stereochemistry [ster"e-o-kem'is-tre] the branch of chemistry dealing with the space relations of atoms in molecules.
stereocilium [ster"e-o- sil'e-əm] nonmotile, branched, long cellular processes of the nature of long microvilli.
stereocinefluorography [ster"e-o-sin"ə-flŏŏ-rog'rə-fe] recording by motion picture camera of images observed by stereoscopic fluoroscopy, affording three-dimensional visualization.
stereoencephalotomy [ster"e-o-ən-sef"ə-lot'ə-me] stereotaxic surgery.
stereoisomer [ster"e-o-i'so-mər] see **isomer**.
stereoisomerism [ster"e-o-i-som'ər-iz-əm] isomerism in which the compounds have the same structural formulae, but the atoms are distributed differently in space.
stereoradiography, stereoroentenography [ster"e-o-ra"de-og'rə-fe] paired radiographs of a part, taken from slightly different angles, and viewed with a stereoscopic device, giving a three-dimensional effect.
stereoscope [ster'e-o-skōp"] an instrument for producing the appearance of solidity and relief by combining the images of two similar pictures of an object.
stereoscopic [ster"e-o-skop'ik] three-dimensional; having depth, as well as height and width.
s. microscope see stereoscopic **microscope**.
stereospecific [ster"e-o-spə-sif'ik] specificity for one stereoisomer of a particular enzyme substrate or reactant in a chemical reaction.
stereotactic [ster"e-o-tak'tik] stereotaxic.
stereotaxic [ster"e-o-tak'sik] 1. pertaining to or characterized by precise positioning in space; said especially of discrete areas of the brain that control specific functions. 2. pertaining to or exhibiting stereotaxis.
s. surgery the production of sharply localized lesions in the brain after precise localization of the target tissue by use of three-dimensional coordinates.
stereotaxis [ster"e-o-tak'sis] movement or growth in response to contact with a solid or rigid surface.
stereotropism [ster"e-ot'rə-piz-əm] stereotaxis.
stereotypy [ster'e-o-ti"pe] see **obsessive-compulsive behavior**.
steric [ste'rik] pertaining to the spatial arrangement of atoms.
sterigmatocystin [stə-rig"mə-to-sis'tin] a mycotoxin produced by *Aspergillus nidulans* and *A. versicolor*. In monkeys and rats causes nephritis and hepatitis and is hepatocarcinogenic in rats.
sterilant [ster'ĭ-lənt] a sterilizing agent, i.e. an agent that destroys microorganisms.
sterile [ster'il] 1. not fertile; barren; not producing young. See also **fertility**. 2. aseptic; not producing microorganisms; free from living microorganisms.
s. field the area defined by the instrument table containing sterile instruments placed over, or immediately adjacent to, the surgery table, the draped patient and the front of the gown worn by the surgery team from chest to table level and the sleeves from above the elbow to the cuff.
s. insect release method a method of insect control of particular use in insects in which mating occurs only once, e.g. screw-worm fly; artificially bred flies are sterilized by irradiation and released; if sufficient sterile flies are released most of the wild flies mate with a sterile fly and the population is sufficiently diminished to lead to a control situation. Method used to eradicate screw-worm in the USA in the 1960s. Called also SIRM.
s. pack see sterile **surgical** pack.
sterility [stə-ril'ĭ-te] the state of being sterile. See also **infertility**.
cryptorchidism s. see **cryptorchidism**.
hybrids s. offspring of parents of different species, these animals are usually sterile due to differences between the chromosomes of the two parents.
intersex s. sterility due to chromosomal differences within the patient.
nondisjunction s. sterility due to chromosomal errors.
polled goats s. a small percentage of all genetically female polled goats are sterile due to masculinization.
XX male dogs s. a Y chromosome-dependent character is an obligatory primary component in transforming the indifferent gonad into a testis.
sterilization [ster"ĭ-lĭ-za'shən] 1. the process of rendering an animal incapable of reproduction, by castration, vasectomy, ovariohysterectomy or other procedure. 2. the process of destroying all microorganisms and their pathogenic products. It is accomplished by heat (wet steam under pressure at 121°C for at least 20 minutes, or dry heat at 160–180°C for 3 hours) or by bactericidal chemical compounds.
skin s. not a practical possibility, but a marked temporary reduction in the bacterial population of the skin, as in presurgical preparation of the surgical site and the hands of operating personnel, is achieved with thorough scrubbing, soaking or repeated applications of antiseptics.
sterilize [ster'ĭ-līz] to subject to sterilization.
sterilizer [ster'ĭ-līz"ər] apparatus used to rid instruments, dressings, etc., of all viable microorganisms. See also **autoclave**.
Stern anthrax vaccine avirulent spore vaccine producing 2 year immunity with no risk of causing the disease.
sternal [ster'nəl] pertaining to the sternum.
s. puncture insertion of a hollow needle into the manubrium of the sternum for the purpose of obtaining a sample of bone marrow. Most often used in horses.
s. recumbency the animal lies down on its ventral thoracic and abdominal walls, usually with the legs tucked underneath the body; the sagittal plane is vertical and the head is in a vertical plane. Called also ventral recumbency.
Sternberg's giant cells [shtərn'bərg] see Reed–Sternberg **cell**.
Sternberg–Reed cell [shtərn'bərg rēd'] see Reed–Sternberg **cell**.
sternebra [stur'nə-brə] pl. *sternebrae;* one of the bony segments of the **sternum**.
stern(o)- word element. [L., Gr.] sternum.
sternocephalic muscle see Table 13.1I.
sternocostal [stur"no-kos'təl] pertaining to the sternum and ribs.
sternodymia union of two fetuses by the anterior chest wall.
sternodymus [stər-nod'ĭ-məs] conjoined twins united at the anterior chest wall.
sternohyoid [stur"no-hi'oid] pertaining to the sternum and hyoid bone.
sternoid [stur'noid] resembling the sternum.
sternomastoid [stur"no-mas'toid] pertaining to the sternum and the mastoid process of the temporal bone.
sternopericardial [stur"no-per"ĭ-kahr'de-əl] pertaining to the sternum and pericardium.
sternoschisis [stər-nos'kĭ-sis] congenital fissure of the sternum.
Sternostoma [stur"no-sto'mə] a genus of mites of the family Rhinonyssidae. Found in the trachea, they cause respiratory difficulty in companion birds.
Sternostomum tracheacolum a tracheal mite in free-living and captive finches and canaries.
sternothyroid [stur"no-thi'roid] pertaining to the sternum and thyroid cartilage or gland.
sternotomy [stər-not'ə-me] incision of the sternum as an approach for a thoracotomy. The incision may be median, through the midline, or transverse, most commonly as an extension of an intercostal thoracotomy incision, across the sternum and up the other side.
sternum [stur'nəm] the breastbone, a median segmented skeletal structure made up of several elements or sternebrae, often with a considerable portion remaining cartilaginous into adulthood. It articulates with the cartilages of the sternal ribs and clavicles when large. It has three parts, the manubrium, the body and the xiphoid process, and consists of vascular, spongy bone covered with a thin layer of compact bone. In ruminants it has a flat ventral surface, while in horses it bears a keel (carina). It is especially well developed, as a nonsegmented keeled bone, in flying birds.
inherited short s. in the North Country Cheviot breed; characterized by a heavy mortality in newborn lambs resulting from rupture of the liver; the latter thought to occur because of the exposed position of the liver as a result of the absence of the sternum.

VetBooks.ir

point of the s. the most cranial point of the sternum (the apex of the manubrium).

sternutatory [stər-nu'tə-tor"e] 1. causing sneezing. 2. an agent that causes sneezing.

steroid [ster'oid] a complex molecule containing carbon atoms in four interlocking rings forming a hydrogenated cyclopentophenanthrene-ring system; three of the rings contain six carbon atoms each and the fourth contains five. Found only in eukaryotes. Steroid derivatives are important in body chemistry. Among them are the male and female sex hormones, such as testosterone and estrogen, and the hormones of the cortices of the adrenal glands, including cortisone. Vitamins of the D group are steroids involved in calcium metabolism. The cardiac glycosides, a group of compounds derived from certain plants, are partly steroids. Sterols, including cholesterol, are steroids. Cholesterol is the main building block of steroid hormones in the body; it is also converted into bile salts by the liver.

s. I **alfaxalone**.

s. II **alfadolone**.

s. diabetes see steroid **diabetes mellitus**.

s. hormones see **androgenic steroids**, **corticosteroid**, **glucocorticoid**, **mineralocorticoid**, **anabolic** steroid.

steroid-responsive meningitis-arteritis (SRMA) [ster'oid] see steroid-responsive **meningitis**-arteritis.

steroidal emanating from or pertaining to steroid.

s. saponins see lithogenic **saponins**.

s. glycoalkaloids toxins including solanidine, soladulcidine, solasidine, tomatidine found in solanaceous plants.

steroidogenesis [stə-roi"do-jen'ə-sis] production of steroids, as by the adrenal glands.

steroidogenic acute regulatory protein (StAR) [stə-roi'do-jen'ik] transport protein involved in the transport of cholesterol within the mitochondrion; has a regulatory role in steroid hormone production.

sterol [ster'ol] any steroid, e.g. cholesterol and ergosterol, having long (8–10 carbons) aliphatic side-chains at position 17 and at least one alcoholic hydroxyl group; the sterols have lipid-like solubility.

stertor [stur'tor] snoring; sonorous respiration, usually due to partial obstruction of the upper airway. May be possible by careful auscultation to determine the site of the stertor, e.g. laryngeal stenosis, pharyngeal obstruction, nasal obstruction.

steth(o)- word element. [Gr.] *chest*.

stethoscope [steth'o-skōp] an instrument used to hear and amplify the sounds produced by the heart, lungs and other internal organs. The modern stethoscope is binaural, with two earpieces and flexible rubber leading to them from the two-branched opening of the bell or cone. In this way, sound travels simultaneously through both of the branches to the earpieces. See also **phonendoscope**.

electronic s. audible sounds are magnified through an amplifier to earphones, of which there may be more than one set, and may be broadcast through loudspeakers, but in both instances the results are mediocre.

esophageal s. one passed into the esophagus with the tip positioned at the level of the heart. It provides an excellent means of monitoring heart sounds and respiration while the animal is anesthetized.

stethoscopy [steth-os'kə-pe] examination using a stethoscope

tracheal s. detects respiratory sounds in the upper respiratory tract.

stethospasm [steth'o-spaz"əm] spasm of the chest muscles.

Stevens power law attempts to quantitate sensory inputs; the law holds that the perceived intensity of the sensation equals the actual intensity of the stimulus raised to a specified power, the value of the power varying with the type of receptor.

Stevens scissors see tenotomy **scissors**.

stewardship the occupation of being a steward or custodian. Referring to animals it implies the caring sort of relationship based on an acceptance of the need to include the rights of animals in overall plans to maintain financial viability.

Stewart's Range syndrome **corynetoxicosis** of sheep in south-eastern South Australia associated with *Rathayibacter toxicus* in the nematode-induced seedhead galls on *Polypogon monspeliensis*.

Stewart's method a concept of assessing clinical acid-base disturbances by using strong ion difference.

STH somatotropic (growth) hormone.

sthenic [sthen'ik] active; strong.

stibialism [stib'e-əl-iz-əm] antimony poisoning.

stibium (Sb) [L.] *antimony*.

stibogluconate sodium a pentavalent antimonial with antiprotozoal activity used in the treatment of leishmaniasis in dogs.

stibophen [stib'o-fən] a sodium antimony compound used at one time as a treatment for heartworm in dogs but now discarded because of toxicity.

stichochrome any neuron having the stainable substance arranged in more or less regular layers.

Sticker's sarcoma [shtik'ərs sahr-ko'mə] see canine transmissible **venereal** tumor.

sticking the abattoir technique of bleeding the animal out at slaughter. There are many techniques used including those used in ritual slaughter. The traditional methods are the slash across the throat cutting arteries, veins, trachea and esophagus and even the spinal cord, and the stab method with the knife being thrust into the jugular vein at the base of the neck. The latter is used in cattle and pigs, the former in sheep. See also **Jewish slaughter**, **Muslim slaughter**.

over s. see **back bleeding**.

prone s. a method of slaughtering pigs in which the pigs are stunned, then conveyed in a prone position on a conveyor belt past the various stations including the sticking or jugular opening station.

stickleback see *Gasterosteus*.

sticky ends see **cohesive end**.

sticky kid syndrome a defect of newborn kids of the golden Guernsey breed of goats; they have sticky, matted coats which remain sticky and harsh. Thought to be an inherited defect.

stiff lamb disease see **enzootic** muscular dystrophy.

stiff lung decreased lung compliance.

stiff sickness ephemeral fever.

stiffness [stif'nis] half way to rigidity, tetany; result of insufficient use of the part.

stiffs one of the very large number of colloquial names given to the disease of cattle caused by a nutritional deficiency of phosphorus. See also **osteomalacia**.

stifle [sti'fəl] the homolog of the human knee in the quadruped, made up of the femorotibial and femoropatellar joints. It is subject to the problems associated with dislocation of the patella, rupture of the cruciate ligaments, injury to the cartilaginous menisci, and several other common disorders.

locking s. see **patellar** luxation.

stifsiekte see **osteomalacia**.

stigma [stig'mə] pl. *stigmas, stigmata* [Gr.] any physical mark or peculiarity that aids in identification or diagnosis of a condition.

follicular s. a 2 mm wide band around the meridian of all follicles greater than 4 mm diameter in the left ovary of the domestic fowl.

stigmatization [stig"mə-tī-za'shən] the formation of stigmas.

stilbamidine see **hydroxystilbamidine isethionate**.

stilbestrol [stil-bes'trol] a synthetic estrogen used in the treatment of female animals for infertility and bitches for urinary incontinence. Its use as a growth promotant, especially in cattle, has been discontinued because of fears that it is a carcinogen. Its use is also not without toxicity hazards. Overfeeding of stilbestrol as a growth promotant causes poisoning characterized by relaxation of pelvic ligaments, elevation of the tailhead, susceptibility to pelvic fracture and hip dislocation and prolapse of rectum and vagina. In castrated males there is a tendency for obstructive urolithiasis to occur. Pigs also show anuria, kidney enlargement and thickening of the ureters. See also **diethylstilbestrol**, **estrogen**.

Stilesia [sti-le'zhə] a genus of tapeworms in the family Thyanosomatidae.

S. globipunctata found in the small intestine of ruminants and causes sufficient injury to kill some animals.

S. hepatica found in the bile ducts in all ruminant species and causes thickening of the duct walls but there is no clinical disease.

stilet [sti-let'] stylet.

Still–Luer rongeur [stil-loo'ər raw-zhur'] double-action, scissor type instrument with spoon-shaped, sharp-edged blades facing each other. The blades in different individual instruments are bent at different angles from the line of cutting so that inaccessible sites can be reached with the appropriate instrument.

VetBooks.ir

S-77: Stifle joint of the dog.
From Feldman EC, Nelson RW, Canine and Feline Endocrinology and Reproduction, 3rd Edition. Saunders, 2007.

stillbirth [*stil'birth*] delivery of a fully formed dead neonate.
stillborn [*stil'born*] born dead.
Stille shears plaster shears with a powerful double action with angled blades that allow cutting while the handles are well away from the patient.
Stillingia an American plant genus in the family Euphorbiaceae; includes *S. dendata, S. treculeana*. It contains cyanogenetic glucosides and may cause poisoning. Called also Queen's delight.
stimulant [*stim'u-lənt*] 1. producing stimulation. 2. an agent that stimulates.
stimulate [*stim'u-lāt*] to excite functional activity in a part.
stimulation [*stim"u-la'shən*] the act or process of stimulating; the condition of being stimulated.
double burst s. a technique of nerve stimulation in which two short tetanic stimuli are applied and the response pattern used to monitor neuromuscular blockade during anesthesia.
s. index the ratio of the number of proliferating T lymphocytes present in lymphocyte cultures exposured to antigen or mitogen to the number in parallel cultures unexposed to antigen or mitogen. It is determined by adding tritiated thymidine to the culture usually 3–5 days after stimulation. The radiolabel is incorporated into DNA of those cells that are stimulated to divide.
stimulus [*stim'u-ləs*] pl. *stimuli* [L.] any agent, act, or influence that produces functional or trophic reaction in a receptor or an irritable tissue.
appetitive s. pleasure-eliciting stimulus.
aversive s. involves fear or pain-eliciting stimuli and is the opposite of appetitive stimulation.
conditioned s. a neutral object or event that is psychologically related to a naturally stimulating object or event and which causes a conditioned response. See also **conditioning**.
discriminative s. a stimulus associated with reinforcement, which exerts control over a particular form of behavior; the subject discriminates between closely related stimuli and responds positively only in the presence of that stimulus.
eliciting s. any stimulus, conditioned or unconditioned, which elicits a response.
s. generalization in learning by animals stimuli tend to be grouped together, the reactions lacking the discrimination of the higher mammals.
s. response coupling coupling of the neural or endocrine stimulus to the cellular response.
structured s. a well-organized and unambiguous stimulus, the perception of which is influenced to a greater extent by the characteristics of the stimulus than by those of the perceiver.
threshold s. a stimulus that is just strong enough to elicit a response.
unconditioned s. any stimulus that is capable of eliciting an unconditioned response. See also **conditioning**.
unstructured s. an unclear or ambiguous stimulus, the perception of which is influenced to a greater extent by the characteristics of the perceiver than by those of the stimulus.
stimulus-response the key mechanism within the animal which permits it to adapt as perfectly as possible to its environment.
s.-r. apparatus a receptor region responding directly to a stimulus, e.g. sound, touch, smell, vision, an afferent neuron which conveys the stimulus towards the central nervous system, a synapse where the afferent path meets the efferent path, an efferent neuron conveying stimuli from the CNS, and an effector (a muscle, gland or neurosecretory cell).
sting [*sting*] 1. injury caused by a poisonous substance produced by an animal or plant (biotoxin) and introduced into a patient which it contacts, together with mechanical trauma incident to its introduction. See also **insect** bites and stings. 2. the organ used to inflict such injury. 3. the illicit prerace administration of a stimulant to a horse with the object of improving its performance.
stinger tree [*sting'er*] ***Dendrocnide*** *moroides*.
stinking willie ***Senecio*** *jacobaea*.
stinkpeul ***Acacia*** *nilotica* subsp. *Kreussiana*.
stinkweed see ***Thlaspi arvense***.
stinkwood see ***Zieria*** *arborescens*.
stinkwort see ***Dittrichia graveolens***.
Stipa [*sti'pə*] grass genus in the family Poaceae; the seed awns are found in great abundance in subcutaneous tissue of sheep grazing pasture containing these grasses when they are ripe. Called also spear grass.
S. inebrians in China inhabited by endophytic fungus *Neotyphodium inebrians* that produces ergot-type alkaloids and lysergic acid amides causing deep somnolence in grazing animals. Called also *Achnatherum inebrians*, drunken horse grass.
S. robusta toxic and narcotic to livestock in areas of the Southwest USA causing stumbling, recumbency, and saliva drooling in horses and cattle, but recovery if moved to new pasture. Caused by ergot alkaloids and lysergic acid amides generated by the endophytic fungus *Neotyphodium chisosum*. Recovered animals commonly show aversion to further grazing of the plant. Called also *S. vaeyi*, sleepygrass.
Stipagrostis grass member of the family Poaceae; awns on the plant become entangled in the forestomachs forming phytobezoars; also cause grass seed abscess. Include *S. obtusa* (*Aristida obtusa*), *S. ciliata* var. *capensis* (*Aristida ciliata*).
stippled [*stip'əld*] covered with many small dots.
s. cells see **basophilic** stippling.
stippling [*stip'ling*] a spotted condition or appearance, such as an appearance of the retina as if dotted with light and dark points, or the spotted appearance of the erythrocytes in basophilic stippling.
basophilic s. see **basophilic** stippling.
stirk a heifer or bullock 6–12 months of age.
stirofos [*sti'ro-fos*] an organophosphorus insecticide.
stirrup [*stur'əp*] 1. the stapes, the innermost of the three ossicles of the ear. 2. device usually made of metal, although some are wooden or laminated hard leather, attached by stirrup leathers to the saddle and providing support for the feet of the rider.
stitch [*stich*] a loop made in sewing or suturing.
s. abscess see stitch **abscess**.
Stizostedion see **pike-perch**.
stochastic [*sto-kas'tik*] arrived at by skillful conjecturing; allowing the opportunity for variation.
stock livestock.
s. equivalents units of livestock measurement used when budgeting feed or assessing productive capacity.
s. guard used in lieu of a gate; consists of a pit fitted with steel rollers close enough together to make a satisfactory crossing for a motor vehicle but sufficient to deter livestock. Called also cattle grid.
s. horse a riding horse used to work cattle, sheep or other horses. Small stature, light weight, wiry, fast for a short distance, agile, mostly bay. Called also cow pony, cutting horse.
s. and station agent person conducting a rural store dealing in implements, supplies and livestock pertaining to agricultural pursuits of all kinds.
Stockard's paralysis a progressive flaccid posterior paresis and paralysis in young Great Danes and crossbreds, believed to be a

hereditary abiotrophy. There have been no reported cases since 1936.

stocker see **store**.

Stockholm tar a substance derived from certain species of *Pinus* spp. by destructive distillation of the wood. Called also wood tar and used extensively as a hoof dressing and general wound protectant by country people.

stockinet closely woven cotton material used extensively by surgeons mostly in the form of cylinders (e.g. Tubegauze) as a draping technique for surgery, as an undercoat for a plaster cast and as a means of keeping dressings in place on a limb.

stocking 1. white markings on the lower legs; in horses from the coronet to the carpus or hock and in dogs most of the leg up to the elbow or stifle. 2. populating a farm with animals.

set s. the livestock are left on the same pasture, in the same fields or paddocks for long periods, under range conditions often indefinitely. Compare with rotational grazing.

s. rate the number of livestock carried per unit of area of pasture. In order to make comparison more rational the procedure is to equate each animal in terms of a standard for the species. See also **animal unit.**

stocking-up accumulation of edema fluid in the lower limbs of horses which are not getting sufficient exercise.

stocks vertical metal or wooden pillars, arranged in a rectangular shape and connected by horizontal bars, designed to restrain a horse or bovine standing within.

stockwhip a whip used by a mounted horseman to help drive cattle; has a short, 3 foot long, handle and a long, 10 foot, thong. The best effect is gained by cracking the thong in the air making a sound like a pistol shot. This is achieved by a special snapper at the end of the thong.

stockyard 1. public saleyard where livestock are sold, usually by auction. 2. yards for working cattle or sheep on private property.

stoichiology [stoi"ke-ol'ə-je] the science of elements, especially the physiology of the cellular elements of tissues.

stoichiometry [stoi"ke-om'ə-tre] the determination of the relative proportions of the compounds involved in a chemical reaction.

stoke (St) [stōk] a unit of kinematic viscosity, that of a fluid with a dynamic viscosity of 1 poise and a density of 1 gram per cubic centimeter.

Stokes–Adams disease [stōks' ad'əmz] a condition due to cerebral ischemia, marked by sudden attacks of unconsciousness, with or without convulsions; associated with heart block or ventricular tachycardias. Called also Stokes–Adams attack, syndrome or syncope or Adams–Stokes syndrome.

Stoll's method a technique for counting nematode and trematode eggs in a fecal sample. The diluting fluid used is 0.1 M caustic soda solution.

stolon [sto'lon] an above-ground prostrate stem that develops roots and leaves at nodes along its length, e.g. couch grass.

stoma [sto'mə] pl. *stomas, stomata* [Gr.] 1. a mouthlike opening. 2. an incised opening that is kept open for drainage or other purposes, such as the opening in the abdominal wall for **colostomy**, **ureterostomy** and **ileal** conduit.

stomach [stum'ək] the curved, muscular, saclike structure that is an enlargement of the alimentary canal between the esophagus and the small intestine. See also **abomasum**, **reticulum** (3), **forestomachs**, **gastric**.

avian glandular s. see **proventriculus**.

s. bot see ***Gasterophilus***.

s. compartments divisions in the stomach complex of camelids are called compartments. *Compartment 1* has the equivalent function of the rumen in ruminants, *Compartment 2* the equivalent function to the reticulum, and *Compartment 3*, a long tubular structure, the combined function of the omasum and abomasum with the abomasal function in the terminal part.

compound s. a stomach made up of several compartments, e.g. ruminant stomach comprising forestomachs (reticulum, rumen, omasum) and abomasum.

glandular s. found in horses; includes cardiac, proper gastric and pyloric glandular zones.

hourglass s. one shaped like an hourglass.

large s. worm see ***Haemonchus***.

s. mesenteries includes mesogastrium, lesser omentum, greater omentum and omental bursa.

muscular s. in birds the gizzard or ventriculus.

simple s. a stomach made up of a single compartment, such as is found in humans, carnivores, rabbits and many rodents. Compare with compound stomach (above).

small s. worm ***Trichostrongylus*** *axei*.

s. worm see ***Gnathostoma*** spinigerum, ***Haemonchus***, ***Ostertagia***.

stomachal [stum'ə-kəl] pertaining to the stomach; stomachic.

stomachic [sto-mak'ik] 1. pertaining to the stomach. 2. a stimulant of gastric activity.

stomatitis [sto"mə-ti'tis] inflammation of the mucosa of the mouth. It may be caused by one of many diseases of the mouth or it may accompany another disease. Both gingivitis (inflammation of the gums) and glossitis (inflammation of the tongue) are forms of stomatitis as are palatitis (or lampas in horses) and cheilitis (inflammation of lips). The specific identification of stomatitis is an important part of a clinical examination in a food animal because of the need to identify the highly infectious vesicular diseases and bluetongue.

angular s. superficial erosions and fissuring at the angles (commissures) of the mouth.

catarrhal s. diffuse erythema of lips, tongue, cheeks; causes some discomfort and unwillingness to eat.

chronic ulcerative paradental s. see **Vincent's angina**.

contagious pustular s. see **horsepox**.

erosive s. see **erosive stomatitis**.

erosive–ulcerative s. advanced stage of stomatitis characterized by multiple erosions and deeper ulcers; complete anorexia results.

infectious s. a necrotic stomatitis of reptiles caused by *Corynebacterium* spp. and *Staphylococcus aureus*; usually secondary to poor husbandry or predisposing health problems.

mycotic s. see **mycotic** stomatitis.

necrotic s. of calves see oral **necrobacillosis**.

papular s. see bovine **papular** stomatitis.

s.–pneumoenteritis complex see **peste des petits ruminants**.

proliferative s. an historically recorded and very rare disease of cattle said to be caused by a filterable agent and recorded only in association with such conditions as chlorinated naphthalene poisoning. The lesions are papular and may also occur on the teats.

vesicular s. stomatitis characterized by vesicular lesions which soon rupture to leave denuded areas which become infected, necrotic, even ulcerative. See also **vesicular** stomatitis, **vesicular** exanthema of swine, **swine** vesicular disease, **foot-and-mouth disease**.

stomat(o)- word element. [Gr.] *mouth*.

stomatocyte [sto'mə-to-sīt] erythrocyte with oval-shaped central area of pallor caused by folding of excess cell membrane. May occur as artifacts in thick blood smears or as a hereditary defect. See hereditary **stomatocytosis**.

stomatocytosis [sto"mə-to-si-to'sis] anemia characterized by the presence of stomatocytes in the blood.

hereditary s. occurs in chondrodysplastic dwarf Alaskan malamutes, Drentse patrijshonds with hypertrophic gastritis, and in miniature Schnauzers who remain asymptomatic.

stomatodeum see **stomodeum**.

stomatogastric [sto"mə-to-gas'trik] pertaining to the stomach and mouth.

stomatognathic [sto"mə-to-nath'ik] denoting the mouth and jaws collectively.

stomatology [sto"mə-tol'ə-je] the study of the mouth and its diseases.

stomatomalacia [sto"mə-to-mə-la'she-ə] softening of the structures of the mouth.

stomatomycosis [sto"mə-to-mi-ko'sis] any fungal disease of the mouth.

stomatonecrosis [sto"mə-to-nə-kro'sis] gangrene of the mouth.

stomatopapilloma [sto"mə-to-pap"i-lo'mə] papilloma on the oral mucosa.

eel s. a disease of eels thought to be caused by a virus.

stomatopathy [sto"mə-top'ə-the] any disorder of the mouth.

stomatoplasty [sto'mə-to-plas"te] plastic reconstruction of the mouth.

stomatorrhagia [sto"mə-to-ra'jə] hemorrhage from the mouth.

stomocephalus [sto"mən-sef'ə-ləs] a fetus with rudimentary jaws and mouth.

stomodeum [sto"mo-de'əm] the ectodermal depression at the head end of the embryo, which becomes the front part of the mouth.

Stomoxys calcitrans [*sto-mok'sis*] the ubiquitous stable fly, about house fly size, and a pest wherever horses are. It is a blood-sucker and transmits a number of trypanosomes including *Trypanosoma evansi* (Surra), *T. equinum* (Mal de Caderas), *T. brucei* and *T. vivax* (Nagana of cattle) and is an intermediate host for *Habronema majus*. It is probably also involved in the transmission of *Dermatophilus congolensis* (mycotic dermatitis).

-stomy word element. [Gr.] creation of an opening into or a communication between.

stone [*stōn*] 1. a calculus. 2. a unit of weight, equivalent in the English system to 14 lb avoirdupois.

milk s. see **milk** stone.

s. searcher see **searcher** (2).

Stonebrink's medium an egg-based medium for the growth of *Mycobacteria bovis*.

stonefish fish member of the family Synanceidae which inhabits coral reefs and has an external appearance similar to a lump of coral. They have a number of spines along the back and if trodden on or bitten eject a very potent poison, which causes severe pain, followed by local swelling and general paralysis ending in fatal respiratory paralysis.

stones commonly used to describe **calculi**.

stool the fecal discharge from the bowels. Normally, only used with reference to the cat and dog. See also feces.

lienteric s. feces containing much undigested food.

night s. soft, moist fecal pellets ingested by rabbits, directly from the anus, usually in the early morning.

s. softeners agents such as bulk or lubricant laxatives which result in soft, but formed feces, without causing purgation.

stootsiekte [Af.] 'pushing disease' caused by *Matricaria nigellifolia* poisoning in southern Africa.

stop [*stop*] the steplike change in lateral profile of the face of dogs at the eyes, where the frontal bones meet the maxilla and nasal bones. It varies greatly between species, being most marked in brachycephalic breeds and barely detectable in Collies and Bull terriers.

stopcock a valve that regulates the flow of fluid through a tube.

stopper pad the normally non-weight-bearing footpad located at the posterior aspect of the forelegs, over the accessory carpal bone, in dogs and cats. Called also carpal pad, stoppers.

stoppers see **stopper pad**.

storage disease any metabolic disorder in which some substance (e.g. fats, proteins or carbohydrates) accumulates in certain cells in abnormal amounts; called also thesaurismosis, thesaurosis.

lipid s. d. any disorder of cellular metabolism that results in accumulation of lipids in tissues, e.g. **gangliosidosis**, **sphingomyelinosis**, **Gaucher's disease**, globoid cell **leukodystrophy**, metachromatic **leukodystrophy**. Called also lipidosis.

lysosomal s. d. any inborn error of metabolism in which the deficiency of a lysosomal enzyme results in the accumulation of the substance normally degraded by that enzyme in the lysosomes of certain cells. These diseases are further classified, depending on the nature of the stored substance, as glycogen storage diseases (glycogenoses), sphingolipidoses, mucopolysaccharidoses and mucolipidoses. Also caused by ingestion of plant toxins, for example **swainsonine**.

storage fungi fungi that are particularly adapted to grow on stored feeds, e.g. *Stachybotrys*, *Aspergillus*, *Fusarium* and *Penicillium* spp.

δ-storage pool disease a blood coagulation disorder due to a defect in δ-granule ADP transport. Characterized by moderate to severe bleeding. Inherited as an autosomal recessive trait in American cocker spaniels. See also **thrombocytopathy**.

store used with reference to any species. Indicates that the animal is in a lean, lightweight condition, usually young and in most cases recently weaned. They are in a growing in stature phase and ready for good pasture so that in 2–5 months they have grown well and are ready for sale as replacement heifers or to go into lots as feeders.

forward s. meat sheep in good enough condition to go to the butcher but in need of topping off to be classified as prime.

storiform [*stor'ĭ-form*] denoting an irregularly whorled interwoven pattern, somewhat resembling that of a straw mat; said of the microscopic appearance of several types of **spindle-cell tumors**.

storksbill see ***Erodium***.

Stormont test a more sensitive test for tuberculosis in cattle. The test is begun as a single **intradermal** test by an intradermal injection, usually into a caudal tail fold. The test is read at 72 or 96 hours and if it is inconclusive a second injection is made at the same site at 7 days after the first injection and the test read 24 hours later. A positive reaction is a 5 mm increase in the thickness of the skin.

stoss therapy treatment of a disease by a single massive dose of therapeutic agent or short-term administration of unphysiologically large doses.

stot steer.

Stout loop technique a method of wiring between teeth to provide support for fractures of the upper or lower jaws.

stoutly bred horseman's expression for a horse bred to stay; bred to run long distance races.

stover stalks of corn plants from which mature corn cobs have been harvested as grain, or grain sorghum plants from which heads have also been removed. The stover is usually fed by turning the cattle into the field and is subject to fungal infection, sometimes causing mycotoxicosis.

STPD standard temperature and pressure, dry; denoting a volume of dry gas at 32°F (0°C) and a pressure of 760 mmHg.

strabismus [*strə-biz'məs*] deviation of the eye that the patient cannot overcome; the visual axes assume a position relative to each other different from that required by the physiological conditions. Called also squint.

bilateral convergent s. with exophthalmus inherited in several cattle breeds and usually manifest at ages older than one year. Progressive course that advances but may be interrupted by long, apparently stable, periods. Characterized by a bilateral symmetric, permanent rotation of the globes in an anterior-medial direction, resulting in permanent deviation of the visual axis. Accompanied by slight to severe laterodorsal exophthalmus.

congenital s. medial strabismus is seen in Siamese cats. See convergent strabismus (below).

convergent s. that in which the visual axes converge; esotropia, or cross-eye. A frequent finding in Siamese cats, related to an anomaly of neuronal pathways between the retina and lateral geniculate nucleus in which more neurons project contralaterally rather than ipsilaterally as in other cats.

divergent s. that in which the visual axes diverge; called also exotropia and walleye.

inherited s. see inherited **exophthalmos**.

traumatic s. a complication of traumatic prolapse of the eye, due to rupture of extraocular muscles.

strabotomy [*strə-bot'ə-me*] cutting of an ocular tendon in treatment of strabismus in humans.

straight [*strāt*] 1. insufficient angulation of a joint or slope of a bone to give a horse a good conformation, e.g. straight hock, pastern, withers. 2. uncomplicated, e.g. a straight radiograph; one taken before the administration of contrast reagent so that any pre-existing opacities can be identified. Called also scout radiography.

distal s. tubule last segment of the nephric loop.

proximal s. tubule first segment of the nephric loop.

straightbred purebred.

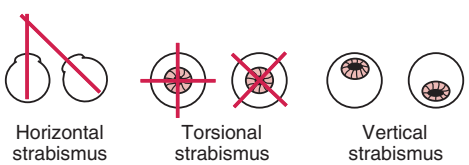
straights animal feeds that are plain feeds without additions of any sort, e.g oats, alfalfa hay, although they may have been processed in some way, e.g. cracked or chaffed.

strain 1. to overexercise. 2. to filter. 3. an overstretching or overexertion of some part of the musculature. 4. excessive effort. 5. one or more characterized organisms within a species or variety. May be distinguished by some particular quality, as rough or smooth strains of bacteria.

s. 2 *Brucella suis* used in a vaccine in China against brucellosis in all target species.

s. 19 *Brucella abortus* see **strain** 19.

s. 45/20 *Brucella abortus* the strain of reduced virulence used as a living vaccine for adult cattle against bovine brucellosis.



S-78: Basic types of strabismus. From Guyton AC, Hall JE, Textbook of Medical Physiology, 10th Edition. Saunders, 2000.

VetBooks.ir

S-79: Advanced bilateral convergent strabismus with exophthalmus in a German brown cow. From Mömke S, Distl O: Bilateral convergent strabismus with exophthalmus (BCSE) in cattle: An overview of clinical signs and genetic traits. Vet J 173:272-277, 2007. Elsevier.

s. 51 *Salmonella dublin* a rough strain with reduced virulence used in Europe to immunize young calves.
s. RB51 *Brucella abortus* a live rough mutant that will immunize cattle but does not induce a reaction to standard serological tests for brucellosis.
s. Rev 1 *Brucella melitensis* live attenuated strain used for vaccination in small ruminants.
s. SC54 *Salmonella cholerasuis* an avirulent organism used live in a vaccine against salmonellosis in swine.
s. 9R *Salmonella gallinarium* a rough strain used as a live vaccine against *S. gallinarium* and *S. enteriditis* in poultry.
cell s. see **cell** culture.
compressive s. physical stress which tends to structural compaction.
minimum effective s. level of strain below which bone shows no adaptive reaction.
tensile s. physical strain which tends toward structural elongation.
strain 19 naturally occurring mutant, low-virulence strain of *Brucella abortus*, deficient in its capacity to metabolize erythritol.
s. 19 vaccine living vaccine of strain 19 *Brucella abortus*, the vaccine which made virtual eradication of bovine brucellosis possible.
straining see **tenesmus**.
s. to defecate tenesmus.
stramonium [*strə-mo'ne-əm*] ***Datura stramonium***.
strand [*strand*] a term commonly used to describe one of the two complementary polynucleotide chains found in double-stranded DNA.
double s. (ds) nucleic acid occurring as a two-strand helix.
lagging s. in DNA replication, the strand in which the nascent strand is synthesized in discontinuous segments after the other or leading strand. See also **Okazaki fragments**.
leading s. in DNA replication, the strand that is copied continuously.
stranding the largely unexplained migrational phenomenon of cetaceans and pinnipeds in which the animals swim into shallow water and up onto land from where they are unable or unwilling to depart. Single strandings may be due to disease. Multiple strandings may similarly result from illness in the leader of the pod. They are also known to occur in specific locations where the local land appears to confuse the whales' direction-finding ability. Called also beaching.
strangles [*strang'gəlz*] an acute highly contagious disease of horses, occurring commonly in outbreaks in breeding stables, racing stables and others with a continual introduction of new horses, caused by infection with *Streptococcus equi* subsp. *equi,* and characterized by fever, purulent rhinitis, pharyngitis, laryngitis, abscessation of the draining lymph nodes and cough. Low case fatality with treatment, but affected premises are quarantined. Metastatic infection (bastard strangles) occurs infrequently but results in abscess formation in any organ or body site with clinical signs related to the location.
puppy s., juvenile s. see juvenile **pyoderma**.
strangulated [*strang'gu-lāt'əd*] congested by reason of constriction or hernial restriction, as strangulated **hernia**.
strangulation [*strang"gu-la'shən*] 1. arrest of respiration by occlusion of the air passages. 2. impairment of the blood supply to a part by mechanical constriction of the vessels. See also **colic** (2), **intestinal** obstruction, **intestinal** strangulation.
epiploic foramen hernia s. rare cause of acute intestinal obstruction in horses.
stranguria [*strang-gu're-ə*] strangury.
strangury [*strang'gu-re*] slow and painful discharge of urine.
strap cell [*strap*] long, flat cells found in some rhabdomyosarcomas.
strapper stable assistant engaged in the preparation of horses for racing.
strategic treatment prophylactic treatment, applied particularly in the prevention of parasitic and protozoal diseases, applied at strategic times in the life cycle of the causative agent, rather than on a strictly temporal basis.
Strathmore weed ***Pimelea prostrata***.
stratification [*strat"ĭ-fĭ-ka'shən*] 1. arrangement in layers. 2. in statistical terms the division of a population into subpopulations on the basis of specified criteria such as age, breed, parity. See stratified random **sample**.
stratiform [*strat'ĭ-form*] occurring in layers.
stratigraphy [*strə-tig'rə-fe*] a method of bodysection radiography.
stratum [*strat'əm, stra'təm*] pl. *strata* [L.] a sheetlike mass of tissue of fairly uniform thickness; distinct layers making up various tissues or organs, as of the skin, brain, retina.
s. avasculosum the avascular stratum in the margin of the iris.
s. basale the mitotically active, basal layer of the epidermis, consisting of columnar to cuboidal keratinocytes on a basement membrane.
s. corneum the outer horny layer of the epidermis, consisting of cells that are non-nucleated, keratinized and desquamating.
s. germinativum in the epidermis, located between the stratum basale and the stratum granulosum. Together with the basal layer, called the malpighian layer. Called also germinative layer.
s. granulosum 1. the layer of cells between the stratum lucidum and the stratum spinosum of the skin, very thin and not always present. Called also the granular layer. 2. the deep layer of the cortex of the cerebellum. 3. the layer of follicle cells lining the theca of the vesicular ovarian follicle. Called also granular layer.
s. lamellatum laminae of the hoof corium; see also **lamella**.
s. lucidum the translucent layer of the skin just beneath the stratum corneum. Called also clear layer. Present in the epidermis of the planum nasale of several species and footpads of carnivores.
s. spinosum the layer of the epidermis between the stratum granulosum and the stratum basale, marked by the presence of prickle cells; called also spinous layer and prickle-cell layer.
s. tectorium the layer of horny scales claimed to exist on the surface of the horse's hoof that gives it the smooth glossy appearance.
Strauss reaction [*strous*] see Strauss **reaction**.
straw 1. mature, dry foliage of a cereal crop after the grain has been harvested by a header or by threshing. Has very low digestibility, energy and protein content. Used principally as bedding but in some economies is used as feed. Causes impaction of the rumen in cattle and ileocecal valve in horses. Is more digestible if chopped and fed with a protein supplement or urea. If left standing in the field is referred to as stubble. When fed in this way there is a variable amount of spilt grain available also. 2. a hollow, plastic tube used for the storage of frozen semen. See also **French straws**.
s. eating a vice in stabled horses which may require muzzling to avoid the occurrence of impaction colic.
United States s's (2) see **French straws**.
strawberry footrot see strawberry **footrot**.
strawberry lymph nodes deeply congested lymph nodes such as seen in any septicemia.
strawberry mark a local granulomatous nodule in the intestinal wall of pigs caused by the deep penetration of the proboscis of *Macrocanthoryncus hirudinaceus*.

VetBooks.ir

stray voltage accumulation of low voltages in the metalwork of a milking parlor due either to leakage from poor wiring or to poor earthing (grounding) with no outlet for static electricity. Very small voltages cause restlessness and a fall in milk yield.

streak [strēk] a line or stripe.

angioid s's red to black irregular bands in the ocular fundus running outward from the optic disk due to choroidal blood vessels and melanin.

s. canal a former name for the papillary duct, the canal between the exterior and the lactiferous sinus within the teat of a ruminant; *ductus papillaris*.

primitive s. a faint white trace at the caudal end of the embryonic disk, formed by movement of cells at the onset of mesoderm formation, providing the first evidence of the embryonic axis and the start of gastrulation.

visual s. horizontal band of the ocular fundus dorsal to the optic disk; characterized by an increased concentration of ganglion cells and cone photoreceptors, as well as a relative reduction in retinal vasculature. Presumably a region of higher visual acuity.

streaked hairlessness irregular, narrow streaks of hairlessness, occurring only in females is recorded in Holstein cattle. Called also streaked hypotrichosis.

streaking 1. a fault in radiographs caused by inadequate rinsing or dirty hangers. 2. the process of inoculating microorganisms onto agar media with a loop such that the inoculum is seeded at decreasing concentration across the media, resulting in isolated colonies of the microorganism.

focused grid s. a focused grid placed on the cassette upside down will cause streaking around the edges of the film.

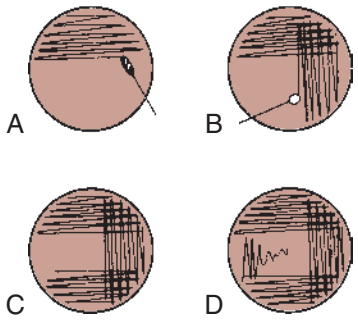
streamlining physiological phenomenon of blood flow which passes through a vessel without complete mixing so that blood from two different sources and with different composition can flow side by side within the one vessel. May occur in the portal vein and be the possible explanation for the occasional limitation of lesions of toxopathic hepatitis to one lobe of the liver.

s. portal blood flow **laminar** flow applied to the blood flowing through the portal vein to the liver.

Streblidae a family of flies similar to the hipposcids and which are found on bats in the tropics and subtropics.

street nail surgery treatment performed on a traumatic penetrating wound to the equine sole that involves cutting a hole to allow access to the deep digital flexor tendon and the infected tissue surrounding it; often caused by the common rusty nail.

streptavidin [strep-tavĭ-din] a protein found in *Streptomyces griseus* which has a high affinity for biotin and is used in a wide range of immunological studies.



S-80: Plate inoculation and streaking method. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

strept(o)- word element. [Gr.] *twisted*.

Streptobacillus [strep"to-bə-sil'əs] a genus of gram-negative bacteria which sometimes forms filaments. *S. moniliformis* found in the nasopharynx of rats causes rat bite fever in humans and possibly dogs and cats. They may be acute septicemia or chronic disease characterized by arthritis in mice. Previously called *Bacillus actinoides* and *Streptobacillus actinoides*.

streptobacillus [strep"to-bə-sil'əs] pl. *streptobacilli* 1. a group of rod-shaped bacteria that remain loosely attached end-to-end in long chains as a result of failure of daughter cells to separate after cell division. 2. an organism of the genus *Streptobacillus*.

Streptocara a genus of spiruroid worms found in the gizzard of many bird species; intermediate host is a crustacean.

streptococcal [strep"to-kok'əl] pertaining to or caused by a streptococcus.

s. adenitis a specific disease of pigs; see **cervical abscess of pigs**. A similar disease occurs in epidemics in dogs in kennels caused by Lancefield Group C *Streptococcus*. It is characterized by fever, pharyngitis, submaxillary lymph node enlargement and conjunctival discharge.

s. dermatitis on the face of piglets in lesions made by unclipped needle teeth.

s. endocarditis see bacterial **endocarditis**.

s. lympadenitis see streptococcal adenitis (above).

s. mastitis bovine mastitis is caused by *Streptococcus agalactiae, S. dysgalactiae, S. uberis*.

s. meningitis disease of young pigs caused by *Streptococcus* suis, manifest with rigidity, hypersensitivity to touch, convulsions and, if untreated, death. There is a dramatic response to penicillin. Most pigs in a litter will be affected and successive litters will have the disease. There is also a suppurative arthritis. See also ***Streptococus*** suis. In calves may result from a streptococcal bacteremia associated with omphalitis.

neonatal s. septicemia streptococcal infection in newborn calves, piglets, lambs and puppies causes a syndrome of polyarthritis, meningitis, choroiditis and in calves an endophthalmitis.

s. pneumonia bacterial pneumonia of lambs, calves and in horses either primary or as secondary infections in viral disease. Infection is usually *Streptococcus pneumoniae* or *S. zooepidemicus*.

s. polyarthritis common in neonates of all species especially piglets; characterized by pain, heat and swellings of a number of joints.

s. septicemia is part of streptococcal infections in neonates and occurs also in calves caused by *Streptococcus pneumoniae*. Affected calves show a peracute illness with fever and petechiation of mucosae.

streptococcemia [strep"to-kok-se'me-ə] the presence of streptococci in the blood.

streptococci [strep"to-kok'si] bacterial members of the genus *Streptococcus*.

streptococcosis [strep"to-kŏ-ko'sis] 1. a disease of domestic poultry caused by *Streptococcus zooepidemicus* (syn. *S. gallinarum*), *S. faecalis, S. faecium* and *S. durans*. The disease is characterized by bacteremia with localization of suppurative infection in many body sites and a variety of clinical pictures of fever, anorexia and pale comb. 2. In fish occurs in farmed rainbow trout, yellowtail and eels; caused by any of several gram-positive cocci, such as *Lactococcus garvieae* or *Streptoccus* spp.; manifested by exophthalmos, sometimes resulting in orbital rupture.

Streptococcus [strep"to-kok'əs] a genus of gram-positive, predominantly aerotolerant cocci in the family *Streptococcaceae* occurring in pairs or chains. Members are classifiable in several ways, none of them completely satisfactory in isolation in terms of species designation, but useful when combined with biochemical testing. Sherman's classification was based on tolerance tests. The system used most widely is Lancefield's grouping based on serological tests. Another means of differentiating streptococci is on the basis of type of hemolysis produced around colonies grown on sheep blood agar. Alpha (α) is partial hemolysis or greening of the agar. Beta (β) hemolysis is seen as a clear zone. Gamma (γ) hemolysis is sometimes used to indicate the absence of hemolysis. Most of the pathogenic species are β hemolytic.

S. agalactiae causes mastitis in cattle, goats and sheep, neonatal septicemia and urogenital infections in dogs and cats.

S. avium, S. durans, S. faecalis, S. faecium* and *S. gallinarum reclassified in the genus ***Enterococcus***. Now called *E. avium* etc.

S

S. bovis an important organism in the development of lactic acidosis in cattle following carbohydrate engorgement because of its capacity to ferment starch to lactic acid. Now classified as *S. equines*.
***S. canis* (*canus*)** isolated from cases of septicemia and adenitis in puppies and kittens.
S. dysgalactiae* subsp. *dysgalactiae causes mastitis in cows, ewes and goat does and polyarthritis in lambs.
S. dysgalactiae* subsp. *equisimilis causes suppurative arthritis in piglets and abscesses in lymph nodes of the head and neck of horses. Also a cause of cervicitis in mares. Previously called *S. equisimilis*.
S. equi* subsp. *equi causes **strangles** in horses.
S. equi* subsp. *ruminatorum isolated from mastitis in small ruminants.
S. equi* subsp. *zooepidemicus occurs as a secondary infection in most species, particularly in horses in wounds, as a cause of cervicitis and a secondary infection associated with the viral infections of the upper respiratory tract. A cause of metritis and mastitis in cattle and septicemia in lambs, pigs and poultry. Previously called *S. zooepidemicus*.
S. equinus causes opportunist infections in many species. Now includes organisms previously classified as *S. bovis*.
S. gallolyticus causes mastitis in cattle, septicemia in poultry, and myositis in pigeons. Includes some organisms previously classified as *S. bovis*.
S. iniae causes disease in cultured finfish.
S. parauberis, S. uberis may cause mastitis in cows. Have been referred to in the past as *S. viridans*, a generic term referring to α-hemolytic or non-hemolytic streptococci.
S. pneumoniae formerly called *Diplococcus pneumoniae*; pneumococcus, causes pneumonia in humans, nonhuman primates, guinea pigs and calves and mastitis in cattle, and septicemia and arthritis in cats.
S. porcinus causes **cervical abscess of pigs**.
S. pyogenes a cause of lymphangitis in foals and an uncommon cause of bovine mastitis. An important pathogen of humans.
S. suis has at least 35 capsular types many of which can cause **streptococcal** meningitis and arthritis in pigs. There is geographic variance in the importance of individual serotypes but types 1,2,3,4,7,8 and 11 are common pathogens. Infection with type 2 is particularly common and is a zoonosis as is type 14. Immunity to disease can be engendered by vaccination but is serotype specific.

streptodornase [*strep"to-dor'nās*] an enzyme produced by hemolytic streptococci that catalyzes the depolymerization of deoxyribonucleic acid (DNA). See **deoxyribonuclease**.

streptokinase (SK) [*strep"to-ki'nās*] an enzyme produced by streptococci that catalyzes the conversion of plasminogen to plasmin. Streptokinase, when administered as a thrombolytic, requires detailed and skilled control to avoid hemorrhage. It also is capable of producing severe antigenic reactions upon readministration. See also **anticoagulant** (2).
s.–streptodornase a mixture of enzymes elaborated by hemolytic streptococci; used as a proteolytic and fibrinolytic agent.

streptolysin [*strep-tol'ĭ-sin*] the hemolysin of hemolytic streptococci.

Streptomyces [*strep"to-mi'sēz*] a genus of nonpathogenic soil bacteria, but occasionally parasitic on plants and animals. Notable as the source of various antibiotics, e.g. the tetracyclines, erythromycin (*S. erythreus*), lincomycin (*S. lincolnensis*), tylosin (*S. fradiae*), rifampin (*S. mediterranei*), amphotericin B (*S. nodosus*) and monensin (*S. cinnamonensis*).

streptomycin [*strep"to-mi'sin*] one of the oldest of the aminoglycoside antibiotics. Because of its widespread use many previously susceptible gram-negative bacteria have developed a resistance to it and it has lost a great deal of its effectiveness and popularity. It is most effective against leptospira and *Haemophilus*-associated infections. Like all other members of the group, streptomycin is absorbed poorly from the alimentary tract and must be given parenterally, usually by intramuscular injection for systemic effect. The group has moderate toxicity but this is of minor importance in food animals. Even in companion animals the risk is small but deafness and vestibular disturbances can occur, particularly in cats. Dihydrostreptomycin is a derivative and is used as an alternative to the parent antibiotic.

Streptopharagus a genus of roundworms in the family Spirocercidae.
S. armatus, S. pigmentatus found in the stomach of apes and monkeys.

streptosepticemia septicemia due to streptococci.

streptothricosis see **mycotic** dermatitis.

Streptothrix bovis see ***Dermatophilus*** *congolensis*.

streptotrichosis see **dermatophilosis**.

streptozocin, streptozotocin [*strep"to-zo'sin, strep"to-zo-to'sin*] a nitrosurea compound with antineoplastic activity, derived from *Streptomyces achromogenes*; used principally in the treatment of islet-cell tumors of the pancreas.

stress [*stres*] 1. forcibly exerted influence; pressure, e.g. compression, tension. 2. the sum of the biological reactions to any adverse stimulus, physical, mental, or emotional, internal or external, that tends to disturb the homeostasis of an organism. Should these reactions be inappropriate, they may lead to disease states. The term is also used to refer to the stimuli that elicit the reactions, e. g. heat, nutritional, lactational, confinement, transportation. See also **psychosomatic** disease.
s. induced diarrhea of the horse see acute idiopathic and chronic undifferentiated **diarrhea** of the horse.
porcine s. syndrome see **porcine** stress syndrome.
s. reaction see **alarm reaction**.
s.-starvation syndrome said of sheep. See **pregnancy** toxemia.
social s. thought to be a common cause of illness in domestic pets and to a less extent in pigs, e.g. in **esophagogastric** ulcer.
s. testing a test for evaluating circulatory response to physical stress produced by exercise. See also **exercise** testing.

stress-induced bone lesions found in horses doing heavy training but only by highly developed imaging techniques. Include sclerosis of the radial fossa of the third carpal bone, remodeling of the distal epiphysis of the third metacarpal or metatarsal bones.

stressor any factor that disturbs homeostasis producing stress. In animals there is a long list including nutritional, lactational and pregnancy stress, physical stressors including inclement climate, hard physical work such as endurance rides, racing, capture of wild animals, psychological including weaning, overcrowding, boredom, harassment by humans or other animals, absence of bedding or protection from drafts and poor ventilation.

stretch severe passive or active extension of a limb or the trunk.
s. injury commonly involves tendons and soft tissues surrounding a joint, particularly of the lower limbs. See dropped **carpus**.
s. receptor see **receptor** (2).
s. relaxation a not universally accepted characteristic of the smooth muscle of the gastrointestinal tract; if the muscle tension is being maintained by regular neural discharge, a distention of the organ which stretches the wall may temporarily inhibit the nervous impulses so that the muscle relaxes and accommodates the new length of the muscle.

stretches [*strech'əz*] 'the stretches'; colloquial name for inherited periodic **spasticity**.

stretching disease a description of the clinical signs shown by sheep with intussusception. Called also reksiekte.

stria [*stri'ə*] pl. *striae* [L.] 1. a streak or line. 2. a narrow, bandlike structure; longitudinal collections of nerve fibers in the brain.
atrophic s., striae atrophicae atrophic, pinkish or purplish, scarlike lesions in the skin, later becoming white, due to weakening of elastic tissues. Seen in association with canine Cushing's syndrome.
habenular s. a bundle of nerve fibers connecting the olfactory centers with the habenular nuclei.
s. mallearis a light band visible through the tympanic membrane when it is examined with an otoscope; is the handle of the malleolus.
s. medullares bundles of white fibers across the floor of the fourth ventricle.

striate, striated [*stri'āt, stri'āt-əd*] having streaks or striae, e.g. striate retinopathy.
s. border see **brush border**.
s. duct the intralobular duct of major salivary glands.

striation [*stri-a'shən*] 1. the quality of being streaked. 2. a streak or scratch, or a series of streaks.

striatonigral [*stri"ə-to-ni'grəl*] projecting from the corpus striatum to the substantia nigra.
s. degeneration the basic lesion in hereditary striatonigral and cerebello-olivary degeneration in Kerry blue terriers. See also cerebellar **abiotrophy**.

striatonigral-cerebello-olivary degeneration hereditary see **striatonigral** degeneration.

stricture [*strik'chər*] an abnormal narrowing of a duct or passage, e.g. cervix, esophagus. See also **stenosis** and specific anatomic sites.

rectal s. of pigs see **rectal** stricture.

stricturization [*strik"chər-ĭ-za'shən*] the process of decreasing in caliber or of becoming narrowed or constricted.

stride the full cycle of the leg's motion.

s. length in gait analysis, the distance between two successive placements of the same foot.

stridor [*stri'dər*] a shrill, harsh sound, especially the respiratory sound heard during inspiration in laryngeal obstruction.

laryngeal s. that due to laryngeal obstruction. See also **roaring**.

stridulation creation of a sound by rubbing two parts of the body together, e.g. cicada.

strigeids intestinal trematodes of birds in the family Strigeidae.

strike [*strīk*] see cutaneous **myiasis**.

striking a vigorous forward pounding action with a front limb. It is an instinctive defense or attack action by a horse which can be very dangerous to an inattentive handler.

string 1. twine, very thin rope. 2. a term used to denote a group of dairy cattle housed together in a free stall system based on stage of lactation and production with string 1 being the most recently calved and the highest producing cows, usually containing cows to the time of peak lactation after which they would move to string 2 and subsequently later strings. This allows groups of cattle to be fed separately on the basis of production.

s. foreign body see linear **foreign body**.

s. sign seen in radiographs of the stenosed gastric pylorus as contrast medium is forced into the limited canal.

stringent response in bacterial cells, a response to stress when the cell does not have a sufficient pool of amino acids to maintain protein synthesis in which the synthesis of rRNAs and tRNAs is reduced by 20-fold, which suspends many of the cell's activities until conditions improve.

stringhalt [*string'hawlt*] a sporadic disease of horses due to unknown cause. Characterized by involuntary repetitive exaggerated flexion of a hock. The horse is unable to move; there is wasting of thigh muscles.

Australian s. occurs as extensive outbreaks, often following a drought and associated with the abundance of herbaceous plants, particularly *Hypochaeris radicata* (called also flatweed, catsear).

classical s. the sporadic irreversible, severe form of the disease as it occurs in the northern hemisphere.

striocerebellar [*stri"o-ser"ə-bel'ər*] pertaining to the corpus striatum and cerebellum.

striola a curvilinear landmark in the middle ear to which the hairs (hair cells) in the macula are oriented.

strip [*strip*] 1. to press the contents from a canal, such as the urethra, teat canal or a blood vessel, by running the finger along it. 2. to excise lengths of large veins and incompetent tributaries by subcutaneous dissection and the use of a stripper.

s. cup a metal cup with a recessed black lid with a hole covered by wire mesh. To test the first milk of a cow for clots a few streams are squirted onto the lid so that watery milk can be recognized and some is squirted through the mesh so that any clots present can be detected.

s. grazing see strip **grazing**.

s. technique used in the treatment of deviated or corkscrew penis in the bull. Depends on the use of strips of the dorsal ligament of the penis to anchor the ligament to the dorsum and preventing it from slipping off during an erection.

S-81: Classical sporadic stringhalt in a horse. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

stripe [*strip*] a white mark, narrower than the nasal bones, down the face of a horse. Called also race.

dorsal s. the dark brown mark that runs along the middle of the back from the poll to the butt of the tail in donkeys, mules, yellow dun horses and primitive horses and ponies.

eel s. see dorsal stripe (above).

striped jack see ***Pseudocaranx dentex***.

stripper [*strip'ər*] surgical instrument for stripping the periosteum from bone. See **Matson elevator**.

stripping 1. abattoir technique for removal of esthetically unattractive pleura or peritoneum from a carcass of meat so rendering the meat saleable. 2. a technique for grooming dogs of the terrier type in which dead hairs are pulled out or cut with a razor blade incorporated into the 'stripping comb' or knife. The procedure may be a cause of mild folliculitis. 3. see **teat** stripping. 4. referring to fish culture is the process of removing eggs or sperm from 'ripe' broodfish.

fore s. (3) expressing streams of milk from the teat prior to machine milking to determine presence of abnormal milk and to stimulate 'letdown'.

hand s. (3) stripping the last of the milk from the udder by milking the teat manually.

machine s. (3) stripping the last of the milk from the udder by pulling down on the teat cup cluster when milk flow has almost ceased; a common but deplored practice is to put a heavy weight on the handpiece at this time.

strobila [*stro-bi'lə*] pl. *strobilae* [L.] the chain of proglottides constituting the bulk of the body of an adult tapeworm.

strobilocercus larval stage of a taeniid cestode; a fluid-filled cyst containing a scolex with a pseudosegmented elongated region connecting to the bladder, e.g. *Taenia taeniaeformis*.

stroke [*strōk*] 1. a sudden and severe attack. 2. **cerebrovascular** accident (CVA).

canine s. see canine idiopathic **vestibular** syndrome.

lightning s. see **lightning** injury.

sun s. see **heat**[1] stroke.

stroma [*stro'mə*] pl. *stromata* [Gr.] the tissue forming the ground substance, framework, or matrix of an organ, as opposed to the functioning part or parenchyma, e.g. stroma iridis, stroma vitreum.

stromuhr [*shtro'moor*] an instrument for measuring the velocity of the blood flow.

strongyle any roundworm in the superfamily Strongyloidea.

large s. includes *Craterostomum*, *Oesophagodontus*, *Strongylus asini*, *S. edentatus*, *S. equinus*, *S. vulgaris* and *Triodontophorus* spp.

pigeon s. ***Ornithostrongylus*** *quadriradiatus.*

small s. includes *Caballonema*, *Cyathostomum*, *Cylicocyclus*, *Cylicodontophorus*, *Cylicostephanus*, *Cylindropharynx*, *Gyalocephalus*, *Poteriostomum* and *Sinostrongylus*.

Strongyloides [*stron"jə-loi'dēz*] a genus of nematode parasites in the family Strongyloididae, the larvae of which are able to penetrate the intact skin of the host then migrate to the intestine via the bloodstream, lung, trachea and pharynx. Many species are passed from the dam to the young via the milk. See also **strongyloidosis**.

S. avium found in the ceca and small intestine of fowl, turkey and wild birds.

S. cati found in the small intestine of the cat.

S. felis in cats.

S. fuelleborni found in the small intestine of primates.

S. papillosus found in the small intestine of ruminants and rabbits.

S. planiceps in cats.

S. procyonis found in raccoons.

S. ransomi found in the small intestine of pigs.

S. ratti found in rats.

S. simiae see *S. fuelleborni* (above).

S. stercoralis a species found in the intestine of humans and other mammals, primarily in the tropics and subtropics, usually causing diarrhea and intestinal ulceration.

S. tumefaciens associated with tumors of the large intestine of cats.

S. venezuelensis found in rats.

S. westeri found in the small intestine of horse, pig and zebra.

VetBooks.ir

strongyloidiasis [stron"jə-loi-di'ə-sis] infection with *Strongyloides* spp. See also **strongyloidosis**.

strongyloidosis, strongyloidiasis [stron"jə-loi-do'sis] infestation with the nematode ***Strongyloides***, a parasite of the small intestine. Can cause dermatitis and balanoposthitis due to percutaneous entry, or diarrhea when the intestinal infection is very heavy. In kangaroos it is a stomach parasite causing gastritis. *Strongyloides papillosus* may be associated with the introduction of organisms into the skin of the feet, causing footrot.

strongylosis [stron"jə-lo'sis] infestation of horses with large strongyles (*Strongylus edentatus*, *S. equinus* and *S. vulgaris*), *Triodontophorus* spp., *Oesophagodontus* spp. and some members of the genera *Cyclostephanus*, *Cyathostomum*, *Cylicocyclus*, and the genera *Cylicodontophorus*, *Cylindropharynx*, *Gyalocephalus* and *Poteriostomum*. *S. vulgaris* sucks blood and also causes verminous arteritis and thromboembolic colic. The other *Strongylus* spp. and the *Triodontophorus* spp. cause anemia and debility. The small strongyles can cause severe enteritis and diarrhea. Called also redworm infestation.

Strongylus [stron'jə-ləs] a genus of roundworms in the family Strongylidae. Called also redworm. See also **strongylosis**.
S. asini found in the large intestine of the ass and wild equids.
S. edentatus found in the large intestine of horses.
S. equinus found in the cecum and colon of equids.
S. tremletti found in the rhinoceros.
S. vulgaris found in the large intestine of equids; larval stages are found in the anterior mesenteric and other arteries.

strontium (Sr) [stron'she-əm] a chemical element, atomic number 38, atomic weight 87.62. See Table 4.
s.-90 is deposited in bones and removed with great difficulty. It has a very long half-life (28.1 years) and if sufficient is ingested it will have the same toxic and teratogenic effects as external irradiation. S-90 plates are used in the treatment of superficial squamous cell carcinomas involving the eye.
s. chloride experimental feeding to pigs causes gross bone abnormality and weakness and paralysis.

strophanthin, K-strophanthin a cardiac glycoside, obtained from the plant *Strophanthus kombé*. Has actions similar to ouabain, which is obtained from *S. gratus*, and scillerin A, obtained from *Drimia maritima*.

Strophanthus [stro-fan'thəs] an African plant genus in the family Apocynaceae; contain cardiac glycosides, e.g. ouabain, strophanthin; are highly poisonous. Includes *S. gratus*, *S. kombé*.

struck [struk] an acute, highly fatal enterotoxemia of sheep caused by type C *Clostridium perfringens*. At post mortem there is peritonitis and myositis. Called also Romney Marsh disease.

structural [struk'chər-əl] pertaining to structure, the components and their arrangement in constituting a whole unit.

struma [stroo'mə] enlargement of the thyroid gland; goiter.

strumectomy [stroo-mek'tə-me] excision of a goiter.

strumitis [stroo-mi'tis] thyroiditis.

struvite [stroo'vīt] magnesium–ammonium–phosphate hexahydrate. See also **urolith**.
s. calculi see struvite **uroliths**.
s. crystalluria a normal finding in cats but large numbers of crystals and, rarely, calculi are found in **feline** lower urinary tract disease, contributing to obstruction of the urinary tract.

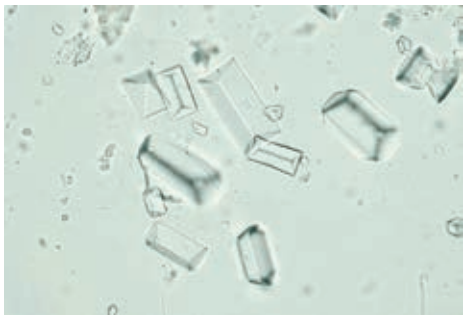
strychnine [strik'nīn] a very poisonous indole alkaloid from seeds of the plant *Strychnos nux-vomica* and other *Strychnos spp.* A commonly used compound in malicious poisoning of dogs and used as a feral animal bait to which domestic dogs find access. The dogs may also be poisoned by eating the vermin. Clinical findings include tetanic convulsions especially in response to external stimuli.

strychnine bush ***Strychnos lucida***.

Strychnos [strik'nos] a genus of tropical plant species in the family Loganiaceae; they contain strychnine or strychnine-like indole alkaloids including brucine, strychninine and lucidine and are therefore potentially poisonous. Includes *S. lucida*, *S. nux-vomica*, *S. psilospermia*, *S. toxifera* (a source of curare).

Stryker saw a power saw designed to cut plaster casts without cutting the patient. Has a unique oscillating action.

Stryphnodendron South American plant genus in the family Mimosaceae; probably contains tannins which cause hepatitis, nephrosis, diarrhea, photosensitivity. Includes *S. adstringens (S. barbadetimam)*, *S. coriaceum S. obovatum*.



S-82: Struvite crystals in urine sediment.
From Raskin RE, Meyer D, Atlas of Canine and Feline Cytology. Saunders, 2001.

STT Schirmer tear test.

Stuart's carrier medium a special transport medium for bacteria, especially *Campylobacter* spp.

Stuart factor, Stuart–Prower factor factor X, one of the blood **clotting** factors. An inherited deficiency occurs in Cocker spaniels, Jack Russell terriers and cats; causing bleeding tendencies, severe in neonatal puppies and mild in adults.

Stuart–Schwan cocci gram-positive cocci, one of the bacteria found in bovine summer mastitis.

stud 1. purebred. 2. a place, usually a farm, at which purebred animals are maintained and reproduced.
s. animal an animal registered in a stud book.
s. book the register in which the names and parentage of all of the animals that constitute the breed are kept.
s. breeder person conducting a business of a stud herd, flock, kennel, cattery etc.
s. crud see **cannon keratosis**.
double s. term used in the sheep industry; said of the best lines of rams.
s. farm a farm maintained for the purpose of breeding more stud animals.
s. herd a herd composed of purebred animals and used for producing more purebred animals.
s. tail hyperplasia of the sebaceous glands of the dorsum of the tail in sexually active male cats complicated by inflammation and orthokeratotic hyperkeratosis.
top s. the best sheep in the stud.

study [stud'e] a scholarly examination. Specific types of study are also detailed under **blind**, **case**-control, **cohort**, **cross-sectional**.
analytical s. one in which a phenomenon is described and an attempt made to analyze the effects of variables on the phenomenon.
descriptive s. one in which a phenomenon is described but no attempt is made to analyze the effects of variables on the phenomenon.
follow-up s. one carried out to find out whether there has been change in the situation since the initial study.
longitudinal s. one carried out over a period of time so that chronological time has an opportunity to exert an effect as a variable.
observational s. see descriptive study (above).
prospective s. one in which the data to be studied are yet to be generated, the events having not yet occurred. The design for establishing relationships between the outcome of interest and exposure variables.
retrospective s. one based on examination of existing data, on events that have already occurred. Allows the formulation of

S-83: Convulsions in a strychnine-poisoned pig.

VetBooks.ir

ideas and preliminary measures of associations and investigation of the effect of an exposure on an outcome.

simulation s. one in which the real circumstances are simulated, either in fact, or by means of a set of mathematical formulae each of which expresses the probability of each outcome in a series of consequential events that mirror the possible pathways in a real-life situation.

stumbling an abnormal gait in which the animal does not fully extend the limb, the plantar surface is not properly placed with respect to the ground surface at the time of impact so that the limb is likely to collapse and the animal to fall.

stump [*stump*] the distal end of a limb, tail or organ, e.g. uterine stump, left after amputation of the limb or organ.

stump sucker see **crib**-biting.

stumped-up toe the toe of a horse's hoof that has been severely rasped back to make it coincide with a shoe that has been set too far back. A major fault in shoeing.

stumpy generally refers to a very short tail, as found in **Stumpy-tail cattle dog**; also a variety of **Manx** cat with a mobile, often deformed, tail.

Stumpy-tail cattle dog a medium-sized dog with pricked ears and short coat, except around the neck where it forms a ruff. It can be blue, blue mottled, or red speckled with solid colored patches. The tail is naturally short.

stunner device used in abattoirs to stun an animal so that it is unconscious when it is bled out.

concussion s. a captive-bolt, nonpenetrating device, activated by a standard bullet. The explosion drives a mushroom-shaped head out of the handheld pistol which has been placed against the animal's forehead. Has the same effect as a hammer blow but is less subject to error or danger.

electrical s. the passage of a low voltage electrical current through the brain to cause unconsciousness. The current is passed through a pair of tongs clamped to the head like a pair of earphones. Used mostly for pigs and poultry but also for lambs and calves. The tongs should be applied for at least 10 seconds and the amperage not less than 250 milliamperes and the voltage not less than 75 volts. See also **stunning**.

penetrating captive-bolt s. the bolt that is driven out of the pistol (see concussion stunner above) is a 0.5 inch diameter rod which penetrates the skull bones and lacerates the brain.

pneumatic s. a penetrating captive-bolt unit (see above) in which the power is compressed air. Has problems when the compressor is not functioning.

stunning [*stun'ing*] producing unconsciousness by a blow. See **stunner**. Various methods are used including a hammer blow, free bullet using a number of different projectiles, immersion of the head in carbon dioxide gas, electric shock, all of them aiming to allow the animal to bleed out while it is still alive. An animal that is dead before it has bled out will be unsuitable for marketing.

stunted chick disease see **infectious** stunting syndrome.

stunting/runting syndrome see **infectious** stunting syndrome.

stupe [*stōōp*] a hot, wet cloth or sponge, charged with a medication for external application.

stupefacient [*stoo"pə-fa'shənt*] 1. inducing stupor. 2. an agent that induces stupor.

stupefactive [*stoo"pə-fak'tiv*] producing narcosis or stupor.

stupor [*stoo'pər*] decreased level of consciousness with lack of response to all except noxious stimuli.

sturdy [*stur'de*] neurological disease in sheep caused by the pressure of a *Taenia multiceps* metacestode. Called also gid.

sturgeon fish of the family Acipenseridae. Valued for their flesh and the production of caviar.

Sturges' rule a guide as to the number of categories into which a set of data should be divided for analysis or presentation:

$$\text{number of categories} = 1 + 3.3 \log N$$

where N = number of individuals in collected data.

Stuttgart casting a complicated technique for casting a horse which utilizes three ropes, a surcingle and two hobbles.

Stuttgart disease canine **leptospirosis**.

stye see external **hordeolum**.

styfziekte [Af.] another of the many colloquial names used to describe **osteomalacia** due to aphosphorosis.

style [*stīl*] a term used in subjective appraisal of wool; combines brightness, density, character, dust penetration and tip shape.

stylet [*sti'lət*] 1. a wire run through a catheter or cannula to render it stiff or to remove debris from its lumen. 2. a slender probe.

stylo see ***Stylosanthes***.

styl(o)- word element. [L., Gr.] *stake, pole, styloid process of the temporal bone.*

stylohyoid [*sti"lo-hi'oid*] pertaining to the styloid process and hyoid bone or to the stylohyoid bone. See **stylohyoideum**.

stylohyoideum the stylohyoid bone, the largest element of the hyoid apparatus, a paired bone (one on each side) that articulates with the cartilaginous tympanohyoid dorsocaudally and the epihyoid rostroventrally.

styloid [*sti'loid*] long and pointed, like a pen or stylus.

s. process 1. a pen-like process, as found at the distal end of the radius and the ulna, or of the auricular cartilage. 2. a small blunt cartilaginous process at the base of the petrous temporal bone.

styloiditis [*sti"loi-di'tis*] inflammation of tissues around the styloid process.

stylomastoid [*sti"lo-mas'toid*] pertaining to the styloid and mastoid processes of the temporal bone.

stylomaxillary [*sti"lo-mak'sĭ-lar"e*] pertaining to the styloid process of the temporal bone and the maxilla.

stylopodium [*sti"lo-po'de-əm*] segment of a limb corresponding to the arm or thigh.

Stylosanthes a perennial legume genus in the plant family Fabaceae; adapted to grow in many environments. An alternative to lucerne (alfalfa) in tough environments. Includes *S. humilis* (Townsville stylo). Called also stylo, Brazilian lucerne.

stylus 1. a stylet. 2. a pencil or stick, as of caustic.

Stypandra glauca Australian member of the plant family Liliaceae; contains stypandrol which causes retinal degeneration, degeneration of optic nerves followed by blindness, incoordination, posterior paresis. Called also *S. grandiflora, S. imbricata*, blind grass or candyup poison.

stypandrol neurotoxic naphthaquinone plant toxin found in *Dianella, Hemerocallis, Stypandra* spp.

stype a tampon or pledget of cotton.

stypsis [*stip'sis*] 1. astringency; astringent action. 2. use of styptics.

styptic [*stip'tik*] 1. arresting hemorrhage by means of an astringent quality. 2. a markedly astringent remedy. A chemical styptic works by causing the formation of a blood clot by chemical action. A vascular styptic checks bleeding by causing the blood vessels to contract. A mechanical styptic assists clotting by mechanical means—for example, paper or cotton applied to a slight cut.

Stypven time [*stip'vən*] see **Russell's viper venom** time.

stywesiekte [Af.] 'stiff sickness', a pyrrolizidine toxicosis in livestock caused by *Crotalaria burkeana, C. barkae, C. steudneri*; characterized by painful hoof lesions.

sub- word element. [L.] *under, less than.*

subacromial [*sub"ə-kro'me-əl*] below the acromion.

subacute [*sub"ə-kūt'*] somewhat acute; between acute and chronic; of the order of a week's duration.

subalimentation [*sub"al-ĭ-mən-ta'shən*] insufficient nourishment.

subaortic, subaortal [*sub"a-or'tik*] below the aorta.

s. septal defect ventricular septal defect in the pars membranaceae of, and high up in, the septum.

s. stenosis see **aortic** subvalvular stenosis.

subaponeurotic [*sub"ap-o-n-rot'ik*] below an aponeurosis.

subarachnoid [*sub"ə-rak'noid*] between the arachnoid and the pia mater.

s. block see subarachnoid **block**.

subareolar [*sub"ə-re'ə-lər*] beneath the areola of the nipple.

subastragalar [*sub"as-trag'ə-lər*] below the astragalus (talus).

subastringent [*sub"ə-strin'jənt*] moderately astringent.

subaural [*səb-aw'rəl*] below the ear.

subcapsular [*səb-kap'su-lər*] below a capsule.

subcartilaginous [*sub"kahr-tĭ-laj'ĭ-nəs*] 1. below a cartilage. 2. partly cartilaginous.

subcellular organelles discrete, functioning structures within cells, e.g. mitochondria, nucleus, Golgi apparatus and lysosomes.

subcephalic pocket a transverse furrow beneath the rostral margin of the forebrain.

subchondral [*səb-kon'drəl*] below the cartilage.

s. bone providing support for the cartilage of the articular surface.

VetBooks.ir

s. cysts cysts in the subchondral bone, usually an indication of osteochondrosis.

subclass [*sub'klas*] a taxonomic category subordinate to a class and superior to an order.

subclavian [*səb-kla've-ən*] literally means under the clavicle.

subclinical [*səb-klin'ĭ-kəl*] without clinical manifestations; said of the early stages or a very mild form of a disease, e.g. subclinical disease, infection, parasitism, or when a disease is detectable by clinicopathological tests but not by a clinical examination.

subcloning a restriction fragment of an original DNA that has been cloned may be further digested with another restriction enzyme and the smaller fragments cloned.

subconjunctival [*sub"kən-jənk-ti'vəl*] pertaining to the zone beneath the conjunctiva, e.g. subconjunctival hemorrhage, subconjunctival infection.

subcoracoid [*səb-kor'ə-koid*] situated under the coracoid or coracoid process.

subcorneal [*səb-kor'ne-əl*] beneath the stratum corneum.

subcortex [*səb-kor'təks*] the brain substance underlying the cortex.

subcostal [*səb-kos'təl*] deep to a rib or ribs.

subcranial [*səb-kra'ne-əl*] below the cranium.

subcrepitant [*səb-krep'ĭ-tənt*] somewhat crepitant in nature; said of a rale.

subculture [*sub'kəl-chər*] a culture of microorganisms derived from another culture.

subcutaneous [*sub"ku-ta'ne-əs*] beneath the layers of the skin.

s. abscess the commonest site of an abscess; causes local pain and swelling and a positive indication is obtained by needle puncture.

s. edema accumulation of edema in subcutaneous tissues, usually of the dependent parts. If extensive referred to as anasarca. See also **edema**.

s. fat necrosis manifested by many inert, painless lumps in the subcutis, is inherited in cattle.

s. hemorrhage the accumulation of blood in a subcutaneous site such as occurs in purpura hemorrhagica.

s. tissue the layer of loose connective tissue directly under the skin.

subcuticular [*sub"ku-tik'u-lər*] below the epidermis.

subcutis [*səb-ku'tis*] the subcutaneous tissue.

hoof s. the connective tissue layer which attaches the dermis to the deeper structures of the hoof. Is thin in most places but thick in the coronary and digital cushions.

subdiaphragmatic [*sub"di-ə-frag-mat'ik*] caudal to the diaphragm.

subduct [*səb-dukt'*] to draw down or deviate downwards; see . **infraversion** (1).

subdural [*səb-doo'rəl*] between the dura mater and the arachnoid.

s. abscess usually extensions from paranasal sinuses, e.g. in cattle after dehorning; localizing signs, head rotation, depending on location and volume of space occupied.

subendocardial [*sub"ən-do-kahr'de-əl*] beneath the endocardium.

s. coat layer of loose connective tissue beneath the endocarium.

s. fibrosis may be present at birth or acquired as a result of prolonged dilatation or as a result of persistent local turbulence as in the jet lesions caused by leaking cardiac valves.

s. mineralization may accompany subendocardial fibrosis or muscular degeneration or in association with persistent hypercalcemia or uremia.

subendothelial [*sub"ən-do-the'le-əl*] beneath an endothelial layer.

s. coat a layer of connective tissue and fibroblasts beneath the endothelium of blood vessels and the heart.

s. space potential connective tissue space beneath the endothelium of blood vessels and the heart.

subepidermal [*sub"ep-ĭ-der'məl*] beneath the epidermis.

subepiglottic [*sub"ep-ĭ-glot'ik*] see **pharyngeal**.

s. cyst in adult horses cause decreased exercise tolerance, respiratory stridor, choking.

subepithelial [*sub"ep-ĭ-the'le-əl*] beneath the epithelium.

subestrus a very weak display of estral signs. See also silent **estrus**.

subfamily [*səb'fam-ĭ-le*] a taxonomic division sometimes established, subordinate to a family and superior to a tribe.

subfascial [*səb-fash'əl*] beneath a fascia.

subfebrile marginally febrile.

subfertility [*sub"fər-til'ĭ-te*] marginal fertility.

subgallate a reduced salt of gallic acid, which is a hydrolysis product of tannins extracted from nutgalls or the spent broths of some antibiotic-producing fungal cultures. It is used as a styptic, intestinal astringent, and as a topical astringent in diseases of the skin. See also **bismuth** subgallate.

subgenus [*səb'je-nəs*] a taxonomic category sometimes established where the number of specimens is large, but not generally used; subordinate to a genus and superior to a species.

subgingival [*səb-jin'jĭ-vəl*] beneath the free margin of gingival tissue.

s. resorptive lesion commonly occur in cats, these may involve the pulp cavity. Affected teeth may become weak and fracture.

subglenoid [*səb-gle'noid*] beneath the glenoid (mandibular) fossa.

subglossal [*səb-glos'əl*] below the tongue.

subglottic [*səb-glot'ik*] below the glottis.

s. stenosis see **laryngeal** stenosis.

subgrondation [*sub"gron-da'shən*] depression of one fragment of bone beneath another.

subhepatic [*sub"hə-pat'ik*] below the liver.

subhyoid [*sub-hi'oid*] below or caudal to the hyoid bone.

subiculum [*sə-bik'u-ləm*] an underlying or supporting structure.

subiliac [*səb-il'e-ak*] below the ilium.

subilium [*səb-il'e-əm*] the lowest portion of the ilium.

subinfertility reduced fertility.

subinvolution [*sub"in-vo-loo'shən*] incomplete involution; failure of a part to return to its normal size and condition after enlargement from functional activity.

s. of placental sites failure of involution of the sites of placental attachment in a postpartum bitch causes persistent intrauterine bleeding and may result in death due to blood loss or uterine perforation.

subjacent [*səb-ja'sənt*] located below.

subject [*səb-jekt'*] an animal subjected to treatment, observation or experiment.

s. contrast the difference in relative densities within the subject as distinct from the differences between the subject and the surroundings.

subjective [*səb-jek'tiv*] perceived only by one examiner and not necessarily by any other examiner.

subjugal [*səb-joo'gəl*] below the zygomatic bone.

sublatio retinae detachment of the retina. See retinal **detachment**.

sublesional [*səb-le'zhən-əl*] performed or situated beneath a lesion.

sublethal [*səb-le'thəl*] insufficient to cause death.

sublimate [*sub'lĭ-māt*] 1. a substance obtained by sublimation. 2. to accomplish sublimation.

sublimation [*sub"lĭ-ma'shən*] the conversion of a solid directly into the gaseous state.

sublingual [*səb-ling'gwəl*] beneath the tongue.

s. gland a salivary gland on either side under the tongue.

sublinguitis [*sub"ling-gwi'tis*] inflammation of the sublingual gland.

sublobular veins [*səb-lob'u-lər*] veins which merge to form hepatic veins which receive tributaries from the central veins of liver lobules.

subluxate [*səb-luk'sāt*] to partially dislocate.

subluxation [*sub"lək-sa'shən*] a partial dislocation. In the terminology of chiropractic, an abnormal positional relationship between contiguous vertebrae resulting in abnormal biochemical and neurological function.

angle of s. in the Ortolani maneuver, the point at which the hip luxates. See also angle of **reduction**.

submandibular [*sub"man-dib'u-lər*] below the mandible.

s. salivary glands see **salivary gland**.

s. swelling the swelling may be soft as in edema or hard and painful as in grass seed abscess, or lymphadenitis or inflammation of salivary glands. The accumulation of edema fluid is characteristic of grazing animals or those eating off the ground. Cows eating from a manger will not be affected. Called also bottle jaw.

submaxilla [*sub"mak-sil'ə*] the mandible.

submaxillaritis [*səb-mak"sĭ-lər-i'tis*] inflammation of the submaxillary gland.

submaxillary [*səb-mak"sĭ-lar'e*] below, caudal or ventral to the maxilla.

s. gland the mandibular salivary gland.

submental [*səb-men'təl*] below the chin.

s. organ a collection of large sebaceous glands located on the chin of cats.

submersion [*səb-mur'zhən*] the act of placing, or the condition of being under, the surface of a liquid.

VetBooks.ir

S-84: Submandibular abscess in a cow. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

submetacentric [*sub"met-ə-sen'trik*] having the centromere almost, but not quite, at the metacentric position.
submicroscopic [*səb-mi"kro-skop'ik*] too small to be visible with the microscope.
submission yielding; not offering resistance. See appeasement **behavior**.
s. rate percentage of cows in a herd which come on heat and which are mated during a specified period, usually a month; the difference, i.e. those which come on heat and are not mated, are the deferred mating group.
submucosa [*sub"mu-ko'sə*] connective tissue situated beneath a mucous membrane.
submucosal glands [*sub"mu-ko'səl*] glands of the lamina epithelialis mucosae which perforate the lamina muscularis, with their adenomeres located in the submucosal connective tissue.
submucous [*səb-mu'kəs*] beneath a mucous membrane.
subnarcotic [*sub"nahr-kot'ik*] moderately narcotic.
subneural [*səb-n'rəl*] beneath a nerve.
subnormal [*səb-nor'məl*] below or less than normal.
subnormality [*sub"nor-mal'ĭ-te*] a state less than normal or that usually encountered.
suboccipital [*sub"ok-sip'ĭ-təl*] below the occiput.
suborbital [*səb-or'bĭ-təl*] beneath the orbit.
suborder [*sub'or-dər*] a taxonomic category sometimes established, subordinate to an order and superior to a family.
subordinance see **dominance** aggression.
subpalpebral underneath the eyelid.
s. lavage see subpalpebral **lavage** tube.
subpapular indistinctly papular.
subpatellar [*sub"pə-tel'ər*] below the patella.
subpericardial [*sub"par-ĭ-kahr'de-əl*] beneath the pericardium.
subperiosteal [*sub"pər-e-os'te-əl*] beneath the periosteum.
subperitoneal [*sub"pər-ĭ-to-ne'əl*] beneath the peritoneum.
subpharyngeal [*sub"fə-rin'je-əl*] beneath the pharynx.
subphrenic [*səb-fren'ik*] beneath the diaphragm.
subphylum [*səb-fi'ləm*] pl. *subphyla* [L.] a taxonomic category sometimes established, subordinate to a phylum and superior to a class.
subpineal below the pineal body.
subplacenta [*sub"plə-sen'tə*] below the placenta.
subpleural [*səb-ploor'əl*] beneath the pleura.
subpreputial [*sub"pre-pu'shəl*] beneath the prepuce.
subpubic [*səb-pu'bik*] beneath the pubic bone.
subpulmonary [*səb-pool'mo-nar"e*] beneath the lung.
subretinal [*səb-ret'ĭ-nəl*] beneath the retina.
subscapular [*səb-skap'u-lər*] below the scapula.
subscription [*səb-skrip'shən*] the third chief part of a drug prescription, comprising directions to be followed by the pharmacist in its preparation.
subserous [*səb-sēr'əs*] beneath a serous membrane.
subsolar beneath the sole of the horse's hoof.
s. abscess usually a consequence of a nail prick causing lameness. See **foot** abscess.
subspecies [*sub'spe-sēz*] a subdivision of a species; a variety or race.
subspectacular pertaining to the region beneath the spectacle that covers the eye in snakes and ablepharine lizards which lack eyelids.
s. abscess accumulation of inflammatory cells in the subspectacular space, usually as a result of an ascending infection from the mouth via the lacrimal duct in individuals with stomatitis.
s. space tear-filled space between the cornea and spectacle.
substage [*sub'stāj*] the part of the microscope underneath the stage.
substance [*sub'stəns*] the material constituting an organ or body.
black s. substantia nigra.
controlled s. see **Controlled Substances Act**.
depressor s. a substance that tends to decrease activity or blood pressure.
gray s. nerve tissue composed of predominantly nerve cell bodies, unmyelinated nerve fibers, and supporting tissue. See also **gray matter**.
ground s. the gel-like material in which connective tissue cells and fibers are embedded.
medullary s. 1. the white matter of the central nervous system, consisting of axons and their myelin sheaths. 2. the soft, marrow-like substance of the interior of such structures as bone, kidney and adrenal gland.
s. P an undecapeptide present in the intestine, where it induces contraction of the intestine and dilatation of blood vessels; it is also present in a number of neuronal pathways in the brain and in primary sensory fibers of peripheral nerves, and may be a neurotransmitter associated with transmission of pain impulses.
perforated s. 1. *anterior perforated substance*, an area anterolateral to each optic tract, pierced by branches of the anterior and middle cerebral arteries. 2. *posterior perforated substance*, an area between the cerebral peduncles, pierced by branches of the posterior cerebral arteries.
pressor s. a substance that raises blood pressure.
reticular s. the netlike mass of threads seen in erythrocytes after vital staining.
slow-reacting s. see **slow-reacting substance**.
threshold s's those substances (e.g. glucose) excreted into the urine only when their concentration in plasma exceeds a certain value.
white s. tissue consisting mostly of myelinated nerve fibers and constituting the conducting portion of the brain and spinal cord; see also **white matter**.
substantia [*səb-stan'she-ə*] pl. *substantiae* [L.] substance.
s. alba the white matter of the spinal cord and the brain.
s. compacta compact bone.
s. gelatinosa the substance sheathing the posterior horn of the spinal cord and lining its central canal.
s. grisea the gray matter of the spinal cord and brain.
s. grisea centralis the central gray matter that surrounds the cerebral aqueduct.
s. nigra the layer of gray substance separating the tegmentum of the midbrain from the crus cerebri.
s. propria corneae layer of transparent lamellated fibrous connective tissue which constitutes the bulk of the cornea; composed of collagen fibers disposed in platelike formations, fibroblasts and ground substance with many nerve fibers but no blood vessels.
s. propria choroid loose connective tissue of the choroid.
substernal [*səb-stur'nəl*] behind the sternum.
substituent [*səb-stich'u-ənt*] 1. a substitute; especially an atom, radical, or group substituted for another in a compound. 2. of or pertaining to such an atom, radical or group.
substitution [*sub"stĭ-too'shən*] the act of putting one thing in the place of another, especially the chemical replacement of one atom or substituent group by another.
conservative s. in protein chemistry, one amino acid is substituted by another which has a similar polarity.
meat s. common in the meat industry in which uninspected meat is substituted for meat that has undergone inspection and been branded as satisfactory. The other fraud is the substitution of meat of another species, e.g. horse for beef, cat for chicken or rabbit.
non-conservative s. in protein chemistry, one amino acid is substituted by another which has a markedly different polarity.
substrate [*sub'strāt*] any substance upon which an enzyme acts.
s. binding site part of the active site of an enzyme which includes the amino acid residues that bind the substrate.
s. specificity the characteristic on an enzyme which causes it to bind to a substrate having a particular structure but not to other molecules with a similar, but not identical, structure.

VetBooks.ir

suicide s. see **suicide substrate**.
substructure [*sub'strək-chər*] the underlying or supporting portion of an organ or appliance.
subsylvian [*səb-sil've-ən*] situated deep in the lateral sulcus (sylvian fissure) of the brain.
subsynaptic web the web of filaments in the postsynaptic membrane, i.e. on the effector organ.
subtarsal [*səb-tahr'səl*] below the tarsus.
subtentorial [*səb"ten-to're-əl*] caudal to the tentorium of the cerebellum.
subthalamus [*səb-thal'ə-məs*] the ventral thalamus or subthalamic tegmental region: a transitional region of the diencephalon interposed between the (dorsal) thalamus, the hypothalamus, and the tegmentum of the mesencephalon (midbrain); it includes the subthalamic nucleus and the zona incerta, all with unknown functions.
subtle [*sut'əl*] 1. very fine, as a subtle powder. 2. very acute, as a subtle pain.
subtraction radiography [*sub-trak'shən*] highlighting the differences between two radiographs by covering one film of a part with a diapositive film of the same part. A photograph of this compilation will produce one which has grayed out the background but reinforced the differences. The method removes distracting material in the ordinary film. Used in angiography where the vessels are difficult to see, e.g. in the skull.
subtribe [*sub'trīb*] a taxonomic category sometimes established, subordinate to a tribe and superior to a genus.
Subtriquetra a genus of pentastomes in the family Porocephalidae found in fish (the nymphs) and crocodiles (the adults).
subtrochanteric [*sub"tro-kan-ter'ik*] below the trochanter of the femur.
subtympanic [*sub"tim-pan'ik*] somewhat tympanic in quality.
Subulura a genus of roundworms in the family Subuluridae.
S. brumpti occurs in the ceca of fowls, turkey, guinea fowl and related wild birds and has low pathogenicity.
S. differens occurs in fowls and guinea fowl.
S. minetti occurs in chickens.
S. strongylina found in chickens, guinea fowl and wild birds.
S. suctoria found in the ceca of chickens and wild birds.
subungual [*səb-ung'gwəl*] beneath a nail or claw.
subunit vaccine see subunit **vaccine**.
suburethral [*sub"u-re'thrəl*] beneath the urethra.
subvaginal [*səb-vaj'ĭ-nəl*] under a sheath, or below the vagina.
subvalvular [*səb-val'vu-lər*] below the heart valves.
s. aortic stenosis see **aortic** subvalvular stenosis.
subvertebral [*səb-vur'tə-brəl*] on the ventral side of the vertebrae.
subvirile [*səb- vir'il*] having deficient virility.
subvolution [*sub"vo-loo'shən*] the operation of turning over a flap to prevent adhesions.
succenturiate [*suk"sən-tu're-āt*] accessory; serving as a substitute.
succimer [*suk'sĭ-mər*] see **dimercaptosuccinic acid**.
Succinamonas amylolytica a common finding amongst the digestive bacteria in the rumen.
succinate [*suk'sĭ-nāt*] any salt of succinic acid.
s. dehydrogenase an enzyme of the TCA cycle, located in the inner mitochondrial membrane that splits off hydrogen from succinic acid producing fumarate and $FADH_2$. A component of Complex II (succinate-Coenzyme Q reductase) of the electron transport chain.
succinic acid [*sək-sin'ik*] a 5-carbon dicarboxylic acid, intermediate in the tricarboxylic acid cycle.
succinimides [*sək-sin'ĭ-mīd*] a group of anticonvulsant drugs that includes phensuximide, methsuximide and ethosuximide. Not widely used in animals.
Succinivibrio dextrinosolvens a bacterial digester of ruminal contents.
succinyl-CoA [*suk'sĭ-nəl*] succinic acid linked to Coenzyme A, a high energy intermediate metabolite formed in the Krebs cycle by the oxidation of α-ketoglutaric acid.
succinylcholine [*suk"sĭ-nəl-ko'lēn*] a short-acting depolarizing neuromuscular blocking agent used as a muscle relaxant. Called also suxamethonium.
s. bromide the pharmaceutical form of succinylcholine; can cause death by cardiac arrest in even healthy horses.
succinylsulfathiazole [*suk"sĭ-nəl-sul"fə-thi'ə-zōl*] a sulfonamide drug used for treatment of enteric infections because it is poorly absorbed and maintains high concentrations in the gut. Called also sulfasuxidine.
Succisa pratensis see ***Scabiosa succisa***.
succorrhea [*suk"o-re'ə*] excessive flow of a natural secretion.
succus pl. *succi* [L.] any fluid derived from living tissue; bodily secretion; juice.
s. entericus the secretion of the intestinal glands.
succussion [*sə-kush'ən*] shaking of the body or part of it to elicit a sound. A homeopathy term describing violent shaking (mixing) to increase the potency of a remedy.
s. sound a splashing sound elicited when a patient is shaken, indicative of fluid and air in a body cavity.
suck reflex [*suk*] see **sucking** reflex.
sucking the application of suction to an object by the mouth.
cross s. group-housed milk-fed calves will sometimes suck each other but this can be greatly reduced or eliminiated if calves consume their milk ration via free access to a teat.
s. drive instinctive enthusiasm of the neonate to suck on a teat, or any object which even remotely resembles a teat.
navel and prepuce s. occurs in group-reared calves fed milk-replacer.
s. order within a litter, piglets establish a sucking order by social interaction and fighting which results in each piglet generally sucking off the same teat and the larger birth weight piglets sucking the anterior teats on the udder as the anterior sections of the sow's udder give more milk than the posterior sections. Also the derivation for the term 'to be left sucking the hind teat'.
s. reflex sucking movements of the lips of newborn and unweaned animals elicited by placing a warm, fleshy mass in the animal's mouth.
suckler a young animal that is still drawing milk from its dam; a nursing female animal, usually a cow.
s. herd a herd of cattle composed of dams and their young calves up to the point of weaning.
Suckleya suckleyana North American member of the plant family Chenopodiaceae; can cause cyanide poisoning. Called also poison suckleya.
suckling the nursing of the young by the dam; the young animal so nursed.
multiple s. when a cow accepts more calves to suckle than her own; a system for foster-rearing of orphan or purchased calves.
sucralfate [*soo-kral'fāt*] a complex of aluminum hydroxide and sulfated sucrose used for short-term treatment of gastric ulceration; it forms a complex with proteins that resists digestion by acid and pepsin thereby making a protective coating for the ulcer.
sucrase [*soo'krās*] an intestinal enzyme that hydrolyzes sucrose. It is not present in newborn animals so that they are unable to digest sucrose and feeding of the sugar will cause severe, osmotic diarrhea. Sucrase activity in the intestine increases as the need for, and secretion of, lactase decreases with age.
sucrose [*soo'krōs*] a sugar obtained from sugar cane, sugar beet, or other sources; used as a food and sweetening agent. Digestion is by sucrase secreted in the succus entericus. The feeding of large amounts to newborn and very young animals will cause osmotic diarrhea because of failure to hydrolyze the sugar. Overfeeding of ruminants with sucrose, or molasses, its crude form, causes carbohydrate engorgement.
suction [*suk'shən*] aspiration of gas or fluid by mechanical means.
post-tussive s. a sucking sound heard over a lung cavity just after a cough.
s. tip sterilizable metal, handheld instrument, used for suction by inserting into the end of a suction tube. Has an angled neck for reaching into difficult pockets and a small bulb on the end with many holes in it to permit placing it on tissue without obstructing the suction. Called also Yankauer tip.
suctioning removal of material through the use of negative pressure, as in suctioning an operative wound during and after surgery to remove exudates.
suctorial [*sək-tor'e-əl*] adapted for sucking.
sudamen [*soo-da'mən*] pl. *sudamina* [L.] a small whitish vesicle caused by retention of sweat in the layers of the epidermis.
Sudan [*soo-dan'*] a group of lipophilic azo compounds used as biological stains for fats, e.g. Sudan III, Sudan IV.
S. stain test a useful screening test for steatorrhea. Feces mixed with Sudan III or Sudan IV stain are examined microscopically

VetBooks.ir

for detection of undigested (direct test) or digested (indirect test) fats that appear as red-stained globules.

Sudan grass [soo-dan'] ***Sorghum*** x *drummondii*.

Sudanese Fulani cattle West African, lyre-horned, milking cattle, usually light gray.

sudanophilia [soo-dan"o-fil'e-ə] 1. affinity for a Sudan stain. 2. a condition in which the leukocytes contain particles staining readily with Sudan red III.

sudanophilic [soo-dan"o-fil'ik] staining readily with Sudan III.

s. granules see **sudanophilia** (2).

sudation [soo-da'shən] the process of sweating.

Sudax a Sudan grass hybrid with substantially less cyanogenetic glycoside content than the parent plant but still capable, in extreme circumstances, of causing cyanide poisoning.

sudden death a category of illness in which animals which are under frequent observation die either with no obvious illness or after a period of illness lasting only a few hours. Typical causes are spontaneous internal hemorrhage, trauma causing shock or blood loss, rupture of the gut, cardiac tamponade, trauma to brain or spinal cord at the occipitoatlantal joint, intravenous injection of inappropriate solution or given too rapidly causing cardiac arrest or pulmonary edema, anaphylactic shock. In large animals, examples are group deaths due to electrocution, lightning injury, many poisons especially cyanide, algal fast death factor, so-called Wimmera ryegrass poisoning, fluoroacetate and oleander. Monensin causes acute heart failure in horses. Septicemia due to anthrax, toxemia due to *Clostridium perfringens* type D and colibacillosis can cause peracute deaths but signs are evident in animals kept under surveillance. In feedlot cattle, sudden death may occur following the acclimatization phase of feeding and presents as death without premonitory signs of illness or agonal struggling. The cause is unknown. Postmortem examination shows no evidence of the common diseases that cause rapid death in feedlot cattle. In chickens, a syndrome of sudden death is recognized in broiler chickens. See **acute** death syndrome of chickens. Animals that are 'found dead' are in a different category to sudden death and have a much wider range of possible causes.

s. d. factors see **anatoxin**.

sudomotor [soo"do-mo'tər] stimulating the sweat glands.

sudor sweat; perspiration.

sudoral characterized by profuse sweating.

sudoresis [soo"do-re'sis] profuse sweating.

sudoriferous [soo"do-rif'ər-əs] 1. conveying sweat. 2. sudoriparous.

s. glands sweat glands.

sudorific [soo"də-rif'ik] 1. promoting sweating; diaphoretic. 2. an agent that causes sweating.

sudoriparous [soo"do-rip'ə-rəs] secreting or producing sweat.

suet [soo'ət] hard, raw fat from a beef carcass sold for cooking. See also adipose renal **capsule**.

sufentanil [soo-fen'tə-nil] an opioid analgesic, related to fentanyl.

suffocation [suf"ə-ka'shən] the stoppage of breathing, or the asphyxia that results from it. If suffocation is complete—that is, no air at all reaches the lungs—the lack of oxygen and excess of carbon dioxide in the blood will cause almost immediate loss of consciousness. Though the heart continues to beat briefly, death will follow in a matter of minutes unless emergency measures are taken to get breathing started again. Suffocation can be caused by drowning, electric shock, gas or smoke poisoning, strangulation, or choking on a foreign body in the trachea. That suffocation is occurring in an animal may not be obvious. Signs that suggest obstruction to the air passage, e.g. in acute pulmonary edema, are gasping dyspnea with mouth breathing, frantic demented activity including aggression, especially in horses, terminally violent convulsions and asphyxial respiratory failure.

Suffolk horse a compact, neat, heavy English draft-horse. Chestnut only, 16–16.2 hands high, limbs almost devoid of feather. Called also Suffolk Punch.

Suffolk Punch see **Suffolk horse**.

Suffolk sheep an English **Downs**-type breed of short-woolled, meat sheep with a black, woolless head and distinctive Roman nose; polled, black legs. Genetic susceptibility to scrapie is more common in this breed than in other breeds. Origin of **White Suffolk**, **South Suffolk**.

suffusion [sə-fu'zhən] 1. the process of overspreading, or diffusion. 2. the condition of being moistened or permeated through.

S-85: Suffolk meat sheep.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

sugar [shoog'ər] a sweet carbohydrate of both animal and vegetable origin, the two principal groups of which are the disaccharides and the monosaccharides. Unless qualified, e.g. fruit sugar, milk sugar, usually refers to sucrose.

s. beet see ***Beta*** *vulgaris*.

s. beet pulp see **beet** pulp.

blood s. blood glucose.

s. cane *Saccharum officinaruym*, a grass in the plant family Poaceae; as such is not fed, but molasses and the pith, bagasse, are fed (Camola is a feed composed of 4 parts pith and 10 parts molasses). When infected by the fungus *Arthrinium* spp., can produce toxic nitro compounds. Sugar cane may contain sufficient cyanogenetic glycoside to cause poisoning if the appropriate enzyme is also supplied.

s. fecal centrifugation using Sheather's solution; standard procedure for examination of feces for parasite eggs.

s. gum ***Eucalyptus*** *cladoclayx*.

invert s. a sugar obtained by hydrolyzing sucrose; a mixture of glucose and fructose. Called invert sugar because sucrose is dextrorotary—the mixture is levorotary. Used as a parenteral nutrient. Called also invertose.

s. of lead lead acetate, used in the preparation of white lotion. Occurs naturally on weathered paintwork and is attractive and poisonous to animals.

s. of milk see **lactose**.

sugillation [sug"ji-la'shən] ecchymosis.

suicide substrate [soo'ī-sīd] a compound that is not of itself toxic to a cell, but which resembles a normal metabolite closely enough that it undergoes metabolic transformation to a product that does inhibit a crucial enzyme, e.g. fluoroacetate. A substrate-analog that binds irreversibly to amino acids, usually the catalytic amino acid, thereby blocking the active site of the enzyme to other molecules and effectively 'killing' the enzyme.

suid [soo'id] a member of the family Suidae.

Suidasia nesbitti a grain mite in the family Acaridae which causes wheat pollard itch.

Suidae the family of pigs; includes pigs (wild and domestic), hogs, bushpigs, warthogs and babirusas.

Suifilaria a genus of filarioid worms in the family Filariidae.

S. suis found in the intermuscular and subcutaneous connective tissue of pigs and cause no problems other than the physical presence of the worms in the meat.

suiform pig-like.

suint [swint] the water-soluble fraction of wool yolk.

Suipoxvirus [soo'ī-poks"vi'rəs] a genus in the order *Poxvirales*, family ***Poxviridae***. The cause of **swinepox**.

suipoxvirus [soo'ī-poks"vi'rəs] a poxvirus in the genus *Suipoxvirus*, family *Poxviridae*.

sulbactam [səl-bak'təm] an irreversible β-lactamase inhibitor which increases the activity of β-lactam antibiotics. Commonly used in combination with ampicillin and occasionally with cephalosporins.

sulcate [sul'kāt] furrowed; marked with sulci.

sulcular pertaining to a sulcus.

s. epithelium the lining of the gingival sulcus.

s. lavage flushing of debris from the gingival crevice. Usually part of dental prophylaxis.

sulcus [sul'kəs] pl. *sulci* [L.] a groove or furrow; a linear depression, especially one separating the gyri of the brain.

abomasal s. the third or abomasal part of the gastric **groove**.

VetBooks.ir

alar s. lies between the dorsolateral cartilage at the nostril and the lateral accessory cartilage.
calcarine s. see **calcarine** sulcus.
central s. see Rolando's **fissure**.
collateral s. see collateral **fissure**.
coronal s. a groove at the top of the hoof wall that houses the coronal matrix.
coronary s. an external groove which indicates the division between the ventricles of the heart and the atria. Houses the circumflex coronary blood vessels of the heart.
cruciate s. a deep groove which runs transversely across the rostro-dorsal surface of the cerebrum and which is one of the landmarks on the cerebral cortex.
s. cutis fine depressions of the skin between the ridges of the skin.
dorsal median s. see dorsal median **fissure**.
gingival s. the groove between the surface of the tooth and the epithelium lining the free gingiva.
hippocampal s. hippocampal fissure.
jugular s. see **jugular** furrow.
lateral cerebral s. see sylvian **fissure**.
s. limitans a longitudinal groove in the neural tube wall of the embryo that is retained in the lateral wall of the fourth ventricle between the medial eminence and the rest of the rhomboid fossa.
omasal s. the second part of the gastric **groove** in ruminants.
reticular s. the first part of the gastric groove in ruminants.
rhinal s. a deep groove which separates the neopallium from the paleopallium on the lateral surface of the brain.
rumenoreticular s. a groove on the external surface of the forestomachs that marks the division between the rumen and reticulum.
scleral s. the groove between the sclera and cornea.
sylvian s. a landmark groove on the lateral side of the cerebral cortex.
urethral s. the furrow in the ventral aspect of the corpus cavernosum of the penis that accommodates the corpus cavernosum urethrae and the urethra.

sulfa drugs [*sul'fə*] a group of chemical compounds used as antibacterial agents; called also sulfonamides.
sulfabenzamide [*sul"fə-ben'zə-mīd*] a sulfonamide antibiotic, similar to sulfamethoxazole.
sulfabrom, sulfabromomethazine a derivative of sulfamezathine which maintains blood concentrations for long periods, up to 48 hours in cattle.
sulfachlorpyrazine [*sul"fə-klor"pir-id'ə-zēn*] an intermediate-acting sulfonamide, used as the soluble sodium salt in drinking water as a systemic antibacterial in chickens. It is absorbed rapidly from the gut.
sulfachlorpyridazine a sulfonamide antibacterial remedy used in pigs and calves. It is most effective against gram-negative bacteria including *Escherichia coli* and *Salmonella* spp., but is limited in its usefulness because of its rapid absorption and excretion.
sulfadiazine [*sul"fə-di'ə-zēn*] a rapidly absorbed and readily excreted sulfonamide antibacterial agent. The sodium salt is used intravenously.
silver s. the silver salt of sulfadiazine, having bactericidal activity against many gram-positive and gram-negative organisms, as well as being effective against yeasts; used as a topical anti-infective for the prevention and treatment of wound sepsis in patients with second and third degree burns.
sodium s. an antibacterial compound used intravenously.
s.–trimethoprim a very popular combination of a potentiated sulfonamide because of its broad antibacterial spectrum and its small dose rate.
sulfadimethoxine [*sul"fə-di"mə-thok'sēn*] a long-acting derivative of sulfadiazine.
sulfadimidine [*sul"fə-di'mĭ-dēn*] sulfamethazine.
sulfadoxine [*sul"fə-dok'sēn*] a long-acting sulfonamide. Called also sulformethoxine.
sulfafurazole [*sul"fə-fu'rə-zōl*] a sulfonamide antibacterial compound used orally, topically and parenterally, in infections of the urinary and respiratory tracts and of soft tissues. Called also sulfisoxazole.
sulfaguanidine the first sulfonamide designed to treat enteric infections. It is poorly absorbed and retains high concentrations in the gut but a number of similar but superior drugs are now available.
sulfallate a thiocarbamate herbicide which is poisonous if taken in large amounts. Not poisonous if used according to instructions. Causes muscle spasms, ataxia, depression and, in chronic cases, alopecia. Called also CDEC.
sulfamerazine [*sul"fə-mer'ə-zēn*] a short-acting sulfonamide.
sulfameter a long-acting sulfonamide, used in urinary tract infections. Called also sulfamethoxydiazine.
sulfamethazine [*sul"fə-meth'ə-zēn*] a sulfonamide which is rapidly absorbed from the alimentary tract, slowly excreted and minimal precipitation in renal tubules. Used as an antibacterial and coccidiostat. Available also as a soluble sodium salt for injection. Called also sulfadimidine, sulfamezathine.
sulfamethizole [*sul"fə-meth'ĭ-zōl*] a short-acting sulfonamide used in urinary tract infections.
sulfamethoxazole [*sul"fə-məth-ok'sə-zōl*] an antibacterial sulfonamide, especially useful in acute urinary tract infections and in infections of wounds and soft tissues. Commonly combined with trimethoprim.
sulfamethoxydiazine sulfameter.
sulfamethoxypyridazine a long-acting sulfonamide that is rapidly absorbed but slowly excreted. Called also sulfapyridazine.
sulfamezathine sulfamethazine.
sulfamylon mafenide.
sulfanilamide [*sul"fə-nil'ə-mīd*] a potent antibacterial compound, the first of the sulfonamides, the first real antibacterial and the drug that opened the door into the antibiotic era.
sulfanilate [*səl-fan'ĭ-lāt*] used in clinical pathology, determination of clearance from the blood with blood samples collected at timed intervals after the intravenous injection of sodium sulfanilate is a sensitive test of renal insufficiency, particularly reduced glomerular filtration.
sulfanitran [*sul"fə-ni'tran*] a coccidiostat used in fowls.
sulfapyridine [*sul"fə-pir'ĭ-dēn*] one of the very early sulfonamides with significant toxicity. Now replaced by safer and more effective drugs.
sulfaquinoxaline [*sul"fə-kwin-ok'sə-lēn*] a coccidiostat which was used extensively in chickens but has been superseded.
sulfarsphenamine an organic arsenical which was once used as a systemic antibacterial agent but is now largely discarded.
sulfasalazine [*sul"fə-sal'ə-zēn*] a combination of sulfapyridine and salicylic acid, used in the treatment and prophylaxis of ulcerative colitis. Previously called salicylazosulfapyridine.
sulfasuxidine see **succinylsulfathiazole**.
sulfatase an enzyme that catalyzes the hydrolysis of sulfate esters.
sulfatases [*sul'fə-tās*] one of the more than 50 groups of hydrolases responsible for the digestive properties and defensive functions of lysosomes.
sulfate [*sul'fāt*] a salt of sulfuric acid.
s. conjugation an important in vivo mechanism for the detoxication of phenols and aliphatic alcohols.
high s. diets associated with increased prevalence of polioencephalomalacia in ruminants.
sulfathiazole [*sul"fə-thi'ə-zōl*] a short-acting sulfonamide used as the phthalyl and succinyl forms for enteric infections. See also **phthalylsulfathiazole** and **succinylsulfathiazole**.
sulfatide [*sul'fə-tīd*] any of a class of cerebroside sulfuric esters.
sulfatroxazole a sulfonamide antibacterial.
sulfhemoglobin [*sulf"he-mo-glo'bin*] a step in the pathway of degeneration of hemoglobin and the formation of Heinz bodies.
sulfhemoglobinemia [*sulf"he-mo-glo"bin-e'me-ə*] high concentration of sulfhemoglobin in the blood.
sulfhydryl [*səlf-hi'drəl*] the univalent radical, −SH.
s. compounds compounds which contain sulfhydryl groups, principally the sulfur-containing amino acids. Used as radioprotective agents.
sulfide [*sul'fīd*] any binary compound of sulfur; a compound of sulfur with another element or base.
sulfiding superficial black pigmentation in meat carcasses, especially pigs, in which, either because of hot weather or a long period between slaughtering and dressing, there is time for interaction between hydrogen sulfide formed in the gut and hemoglobin in the blood vessels of the kidney and liver.
sulfiram monosulfiram.
sulfisoxazole [*sul"fə-sok'sə-zōl*] a sulfonamide antibacterial compound used orally, topically and parenterally, in infections of the urinary and respiratory tracts and of soft tissues. Called also sulfafurazole (INN).

VetBooks.ir

sulfmethemoglobin [sulf"mət-he'mo-glo"bin] a compound of hemoglobin and hydrogen sulfide.

sulfobromophthalein [sul"fo-bro"mo-thal'ēn] a sulfur- and bromine-containing compound previously used in liver function tests. The commercial name for the test reagent was Bromsulphalein.

s. clearance test a previously used test of liver function. The compound is injected intravenously and measurement made at intervals of its serum concentration. Too slow a clearance is an indication of hepatic insufficiency. Called also BSP test.

sulfonamide [səl-fon'ə-mīd] 1. any compound containing the $-SO_2NH_2$ group. 2. any of a group of drugs that are derivatives of sulfanilamide, which competitively inhibit folic acid synthesis in microorganisms, and are bacteriostatic against gram-positive cocci (streptococci and pneumococci), gram-negative cocci (meningococci and gonococci), gram-negative bacilli (*Escherichia coli* and shigellae), and a wide variety of other bacteria. Sulfonamides have been supplanted by more effective and less toxic antibiotics in most uses. Called also sulfa drugs.

sulfone [sul'fōn] a compound containing two hydrocarbon radicals attached to the $-SO_2-$ group, especially dapsone (4,4'-sulfonylbisbenzenamine) and its derivatives, which are potent antibacterials effective against many gram-positive and gram-negative organisms.

sulfonylurea [sul"fə-nəl-u-re'ə] a class of chemical compounds that includes the oral **hypoglycemic** agents acetohexamide, chlorpropamide, tolazamide and tolbutamide.

sulformethoxine sulfadoxine.

sulfosalicylic acid (SSA) test [sul"fo-sal"ĭ-sil'ik] a turbidometric test for protein in the urine.

sulfoxide [səl-fok'sīd] 1. the divalent radical =SO. 2. an organic compound intermediate between a sulfide and a sulfone.

sulfur (S) [sul'fər] a chemical element, atomic number 16, atomic weight 32.064. See Table 4. Elemental sulfur is fed to animals to reduce their volume of feed intake, for example in a feedlot using self-feeders. It is also fed as an oldfashioned worm prophylaxis and coccidiostat. Application of sulfur as a fertilizer to plants decreases their uptake of selenium and may predispose selenium deficiency in grazing livestock. High concentrations of sulfur in the diet are a cause of **polioencephalomalacia** in ruminants. Overfeeding of elemental sulfur causes enteritis characterized by black, evil smelling diarrhea. See also **hydrogen** sulfide poisoning.

s. dioxide a poisonous gas liberated by some industrial enterprises, e.g. copper smelting, from silage to which sodium metabisulfite has been added as a preservative and in old fashioned treatments for mange. The gas causes irritation of the upper respiratory tract and pneumonia in severe cases. Commonly used as a meat preservative where it selectively destroys thiamine and has been incriminated as a cause of thiamine deficiency, particularly in dogs and cats.

s. granule small, soft to mineralized bodies in the pus of lesions of **actinomycosis**, **actinobacillosis**, and **botryomycosis**. Called also drusen.

lime-s. see **lime-sulfur**.

s. myopathy skeletal and myocardial degeneration caused by the feeding of toxic concentrations of sulfur.

s. nutritional deficiency ruminants may need supplemental inorganic sulfur if the bulk of their nitrogen is not in the form of protein but as urea or ammonium phosphate. A deficiency in these circumstances causes anorexia, weight loss, poor digestion and fall in milk yield.

precipitated s. a scabicide, antiparasitic, antifungal and keratolytic. Called also milk of sulfur.

s. sublimatum, sublimed s. a parasiticide and scabicide. See also **flowers of sulfur**.

technetium coated s. colloid used in scintigraphy of the liver and reticuloendothelial systems. Called also ^{99m}Tc sulfur colloid.

sulfurated [sul'fu-rāt"əd] combined with sulfur.

sulfurated lime [sul'fu-rāt"əd] see **lime-sulfur**.

sulfuric acid [səl-fūr'ik] an oily, highly caustic, poisonous compound, H_2SO_4.

Sulkowitch test an outmoded test of calcium concentration in urine. Used at one time as a diagnostic aid in parturient hypocalcemia (milk fever) diagnosis in cows.

sulky horse-drawn, ultra-lightweight, single-seater, two-wheeled vehicle used by Standardbreds in races. Called also bike, gig.

sulph- for words beginning thus, see those beginning *sulf-*.

sulphur sulfur.

sumac [soo'mak] common name used for trees and shrubs, particularly ***Rhus*** spp., but also for *Toxicondendron vernix* (poison sumac).

sumatrol one of the insecticidal substances, with rotenone, in **derris**.

sumicidin synthetic, pyrethroid anthelmintic; poisonous causing a non-fatal syndrome of nervous signs, dyspnea, bloat and regurgitation of ruminal contents.

summation [sə-ma'shən] accumulate, add up, aggregate a series of numbers or quantities or events. In radiology, radiopacity created by superimposition of more than one structure.

s. of effects a theory explaining clinical pruritus as the additive effects of pruritus from several causes which may raise the individual above the threshold, but pruritus from any single cause would be unlikely to do so.

s. gallop see gallop **rhythm**.

neurological s. physiological summation in synapses is a characteristic of the mammalian nervous system. It may be spatial, with additional synaptic junctions participating, or temporal, when succeeding stimuli catch up with the as-yet undischarged neurotransmitter. Seen in the retina of the cat, as an example of a nocturnal animal, where many millions of photoreceptors are connected to only one million axons, resulting in maximal sensitivity to light.

weighted s. the sum obtained by adding the numerical value for individual clinical signs, each weighted to express their importance, when making a diagnosis. The total, as a fraction or a percentage, provides an estimate of the probability of each diagnosis being the correct one.

summer slump associated with grazing endophyte infested *Festuca arundinacea*. Cattle have lower feed intake, depressed weight gains, depressed milk production, higher rates of respiration, elevated rectal temperature, and increased water consumption, a rough hair coat, reduced reproductive performance and reduced prolactin concentrations in plasma. Has major occurence in the USA.

summer kill deaths amongst cultivated finfish caused by a higher temperature of the water in the water body than the particular species can tolerate, and/or the reduction in dissolved oxygen resulting from the elevated temperature.

summit metabolism [sum'it] when heat losses from the patient's body exceed the patient's ability to produce heat.

sump oil see crankcase **oil**.

sump–Penrose drain a Shirley wound drain (sump drain) enclosed within a Penrose drain.

sun conures a parrot in the family Psittacidae.

sunburn [sun'bərn] inflammation of the skin caused by exposure to ultraviolet rays of the sun. White pigs suffer most and may develop a chronic dermatitis along the back, some may lose the tips of the ears by sloughing. Called also primary phototoxicity. Dogs and cats, particularly those with unpigmented skin on the dorsum of the nose, eyelids, ears or groin, may develop a chronic actinic dermatitis. Fish in cultivation ponds show white patches on the top of the head and corneal cataracts. See also solar **dermatitis**.

s. cells dyskeratotic keratinocytes, either scattered or in a continuous band in the outer stratum spinosum, are characteristic of a sunburn lesion.

sunburst appearance, effect calcified streaks which appear on radiographs to radiate from a primary lesion at the surface of a bone. One possible feature of osteogenic sarcoma but can also occur in cases of osteomyelitis.

sunchillo ***Wedelia*** *glauca*.

sundews see ***Drosera***.

sunflower (*Helianthus annuus*) a plant in the family Asteraceae whose seed is used for oil and for human food. The residual cake is a high-protein supplement but lacking in lysine. Decorticated seed cake contains 44% protein, undecorticated seed cake, suitable only for ruminants because it contains the seed hulls, contains 28% protein. Leaves and stems can contain toxic amounts of nitrate and cause nitrate-nitrite poisoning in ruminants.

wild s. see ***Doronicum hungaricum***, ***Verbesina encelioides***, ***Wedelia*** *asperrima*.

sunlight the actinic rays of direct sunlight are known to have disinfectant properties, to be instrumental in the production of vitamin D

VetBooks.ir

in the skin and to be the trigger mechanism in photosensitive dermatitis, squamous cell carcinoma of the eye in cattle and of the vulva in sheep and solar dermatitis.

sunn hemp ***Crotalaria juncea***.

sunscreen [sun'skrēn] a topical agent that filters ultraviolet rays reaching the skin; used to prevent sunburn, actinic dermatitis, and in the control of discoid lupus erythematosus.

sunstroke [sun'strōk] causing damage to the central nervous system by penetration of tissues by actinic rays is thought not to be an important physical pathogen. See **heat**[1] exhaustion and **heat**[1] stroke.

super- word element. [L.] *above, excessive*.

superalimentation [soo"pər-al"ĭ-mən-ta'shən] excessive feeding; sometimes used in the treatment of wasting diseases.

superalkalinity [soo"pər-al"ka-lin'ĭ-te] excessive alkalinity.

superantigen [soo"pər-an'tĭ-jən] molecules that are potent T lymphocyte mitogens that act by simultaneously binding directly to class II MHC molecules and to conserved regions of the T-cell receptor. They are often associated with staphylococcal products and are involved in enterotoxemias and toxic shock syndrome in humans.

superbug a colloquial referrence to a bacterium that carries resistance genes to many antibiotics or to a bacterium or virus of greatly enhanced virulence.

superfamily [soo"pər-fam'ĭ-le] a group of proteins related in structure but different in function, e.g. immunoglobulin superfamily which includes immunoglobulins, T cell receptor, major histocompatibility class I and II, β_2-microglobulin, α/β glycoprotein, neuronal cell-adhesive molecule (N-CAM) and neurocytoplasmic protein 3 (NP3).

superfecundation [soo"pər-fe"kən-da'shən] fertilization of two or more ova during the same ovulatory cycle, by separate coital acts.

superfetation [soo"pər-fe-ta'shən] the fertilization and subsequent development of an ovum when a fetus is already present in the uterus, a result of fertilization of ova during different ovulatory cycles and yielding fetuses of different ages.

superficial [soo"pər-fish'əl] situated on or near the surface.

superficialis [soo"pər-fish"e-a'lis] superficial.

superficies [soo"pər-fish'e-ēz] an outer surface.

superfine a class of Merino sheep with wool finer than that of **fine-wool**. Usual limit is wool of 18.5 microns or less fiber diameter.

superhutches calf housing structures, often open on one side, designed for a small number of calves when first grouped immediately after weaning. See also **hutch** (2)

superinduce [soo"pər-in-dōōs'] to bring on in addition to an already existing condition.

superinfection [soo"pər-in-fek'shən] a new infection complicating the course of antimicrobial therapy of an existing infection, due to proliferation of bacteria or fungi, usually part of the normal flora, resistant to the drug(s) in use and capable of occupying the niche vacated by organisms susceptible to the drug.

superinvolution [soo"pər-in"vo-loo'shən] prolonged involution of the uterus after delivery, to a size much smaller than the normal, occurring in females that are still suckling their young.

superior [soo-pēr'e-ər] situated above, or directed upward.

superjacent [soo"pər-ja'sənt] located just above.

superjuice Australian farmers' remedy for almost everything; saturated solution of superphosphate prepared by soaking enough of the fertilizer in a large drum of water to ensure that there is always a residue. A cupful per cow per day wards off nutritional deficiency of phosphorus.

superlactation [soo"pər-lak-ta'shən] oversecretion of milk; hyperlactation.

superlethal [soo"pər-le'thəl] more than sufficient to cause death.

supermotility [soo"pər-mo-til'ĭ-te] excessive motility.

supernatant [soo"pər-na'tənt] the liquid lying above a layer of precipitated insoluble material.

supernumerary [soo"pər-noo'mər-ar"e] in excess of the regular number.

supernutrition [soo"pər-noo-trĭ'shən] see **superalimentation**.

superolateral [soo"pər-o-lat'ər-əl] above and to the side.

superovulation [soo"pər-ov"u-la'shən] production of more than one ovum at ovulation. 1. Planned production of a number of ova from the one cow at the same ovulation period is an essential part of the technique of bovine embryo transfer. Can be effected with a single injection of PMSG or for better results, with FSH and LH in a 5:1 ratio, twice daily for 5 days. Called also multiple ovulation or ovarian superstimulation. 2. Can occur accidentally when cows are treated with large doses of FSH as a treatment for no visible estrus.

superoxide [soo"pər-ok'sīd] any compound containing the highly reactive superoxide ion O_2^-, a common intermediate in numerous biological oxidations and an important killing mechanism generated in lysosomes of phagocytes after they have phagocytosed microorganisms.

s. dismutase copper-containing enzyme, present in cells of all animals, that has antioxidant and anti-inflammatory properties and catalyses the dismutation of superoxide to oxygen and hydrogen peroxide. Concentrations reduced in animals with copper deficiency.

superphosphate the common fertilizer for the application of phosphorus to a deficient soil. Used also to provide a direct nutritional supplement, as super-juice, the supernatant from a settled mixture of superphosphate and water. Fluorine poisoning may occur in animals with access to superphosphate made from rock phosphate with a high fluorine content.

superpurgation [soo"pər-pər-ga'shən] violent, watery diarrhea; life-threatening because of the imminence of irreversible dehydration.

supersaturate [soo"pər-sach'ər-āt] to add more of an ingredient than can be held in solution permanently.

superscription [soo"pər-skrip'shən] something written above; the first of four chief parts of a drug prescription, the ℞ prescription sign ('Take thou').

superseding taking over a case of a patient under treatment by another veterinarian. In general terms this is poor professional etiquette unless the other veterinarian has been consulted and agrees to the change. However, there are many situations in which professional etiquette is overridden by the need to provide the best treatment for the animal.

supersession see **superseding**.

superstimulation see **superovulation**.

supertension extreme tension.

supervascularization [soo"pər-vas"ku-lər-ĭ-za'shən] in radiotherapy, the relative increase in vascularity that occurs when tumor cells are destroyed so that the remaining tumor cells are better supplied by the (uninjured) capillary stroma.

supervision oversight; direction. In the context of teacher - student, the observing and directing of learning activities, usually of a practical nature. In the case of management of clinical cases, the responsibility for all that is done for the patient.

direct s. licensed veterinarian is readily available on the premises where the patient is being treated.

indirect s. veterinarian has given either written or oral instructions for treatment of the patient and is readily available by telephone or other form of communication.

supervoltage in radiation therapy, pertaining to X-rays produced by a tube voltage in the range of 500–1000 kilovolts.

supination [soo"pĭ-na'shən] in humans, rotation of the forearm to bring the palm to face upwards; in animals, the action is best accomplised in primates but is still significant in laboratory animals, cats and dogs, where the range of supination is reduced to around 90°, as for example with a squirrel holding a nut, or a cat a ball of wool or a dog a bone.

supplejack see ***Ventilago viminalis***.

supplementary in addition to the already supplied basics.

supplementation the provision of supplementary materials.

supplements materials used in a supplementary way. See also **feed** supplements.

liquid s. molasses-based supplement that contains a non-protein nitrogen such as urea. Often also contains minerals and other feed additives.

suppository [sə-poz'ĭ-tor-e] an easily fusible medicated mass for introduction into the rectum, urethra or vagina.

suppressant [sə-pres'ənt] 1. inducing suppression. 2. an agent that stops secretion, excretion or normal discharge.

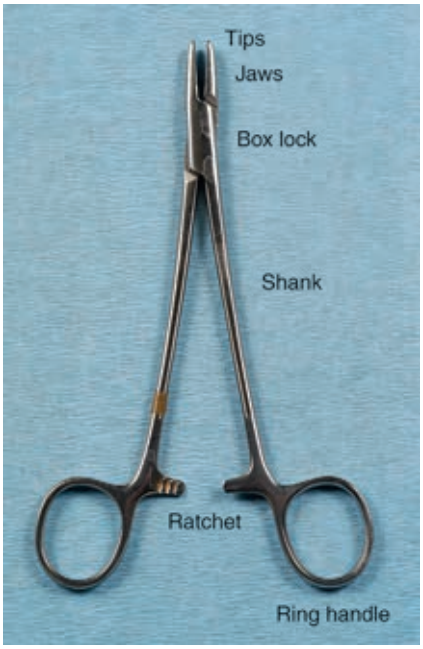
VetBooks.ir

suppression [sə-presh'ən] 1. sudden stoppage of a secretion, excretion or normal discharge. 2. in genetics, restoration of a lost function by a second mutation either in a gene other than that involved in the primary mutation, or within the same gene.
suppressor cells [sə-pres'ər] see T **lymphocyte**.
suppurant [sup'u-rənt] 1. promoting suppuration. 2. an agent causing suppuration.
suppurate produce pus.
suppuration [sup"u-ra'shən] formation or discharge of pus.
lamellar s. see **lamellar** suppuration.
suppurative [sup'u-ra"tiv] pertaining to or emanating from suppuration; pus in e.g. suppurative arthritis, bronchopneumonia.
supra- word element. [L.] *above*.
supra-acromial [soo"prə-ə-kro'me-əl] above the acromion.
supra-auricular [soo"prə-aw-rik'u-lər] above the auricle of the ear.
supracaudal organ, gland [soo"prə-kaw'dəl] a collection of large sebaceous glands in the skin of the dorsum of the tail in cats. Excessive sebaceous secretion with inflammation gives rise to the condition known as **stud** tail.
suprachoroid [soo"prə-kor'oid] above or upon the choroid.
s. layer most superficial of the five laminae constituting the choroid; the layer is avascular and composed of collagen fibers, chromatophores, macrophages, fibroblasts.
suprachoroidea the outermost layer of the choroid.
supracondylar [soo"prə-kon'də-lər] above a condyle.
supracostal [soo"prə-kos'təl] above or outside the ribs.
supracotyloid [soo"prə-kot'ə-loid] above the acetabulum.
supradiaphragmatic [soo"prə-di"ə-frag-mat'ik] above the diaphragm.
supraduction [soo"prə-duk'shən] the turning upward of a part, especially the eyes.
supraepicondylar [soo"prə-ep"i-kon'də-lər] above the epicondyle.
supragingival [soo"prə-jin'jī-vəl] a position on the side of the gingival margin towards the dental crown.
supraglenoid [soo"prə-gle'noid] above the glenoid cavity.
suprahyoid [soo"prə-hi'oid] above the hyoid bone.
supraliminal [soo"prə-lim'i-nəl] above the threshold of sensation.
supralumbar [soo"prə-lum'bahr] above the loin.
supramaxillary [soo"prə-mak'sĭ-lar"e] pertaining to the upper jaw.
supraorbital [soo"prə-or'bĭ-təl] above the orbit.
s. foramen see supraorbital **foramen**.
s. nerve block see supraorbital **block**.
suprapelvic [soo"prə-pel'vik] above the pelvis.
suprapharmacological much greater than the usual therapeutic dose or pharmacological concentration of a drug.
suprapharyngeal diverticulum impaction [soo"prə-fə-rin'je-əl] impaction of the sac in pigs fed indigestible roughage causes pharyngeal obstruction and difficulty in swallowing.
suprapontine [soo"prə-pon'tīn] above or in the upper part of the pons.
suprapubic [soo"prə-pu'bik] above the pubes.
suprarenal [soo"prə-re'nəl] above a kidney; adrenal.
s. gland adrenal gland.
suprarenalectomy [soo"prə-re"nəl-ek'tə-me] adrenalectomy; excision of one or both adrenal glands.
suprascapular [soo"prə-skap'u-lər] above or superficial to the scapula.
s. neuropathy suprascapular paralysis.
s. paralysis paralysis of the suprascapular nerve that leads to atrophy of the supraspinatus and infraspinatus muscles; usually due to trauma. Called also slipped shoulder, sweeney, equine suprascapular neuropathy.
suprascleral [soo"prə-sklēr'əl] on the outer surface of the sclera.
suprasellar [soo"prə-sel'ər] above the sella turcica.
supraspinal [soo"prə-spi'nəl] above the spine.
supraspinatus above or cranial to the spine of the scapula.
suprasternal [soo"prə-ster'nəl] above the sternum.
supratrochlear [soo"prə-trok'le-ər] above the trochlea.
supravaginal [soo"prə-vaj'ĭ-nəl] outside or above a sheath, specifically, above the vagina.
supravalvular [soo"prə-val'vər] above the heart valves.
s. aortic stenosis see **aortic** stenosis.
s. stenosis one of the forms of congenital constriction of the pulmonary trunk, which is dilated and thin-walled on the ventricular side of the lesion. There is a compensatory hypertrophy of the right ventricular wall.
supraventricular [soo"prə-vən-trik'u-lər] situated or occurring above the ventricles, especially in an atrium or atrioventricular node.
supraversion [soo"prə-ver'zhən] abnormal elongation of a tooth from its alveolus.
supravital stain [soo"prə-vi'təl] see supravital **stain**.
sura [soo'rə] [L.] *gastrocnemius muscles*.
suramin [soo'rə-min] a trypanocidal agent that is also toxic to the host animal, causing degeneration of the liver, kidney and adrenal glands. It is also an inhibitor of reverse transcriptase, some types of growth factors, and causes suppression of the adrenal cortex, leading to investigations of its usefulness in the treatment of immunodeficiency infection in humans and cats, cancer and hyperadrenocorticism.
surcingle a separate, wide, thin strap or webbing passed around the horse and including the saddle and buckled tight underneath.
surditas deafness.
surface [sur'fəs] the outer part or external aspect of a body.
s.-active agent any substance capable of altering the physicochemical nature of surfaces and interfaces; an example is a detergent. Called also surfactant.
s. area conversion chart see Table 20.
s. body weight see **body** surface area.
s. catalysis in the intrinsic coagulation pathway, conversion of factor XII into its active state, factor XIIa, is catalyzed by contact with glass or a similar surface.
s. contact plates a bacteriological preparation in which the agar surface is slightly higher than the rim of the plate and inoculation is by inversion and direct contact with the surface being sampled.
surfactant [sər-fak'tənt] a surface-active agent, such as soap or a synthetic detergent. In pulmonary physiology, a mixture of phospholipids (mainly dipalmitoylphosphatidylcholine) secreted by the great, or type II, alveolar cells into the alveoli and respiratory air passages, which reduces the surface tension of pulmonary fluids and thus contributes to the elastic properties of pulmonary tissue. See also **hyaline** membrane disease.
surgeon [sur'jən] a veterinarian who practises in surgery. In many countries it is still the practice to continue the British tradition of having all veterinarians call themselves veterinary surgeon and for the registering legislation to be the Veterinary Surgeon's Act.
surgeon's knot same as a square knot except that the first throw is a double one. It is more secure than a square and holds its position better under conditions of wound tension for the second throw. It is often reinforced by a third or fourth single throw. See also **knot**.
surgery [sur'jər-e] 1. that branch of veterinary science which treats diseases, injuries and deformities by manual or operative methods. 2. the place in a hospital, or doctor's or dentist's office where surgery is performed. 3. in some countries a room or office where a veterinarian sees and treats patients. 4. the work performed by a surgeon.
basic s. kit the collection of instruments, wrapped, sterilized and ready for use in the majority of uncomplicated surgical procedures. The choice of instruments may vary from one surgeon to another, but generally there are tissue forceps, thumb forceps, sponge forceps, hemostats, towel clamps, scalpel handle and needle holder. Scissors and needles may be added after cold sterilization.
bench s. surgery performed on an organ that has been removed from the body, after which it is reimplanted.
cold steel s. that performed with traditional cutting instruments; to distinguish from cryosurgical and electrosurgical methods.
cosmetic s. performed to improve the appearance, or change the appearance, of the animal; surgery that is not necessary for the health of the animal. Other than ear cropping and tail docking, where performed, generally discouraged or considered unethical for animals as it is usually done for purposes of improving their appearance in the show ring or to disguise traits that might be heritable.

VetBooks.ir

elective s. surgery carried out at a time convenient to client and surgeon. The opposite of emergency surgery. Distinctly different to cosmetic surgery.
experimental s. that carried out as part of a planned experimental protocol, usually on animals selected specifically for the purpose and which are often sacrificed afterwards. Increasingly, use of animals in this way is under the control of institutional or governmental authorities.
plastic s. that concerned with the restoration, reconstruction, correction or improvement in the shape and appearance of body structures that are defective, damaged or misshapen by injury, disease or anomalous growth and development.
replacement s. transplanting of tissues or organs from another host. Not commonly undertaken in veterinary surgery.
veterinary s. see **veterinary** surgery.

surgical [*sur'jĭ-kəl*] emanating from or pertaining to surgery.
s. abdomen see acute **abdomen**.
s. cap an accompaniment to the surgical gown and mask which covers the head, and sometimes facial hair, of members of the surgical team; the object is to avoid contamination of the wound.
s. fever resulting from extensive tissue damage in major surgery.
s. gut see **catgut**.
s. insemination carried out by gaining access to the uterus by surgical means including per vaginam and via laparotomy or laparoscopy.
s. instruments a group of instruments used in the performance of surgical operations. Nowadays there are subdivisions including ophthalmic, orthopedic, vascular, gut, thoracic and obstetric surgery.
s. mask a protective covering over the mouth and nostrils of members of a surgical team, usually held in place by tapes tied over or behind the head, intended to minimize wound contamination.
s. needle see **needle**.
s. pins see **pinning**.
s. scissors see standard surgical **scissors**.
s. shock shock occurring as a result of massive or traumatic surgery. To a large extent the term is a contradiction because one of the principal objectives of surgery is the avoidance of shock but there are occasions, e.g. in a major resection of the gut in a horse or a cesarean in a mare, when extensive handling of heavy viscera is unavoidable and shock must be considered as inevitable unless preventive therapy is provided.
sterile s. pack all of the instruments and other equipment such as drapes, gloves, etc. required for a particular operation, or part of an operation, specially arranged, wrapped and sterilized by autoclaving then stored for future use.



S-86: Basic components of a surgical instrument.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

s. suite a group of rooms designed to provide all surgical services to patients. Includes surgery, preparation and anesthesia for the patient, sterile preparation of the surgeon, instrument and materials sterilization and storage, instrument cleaning, and recovery room.

suring ***Rumex*** *acetosa*.

surra [*soor'ə*] the disease occurring principally in camels and horses, caused by *Trypanosoma evansi* and transmitted by biting flies. The clinical syndrome, which has no diagnostic highlights, includes intermittent fever, anemia and weight loss and a high mortality rate. A disease notifiable to the OIE (see Table 22). See also **nagana**.

surrogate [*sur'o-gət*] a substitute; a thing or animal that takes the place of something or some animal, as a drug used in place of another, or, in animal husbandry, an animal which takes the place of another in the family or herd environment.

sursumduction [*sur"səm-duk'shən*] the turning upward of a part, especially the eyes.

Surti a domestic Indian breed of black or brown buffalo with two white collars; used for dairying and draft.

surveillance [*sər-vāl'əns*] keeping a watch over.
active s. sampling, including necropsy examination, of clinically normal samples of the population; important in the surveillance of diseases in which subclinical cases and carriers predominate.
epidemiological s. watching over a population and recording data likely to have epidemiological significance, usually with the aim of early detection of disease. Essentially an interventionist exercise compared with monitoring, which is passive.
passive s. examination of only clinically affected cases of specified diseases in the population.

survey a comprehensive examination of an area or population for a particular purpose. The survey may be of a part, e.g. cross-sectional survey, or for a particular end-result, e.g. a prevalence survey, or by the use of a particular method, e.g. aerial survey, or a combination of these, e.g. seroepidemiological.
s. radiograph a plain radiograph of a large area before embarking on a special radiographic technique for achieving special results. Called also scout radiography.

survivorship rate proportion of the population that are still alive at successive annual ages.

Sus a genus of pigs, including the domestic pig (*S. domestica*), bearded pig (*S. barbatus*) and wild boar (*S. scrofa*).

susceptibility [*sə-sep"tĭ-bil'ĭ-te*] the state of being susceptible. Refers usually to infectious disease but may be to physical factors such as wetting or to psychological factors such as harassment. Signs which suggest a state of increased susceptibility to infection are: infections in the first few weeks of life, repeated bouts of infection, infections with nonvirulent pathogens, attacks of illness after vaccination with attenuated vaccines, and low leukocyte counts. See also **immune** deficiency disease.

susceptible [*sə-sep'tĭ-bəl*] readily affected or acted upon; lacking immunity or resistance.

suscitate to arouse to greater activity.

suscitation an arousal to greater activity.

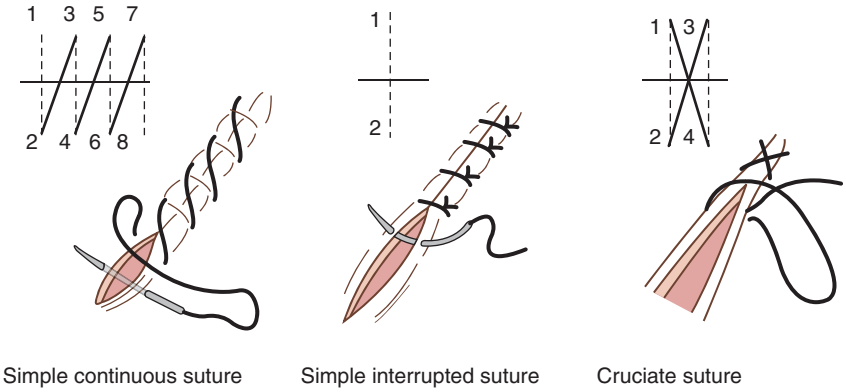
suspension [*səs-pen'shən*] 1. temporary cessation, as of pain or a vital process. 2. a supporting from above, as in treatment of spinal disorders. 3. a preparation of a finely divided, undissolved substance dispersed in a liquid vehicle.
colloid s. one in which the suspended particles are very small.

suspensoid [*səs-pen'soid*] a colloid system in which the disperse phase consists of particles of any insoluble substance, such as a metal, and the dispersion medium may be gaseous, liquid or solid.

suspensory [*səs-pen'sor-e*] 1. serving to hold up a part. 2. a ligament, bone, muscle, bandage or sling for supporting a part.
s. ligament 1. the modified interosseous muscle of the horse that arises from the palmar carpal ligament behind the knee (or the hock in the hindlimb) and suspends the pair of sesamoid bones behind the fetlock. The distal continuation of the ligament is composed of the cruciate, oblique and straight sesamoidian ligaments and the pair of extensor branches that unite with the common digital extensor tendon. 2. various other supporting ligaments.
s. ligament of the lens delicate ligament suspending the lens from the ciliary body of the eye.
ovarian s. ligament a peritoneal fold which forms the cranial limit to the mesovarium.

VetBooks.ir

rupture of udder s. ligament the medial attachment separates, the udder floor drops down and outwards so that the teats point laterally. The cow is difficult to milk, especially with a machine.
Sussex a solid red breed of beef cattle similar to the Devon. There are horned and polled breeds.
Sussex spaniel a massive, strongly built dog with short, well-boned legs. It has a broad head, round, deep and wide chest, pendulous ears and an abundant, flat, golden liver-colored coat with feathering on the legs, ears and lower body. The tail may be docked to a medium length. The breed has a characteristic rolling gait.
sustained-release preparations formulations of medicines which limit their solubility so that they are delivered at a slow but steady rate into the blood supply. Includes oral preparations in the form of reticular bullets of metal or ceramic and slow-release granules, intramuscular injection of slowly soluble substances, e.g. procaine penicillin, or drugs suspended in oil or in tablets, usually deposited under the skin. Microsyringes, described as osmotic pumps, are also being used for the pulsatile delivery of hormones over a long period.
s.-r. p. for bloat control capsules containing anti-foaming agents or ionophores are administered by mouth.
sustentacular [*sus"tən-tak'u-lər*] supporting; sustaining.
s. cell a supporting epithelial cell which lacks a specialist function.
sustentaculum [*sus"tən-tak'u-ləm*] pl. *sustentaculi* [L.] a support.
s. tali a medial process of the calcaneus, extending over the plantar aspect of the talus.
susurrus [L.] *murmur*.
sutilains [*soo'ti-lānz*] proteolytic enzymes derived from a strain of *Bacillus subtilis* used for wound débridement.
sutura [*soo-tu'rə*] pl. *suturae* [L.] suture; used in anatomical nomenclature to designate a type of joint in which the apposed bony surfaces are united by fibrous tissue, permitting little or no movement; found only between bones of the skull.
s. lambdoides see lambdoid **suture**.
s. sagittalis see sagittal **suture**.
suturation [*soo"chə-ra'shən*] the process or act of suturing.
suture [*soo'chər*] 1. the line of union of adjoining bones of the skull. See also **sutura**. 2. the linear union of the crystalline lens fibers at the anterior and posterior poles at all levels within the lens. May be the location of cataracts. 3. a stitch or series of stitches made to secure apposition of the edges of a surgical or traumatic wound; used also as a verb to indicate application of such stitches. 4. material used in closing a wound with stitches.
absorbable s. (4) a strand of organic or synthetic material used for closing wounds, which becomes dissolved in the body fluids and disappears, such as catgut and tendon or polydioxanone.
anchoring s. (3) the fixation of adjacent tissues by means of a suture.
apposition s. (3) a superficial suture used for exact approximation of the cutaneous edges of a wound.
approximation s. (3) a deep suture for securing apposition of the deep tissue of a wound.
automatic ridge suture see **mattress suture pattern**.
biocidal s. impregnated with a biocidal material.
braided s. (4) thin filaments braided into a single suture; has the virtues of strength, flexibility, ease of handling and good knot security.
Bunnell s. (3) see **Bunnell suture pattern**.
buried s. (3) one placed deep in the tissues and concealed by the skin.
button s. a mattress suture that includes a button on either side of the wound to prevent cutting of the wound by the suture.
Caslick s. (3) see **Caslick** operation.
catgut s. (4) see **catgut**.
Chinese finger cuff s. (3) a method of securing a thoracostomy tube to the thoracic wall in which the suture is placed deeply into the skin and underlying tissue and the ends are wrapped around the protruding tube in a spiral pattern ('Chinese finger cuff') and tied.
circular s. (3) one applied around the circumference of a hollow viscus to close it, or to a portion of the wall to bring about inversion of the wall.
cobbler's s. (3) one made with suture material threaded through a needle at each end.
Connell s. (3) see **Connell suture pattern**.
continuous s. (3) one in which a continuous, uninterrupted length of material is used. Called also whip stitch.
continuous lock s. (3) see **lock-stitch suture pattern**.
coronal s. (1) the line of union between the frontal bone and the parietal bones.
cotton s. (4) a multifilament suture used mainly for closure of skin.
cranial s. (1) the lines of junction between the bones of the skull.
cruciate s. (3) see **cruciate** suture pattern.
Cushing s. (3) see **Cushing suture pattern**.
Czerny s. (3) see **Czerny suture**.
Czerny–Lembert s. (3) see **Czerny–Lembert suture**.
false s. (1) a line of junction between apposed surfaces without a serrated union of the bones.
far–near–far s. (3) see **near–far–far–near suture pattern**.
far–near–near–far s. (3) used on tendons, the first bite is made farthest from the severed end, across the gap and emerging close to the severed edge of the distal end. The second bite is close to the end of the proximal segment, crosses the gap and emerges farther from the end of the distal segment. See also tendon suture (below).
figure-eight s. (3) a row of surgical pins are placed through both edges of the wound and suture material is wound back and forth around each pin, as with a shoelace.
four stitch interrupted s. (3) see **mattress suture pattern**.
furrier's s. (3) simple continuous suture.
Gambee s. (3) see **Gambee suture pattern**.
Gély's s. (3) see **Gély's suture pattern**.
Goetze's s. (3) see **Goetze's suture pattern**.
Halsted s. (3) see **Halsted** suture pattern.
horizontal mattress s. (3) an everting suture pattern. See **mattress suture pattern**.
interrupted s. (3) one in which each stitch is made with a separate piece of material.
intradermal s. (3) one placed in the lower dermis; a buried suture. May be interrupted or continuous.
intracutaneous s. (3) one totally within the substance of the skin, not emerging externally and not into the subcutaneous tissues. See also intradermal suture (above).
inverting s. (3) one that turns the edges of the incision inward so the exposed surfaces, usually serosa, contact each other and the edges of the incision are buried. Used in closure of hollow viscera such as the stomach, uterus, intestine or visceral stumps. Includes the Connell, Cushing, Halsted, Lembert and Parker–Kerr suture patterns.
Kessler s. (3) see locking-loop suture (below).
lambdoid s. (1) the line of union between the upper borders of the occipital and parietal bones, shaped like the Greek letter lambda; called also sutura lambdoides.
Lembert s. (3) see **Lembert suture pattern**.
locking-loop s. (3) a tension suture used for apposition of severed tendon ends.
McLean s. (3) a mattress-type corneoscleroconjunctival suture.
mattress s. (3) see **mattress suture pattern**.
Mersilene s. (4) an uncoated polyester suture material.
metal s. (4) stainless steel is used universally. There are also special metal devices including Michel clips and skin staples and staples for intestinal repair.
near–far–far–near s. (3) see **near–far–far–near suture pattern**.
non-absorbable s. (4) includes silk, steel, polyester, polymerized caprolactam, polypropylene, polyethylene, nylon and cotton.
nylon s. (4) may be braided or monofilament.
Parker–Kerr s. (3) see **Parker–Kerr suture pattern**.
s. pattern (3) the placement of suture material, usually designed to achieve a particular purpose in relation to the tissue, organ or surgical procedure being performed, e.g. inversion or eversion of wound edges, relief of tension on the wound, or cosmetic results.
s. pin (4) sharp-pointed pins that can be pushed through tissue, e.g. vulval lips, and secured at both ends by knobs so that they stay in situ.
polyester s. (4) a multifilament strand, Dacron impregnated or coated with Teflon, silicone or polybutylate used as nonabsorbable sutures. Their virtue is their strength, their disadvantage the difficulty encountered in tying a knot that holds.
pull-out s. (3) see **pull-out suture pattern**.



Simple continuous suture | Simple interrupted suture | Cruciate suture

S-87: Types of suture patterns: (A) simple continuous, (B) simple interrupted (C) Cruciate suture.
From Sirois M, Principles and Practice of Veterinary Technology, 3rd Edition. Mosby, 2011.

purse-string s. (3) a type of suture commonly used to bury the stump of the appendix, a continuous running suture being placed about the opening, and then drawn tight.
relaxation s. (3) any suture so formed that it may be loosened to relieve tension as necessary.
retention s. (3) used in the replacement of vaginal and uterine prolapse in cattle. Usually thick, heavy suture material, sometimes tape, is placed through adjacent tissues.
round-wound s. (3) used for tension relief, it consists of surgical pins placed through both sides of the wound and suture material wound around the protruding ends and across the incision.
safety s. (3) used in the surgical correction of patent ductus arteriosus, particularly in small dogs, to ensure that any slippage of ligatures or tissue will not result in excessive blood loss before being controlled by other means.
sagittal s. (1) the line of union of the two parietal bones, dividing the skull anteroposteriorly into two symmetrical halves; called also sutura sagittalis.
silk s. (4) braided silk is used as a nonabsorbable suture. It may be coated with wax or silicone to reduce its absorption of fluids. Its great advantages are its ease of handling and good knot-holding quality.
squamous s. (1) a suture where the uniting bones overlap such as the suture between the pars squamosa of the temporal bone and parietal bone.
stainless steel s. (4) see wire suture (below).
stent s. (3) a tension suture for closing wounds created by placing a roll of bandage along the line of incision and tying the sutures over the top of it.
subcuticular s. (3), subcutaneous s. a method of skin closure involving placement of stitches in the subcuticular tissues parallel with the line of the wound.
tendon s. (3) see **Bunnell suture pattern**, far-near-near-far suture (above), three-loop pulley suture (below).
tension s. (3) one placed to relieve tension on the incision; may be the same suture pattern that closes the incision or a separate suture or line of sutures of a different pattern.
three-loop pulley s. (3) a complicated suture pattern used on tendons. See tendon suture (above).
U-s. (3) see **mattress suture pattern**.
vertical mattress s. an everting suture pattern. See **mattress suture pattern**.
vest-over-pants s. (3) see **vest-over-pants suture pattern**.
walking s. (3) a pattern of interrupted sutures used in closing large skin wounds. Each suture is placed first in the deep dermis and then into the deeper tissues, usually fascia, at a point closer to the center of the wound. The effect is to move the skin closer to the closing position with each suture, obliterate dead space, and relieve tension on the sutures eventually placed to close the wound edges.
wire s. (4) stainless steel wire used as suture material as monofilament or braided. Problems are kinking, bulk knots, tearing of tissues and the need for special cutting instruments.
Zimmerman's aluminum wire s. (3) a technique used for tension support. The stitches are placed with a cannula and ends are rolled instead of being tied.
suture knot may be tied manually or by instrument in several patterns. See also **square knot**, **surgeon's knot**.
suture pattern see **s.** pattern.
suxamethonium [*suk"sə-mə-tho'ne-əm*] see **succinylcholine**.
Sv sievert.
SV-5 virus simian virus type 5; see **parainfluenzavirus** 2.
SVD swine vesicular disease.
SVE special visceral efferent.
Svedberg (S) a unit used to express sedimentation coefficients.
swab [*swahb*] 1. a small pledget of cotton or gauze wrapped around the end of a slender wooden stick or wire for applying medications or obtaining specimens of secretions, etc., from body surfaces or orifices. 2. use of a swab to collect a specimen, e.g. collection of a sample of saliva for testing horses for doping.
swage [*swāj*] 1. to shape metal by hammering or by adapting it to a die. 2. to fuse, as suture material to the end of a suture needle.
Swainsona [*swān'sə-nə*] Australian genus of plants in the legume family Fabaceae, closely related to *Astragalus*; contain the toxic indolizidine alkaloid swainsonine which causes tremor, incoordination, mania and death from an acquired lysosomal storage disease through inhibition of α-mannosidase so that mannose accumulates in nervous and other tissues. Toxic species include *S. brachycarpa* (small-flowered Darling pea), *S. canescens* (gray Swainson pea), *S. galegifolia* (smooth Darling pea), *S. greyana* (Darling pea), *S. luteola* (dwarf Darling pea), *S. procumbens* (Broughton pea), *S. swainsonioides*. See also **mannosidosis**, ***Astragalus***, ***Oxytropis***, **swainsonine**, **lysosomal** storage diseases.
swainsonine a trihydroxylated indolizidine alkaloid found in *Swainsona* spp., *Astragalus* and *Oxytropis* spp. It induces an acquired lysosomal storage disease; inhibits lysosomal α-D-mannosidase and Golgi mannosidase II and causes accumulation of large quantities of oligosaccharides composed of mannose and N-acetylglycosamine in lysosomes.
Swale gag see **Bayer gag**.
Swaledale sheep English carpetwool, meat sheep, black face, gray muzzle; similar to Black-faced mountain sheep.
swallow 1. the amount of ingesta that can be swallowed at one time. 2. to perform the act of swallowing.
barium s. see **barium** swallow.
swallowing [*swahl'o-ing*] the taking in of a substance through the mouth and pharynx and into the esophagus. It is a combination of a voluntary act and a series of reflex actions. Once begun, the process operates automatically. Called also deglutition.
s. disorders difficulty in swallowing may be caused by foreign body obstruction, by inflammation of the lining or by a defect in

S-88: Swaledale sheep.

nervous control. The nerves involved are the sensory and motor branches of the trigeminal nerve, the hypoglossal, the facial and the glossopharyngeal nerves. Called also dysphagia.

s. reflex begins as soon as the bolus of ingesta approaches the entry to the pharynx. In a series of reflex actions: breathing is halted, the soft palate elevates and closes the entrance to the nasal cavities, the tongue is clamped into the fauces, closing the exit from the pharynx back into the mouth, the epiglottis closes off the larynx, the pharynx contracts and forces the bolus into the esophagus, peristalsis-like movements in the esophagus carry the food to the cardia which relaxes and the food is propelled into the stomach. Called also palatal reflex.

repeated s. a sign of partial esophageal obstruction.

swamp cancer a common lesion of the skin and mucosae of horses in tropical and subtropical regions. The lesions are dense granulation tissue in the form of an ulcer which may rapidly extend to 8 inches diameter. The tissue may contain cores of necrotic yellow or black, sometimes calcified, material referred to colloquially as leeches, grains or kunkurs. Distribution of the lesions varies with the etiology, but is concentrated mostly on the legs and ventral abdomen, below the medial canthus of the eye and on the muzzle and nearby mucosae. The cause may be any one of the following: *Habronema megastoma* larvae, or one of the fungi *Hyphomyces destruens*, *Basidiobolus haptosporus* or *Entomophthora coronata*. Called also hyphomycosis, bursatti, cutaneous habronemiasis, summer sore, equine phycomycosis, equine pythiosis, Florida horse leech.

swamp fever 1. **equine** infectious anemia. 2. leptospirosis.

swamp itch see **schistosome** dermatitis.

swampy back said of sheep and cattle; an exaggerated depression of the back between the withers and the loin.

swan a member of the genera *Cygnus* (true swans) or *Coscoroba* (South American swan) in the family Anatidae (ducks, geese and swans). Swans are the largest members of the family; most species are white, except for the Australian black swan (*c. atratus*). They have long flexible necks, paddle and swim but they do not dive.

Swan–Ganz catheter [*swahn' ganz'*] a soft, flow-directed catheter with a balloon at the tip for measuring pulmonary arterial pressures, right atrial pressures, left atrial pressure, and reflected left ventricular end-diastolic pressure. The catheter permits evaluation of cardiac function by assessing the effectiveness of right and left pumping action of the heart and providing a quantitative measurement of cardiac output, and by allowing for sampling of mixed arterial–venous oxygen concentrations and calculation of differences between the two.

swan plant ***Gomphocarpus*** *physocarpus*.

Swann Report 1. a 1969 report by the Swann Committee in Great Britain on the use of antibiotics in animal husbandry and veterinary medicine that concluded that the administration of antibiotics to farm livestock, particularly at sub-therapeutic levels, poses certain hazards to human and animal health. 2. a report by the Swann Committee on Veterinary Education in 1977 which made, among other matters, a strong recommendation that preventive veterinary medicine should be better taught in UK veterinary schools.

swarming [*swawr'ming*] 1. a phenomenon observed in cultures of *Proteus* spp. on solid media in which there is progressive spreading over the surface of the agar from the parent colony because of the high level of motility of the organism. 2. the periodic bee migration of the old queen and accompanying workers and drones from a full original hive which is left to be fought over by the new young queens.

S-89: Swamp cancer (habronemiasis). From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

Swartzia madagascariensis see ***Bobgunnia madagascariensis***.

sway-backed [*swa'bak*] a marked lordosis in the back of a horse.

sway response clinical test in which the animal is pulled laterally by the tail or pushed sideways on the rump while it is walking. Absence of the normal response, a resistance to being swayed or a smart sidestep to save from falling, is taken as indicating that normal balancing reflexes are not functioning.

swayback one of the syndromes caused by a primary nutritional deficiency of copper. It may be congenital with lambs unable to stand or suck, spastic paralysis, sometimes blindness, or delayed, appearing at 3–6 weeks of age. There is incoordination and spasticity. See also **enzootic** ataxia.

sweat [*swet*] the excretion of the sweat (sudoriparous) glands of the skin; perspiration. Sweating produces an evaporative cooling of the body, the importance varying between species, and also serves an excretory function. Substances eliminated in sweat include water, sodium chloride and small amounts of urea, lactic acid and potassium ions. In humans the ability to lose heat by sweating is much greater than that in domestic animals. Cattle have a high sweat rate (150 $g/m^2/h$ at 40°C), sheep lose less (32 $g/m^2/h$) and dogs lose an insignificant amount. Horses probably have the highest sweat rate of all. Excessive sweating is called diaphoresis, hyperhidrosis.

atrichial s. gland see sweat glands (below).

eccrine s. gland called also atrichial sweat gland; see sweat glands (below).

s. glands the glands that secrete sweat, situated in the corium or subcutaneous tissue, and opening by a duct on the surface of the body. They are of two types: (1) the ordinary or eccrine sweat glands are unbranched, coiled, tubular glands that promote cooling by evaporation of their secretion. They are innervated by cholinergic nerve fibers; (2) the **apocrine** sweat glands are large, branched, specialized glands that empty into the upper portion of a hair follicle instead of directly onto the skin surface, and have no secretory innervation but are sensitive to epinephrine in the bloodstream. Called also sudoriferous, or sudoriparous, glands.

paratrichial s. gland see **apocrine** sweat gland.

s. scraper a semicircular band of metal with a handle to be dragged over a horse's skin like a squeegee to remove excess moisture quickly.

sweating [*swet'ing*] 1. the production of sweat. Its importance as a cooling mechanism varies between species, being important in cows but not so in dogs. See also **sweat**. 2. meat that has been in cold store condenses air moisture onto it when it comes out into room temperature and is said to sweat. 3. see **fell-mongering**.

s. pens pens in which sheep are held before shearing.

s. sickness a tick toxicosis of young cattle caused by the bites of *Hyalomma truncatum* (syn. *H. transiens*) characterized by hyperemia of the mucosae and an extensive moist eczema which may lead to sloughing. Called also dyshidrosis tropicale, sweetsiekte.

swede ***Brassica*** *napobrassica*.

Swedish cattle indigenous to Sweden.

S. Friesian cattle Swedish version of Friesian.

S. red-and-white cattle red with small white markings, Swedish dairy cattle, originated from local breed plus Ayrshire. Called also Swedish red spotted cattle.

Swedish cattledog see **Swedish Vallhund**.

Swedish Lapphund dog a medium-sized, spitz-type dog with a thick, standing haircoat in black, brown or other solid colors, sometimes with white marks on the chest, feet and tip of tail. Very similar to, but larger than, the Finnish Lapphund. The breed is affected with an hereditary neuronal abiotrophy and glycogenosis type II (Pompe's disease). Called also Swedish Lapland dog.

Swedish Vallhund a small (20–32 lb), powerfully built, spitz-type, working dog with a long body, long head, pointed erect ears and moderately short legs. The breed standards call for a height to body length ratio of 2:5. The coat is medium length, abundant and woolly in shades of gray, brown, red or yellow. The tail be curled, naturally short or docked to a medium length. Called also Vasgotaspets, Swedish cattle dog, Swedish shepherd.

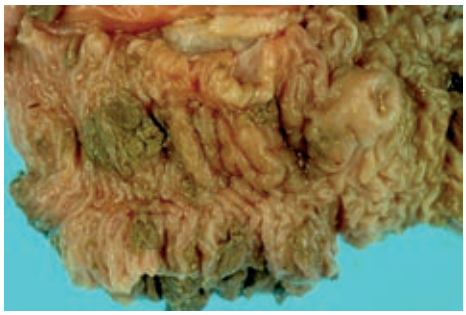
sweeney [*swe'ne*] see **suprascapular** paralysis.

sweet [*swēt*] opposite of sour.

VetBooks.ir

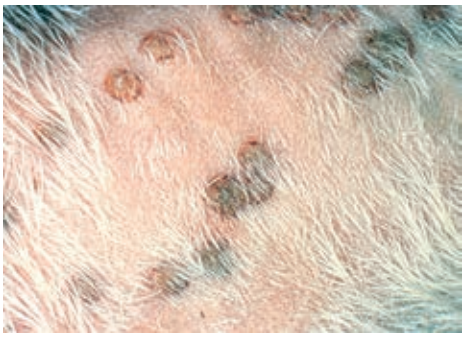
s. feed a mixture of rolled grain and molasses used to tempt convalescent horses and cattle.
s. itch see equine **allergic** dermatitis.
sweetbread an abattoir expression for calf thymus.
gut s. pancreas.
true s. thymus.
Sweet's syndrome [*swēt*] a syndrome of cutaneous and extracutaneous, sterile neutrophilic infiltrates with marked neutrophilia and fever that is recognized in humans; there have been reports of similar findings in dogs and horses. See sterile neutrophilic **dermatosis**.
sweetsiekte **sweating** sickness.
swell body the alar fold in the nostril of dogs.
swelled head [*swel'hed*] a disease of rams, a form of malignant edema caused by *Clostridium septicum* or other *Clostridia* spp. The swelling and emphysema are present only on the head and neck. The disease is thought to occur as a result of fighting. Called also ovine bighead.
swellhead a disease of sheep caused by photosensitization. See also **swelled head**.
swelling [*swel'ing*] 1. transient abnormal enlargement of a body part or area not due to cell proliferation. 2. an eminence, or elevation.
epiglottal s. the enlargements which appear on the floor of the pharynx of the embryo and subsequently take part in the formation of the lateral ventricles.
genital s. labioscrotal s.
labioscrotal s. in the male embryo overlie the inguinal canal development; in the female shift anteriorly and, in most species, disappear before birth.
lingual s's. primordia of the tongue, the median swelling and the distal and proximal swellings arise from the ventral aspect of the stomodeum.
laryngeal s. eminences which develop lateral to the laryngotracheal groove in the embryo.
scrotal s. primordial scrotum.
swept gain controls see **time** gain compensation.
swill cooked edible garbage fed to pigs.
swimmer see **flat puppy syndrome**.
swimmer's ear an explanation for otitis externa in dogs that swim or are bathed carelessly so that water enters the external ear canal. Excessive moisture in the ear predisposes to bacterial and fungal colonization.
swimmer's itch see **schistosomiasis**.
swine pertaining to or emanating from swine (pigs, hogs). See also **porcine**.
African s. fever see **African** swine fever.
classical s. fever see **classical swine fever**.

S-90: Swelled head.



S-91: Colitis in swine dysentery.

s. dysentery a contagious chronic diphtheritic typhylocolitis of young pigs caused by ***Brachyspira*** *hyodysenteriae*, characterized by severe porridge-like diarrhea, sometimes dysentery, dehydration and heavy morbidity, but usually low case fatality rates. See also **drug** augmented, drug delayed, drug diminished, and drug resistant swine dysentery.
s. erysipelas see **erysipelas**.
s. fever see **classical swine fever**, **African** swine fever.
s. infertility and respiratory syndrome see **porcine** reproductive and respiratory syndrome.
s. influenza a highly contagious upper respiratory disease of pigs caused by swine influenza virus A(H1N1); clinical signs include fever, stiffness, recumbency, labored breathing, sneezing, paroxysmal cough and nasal and ocular discharge. Clinical signs in pigs are often enhanced by concurrent infection with *Haemophilus influenzae*. Since the 1930s, H1N1 viruses of swine origin have been occasionally recognized as zoonotic, but in 2008-2009 the zoonotic potential was extended with the emergence of presumably a variant virus that caused one of the most dramatic zoonotic pandemics and many countries commenced national, mass, emergency, hastily implemented human vaccination programs. Although human infection has caused some deaths, usually in individuals with other medical conditions that compromise their immune systems, most uncomplicated human infections have been relatively mild compared to regular seasonal human influenza, with recovery in a few days.
s. paramyxovirus see **paramyxovirus** encephalomyelitis.
s. paratyphoid see **salmonellosis**.
s. plague historic disease with fibrinous pneumonia caused by *Pasteurella multocida*. Occurred in outbreak form with a number of litters of young pigs being affected within a short time.
s. vesicular disease is a highly infectious disease of pigs caused by an enterovirus related to human coxsackie B5 virus. It is clinically indistinguishable from foot-and-mouth disease in pigs. Vesicular lesions occur at the coronet, causing severe lameness, and in the mouth and on the snout. A disease notifiable to the OIE (see Table 22).
vesicular exanthema of s. see **vesicular** exanthema of swine.
swineherd's disease see **leptospirosis**.
swinepox a disease caused by either of two pox-viruses, true swine poxvirus (suipoxvirus) or vaccinia virus. There are typical pox lesions, most commonly on the abdominal skin in adult pigs. Piglets may have lesions on the face and have a concurrent conjunctivitis and some may die. *Haematopinus suis* is thought to transmit the disease in older pigs whereas suckers probably are infected by contact with the sow's udder.
swinge coat a haircoat that is short, sparse and curly.
swingle-bar wooden spreader used to keep trace chains apart behind draft animals.
swinney see **suprascapular** paralysis.
Swiss frill a breed of canary characterized by a curved body and voluminous, frilled breast feathers and a mantle with feathers falling symmetrically over the shoulders.
Swiss mountain dog see **Sennenhund**.
switch [*swich*] 1. the hairy part of the tail of a cow. 2. in immunology refers to the change from the production of one form or class of antibody by a B lymphocyte to another; the differentiation occurs only in the C region of their heavy chain.
s. sites repetitive nucleotide sequences located between most of the C genes.
switchgrass see ***Panicum*** *virgatum*.



S-92: Swinepox. Courtesy of JT Done.

swollen head syndrome a disease of domestic poultry caused by a combination of a pneumovirus and adventitious bacteria, usually *Escherichia coli*. Often associated with outbreaks of rhinotracheitis in turkeys, thought to be caused by the same virus. Clinically the disease occurs in broiler breeders causing swelling of the periorbital and infraorbital sinuses and submandibular edema. Young birds also show signs of severe respiratory disease.

swordtail a popular and colorful aquarium fish, *Xiphophorus* spp., characterized by its elongated caudal fins. Includes the green swordtail (*X. hellerii*) and many related species and hybrids.

Sx abbreviation for surgery; used in medical records.

sycosiform [*si-ko'sĭ-form*] resembling sycosis.

sycosis [*si-ko'sis*] a papulopustular inflammation of the hair follicles in humans. The term is not used in veterinary medicine but the animal diseases that fit this definition best are equine staphylococcal dermatitis, Canadian horsepox and demodectic mange.

sydecans a class of proteoglycans that are intergral membrane proteins that function in cell matrix adhesion, interact with the cytoskeleton and may bind external signal molecules thereby participating in cell–cell signaling.

Sydney silky see **Silky terrier**.

sylade a chemical additive used in the making of ensilage. A strong suspect at one time to be related in some way to the etiology of the pyrexia–pruritus–hemorrhage syndrome of cattle.

sylvan emanating from or pertaining to woods. See also **sylvatic**.

sylvatic [*səl-vat'ik*] found in the woods; occurring in animals of the forest.

s. plague see sylvatic **plague**.

s. rabies see sylvatic **rabies**.

s. ringworm see sylvatic **ringworm**.

sylvian aqueduct [*sil've-ən*] cerebral aqueduct.

sylvian fissure [*sil've-ən*] a fissure extending laterally between the temporal and frontal lobes, and turning posteriorly between the temporal and parietal lobes. Called also fissure of Sylvius, lateral cerebral sulcus.

Sylvilagus the rabbit genus of lagomorphs in the family Leporidae; the cottontail **rabbits**.

sym- prefix meaning together.

symballophone [*sim-bal'o-fōn*] a stethoscope with two chest pieces, making possible the comparison and localization of sounds.

symbiont [*sim'bi-ont, sim'be-ont*] an organism or species living in a state of symbiosis.

symbiosis [*sim"bi-o'sis*] the biological association of two individuals or populations of different species, classified as mutualism, commensalism, parasitism, amensalism or synnecrosis, depending on the advantage or disadvantage derived from the relationship.

symbiote [*sim'bi-ōt*] symbiont.

symbiotic mange [*sim"bi-ot'ik*] chorioptic mange.

symbiotics commercial products that combine prebiotics with probiotics.

symblepharon [*sim-blef'ə-ron*] adhesion of conjunctiva to conjunctiva or to cornea due to ulceration of both surfaces and exposure of sub-epithelial corneal or conjunctival stroma. Occurs most frequently as a sign of feline herpesvirus infection in cats or following chemical burns in any species.

symblepharopterygium [*sim-blef"ə-ro-tər-ij'e-əm*] symblepharon in which the adhesion is a cicatricial band resembling a pterygium.

symmelus [*sim'ə-ləs*] a fetus with fused legs.

symmetrical [*sĭ-met'rĭ-kəl*] equally on both sides.

symmetry [*sim'ə-tre*] correspondence in size, form and arrangement of parts on opposite sides of a plane, or around an axis. Often used to describe conformation.

bilateral s. the configuration of an irregularly shaped body (such as the body of a higher animal) that can be divided by a longitudinal plane into halves that are mirror images of each other.

radial s. that in which the body parts are arranged regularly around a central axis.

sympathectomize [*sim"pə-thek'tə-mīz*] to deprive of sympathetic innervation.

sympathectomy [*sim"pə-thek'tə-me*] excision or interruption of some portion of the sympathetic nervous pathway. The operation produces temporary vasodilatation leading to improved nutrition of the part supplied by the vessel.

chemical s. the interruption of the transmission of impulses through a sympathetic nerve by chemical agents.

periarterial s. surgical removal of the sheath of an artery containing the sympathetic nerve fibers; it produces temporary vasodilatation.

sympathetic [*sim"pə-thet'ik*] pertaining to the sympathetic nervous system.

acute s. blockade trauma to the cervical spinal cord may be associated with bradycardia and hypotension.

s. chain the sympathetic trunk whose ganglia suggest a chain of beads.

s. cholinergic vasodilator fibers a system of efferent dilator nerves distributed only to skeletal muscles; the existence of the system has been verified only in cats and dogs; in other species where it is not present vasodilation is achieved only by relaxation of vasoconstrictor tone.

s. nerves 1. see sympathetic trunk (below). 2. any nerve of the sympathetic nervous system.

s. nervous system the part of the **autonomic** nervous system whose preganglionic fibers arise from cell bodies in the thoracic and lumbar segments of the spinal cord; postganglionic fibers are distributed to the heart, smooth muscle, and glands of the entire body.

s. outflow the preganglionic fibers from the nerve cells in the thoracolumbar cord.

s. regurgitation see neurotic **regurgitation**.

s. trunk two long ganglionated nerve strands, one on each side of the vertebral column, extending from the base of the skull to the coccyx.

s. trunk ganglia ganglia situated segmentally along the paired sympathetic trunks beside the vertebral bodies.

sympathicoblast [*sim-path'ĭ-ko-blast"*] sympathoblast.

sympathicoblastoma [*sim-path"ĭ-ko-blas-to'mə*] a malignant tumor containing sympathicoblasts.

sympathicolytic [*sim-path"ĭ-ko-lit'ik*] sympatholytic.

sympathicomimetic [*sim-path"ĭ-ko-mi-met'ik*] sympathomimetic.

sympathicotonia [*sim-path"ĭ-ko-to'ne-ə*] a stimulated condition of the sympathetic nervous system marked by vascular spasm, heightened blood pressure, and the dominance of other sympathetic functions.

sympathicotripsy [*sim-path"ĭ-ko-trip'se*] surgical crushing of a nerve, ganglion or plexus of the sympathetic nervous system.

sympathicotropic [*sim-path"ĭ-ko-tro'pik*] 1. having affinity for or exerting its principal effect on the sympathetic nervous system. 2. an agent with such properties.

sympathicus the sympathetic nervous system.

sympathin a neurohormonal mediator of nerve impulses at sympathetic nerve synapses; the term is used only when the nature of the mediator is unknown.

sympathoadrenal [*sim"pə-tho-ə-dre'nəl*] 1. pertaining to the sympathetic nervous system and the adrenal medulla. 2. involving the sympathetic nervous system and the adrenal glands, especially increased sympathetic activity that causes increased secretion of epinephrine by the adrenal medulla and norepinephrine by the postganglionic sympathetic nerve endings.

s. discharge the sympathoadrenal system can discharge as one unit and prepare the animal in all systems for immediate fight or flight. There is an increase in heart rate, ventricular contractile strength, cardiac output, blood pressure plus pupillary dilatation, increased respiratory rate, bronchiolar dilatation, diversion of blood flow from the splanchnic to skeletal muscle circulation and elevation of the blood sugar.

VetBooks.ir

sympathoblast [*sim-path'o-blast"*] an embryonic cell that develops into a sympathetic nerve cell. See also **sympathogonium**.
sympathoblastoma [*sim"pə-tho-blas-to'mə*] sympathicoblastoma.
sympathogonioma [*sim"pə-tho-go"ne-o'mə*] sympathicoblastoma.
sympathogonium [*sim"pə-tho-go'ne-əm*] pl. *sympathogonia* [Gr.] an embryonic cell that develops into a sympathetic cell.
sympatholytic [*sim"pə-tho-lit'ik*] antiadrenergic: blocking transmission of impulses from the adrenergic (sympathetic) postganglionic fibers to effector organs or tissues, inhibiting such sympathetic functions as smooth muscle contraction and glandular secretion. Also, an agent that produces such an effect.
sympathomimetic [*sim"pə-tho-mi-met'ik*] 1. producing effects resembling those of impulses transmitted by the adrenergic postganglionic fibers of the sympathetic nervous system. 2. an agent that produces such an effect.
sympathy [*sim'pə-the*] an influence produced in any organ by disease or disorder in another part. See also symphatetic **ophthalmia**.
symphalangism [*sim-fal'ən-jiz-əm*] congenital ankylosis of the proximal phalangeal joints.
Symphoromyia [*sim"for-o-mi'yə*] a genus of flies which is ordinarily predatory on other flies but which are blood-suckers and do inflict a painful bite. They are members of the family Rhagionidae.
symphyseal, symphysial [*sim-fiz'e-əl*] pertaining to a symphysis.
symphysiodesis surgical fusion or thermal destruction of the pubic symphysis in young dogs with hip dysplasia to increase the angle of the acetabulum and reduce hip joint laxity. Called also juvenile pubic symphysiodesis (JPS).
symphysiorrhaphy [*sim-fiz"e-or'ə-fe*] suture of a divided symphysis.
symphysiotomy [*sim-fiz"e-ot'ə-me*] surgical division of a symphysis.
mandibular s. performed in order to achieve better access to the pharynx and posterior buccal cavity.
pubic s. performed to facilitate delivery, most commonly in under-age or overfat heifers. In the management of chronic obstipation in cats, the pelvic diameter is enlarged by symphysiotomy and maintained with an iliac bone graft.
symphysis [*sim'fi-sis*] pl. *symphyses* [Gr.] a type of joint in which the apposed bony surfaces are firmly united by a plate of fibrocartilage or cartilage; e.g. intermandibular joint, pelvic symphysis. There is usually cartilage against each bone and fibrous tissue or fibrocartilage in the middle.
ischiatic s. the line of fusion between the bodies of the ischia.
mandibular s. the joint between the two halves of the mandible which allows each half to rotate, as in the jaws of the dog, cat, ruminants and many other species, is a cartilaginous symphysis. In the jaws of horses and pigs the mandibles are fused together.
pelvic s. the combined pubic and ischiatic symphyses, a cartilaginous symphysis.
pubic s., s. pubis the line of union of the bodies of the pubic bones in the median plane.
Symphytum [*sim'fi-təm*] genus in plant family Boraginaceae; contain pyrrolizidine alkaloids and can cause poisoning if eaten in large quantities. Include *S. asperum* (rough comfrey), *S. officinale* (comfrey), *S.* x *uplandicum* (Russian comfrey).
Symplocarpus foetidus North American member of the plant family Araceae; contains calcium oxalate raphide crystals which cause stomatitis; called also skunk cabbage.
sympodia [*sim-po'de-ə*] fusion of the lower extremities.
symport [*sim'port*] a structure that transports two compounds simultaneously across a cell membrane in the same direction, one compound being transported down a concentration gradient, the other against a gradient.
symptom [*simp'təm*] any indication of disease perceived by the patient and a term therefore not applicable to animals. The expression used instead is 'clinical signs'.

S-93: Rostral view of feline mandibular symphysis.

symptomatic [*simp"to-mat'ik*] 1. pertaining to or of the nature of a symptom. The word symptom is not used in veterinary medicine because the subjective sensations of our patients are not known to us. However, because there is no comparable word relating to clinical sign, the principal means by which veterinarians arrive at diagnoses, it is customary to use the word symptomatic in this context, that is as pertaining to or in the nature of a clinical sign. 2. indicative (of a particular disease or disorder). 3. exhibiting the symptoms of a particular disease but having a different cause. 4. directed at the allaying of symptoms, as symptomatic treatment.
s. anthrax see **blackleg**.
symptomatology [*simp"tə-mə-tol'ə-je*] 1. the study of the science of clinical signs. 2. the combined clinical signs of a disease.
symptomatolytic [*simp"to-mat"o-lit'ik*] causing the disappearance of clinical signs.
sympus [*sim'pəs*] symmelus.
syn- word element. [Gr.] *union, association*.
Synadenium South African plant genus in the family Euphorbiaceae; some used as tropical garden shrubs; contain a milky sap (latex) which irritates mucosae, causes diarrhea, but the toxin has not been identified. Includes *S. cupulare (S. arborescens* crying tree), *S. grantii* (African milk bush).
synanthropic ecologically associated with humans.
Synapis [*sĭ-nap'sis*] see ***Sinapis***.
synapse [*sin'aps*] the junction between the processes of two neurons or between a neuron and an effector organ, where neural impulses are transmitted by chemical means. The impulse causes the release of a neurotransmitter (e.g. acetylcholine or norepinephrine) from the presynaptic membrane of the axon terminal. The neurotransmitter molecules diffuse across the synaptic cleft, bind with specific receptors on the postsynaptic membrane, causing depolarization or hyperpolarization of the postsynaptic cell. See also **neuron**.
adrenergic s. the neurotransmitter is norepinephrine. See also **adrenergic** (1).
axoaxonic s. see **axoaxonic**.
axodendritic s. see **axodentritic**.
axodendrosomatic s. one between the axon of one neuron and the dendrites and body of another.
axosomatic s. see **axosomatic**.
cholinergic s. the neurotransmitter is acetylcholine. See also **cholinergic**.
dendrodendritic s. one from a dendrite of one cell to a dendrite of another.
excitatory s. a synapse in which the transmission of impulses is electrical not chemical. Found only in fish and invertebrates.
inhibitory s. hyperpolarizing electrical current is used to raise the threshold for the stimulation of a discharge of an impulse from the particular kind of nerve cell, found only in fish.
synapsis the pairing off and union of homologous chromosomes from male and female pronuclei at the start of meiosis.
synaptic [*sĭ-nap'tik*] pertaining to a synapse.
s. cleft a narrow space between the plasma membranes of the presynaptic and postsynaptic cells.
s. junction see **synapse**.
s. vesicle one located in the axon terminal of a presynaptic cell, containing neurotransmitter substances.
synaptosomes [*sin-ap'to-sōm"*] discrete units of pre- and postsynaptic membranes.
synarthrodia [*sin"ahr-thro'de-ə*] synarthrosis.
synarthrodial [*sin"ahr-thro'de-əl*] pertaining to a synarthrosis.
synarthrophysis [*sin-ahr"thro-fi'sis*] any ankylosing process.
synarthrosis [*sin"ahr-thro'sis*] pl. *synarthroses* [Gr.] an outmoded term for a form of joint in which the bony elements are united by continuous intervening strip of fibrous or cartilaginous tissue to make them immobile. Called also fixed joint.
synbiotic a food product that contains both probiotics and prebiotics.
syncanthus [*sin-kan'thəs*] adhesion of the eye to the orbital structures.
syncephalus [*sin-sef'ə-ləs*] conjoined twins with heads fused into one, there being a single face, with four ears.
synchilia [*sin-ki'le-ə*] congenital adhesion of the lips.
synchiria [*sin-ki're-ə*] reference of sensation to the opposite side on application of a stimulus.

VetBooks.ir

synchondrosis [*sin"kon-dro'sis*] pl. *synchondroses* [Gr.] a type of cartilaginous joint such as found in most growing long bones in which the diaphysis and epiphysis are united by the cartilage of a growth plate which is usually converted into bone before or during early adult life and that serves to allow growth. Such joints similarly occur in the intermandibular, intersternebrales (syn. sternales), spheno-occipitales locations. See also **intersphenoidal synchondrosis**.

synchondrotomy [*sin"kon-drot'ə-me*] division of a synchondrosis.

synchronism [*sing'krə-niz-əm*] occurrence at the same time.

synchronization [*sing"krə-nĭ-za'shən*] arranging that events shall occur at the same time.

estrus s. see **estrus** synchronization.

synchronous [*sing'krə-nəs*] occurring at the same time.

s. timer an oldfashioned timer on an X-ray machine that permits of very short exposure times but has to be reset after each exposure. Use of this kind of timer is no longer legal in most countries.

synchysis [*sin'kĭ-sis*] a softening or fluid condition of the vitreous body of the eye.

s. scintillans floating mobile cholesterol crystals in the vitreous body; develops as a secondary degenerative change. Once called cholesterolosis bulbi.

synclonus [*sin'klo-nəs*] muscular tremor or successive clonic contraction of various muscles together.

syncope [*sing'kə-pe*] a temporary suspension of consciousness due to cerebral anoxia; fainting.

cardiac s. sudden loss of consciousness due to cerebral anoxia caused by ventricular asystole, extreme bradycardia, atrial fibrillation (in horses) or ventricular fibrillation.

drug-induced s. may result from abnormalities of cardiac rhythm, caused by treatment with digitalis, and hypotension caused by drugs such as diuretics, promazine and phenothiazine tranquilizers, and peripheral vasodilating agents.

laryngeal s. tussive syncope.

Stokes–Adams s. see **Stokes–Adams disease**.

swallow s. syncope associated with swallowing, a disorder of atrioventricular conduction mediated by the vagus nerve.

tussive s. brief loss of consciousness associated with paroxysms of coughing.

vasovagal s. see **vasovagal** attack.

syncytial [*sin-sish'əl*] pertaining to or producing a syncytium.

bovine s. virus see ***Retroviridae***.

feline s. virus see ***Retroviridae***.

s. giant cell multinucleated mass of protoplasm formed by the fusion of a number of cells; a stage in the formation of a syncytium.

syncytiotrophoblast [*sin-sit"e-o-tro'fo-blast*] the outer syncytial layer of the trophoblast.

syncytium [*sin-sish'e-əm*] a multinucleate cellular mass produced by the fusing of cells.

s.-forming virus members of the family *Retroviridae*, genus *Spumavirus*. The best known of these viruses are found in cats and cattle. It should be noted, however, that viruses of several families, including herpesviruses, paramyxoviruses, coronaviruses and retroviruses, produce syncytia.

syndactylia [*sin"dak-til'e-ə*] syndactyly.

syndactylism [*sin-dak'tə-liz-əm*] syndactyly.

syndactyly [*sin-dak'tə-le*] fusion of the claws or digits. An inherited defect in several breeds of cattle. Some affected animals are also susceptible to hyperthermia.

syndectomy [*sin-dek'tə-me*] peritectomy.

syndesis [*sin'də-sis, sin-de'sis*] 1. arthrodesis. 2. synapsis.

syndesmectomy [*sin"dəz-mek'tə-me*] excision of a portion of ligament.

syndesmitis [*sin"dez-mi'tis*] 1. inflammation of a ligament. 2. conjunctivitis.

s. ossificans ossification of a ligament. The ventral longitudinal ligament may be affected, especially in young Boxer dogs.

syndesm(o)- word element. [Gr.] *connective tissue, ligament*.

syndesmochorial [*sin"dəz-mo-kor'e-əl*] see syndesmochorial **placenta**.

syndesmography [*sin"dəz-mog'rə-fe*] a description of the ligaments.

syndesmology [*sin"dəz-mol'ə-je*] scientific study of the ligaments and joints.

syndesmoma a tumor of connective tissue.

syndesmoplasty [*sin-dez'mo-plas"te*] plastic repair of a ligament.

S-94: Calf with syndactyly.
From Drögemüller C, Distl O: Genetic analysis of syndactyly in German Holstein cattle. Vet J 171:120-125, 2006. Elsevier.

syndesmosis [*sin"dəz-mo'sis*] pl. *syndesmoses* [Gr.] a joint in which the bones are united by fibrous connective tissue forming an interosseous membrane or ligament that allows a modest amount of movement.

syndesmotomy [*sin"dəz-mot'ə-me*] incision of a ligament.

syndrome [*sin'drōm*] a combination of clinical signs resulting from a single cause or so commonly occurring together as to constitute a distinct clinical picture. For specific syndromes, see under the specific name, as **flat puppy syndrome**, **Cushing's syndrome**.

s. recognition a preliminary stage in the making of a diagnosis based on the recognition of a particular combination of clinical signs.

testicular feminizing s. see **testicular** feminization syndrome.

triple XXX s. see **XXX**.

syndrome of inappropriate secretion of antidiuretic hormone (SIADH) a syndrome in which the secretion of antidiuretic hormone (ADH) is not inhibited by hypotonicity of extracellular fluid and hyponatremia is produced.

syndromic [*sin-drom'ik*] occurring as a syndrome.

syndromology [*sin"drom-ol'ə-je*] the field concerned with the taxonomy, etiology and patterns of congenital malformations.

synechia [*sĭ-nek'e-ə*] pl. *synechiae* [Gr.] adhesion, as of the iris to the cornea or the lens.

annular s. adhesion of the whole pupillary rim of the iris to the lens; a precursor to iris bombe.

anterior s. adhesion of the iris to the cornea.

peripheral anterior s. adhesion of the peripheral iris root to the cornea.

posterior s. adhesion of the iris to the anterior lens capsule.

total s. adhesion of the whole posterior surface of the iris to the anterior lens capsule.

s. vulvae a congenital condition in which the labia are sealed in the midline, with only a small opening below the clitoris through which urination may occur.

synechotomy [*sin"ə-kot'ə-me*] incision of a synechia.

synencephalocele [*sin"ən-sef'ə-lo-sēl"*] encephalocele with adhesions to adjoining parts.

synencephaly [*sin"ən-sef'ə-le*] a fetal anomaly in which there are two bodies and one head. Called also disomus.

syneresis [*sĭ-ner'ə-sis*] a drawing together of the particles of the disperse phase of a gel, with separation of some of the disperse medium and shrinkage of the gel. Occurs as a result of liquefaction of the vitreous as a normal aging change or following pathology resulting in vitreal hemorrhage, for example.

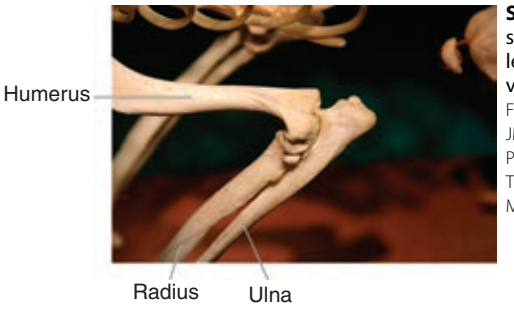
S

S-95: Lens subluxation in a fox terrier. A focal posterior synechia adheres to the anterior lens capsule at the 2 o'clock position.
From Dziezyc J, Millchamp N, Color Atlas of Canine and Feline Ophthalmology. Saunders, 2005.

S-96: Congenital metatarsal bone synostosis in a dog.
From Ettinger SJ, Feldman E, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2004.

synergism [*sin'ər-jizm*] the joint action of agents so that their combined effect is greater than the algebraic sum of their individual parts, e.g. antibiotic synergism.
synergist [*sin'ər-jist*] an agent that acts with or enhances the action of another, e.g. parainfluenza 3 virus and ***Mannheimia*** *haemolytica* in cattle.
synergy [*sin'ər-je*] correlated action or cooperation by two or more structures or drugs.
syngamiasis infestation with *Syngamus trachea* in fowl, turkey, pheasant, guinea fowl, goose and wild birds. Causes pneumonia while migrating through the lungs. In the trachea causes tracheitis and anemia because of heavy blood-sucking. The predominant clinical signs are dyspnea, head shaking and spasmodic gaping.
Syngamus [*sin'gə-məs*] a genus of nematodes in the family Syngamidae.
S. ierei a cause of chronic nasopharyngitis in cats in Puerto Rico.
S. laryngeus found in the larynx of cattle.
S. nasicola found in the nasal cavities of ruminants.
S. skrjabinomorpha found in the domestic goose and in chickens.
S. trachea found in fowl, turkey, pheasant, guinea fowl, goose and wild birds. Causes pneumonia while migrating through the lungs. In the trachea causes tracheitis and anemia because of heavy blood-sucking. The predominant clinical signs are dyspnea, head shaking and spasmodic gaping.
syngamy [*sing'gə-me*] a method of reproduction in which two individuals (gametes) unite permanently and their nuclei fuse; sexual reproduction. A common form of reproduction in protozoa.
syngeneic [*sin"jə-ne'ik*] in transplantation biology, denoting individuals or tissues having almost identical genotypes, i.e. animals of the same inbred strain, or their tissues. Grafts can be as readily exchanged between syngeneic animals as between identical twins which are called isogeneic.
syngenesis [*sin-jen'ə-sis*] 1. the origin of an individual from a germ derived from both parents and not from either one alone. 2. the state of having descended from a common ancestor.
syngraft [*sin'graft*] see **isograft**.
Synhimantus a genus of nematodes that infect birds; members of the family Acuariidae.
S. spiralis, S. nasula found in the walls of the proventriculus, esophagus, and sometimes intestine of most domestic and wild bird species, mainly in water birds, e.g. pelicans, but also in hawks and owls. It causes severe lesions in the proventriculus and affected birds waste away and die. Losses may be heavy.
synkaryon [*sin-kar'e-on*] a nucleus formed by fusion of two pronuclei, the fertilization nucleus.
synkinesis [*sin"ki-ne'sis*] an associated movement; an unintentional movement accompanying a volitional movement.
synnecrosis [*sin"ə-kro'sis*] symbiosis in which the relationship between populations (or individuals) is mutually detrimental.
synonym an alternative name for the same disease, sign, bacteria, etc. A key word or sign may have a number of synonyms.
synophthalmus, synophthalmos, synophthalmia [*sin"of-thal'məs*] cyclops.
synorchism, synorchidism [*sin'or-kiz-əm*] congenital fusion of the testes into one mass.
synosteotomy [*sin"os-te-ot'ə-me*] dissection of the joints.
synostosis [*sin"os-to'sis*] pl. *synostoses* [Gr.] normal or abnormal union of two bones by osseous material.
radioulnar s. occurs between the radius and ulna as a result of unsatisfactory reduction of fractures.
synotia [*sĭ-no'she-ə*] a developmental anomaly with fusion of the ears, or their location near the midventral line in the upper part of the neck.
synotus [*sĭ-no'təs*] a fetus exhibiting synotia.
synovectomy [*sin"o-vek'tə-me*] excision of a synovial membrane, as of that lining the capsule of the knee joint.
synovia [*sĭ-no've-ə*] synovial fluid; the yellow-white transparent viscid fluid secreted by the synovial membrane and found in joint cavities, bursae and tendon sheaths that serves to lubricate moving parts and nourish articular cartilage.
synovial [*sĭ-no've-əl*] of, pertaining to, or secreting synovia.
s. fluid a protein-free dialysate of plasma with added hyaluronate, glycoproteins and other unidentified substances added by the synovial membrane. Called also synovia.
s. folds pleats of synovial membrane infoldings into joint cavities.
s. fossa cartilage-free nonarticulating areas in synovial joint articular surfaces found in the larger joints of larger animals. They are recessed below the surface of the cartilage and are unevenly sculpted.
s. gout see articular **gout**.
s. joint a specialized form of articulation permitting more or less free movement, the union of the bony elements being surrounded by an articular capsule enclosing a cavity lined by synovial membrane. Formerly called diarthrosis.
s. membrane the inner of the two layers of the articular capsule of a synovial joint; composed of loose connective tissue and having a free smooth surface that lines the joint cavity; it secretes the synovia.
s. mucin the lubricant in synovial joints; an acidoglycoprotein, the acid polysaccharide portion of which is hyaluronan.
s. villus see synovial **villus**.
synovialis [*sĭ-no"ve-a'lis*] synovial.
synovialoma, synovioma [*sĭ-no"ve-ə-lo'mə*] a tumor of synovial membrane origin.

VetBooks.ir



S-97: Hinge-type synovial joint. Canine left elbow, lateral view.
From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

synoviocytes [*sĭ-no've-o-sīt*] cells of the synovial membrane are of two types: type A are mainly phagocytic and pinocytic; type B are chiefly synthesizers. Seen in cytological examination of joint fluid.
synovioma [*sĭ-no"ve-o'mə*] synovialoma.
synoviorthese [*sĭ-no"ve-or-thē'sis*] irradiation of the synovium by intra-articular injection of radiocolloids to destroy inflamed synovial tissue.
synovitis [*sin"o-vi'tis*] inflammation of a synovial membrane, usually painful, particularly on motion, and characterized by fluctuating swelling, due to effusion in a synovial sac.
dry s. synovitis with little effusion.
granulomatous s. see **granulomatous** synovitis/arthritis.
infectious avian s. an infectious disease of broiler chickens and young turkeys caused by *Mycoplasma synoviae* and manifested by acute or chronic exudative synovitis, tenosynovitis or bursitis. The birds are lame, the joints are often swollen and there is difficulty in moving and in maintaining a standing posture.
lymphocytic s. see lymphocytic–plasmacytic synovitis (below).
lymphocytic–plasmacytic s. an immune-mediated inflammatory joint disease seen most often in the stifle of dogs, with signs of joint laxity and instability resembling rupture of the cranial cruciate ligament. The synovial membrane is greatly thickened.
pigmentary villonodular s. a disease of humans characterized by the development of nodular and villous synovial proliferations; similar lesions are reported in horses and dogs; pigmentation results from deposition of blood pigments.
purulent s. synovitis with effusion of pus in a synovial sac.
serous s. synovitis with copious nonpurulent, serous effusion.
s. sicca dry synovitis.
simple s. synovitis with clear or slightly turbid effusion.
tendinous s. inflammation of a tendon sheath.
villonodular s. proliferation of synovial tissue, especially of the knee joint, composed of synovial villi and fibrous nodules infiltrated by giant cells and macrophages.
synovium [*sĭ-no've-əm*] a synovial membrane.
synsacrum [*sin-sa'krəm*] the fused lumbar and sacral vertebra and pelvic girdle of birds.
synsarcosis [*sin-sahr-ko'sis*] union of parts of the skeleton by muscles, e.g. attachment of the thoracic limb to the trunk in any of the domestic animals.
syntenic groups [*sin-ten'ik*] see **linkage** (2).
synteny [*sin'tə-ne*] conserved gene order along the chromosomes of different species.
synthase [*sin'thās*] any enzyme, especially a lyase, which catalyzes a synthetic reaction, called a lyase when the reverse reaction is catalyzed. Originally defined as enzymes not using energy from nucleoside triphosphates, but now covers all synthetic enzymes.
synthesis [*sin'thə-sis*] creation of a compound by union of elements composing it, done artificially or as a result of natural processes.
synthesize [*sin'thə-sīz*] to produce by synthesis.
synthetase [*sin'thə-tās*] ligase; any of a class of enzymes that catalyze the joining together of two molecules coupled with the breakdown of a pyrophosphate bond in ATP or a similar triphosphate.
aminoacyl-tRNA s's see t**RNA**.
heme s. see **ferrochelatase**.
synthetic [*sin-thet'ik*] artificially produced.
s. organic dyes includes azo, acridine and rosaniline dyes. Used topically as weak antimicrobial agents.
s. reaction a metabolic reaction in which a substance is formed from two precursors.
s. rubber may contain tricresyl phosphate and cause intoxication of animal having access to litter made of it.
syntopy [*sin'tə-pe*] the position of an organ relative to other organs.
syntrophoblast [*sin-trof'o-blast*] syncytiotrophoblast.
Syphacia obvelata [*si-fa'se-ə*] the pinworm found in mice and hamsters, a common parasite in laboratory colonies.
syphilis [*sif'ĭ-lis*] in rabbits, see **spirochetosis** (2).
syringe [*sĭ-rinj', sir'inj*] an instrument for introducing fluids into or withdrawing them from the body.
bulb s. a compressible rubber bulb with a pierced, pointed end that allows suction and expulsion of fluids. Useful in irrigating ears or small cavities as in abscesses.
s. driver an electronically controlled syringe used for delivering small volumes of fluid at a constant rate.
hypodermic s. one for introduction of liquids through a hollow needle into tissues.
pole s. a syringe on a long pole so that the syringe can be operated from a distance, e.g. through the bars of a cage.
projectile s. see **blow dart**.
syringectomy [*sir"in-jek'tə-me*] excision of a fistula.
syringitis [*sir"in-ji'tis*] inflammation of the pharyngotympanic (auditory, eustachian) eustachian tube.
syring(o)- word element. [Gr.] *tube, fistula*.
syringoadenoma [*sĭ-ring'go-ad"ə-no'mə*] syringocystadenoma.
syringobulbia [*sĭ-ring'go-bul'be-ə*] the presence of fluid-filled cavities in the medulla oblongata and pons.
syringocarcinoma [*sĭ-ring"go-kahr"sĭ-no'mə*] neoplasm of a sweat gland.
syringocele [*sĭ-ring'go-sēl*] a cavity-containing herniation of the spinal cord through the bony defect in spina bifida.
syringocystadenoma [*sə-ring"go-sis-tad"-ə-no'mə*] adenoma of the sweat glands; called also hidradenoma.
syringocystoma [*sə-ring"go-sis-to'mə*] a cystic tumor of a sweat gland.
syringomeningocele meningocele resembling syringomyelocele.
syringomyelia [*sĭ-ring"go-mi-e'le-ə*] 1. the presence of fluid-filled cavities in the substance of the spinal cord, with destruction of nervous tissue. Clinical signs are posterior paralysis, or if the animal is able to stand the posture is a wide spacing of the feet and overextension of the legs when walking. An inherited trait in Weimaraner dogs. See also spinal **dysraphism**. 2. Also commonly used to refer to a condition in Cavalier King Charles spaniels and other small breeds which involves abnormal occipital bone formation and herniation of the caudal part of the cerebellum through the foramen magnum in addition to pockets of fluid within the spinal canal. Clinical signs include scratching at the side of the shoulder or neck due to apparent dysesthesia, and paroxysms of screaming in pain with no or minimal inciting stimuli. Other terms used for this condition include caudal occipital malformation syndrome and Chiari-like malformatiion due to its similarity to Arnold Chiari Type I malformatiion in humans.
syringomyelitis [*sĭ-ring"go-mi"ə-li'tis*] inflammation of the spinal cord with the formation of cavities.
syringomyelocele [*sĭ-ring"go-mi'ə-lo-sēl*] hernial protrusion of the spinal cord through the bony defect in spina bifida, the mass containing a cavity connected with the central canal of the spinal cord.
Syringophilus a genus of trombidiform mites found inside the quills of feathers of birds.
S. bipectinatus found in fowl feather quills.
S. columbae found in pigeon feather quills.
***S. uncinatus* (syn. *Cheyletoides uncinata*)** found in peacock feather quills.
syringotomy [*sir"in-got'ə-me*] incision of a fistula.
syrinx [*sir'inks*] 1. a tube or pipe; a fistula. 2. the principal voice organ of birds; a laterally compressed cartilaginous box at the caudal end of the trachea and the beginning of the bronchi.
s. membrane one that creates the voice of birds; comprises two pairs of vibrating membranes, the internal and external tympanic membranes.
syrinxitis a condition seen in companion birds; inflammation of the trachea and syrinx, characterized by snoring, coughing, gagging, cyanosis and a threat of asphyxiation.
Syrmaticus reevesii Reeves **pheasant**.

VetBooks.ir

syrup [*sir'əp*] a viscous concentrated solution of a sugar, such as sucrose, in water or other aqueous liquid; combined with other ingredients, such a solution is used as a flavored vehicle for medications.

systaltic [*sis-tawl'tik*] alternately contracting and dilating; pulsating.

system [*sis'təm*] 1. a set or series of interconnected or interdependent parts or entities (objects, organs or organisms) that act together in a common purpose or produce results impossible by action of one alone. 2. an organized set of principles or ideas. The parts of a system can be referred to as its elements or components; the environment of the system is defined as all of the factors that affect the system and are affected by it. A living system is capable of taking in matter, energy and information from its environment (input), processing them in some way, and returning matter, energy and information to its environment as output. An *open* system is one in which there is an exchange of matter, energy and information with the environment; in a *closed* system there is no such exchange. A living system cannot survive without this exchange, but in order to survive it must maintain pattern and organization in the midst of constant change. Control of self-regulation of an open system is achieved by dynamic interactions among its elements or components. The result of self-regulation is referred to as the steady state; that is, a state of equilibrium. **homeostasis** is an assemblage of organic regulations that act to maintain steady states of a living organism. Definitions of individual systems are to be found under those titles, e.g. **alimentary** system.

general s's theory a theory of organization proposed by Ludwig von Bertalanffy in the 1950s as a means by which various disciplines could communicate with one another and duplication of efforts among scientists could be avoided. The theory sought universally applicable principles and laws that would hold true regardless of the kind of system under study, the nature of its components, or the interrelationships among its components. Since the introduction of the general systems theory, theoretical models, principles and laws have been developed that are of great value to scientists in all fields, including those of medicine, nursing, other health-related professions, and in veterinary medicine.

heterogeneous s. a system or structure made up of mechanically separable parts, as an emulsion or suspension.

homogeneous s. a system or structure made up of parts that cannot be mechanically separated, such as a solution.

systema [Gr.] *system*.

systematic [*sis"tə-mat'ik*] in an organized manner; according to some system.

Systematized Nomenclature of Medicine (SNOMED) see **SNOMED**.

Systematized Nomenclature of Veterinary Medicine (SNOVET) published by the US Department of Health, Education and Welfare in 1966. An eight digit code divided into two sections of four digits each, one section devoted to topography or anatomical location and the other to etiology.

Système International d'Unités (SI) the International System of Units; introduced in 1977, a universally accepted system of units of measure and providing units for the health professions.

systemic [*sis-tem'ik*] pertaining to or affecting the body as a whole.

systole [*sis'to-le*] the contraction, or period of contraction, of the heart, especially of the ventricles, during which blood is forced into the aorta and pulmonary artery.

atrial s. contraction of the atria by which blood is forced into the ventricles; it precedes the true or ventricular systole.

extra s. see **extrasystole**.

ventricular s. contraction of the ventricles, forcing blood into the aorta and pulmonary artery.

systolic [*sis-tol'ik*] pertaining to or emanating from systole.

syzygy [*siz'ə-je*] 1. the fusion of organs without the loss of identity by either. 2. an association of two protozoa laterally or end-to-end for the asexual exchange of genetic material. 3. the pairing of chromosomes during meiosis.

T

T symbol, *tesla; tera-;* (absolute) temperature; **thymine**.

T_1 in magnetic resonance imaging, a time constant; called also spin-lattice relaxation time.

T_1 recovery the time taken for about 63% of the original longitudinal tissue magnetization to recover after termination of an external radiofrequency pulse. T_1 recovery times vary between different soft tissues. Fat has a shorter T_1, central nervous system tissue is intermediate and water, such as cerebrospinal fluid, has a longer T_1 recovery time. By using a short time delay between energtizing radiofrequency pulses, these tissue differences can be emphasized.

T_1 weighted scans achieved by setting shorter time intervals between excitation radiofrequency pulses and shorter time to receive the peak echo signal than for other MRI scans. Fat is bright, soft tissues are displayed as varous shades of gray, and cerebrospinal fluid, tendons, ligaments, air and cortical bone are dark. Gadolinium contrast agent is bright.

T_2 in magnetic resonance imaging, a time constant for the transverse tissue magnetization to decrease to 37% of the prior level. Called also spin-spin relaxation time.

T_2 decay occurs after termination of an external radiofrequency field. There is a rapid loss in uniformity of proton spin rates. The radiofrequency signal decay rate varies between tissues. The proportional signal intensity increases from cerebrospinal fluid (CSF) over time as the rate of signal decay is slower for CSF than surrounding soft tissues.

T_2 weighted scan achieved by using a longer time to receive the peak echo signal and longer intervals between excitation radiofrequency pulses than for other MRI scans. Fluids are bright, soft tissues are displayed as various shades of gray, and tendons, ligaments, air and cortical bone are dark.

T_2 toxin a trichothecene toxin (a secondary toxic metabolite) produced by a number of *Fusarium* spp. fungi including *F. tricinctum* growing on stored grain, usually corn. The toxin affects rapidly dividing cells, thereby causing necrosis of skin and of cells lining the alimentary tract, lymphoid and hemopoietic tissues. This may result in panleukopenia and defective blood clotting. The toxin is also a teratogen and causes stillbirth, abortion and fetal abnormalities. Clinical signs include feed refusal and vomiting in species that can vomit. Called also moldy corn disease. See also **trichothecene**.

T_3 tri-iodothyronine.

T_4 thyroxine.

free T_4 see free **thyroxine**.

tT_4 see total **thyroxine**.

T_7 free thyroxine (T_4) index.

T_{12} a value derived by multiplying the value for T_4 by the value for T_3 expressed as RT_3U (resin T_3 uptake).
T_m tubular maximum (of the kidneys); used in reporting kidney function studies, with inferior letters representing the substance used in the test, as T_{mPAH} (tubular maximum for para-aminohippuric acid).
T_{max} the time after administration of a drug when the maximum plasma concentration is reached; when the rate of absorption equals the rate of elimination.
2,4,5-T (2,4,5-trichlorophenoxy) acetic acid, a herbicide considered to be without toxicity hazard provided it is clear of the toxic contaminant dioxin.
T-1824 Evans blue dye.
t in genetics, symbol for translocation.
$t_{1/2}$ half-time.
$t_{1/2\ context}$ context-sensitive half-time.
θ theta, small letter; eighth letter in the Greek alphabet.
τ tau, small letter; ninetheenth letter in the Greek alphabet. Used to designate an interval of time.
TA toxin–antitoxin.
T antigen tumor antigen.
T banding a staining technique with Giemsa stain used in the preparation of karyotypes; stains the telomeres (ends) and the centromeres.
T cell see T **lymphocyte**.
T c. receptor antigen specific heterodimeric proteins, either αβ or γδ, present on the surface of T lymphocytes, the specificity of which is generated by somatic mutation and somatic recombination of a relatively small number of genes similar to that responsible for the generation of antibody diversity.
T conformational state deoxy ('tense') conformational form of hemoglobin.
T effector cell includes large granular lymphocyte, called also natural killer **cell** and cytotoxic T lymphocytes.
T helper cell see helper **lymphocyte**.
T lymphocyte see T **lymphocyte**.
T tubule see transverse **tubules**.
t-PA tissue plasminogen activator.
t-distribution see **t statistic**.
***t* statistic, *t* distribution** the statistical distribution of the ratio of the sample mean to its sample standard deviation for a normal random variable with zero mean. It is the basis of various *t*-tests used to make inferences about the mean of a normal variable.
t-strain mycoplasma see ***Ureaplasma***.
***t*-test** a test of statistical significance which uses a formula from which a *t* value is derived. The value is then compared with a set of *t*-distribution tables to see whether the null hypothesis should be rejected or not.
TA Terminologia Anatomica.
Ta chemical symbol, *tantalum*.
TAA tumor-associated antigen.
TAB a vaccine prepared from killed typhoid, paratyphoid A and paratyphoid B bacilli.
tabanid [*tab'ə-nid*] a fly of the family Tabanidae, including the genera *Chrysops*, *Haematopota*, *Pangonia* and *Tabanus*.
Tabanus [*tə-ba'nəs*] a genus of blood-sucking biting flies (horse flies, deer flies or march flies) in the family Tabanidae which transmit trypanosomes and anthrax to various animals and have a painful bite.
tabby genetically determined coat color patterns that occur in different cat breeds and in any coat type or colors. The four variations are: *mackerel,* with parallel vertical stripes on the body and rings around the tail and legs; *classic* or blotched, with thicker, horizontal stripes forming swirls; *spotted,* with spots instead of stripes; and *ticked,* with bands of color in individual hairs and an overall uniform appearance.
t. point see **points**.
tabes [*ta'bēz*] any wasting of the body; progressive atrophy of the body or a part of it.
tabescent [*tə-bes'ənt*] growing emaciated; wasting away.
tabetiform [*tə-bet'ĭ-form*] resembling tabes.
tablature [*tab'lə-chər*] separation of the chief cranial bones into inner and outer tables, separated by a diploë.
table [*ta'bəl*] 1. a flat layer or surface, e.g. smooth surface on top of (occlusal surface of) teeth especially on the incisors of the horse, used in telling the age of the horse. 2. a collection of related records in a data base.
hydraulic t. used for surgery of large animals so it can be adjusted to the appropriate height and in some cases starting from floor level to accommodate animals anesthetized on the floor, then raised.
inner t. the inner compact layer of the bones covering the brain.
instrument t. used to arrange instruments for ready access by the surgeon and assistants. It often overhangs the surgery table.
outer t. the outer compact layer of the bones covering the brain.
restraint t. of different designs and size according to their purpose. Examples are restraint tables for hoof trimming of cattle and restraint tables for collecting semen from rams. The animal is stood next to the upright table and strapped to it, or placed in a cage, and the table is then moved to a horizontal position and further restraints applied.
statistical t. tables of values used in statistics, e.g. *t*-tables.
t. ties sterilizable nylon or cotton ropes that can be used to tie a recumbent, anesthetized dog or cat firmly to an operating table.
vitreous t. inner table.
table top technique a technique of radiography in which the use of a grid is unnecessary and the cassette can be moved about on the table top so that it is just below the part to be radiographed.
tablespoon [*ta'bəl-sp n*] a household unit of volume or capacity; equivalent to three teaspoons or approximately 15 mL; in metric measurement, equal to 20 mL.
tablet [*tab'lət*] a solid dosage form containing a medicinal substance with or without a suitable diluent.
enteric-coated t. one coated with material that delays release of the medication until after it leaves the stomach.
t. triturate a small, loosely packed tablet to be dissolved in water immediately before injection, e.g. apomorphine.
tabula vitrea [*tă'bu-lə*] inner layer of very dense bone in the bones of the cranium.
tabular [*tab'u-lər*] resembling a table.
Tacazzea African genus of the plant family Apocynaceae; may contain cardiac glycoside which causes abdominal pain, vomiting, diarrhea, hepatitis. Includes *T. yototacolla*.
tachogram [*tak'o-gram*] the graphic record produced by tachography.
tachography [*tə-kog'rə-fe*] the recording of the movement and speed of the blood current.
tachy- word element. [Gr.] *rapid, swift*.
tachyarrhythmia [*tak"e-ə-rith'me-ə*] tachycardia associated with an irregularity in the normal heart rhythm. Includes atrial **tachycardia**, sinus **tachycardia**, **premature** ventricular contractions, atrial **flutter**, atrial **fibrillation** and **ventricular** tachycardia.
re-entrant t. one caused by a depolarization wave crossing areas of nonuniform conduction and excitability.
tachycardia [*tak"ĭ-kahr'de-ə*] abnormally rapid heart rate.
arrhythmic t. the heart rate is faster than normal, the rhythm is irregular; due usually to myocarditis.
atrial t. rapid contraction of the atrium arising from an ectopic focus in the atrium. The heart rate remains normal.
ectopic t. rapid heart action in response to impulses arising outside the sinoatrial node.
idioventricular t. one occurring as a compensation for a sinus bradycardia and A-V block.
junctional t. that arising in response to impulses originating in the atrioventricular junction, i.e. the atrioventricular node.
paroxysmal t. episodes of an abrupt and marked increase in heart rate in a resting patient, with an equally sudden return to normal.
sinus t., simple t. an increase in heart rate from heightened activity of the sinoatrial node, such as occurs with excitement or pain.
supraventricular t. a combination of junctional tachycardia and atrial tachycardia.
ventricular t. see **ventricular** tachycardia.
Tachygonetria a genus of oxyurid worms, in the superfamily Oxyuroidea, found in the large intestine of tortoises.
tachymeter [*tə-kim'ə-tər*] an instrument for measuring rapidity of motion.
tachyphagia [*tak"ĭ-fa'je-ə*] rapid eating.
tachyphylaxis [*tak"e-fə-lak'sis*] 1. rapid immunization against the effect of toxic doses of an extract by previous injection of small

T-1: Sinus tachycardia in a dog.
From Ettinger SJ, Feldman E, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2004.

doses of it. 2. rapidly decreasing response to a drug or physiologically active agent after administration of a few doses.

tachypnea [tak"ip-ne'ə; tak"e-ne'ə] very rapid respirations. The rate is fast and the depth shallow, as in heat stroke, because the initiating mechanism is hyperthermia and there is no hypercapnia.

tachypneic respiratory failure see **respiratory** failure.

tachysterol [tak-is'tə-rol] an isomer of ergosterol, an antirachitic substance, produced by irradiaton of ergosterol.

tachyzoite [tak"ĭ-zo'ĭt] a fast multiplication stage of zoites in the life cycle of *Toxoplasma gondii* or *Neospora caninum*; found in tissues.

tack abbreviation for tackle; a horseman's word for saddlery and gear generally.

tacrolimus [tak"ro-li'məs] an immunosuppressive agent used in allogenic organ transplant to reduce the risk of rejection. It is derived from *Streptomyces tsukabaensis*. It selectively binds FK-binding proteins and the complex inhibits calcineurin. There is a slightly increased risk of cutaneous carcinogensis when used topically on humans, rodents and monkeys. It is used topically in the treatment of inflammatory and immune-mediated skin diseases of dogs and cats.

tactical treatment treatment at times when the activities of a disease are at their worst, e.g. when diarrhea caused by *Ostertagia* spp. in cattle is most severe.

tactile [tak'til] pertaining to touch.

t. hair hairs particularly sensitive to touch. See also **hair** (1).

t. hair organ a group of vibrissae, such as the carpal organ of cats, made up of about four vibrissae on the medial surface of the forelimbs, sensitive to vibrations that probably assist cats while stalking their prey when placing their forelimbs between potentially noisy grass stems.

t. percussion a combination of touch and tap as in ballottement. The objective is to delineate the boundaries of a fetus or organ by a tap or thrust and allow the repelled organ to bounce back onto the fingers.

t. placing reaction, t. reflex see **placing** reflex.

t. receptors located in the skin most are connected to very fast, myelinated nerve fibers.

tactus [L.] *touch*.

tadpole edema virus see ***Ranavirus***.

Taenia [te'ne-ə] a genus of cyclophyllidean tapeworms of the family Taeniidae. The adult tapeworm inhabits the intestine of carnivores, the larval stage (metacestode) invades the tissues of a variety of animals, in some cases humans. They cause some economic loss due to condemnation of offal, but their greatest importance is their zoogenetic potential, and the preoccupation of humans with the danger of becoming infected. Tapeworms and their hosts are listed below, but species whose intermediate hosts are unknown are: *T. bubesi* (lion), *T. crocutae* (spotted hyena), *T. erythraea* (black-backed jackal), *T. gongamai* and *T. hlosei* (lion and cheetah), *T. lycaontis* (hunting dog), *T. regis* (lion).

T. asiatica adult tapeworm in humans, larval stage (cysticercus) in pigs. Commonkly known as the Asian *Taenia*.

T. brauni adult tapeworms in dogs and jackals and the larval stage (coenurus) in rats, mice and porcupines. It is probably a subspecies of *T. serialis*.

T. crassiceps adult tapeworms in foxes and coyotes, the larval stage (cysticercus) in rodents.

T. hydatigena tapeworms in small intestine of dogs, wolves and wild Carnivora, and the larval stage, formerly known as *Cysticercus tenuicollis*, found in the sheep and other ruminants, and in pigs and occasionally primates.

T. hyenae tapeworms are in hyenas and the cysticerci in antelopes.

T. krabbei adult tapeworms are found in the dog and in wild carnivores and the larval cestode, formerly known as *Cysticercus tarandi*, in the muscles of wild ruminants, especially deer.

T. laticollis tapeworms found in carnivores and larval forms in rodents. Possibly a synonym for *T. pisiformis*.

T. macrocystis adult tapeworms in lynx and coyote, and the intermediate stage in snowshoe hares (lagomorphs).

T. martis the adult tapeworms in the marten and the cysticercus in the vole.

***T. multiceps* (syn. *Multiceps multiceps*)** the adult tapeworms are found in the dog and wild canids, the larvae, formerly known as *Coenurus cerebralis*, in the brain and spinal cord of sheep and goat.

T. mustelae adult tapeworms in martens, weasels, otters, skunks, badgers and larval stages in voles and other rodents.

T. omissa adult tapeworms in the cougar and larvae in deer.

T. ovis adult tapeworms are found in dogs and wild carnivores and the larval stage, formerly known as *Cysticercus ovis*, in the skeletal and cardiac muscles of sheep and goats.

T. parva adult tapeworms in genets, larval stage in rodents.

T. pisiformis adult tapeworms found in small intestine of dog, fox, some wild carnivores, and very rarely in cats. The metacestode stage, formerly known as (*Cysticercus pisiformis*), found in lagomorphs, in the liver and peritoneal cavity.

T. polyacantha adults are in the intestine of foxes and the metacestodes in microtine rodents.

T. rileyi adult tapeworms found in lynx, larvae in rodents.

T. saginata adult tapeworms are intestinal parasites of humans, and the metacestode (*Cysticercus bovis*) in cattle and some wild ruminants. Cysticercosis (beef measles) is a significant cause of carcass condemnation in developed countries. Sources of infection include sewage, sludge and night soil deposited on pasture, irrigtation water containing sewage effluents used for crops fed to cattle, flooded streams containing sewage effluents, and human excreta spread with animal slurry or deposited in cattle feed troughs by impatient livestock attendants.

T. serialis the adult tapeworm is found in dogs and foxes and the metacestode, formerly known as *Coenurus serialis*, in the subcutaneous and intramuscular tissues of lagomorphs.

T. serrata see *T. pisiformis* (above).

T. solium the adults are found in the small intestine of humans and some apes, the metacestode, formerly known as *Cysticercus cellulosae*, in the skeletal and cardiac muscle of pigs and in the brain of humans.

T. taeniaeformis the adult is found in the small intestine of cats and other related carnivores and the metacestode, formerly known as *Cysticercus fasciolaris*, in the livers of rodents.

T. twitchelli adult tapeworms found in wolverines, larvae in lungs and pleural cavity of porcupines.

taenia [te'ne-ə] see **tenia**.

taeniacide [te'ne-ə-sīd"] teniacide.

taeniafuge [te'ne-ə-fūj"] teniafuge.

Taeniorhyncus the genus of mosquitoes.

tafes see ***Perralderia coronopifolia***.

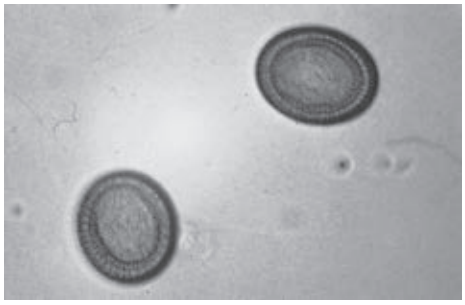
tag [tag] 1. a small appendage, flap or polyp. 2. label. See **ear** tag, **tail** tag. 3. broken or dung-covered wool.

cutaneous t. see fibrovascular **papilloma**.

radioactive t. a radioisotope that has been incorporated in a chemical compound.

Tagetes minuta African grass in the family Poaceae; its sharp awns cause subcutaneous abscesses, dermatitis especially of the lower limbs. Called also kakiebos.

tahr short-horned, Asian goat-antelopes in the subfamily Caprinae; also introduced into New Zealand for recreational hunting.



T-2: Egg of *Taenia pisiformis*.
From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

VetBooks.ir

Tahyna virus a virus of the California group of the genus *Bunyavirus*, family *Bunyaviridae*, associated with the occurrence of encephalitis in humans and for which many domestic and wild animals act as reservoirs.

tail [*tāl*] the caudal terminal appendage of the vertebral column made up of the coccygeal vertebrae and their attendant tissues. See also **cauda**.

t. absence an inherited defect in cattle, cats and pigs, sometimes associated with other deformities of the vertebral column, atresia of the anus and urogenital system defects. See also **Manx**.

t. amputation see **dock**[1].

banged t. see **bangtail**.

t. biting a vice in pigs which bite each other's tail because of boredom initially and then as a habit, causing blood loss and frequently local abscess formation or spinal cord abscess. In dogs, seen as a vice in association with tail chasing (see below). In caged mice may be attributable to crowding.

t. bleeding collection of blood from the ventral median coccygeal vein, e.g. in cattle; laboratory rodents are also bled from the ventral coccygeal artery or by amputation of the end of the tail.

bob t., bobbed t. see **bobtail**.

t. boot a leather sleeve that is wrapped around the butt of a horse's tail, laced up, and secured to a harness by a retaining strap. Designed to protect the tail from wear while traveling. Nowadays bandaging is a more common method of protection.

t. brace a device for supporting the tail in an elevated position for extended periods of time, usually as an adjunct to a surgical procedure on the tail or in the perineal region, e.g. dogs after surgery for perianal fistulae and horses after ventral myotomy ('nicking').

t. carriage the way in which the tail is carried relative to the body. A high carriage of the butt of the tail with the hair streaming in the wind is the objective in show horses. See also **nicking** (2).

caudal t. fold see **caudal** tailfold.

t. cellulitis at the tail tip, a common sequel to unsanitary vaccination against pleuropneumonia; at the butt incidental to injury.

t. chasing an obsessive-compulsive behavior seen occasionally in dogs, particularly Bull terriers. The dog periodically lapses into episodes of chasing its tail. Most deliberately do not catch it, but those that do can cause serious self-trauma.

t. deformity most cases are sporadic but it is inherited as part of the inherited tail-absent syndrome in cattle and pigs.

t. elevation posture indicative of irritation in the vagina, e.g. after irrigation of cervix and uterus with Lugol's iodine; tail held out from the body, plus rigidity, a sure indication of the presence of tetanus.

t. fold dermatitis see fold **dermatitis**.

t. gland an oval area of skin on the dorsal aspect of the tail in dogs centered at the level of the eighth coccygeal vertebrae which contains a large number of sebaceous and apocrine glands.

t. gland hyperplasia in dogs, a spongy enlargement with alopecia and scaling of the area, usually associated with hormonal disturbances, in which the apocrine gland segment is especially hyperplastic.

ingrown t. dogs with naturally short, kinked tails (corkscrew tails), e.g. British bulldogs and Pugs, may have deep skin folds surrounding the tail that are subject to moist dermatitis and secondary infection.

t. jack see **tailing**.

T-3: Tail gland in a dog.

limber t. a painful condition of the tailbase recognized in gundogs, mainly Labrador retrievers. Originally associated with hunting, but now known to occur under many different circumstances; believed to be a tendonitis or myositis associated with vigorous swimming or hyperextension of the tail from any cause. The affected dog holds the tailbase horizontally, away from the rump, with the remainder of the tail hanging limp, and is reluctant to sit. There is usually a speedy recovery. Called also frozen tail, rudder tail, cold water tail.

t. and mane dystrophy see **mane** and tail dystrophy.

otter t. in dogs, describes a thickly haired, medium length tail with a thick base tapering to a rounded end; seen in Labrador retrievers.

t. paint special paint applied to the tailhead of cows as a heat mount detection aid. When cows stand to be mounted the paint is rubbed off.

t. paralysis is characterized by a flaccid, anesthetized tail. Occurs with injury, myelitis or myelomalacia of caudal segments of the spinal cord.

t. pulse the pulse as felt in the ventral coccygeal artery in cattle. Best felt at the level of the tip of the vulva.

t. pyoderma equine staphylococcal folliculitis.

t. rigidity tail is stiff instead of its usual, whip-like in cattle, flexibility. Indicative of the presence of tetanus.

t. root where the tail joins the body.

t. setting see **nicking** (2).

t. skin dehiscence the skin of the tail in gerbils is thin and easily stripped with improper handling.

t. sore the early or mild lesions in a tail-biting problem of pigs.

t. stock first part of the tail, of a whale or dolphin, before it divides into the flukes.

t. switching movement of the tail, common in horses but also in cattle, from side to side, or dorsally and ventrally, with contact with the rump, usually in response to irritation by flies.

t. tag used extensively for the identification of cattle. Made of metal or plastic in sharply contrasting colors and with identifying marks or numbers and letters on them so that animals, owners and veterinarians can be easily identified. The tag is wrapped around the thinner, meaty part of the tail, just above the brush and fixed with one of several patented attachments. See also **backtag**.

tail s. a vice of cats, particularly Siamese, in which the tip of the tail is usually wet and becomes discolored.

t. tie see **tail-hitch**.

t. tip necrosis disease of confined cattle on slatted floors; caused by treading injury. Also occurs with ergot alkaloid ingestion in ruminants and with *Salmonella dublin* infection in calves.

t. tone complete absence indicative of good outcome of epidural anesthesia; occurrence spontaneously indicative of lesion to cauda equine, in cattle usually due to mounting injury caused by a heavy bull or cow.

t. worm **equine** staphylococcal dermatitis.

tail-hitch [*tāl*] a half-hitch applied to a horse's tail, used in restraint for standing castration by pulling horse up on its toes to an overhead beam. Useful also in tying a cow's tail out of the way and in applying traction to a calf in posterior presentation at a dystocia. Called also tail tie.

tail root eczema [*tāl*] itching, scaling, crusting, twitching of the tailhead in cows; responds to supplementary zinc in diet.

tailhead dorsal aspect of the root of the tail.

tailing 1. the restraint technique used in cattle; the butt of the tail is grasped with both hands and raised vertically as far as it will go without breaking. While the tail is in this position the animal is unlikely to kick and then only lightly. Called also tail jack, tail restraint, tail-hitch. 2. the addition in vitro of the same nucleotide by terminal transferase to the 3′-hydroxyl terminus of a double-stranded DNA molecule. Called also homopolymeric tailing.

taillessness see **tail** absence.

taint an unpleasant odor and flavor in a human foodstuff of animal origin. Caused by the ingestion of the substance, commonly a plant such as *Melilotus indicus*, or while in storage, e.g. milk stored with pineapples, or as a result of animal metabolism, e.g. boar taint.

cold store t. cut lean surfaces of chilled meat are covered with a brown slime and have a sour smell caused by growth of the bacteria *Achromobacter* spp.

T-4: Cow in the process of being restrained by tailing.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

musty t. an unpleasant odor in poultry meat from chickens raised on litter containing wood shavings. The odor is caused by chloroanisoles generated by bacterial action on wood preservatives in the shavings.

taipan [*ti-pan'*] highly venomous snakes in the genus *Oxyuranus*, found in Australia and Papua New Guinea. Envenomation of animals and humans is characterized by neurotoxicity and coagulopathy.

take-off 1. part of the horse's jumping gait, the lifting of the forequarters off the ground and the thrust from the hindlegs at the beginning of the jump. 2. see **automatic takeoff**.

takin (*Budorcas taxicolor*) a medium-sized, Himalayan and East Asian goat-antelope with a thick, long, shaggy coat and curved horns. The national animal of Bhutan.

talampicillin [*tal-amp"i-sil'in*] an antibiotic derived from ampicillin.

talapoin (*Miopithecus* spp.) the smallest of the Old World monkeys.

talc [*talk*] a naturally occurring hydrous magnesium silicate, sometimes with a small amount of aluminum silicate; used as a dusting powder. Called also talcum.

t. granulomatous peritonitis talc, or starch, spilled in the peritoneal cavity provokes the development of granuloma by e.g. the serous membrane.

talcosis [*tal-ko'sis*] a condition due to inhalation or implantation in the body of talc.

talcum [*tal'kəm*] talc, talcum powder.

Talfan disease see porcine viral **encephalomyelitis**.

talipes [*tal'i-pēz*] see **dactylomegaly**.

tall higher than average.

t. Cape honeyflower ***Melianthus*** *major*.

t. chloris ***Chloris*** *ventricosa*.

t. delphinium ***Delphinium*** *trolliifolium*.

t. yellowtop ***Senecio*** *magnificus*.

Tallebudgera horse disease see ***Ageratina*** *adenophora*.

tallow natural, hard fat taken from cattle or sheep. It is used in prepared animal feeds to act as a binder and reduce dust. It has a high calorific value and is palatable to pigs and poultry.

tallow tree Chinese tallow tree; see ***Sapium sebiferum***. Called also Chinese tallow wood.

Tallqvist method a very old method for estimation of the hemoglobin content of blood in which a drop of blood is absorbed onto white paper and compared with a color chart.

talocalcaneal joint [*ta"lo-kal-ka'ne-əl*] see tarsal joints, Table 11.

talocalcanean [*ta"lo-kal-ka'ne-ən*] pertaining to the talus and calcaneus.

talocalcaneocentral joint the joint between the talus and central tarsal bone; see also tarsal joints, Table 11.

talocrural [*ta"lo-kroo'rəl*] tarsocrural.

talofibular [*ta"lo-fib'u-lər*] pertaining to the talus and fibula.

talonavicular [*ta"lo-nə-vik'u-lər*] pertaining to the talus and navicular bone.

talus [*ta'ləs*] the most proximal of the tarsal bones. Called also the tibial tarsal bone. See also Table 10.

tamandua (*Tamandua* spp.) nocturnal, arboreal anteater, native to Central and South America; they are distinguished by a cream to brown body and striking, black vest-like marking. Includes the northern tamandua (*T. mexicana*) and southern tamandua (*T. tetrradactyla*).

tamarin small, New World monkeys in the family Callitrichidae. Many species have a prominent mustache.

cotton-top t. (*Saquinus oedipus*) distinguished by a crest of long white hair that falls over the shoulders; an endangered species. a gold to orange, longhaired monkey; up to 20 inches long and up to 1 lb weight.

golden lion t. (*Leontopithecus rosalia*) a long gold to orange coat, darker around the face. An endangered species.

tamboril da campo see ***Enterolobium***.

tameridone a purine alkyl piperidine derivative used to sedate cattle and wild ruminants.

Tamias striatus the genus of **chipmunks**.

Tamm–Horsfall mucoprotein a normal product of the ascending limb of the loop of Henle and the distal renal tubules; may appear in many cortical tubules.

tampan [*tam'pan*] a tick; see ***Ornithodorus***.

tampon [*tam'pon*] a pack, pad, or plug made of cotton, sponge or other material, variously used in surgery to plug the nose, vagina, etc., for the control of hemorrhage or the absorption of secretions.

tamponade [*tam"pon-ād'*] 1. surgical use of a tampon. 2. pathological compression of a part.

cardiac t. compression of the heart due to collection of fluid or blood in the pericardial sac. There is impaired cardiac filling resulting in decreased stroke volume and cardiac ouput and ultimately congestive heart failure. The heart shadow on radiography is enlarged, the heart sounds on auscultation are muffled. See also **pericardial** effusion.

Tamus communis [*ta'məs*] see ***Dioscorea*** *communis*.

Tamworth a golden-red, long faced, prick-eared bacon pig produced in the UK.

tan [*tan*] **tanbark**.

Tanacetum [*tan"ə-se'təm*] genus in the plant family Asteraceae; reported to be associated with abortion in cattle; includes *T. axillare*, *T. parthenium* (feverfew), *T. vulgare* (tansy).

Tanaecium exitosium South American member of the plant family Bignoniaceae; contains an unidentified toxin which causes cardiomyopathy, enteritis, frequent micturition in cattle.

Tanaisia a genus of flukes in the family Eucotylidae.

T. bragai found in the kidneys and ureters of chickens, turkeys and pigeons but is apparently without much pathogenic effect.

T. zarudnyi found in ruffed grouse.

tanapox [*tan'ə-poks"*] a poxvirus that infects African nonhuman primates, but may also cause disease in humans. Named after the Tana River Valley in Kenya.

tanbark dry shredded residue of the tree bark used in tanning leather. Springy and absorbent and is in demand as a surface for horses to work and exercise on or to stand on if they are sorefooted.

tangled hypericum ***Hypericum*** *triquetrifolium*.

tank [*tank*] an artificial receptacle for liquids.

horse flotation t. used to suspend horses with limb-bone injuries during repair phase. Water is warmed and filtered and the horse may be kept in the tank for periods of up to 3 months but if suspension has been almost complete and is ceased suddenly the osteoporosis due to weightlessness may cause bone fractures.

X-ray processing t. usually in four compartments, one for developing, one for wash water, one for fixing and one for rinsing.

tankage made from heat-digested animal abattoir residues without gut contents, hide, horn, hoof. Concentrated and dried and possessing a high biological value protein content of 60%. See also **meat** meal.

tannate [*tan'āt*] any of the salts of tannic acid, all of which are astringent.

tanner grass [*tan'ər*] ***Brachiaria*** *radicans*.

tannia see ***Xanthosoma***.

tannic acid [*tan'ik*] a polyphenol obtained from bark and fruit of many plants, used as an astringent.

VetBooks.ir

tanning the process of tanning hides to make leather; tanning is by a tanning bark process or a chemical process called chrome tanning.

tannins secondary plant metabolites, probably important in antiherbivore defense; divisible into the common condensed tannins, and less common and more toxic hydrolyzable tannins, e.g. gallotannins in oak trees, punicalagin in *Terminalia oblongata*, capable of damaging the kidneys; condensed tannins bind to protein, interfere with the availability of proteins from feeds, and are pooly absorbed from the gut. The presence of condensed tannins in some legumes, such as vetch and trefoil, results in these legumes being less prone to cause frothy bloat in grazing ruminants.

tansy ***Tanacetum*** *vulgare*. See also tansy **ragwort** and tansy **mustard**.

tantalum (Ta) [*tan'tə-ləm*] a chemical element, atomic number 73, atomic weight 180.948. See Table 4. It is a noncorrosive and malleable metal used for plates or disks to repair cranial defects, for wire sutures, and for making prosthetic appliances.

tanycyte [*tan'ĭ-sīt*] special cell in the ependyma lining the third ventricle in the brain; the function is unknown.

TAP trypsinogen activation peptide.

tap [*tap*] 1. a quick, light blow. 2. to drain off fluid by paracentesis.
bone t. an instrument for cutting a screw thread inside a drill hole in bone. May have a fixed handle or come in bit form so that the bit size can be interchanged in a handle fitted with a chuck.
spinal t. lumbar puncture.

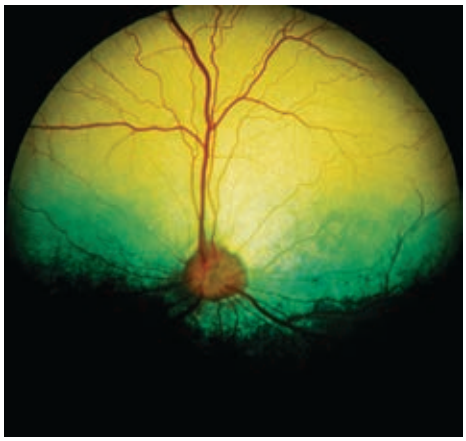
tape [*tāp*] a long, narrow strip of fabric or other flexible material.
adhesive t. a strip of fabric or other material evenly coated on one side with a pressure-sensitive adhesive material.
t. closure application of tape strips across the incision can be used to hold wound edges in apposition.
vaginal t. special tape for use in closing the vulva to retain a prolapsed cervix or uterus. See also **Buhner method**.

tapeinocephaly [*tap"ĭ-no-sef'ə-le*] flattening or depression of the skull.

tapetal [*tə-pe'təl*] emanating from or pertaining to the tapetum.
t. aplasia failure of the tapetum to develop. A variation of normal.
t. degeneration occurs as an inherited defect in beagles and in cats with Chediak–Higashi syndrome.
t. hyperreflectivity an ophthalmoscopically visible feature of retinal degeneration due to less light being absorbed by the atrophic retina.
t. rods crystalline structures in the cellular tapetum in carnivores; typically contain zinc or riboflavin..
t. stars nonreflective dots in the tapetum lucidum of certain species (especially the cat and large herbivores) caused by choroidal blood vessels piercing through the tapetum. More commonly called stars of Winslow.

tapetum [*tə-pe'təm*] pl. *tapeta* [L.] 1. a covering structure or layer of cells. 2. a stratum in the human brain composed of fibers from the body and splenium of the corpus callosum sweeping around the lateral ventricle. 3. common abbreviation for tapetum lucidum (see below).
t. cellulosum a type of tapetum lucidum made of cells called iridocytes, as found in carnivores.
t. fibrosum a type of tapetum lucidum composed predominantly of organized bundles of collagen as found in ungulates.
t. lucidum the iridescent reflecting tissue layer of the fundus (typically the choroid) of some species of animals that gives their eyes the property of shining in the dark. It is characteristic of crepuscular animals and is believed to allow incident light two opportunities to stimulate the retinal photoreceptors.

tapeworm [*tāp'wərm*] a class of the phylum Platyhelminthes, class Eucestoda, or flatworms; includes members of the genera *Taenia*, *Diphyllobothrium*, *Dipylidium* and *Echinococcus*. Most adult tapeworm infestations have little apparent effect on the health of farm livestock (with the exception of *Anoplocephala perfoliata* in horses) and are mostly esthetic problems in companion animals.
armed t. ***Taenia*** *solium*.
Asian t. *Taenia asiatica*
bass tapeworm see ***Proteocephalus ambloplitis***.
beef t. ***Taenia*** *saginata*.
broad t. ***Diphyllobothrium*** *latum*.
broad fish tapeworm see ***Diphyllobothrium*** *latum* .



T-5: Tapetum of the dog. From Maggs DJ, Miller PE, Ofri R, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2008.

dog t. ***Dipylidium*** *caninum*.
dwarf t. see ***Hymenolepis*** *nana*.
fish t. ***Diphyllobothrium*** *latum*.
fringed tapeworm see ***Thysanosoma actinioides***.
hydatid t. ***Echinococcus*** *granulosus*.
pork t. ***Taenia*** *solium*.
unarmed t. ***Taenia*** *saginata*.

tapioca ***Manihot*** *esculenta*.

tapir (*Tapirus* spp.) a medium-large sized ungulate, native to Central and South America; it has a rounded body, thick head and a short, prehensile proboscus.

tapotement [*tah-pōt-maw'*] a technique used in massage therapy in which gentle percussion is used to stimulate sensory nerves and vasodilate capillaries. Called also cupping.

tar [*tahr*] a dark-brown or black, viscid liquid obtained from various species of pine or from bituminous coal. See also **wood tar derivatives**.
coal t. see **coal tar**.
coal t. pitch see **coal tar pitch**.
t. derivatives include phenol (carbolic acid), cresols, creosote, all potent poisons. See also **wood tar derivatives**.
hot t. a cause of burns in dogs and cats, usually made more severe because it sticks to the skin.
juniper t. a volatile oil obtained from wood of *Juniperus oxycedrus*; used topically in the treatment of skin disease.
pine t. a product of destructive distillation of the wood of various pine trees; used as a rubefacient and treatment for skin disease.
t. pitch see **coal tar pitch**.
Stockholm t. see **Stockholm tar**.

Tarai a black Indian dairy buffalo with a white tail; occasionally brown in color.

tarantula [*tə-ran'tu-lə*] a large group of hairy spiders in the family Theraphosidae. Although known for the large size and a fearsome reputation, they are also kept as pets.

Taraxacum officinale [*tə-rak'sə-kəm*] a plant in the family Asteraceae suspected to cause some incidents of stringhalt in horses in the absence of *H. radicata*, for example in South America. Called also dandelion. See ***Hypochaeris radicata***.

tarbush see ***Flourensia cernua***.

tardive [*tahr'div*] late; applied to a disease in which the characteristic lesion is late in appearing.

T-6: Example of typical tapeworm with dorsoventrally flattened, ribbonlike appearance. Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

VetBooks.ir

T-7: Tarantula spider. Courtesy of CDC.

tare [*tār*] 1. the weight of the vessel in which a substance is weighed. 2. to weigh a vessel which is to contain a substance in order to allow for it when the vessel and substance are weighed together.

Tarentaise cattle fawn to yellow, dual-purpose cattle from the French Alps.

target [*tahr'gət*] 1. an object or area toward which something is directed, e.g. target animal, population, level or nucleotide sequence. 2. the area of the anode of an X-ray tube where the electron beam collides causing the emission of X-rays. 3. a cell or organ that is affected by a particular agent, e.g. a hormone or drug.

t. cell see target **cell**.

t.–film distance the distance from the target of the X-ray tube and the plane of the X-ray film.

t. lesion skin lesion consisting of annular or arciform areas of erythema with central pigmentation. Associated with bacterial hypersensitivity and seborrheic dermatitis. Called also bull's eye lesion.

performance t. in herd health programs target performances are set up in a number of production and health functions in order to provide an incentive and give some measure of performance other than an absolute one. This enables farmers to be rated on their effective performance in spite of the great variations that can occur between them in basic resources.

targetting of proteins [*tahr'gət-ing*] mechanisms whereby proteins are sorted and transported to particular sites in the cell required for their synthesis or function.

Targhee an American medium-woolled, polled, meat sheep produced by crossing sheep of Lincoln and Rambouillet breeds.

tarichatoxin [*tar'ik-ə-tok"sin*] a neurotoxin from the newt (*Taricha*), identical with tetrodotoxin.

taro ***Colocasia*** *esculenta*, ***Xanthosoma*** spp.

giant t. ***Alocasia*** *brisbanensis*.

tarry [*tahr'e*] said of feces that are black and glutinous. See also **melena**.

tarsadenitis [*tahr"sad-ə-ni'tis*] inflammation of the tarsal plate and the meibomian glands of the eyelid.

tarsal [*tahr'səl*] pertaining to the tarsal plate of an eyelid or of the foot. See also Table 10.

t. adenitis see meibomian **adenitis**.

central t. bone the bone of the hock which lies between the proximal and distal rows of tarsal bones. Subject to fracture-dislocation in dogs, particularly racing greyhounds.

t. gland sebaceous follicles between the tarsal plate and conjunctiva of the eyelids. Called also meibomian **gland**.

t. hydrarthrosis see **bog spavin**.

t. joint see **tarsus**.

t. pad see tarsal **torus**.

t. plate dense fibrous layer within the eyelids providing rigidity and facilitating eyelid opening and closure. More developed in the upper lid than the lower lid of mammals.

t. sheath the synovial sheath around the deep flexor tendon in the horse.

t. tunnel the osseofibrous passage for the tibial nerve, and flexor tendons, formed by the flexor retinaculum and the tarsal bones.

tarsalia [*tahr-sa'le-ə*] the bones of the tarsus.

tarsalis [*tahr-sa'lis*] [L.] *tarsal*.

tarsectomy [*tahr-sek'tə-me*] 1. excision of one or more bones of the tarsus. 2. excision of the tarsal plate of the eyelid.

tarsier small, arboreal, almost hairless, Southeast Asian primate in the family Tarsiidae and closely related to the monkeys, apes and humans. They have very large eyes, elongated tarsal bones and long digits.

tarsitis [*tahr-si'tis*] inflammation of the connective tissue portion (tarsal plate) of the eyelid; blepharitis.

tars(o)- word element. [Gr.] *edge of eyelid, tarsus of the foot*.

tarsoclasis [*tahr-sok'lə-sis*] surgical fracture of the tarsus.

tarsoconjunctiva [*tahr"so-kən-jənk'ti-və*] the tarsal plate and palpebral conjunctiva.

t. graft, t. transposition transposition of the tarsus and palpebral conjunctiva by a sliding graft technique; used in reconstruction of the eyelid.

tarsocrural [*tahr"so-krōōr'əl*] pertaining to the tarsal bones and the tibia and fibula.

t. joint the articulation between the tibial tarsal bone (talus) and the tibia and fibula.

tarsomalacia [*tahr"so-mə-la'shə*] softening of the tarsal plate of an eyelid.

tarsometatarsal [*tahr"so-met"ə-tahr'səl*] pertaining to the tarsus and metatarsus.

tarsometatarsus [*tahr"so-met"ə-tahr'səs*] the bone of the lower shank of birds made up of fused tarsal and metatarsal bones.

tarsophyma any tumor of the tarsus.

tarsoplasty [*tahr'so-plas"te*] plastic repair of the tarsal plate of the eyelid.

tarsorrhaphy [*tahr-sor'ə-fe*] temporary or permanent joining with suture of a portion or the entire upper and lower eyelids for the purpose of protecting the cornea by shortening or closing the palpebral fissure.

tarsotomy [*tahr-sot'ə-me*] surgical incision of a tarsus, or the tarsal plate of an eyelid.

tarsus [*tahr'səs*] 1. the hock or ankle made up of up to seven bones–talus, calcaneus, navicular, medial, intermediate and lateral cuneiform, and cuboid–comprising the articulation between the cannon bone and the tibia. 2. the fibrous layer forming the framework of either (upper or lower) eyelid. See **tarsal** plate.

tartar [*tahr'tər*] 1. the recrystallized sediment of wine casks; crude potassium bitartrate. 2. a yellowish film formed of calcium phosphate and carbonate, food particles, and other organic matter, deposited on the teeth by the saliva. See also **dental** calculus.

t. emetic antimony potassium tartrate; used at one time as an emetic and as a treatment for trypanosomiasis but is very poisonous and is no longer used as an animal medicine.

t. scraper manual or mechanical, handheld instruments used to scrape tartar (dental calculus) from the teeth of dogs. There is a variety of tips including triangle, hoe (right and left) and claw. They may be single or double ended.

Tarui disease [*tah'roo-e*] **6-phosphofructokinase 1** deficiency.

tarweed see ***Amsinckia***.

Tasmanian devil (*Sarcophilus harrisii*) the world's largest surviving carnivorous marsupial, found only in the Australian island state, Tasmania, where it is common, but numbers have declined sharply with the occurrence of Tasmanian devil facial tumor disease (see below). The size of a small dog, it is noted for its rowdy, nocturnal behavior and threatening appearance and sounds.

T. d. facial tumor disease tumors of Schwann cell origin first appear in and around the mouth, face and neck, but can be found elsewhere in the body. Large, disfiguring growths interfere with eating and the condition is fatal within 3–8 months. It first appeared in the mid-1990s and has spread widely, greatly

T-8: Accumulation of dental tartar and resulting perialveolar gingivitis in cat. From Greene CE, Infectious Diseases of the Dog and Cat, 3rd Edition. Saunders, 2008.

VetBooks.ir

reducing the population of Tasmanian devils. Tumors are infective; the disease, analogous to transmissible veneral tumor of dogs, is caused by transplantable neoplastic cells transmitted through fight wounds.

Tasmanian ngaio *Myoporum insulare*.

tassel see caprine **wattle**.

tastant [*tās'tənt*] any substance, e.g. salt, capable of eliciting gustatory excitation, i.e. stimulating the sense of taste.

taste [*tāst*] the peculiar sensation caused by the contact of soluble substances with the tongue; the sense effected by the tongue, the gustatory and other nerves, and the gustatory center. There are four basic tastes: sweet, salt, sour and bitter. Sometimes alkaline and metallic are also included as basic tastes. All other tastes are combinations of these. The taste buds are specialized, and each responds only to the kind of basic taste that is its specialty. The location of and the number of taste buds varies between animal species. Other senses, including smell and touch, also play an important role in tasting.

t. bud, t. organ the organ of taste; spherical nests of cells embedded in the mucosa of the mouth and tongue are composed of supporting and gustatory cells. The gustatory cells have a delicate, hairlike process which protrudes from the peripheral surface of the cell. Substances must be in solution to be tasted, solids must be chewed and mixed with saliva.

conditioned t. aversion animals have been shown to develop aversions to foods associated with illness or other adverse experiences.

conditioned t. preference theoretically, the reverse of conditioned taste aversion, which is a naturally occurring phenomenon; it is not widely accepted that animals will associate recovery from illness with a specific taste or food.

t. pore opening from the exterior to a taste bud.

t. receptor one of the three types of cell in a taste bud; called also gustatory cells.

TAT 1. tube agglutination test. 2. tetanus antitoxin.

TATA box a eukaryotic DNA sequence usually TATAAATA, similar to the Pribnow box of *Escherichia coli*, occurring in the promoter region 25–35 bases upstream from the transcriptional start site that binds the general transcription factor TFIID to begin the formation of the transcription initiation complex which includes RNA polymerase.

tattooing [*tă-too'ing*] the introduction, by punctures, of permanent colors in the skin. Used in animals as a means of permanent identification, the symbol or number code being placed inside the ear pinna in all species except the horse in which it is placed on the inside of the upper lip. In some schemes, dogs are tattooed in the prepubic or inguinal area.

tau [*tou, taw*] nineteenth letter in the Greek alphabet, T or τ.

Taura syndrome virus cause of severe losses in juvenile prawns *Penaeus vanammei* caused by a picornavirus. Called also red tail disease.

taurindicus breeds of cattle produced by crossing *Bos taurus* and *B. indicus* cattle. Examples are Santa Gertrudis, Chinese Yellow, Sanga.

taurine [*taw'rēn*] a sulfur-containing amino acid found free in mammalian tissues. Because of obligatory excretion and only limited ability to synthesize taurine, it is a dietary essential amino acid for cats. It is a conditionally essential dietary amino acid in dogs; dietary sources are usually adequate, but under some conditions deficiency can occur. Called also 2-aminoethanesulfonic acid.

t. nutritional deficiency taurine is the predominant free amino acid in the retina and in cats a dietary deficiency of the acid may result from diets low in animal protein, causing generalized retinal atrophy. Dilated **cardiomyopathy** has also been associated with taurine deficiency in cats and dogs.

taurocholate [*taw"ro-ko'lāt*] a salt of taurocholic acid, one of the bile acids.

taurocholic acid [*taw"ro-ko'lik*] a bile acid; when hydrolyzed it splits into taurine and cholic acid.

tauroconjugates primary and secondary bile acids linked to taurine in the liver and secreted into bile.

tautomer [*taw'to-mər*] a chemical compound exhibiting, or capable of exhibiting, tautomerism.

tautomeral [*taw-tom'ər-əl*] pertaining to the same part; said especially of neurons and neuroblasts sending processes to aid in formation of the white matter in the same side of the spinal cord.

tautomerase [*taw-tom'ər-ās*] an enzyme that catalyzes tautomeric reactions.

tautomeric [*taw"to-mer'ik*] exhibiting, or capable of exhibiting, tautomerism.

tautomerism [*taw-tom'ər-iz-əm*] stereoisomerism in which the compounds are mutually interconvertible, under normal conditions, forming a mixture that is in dynamic equilibration.

taxel see American **badger**.

taxine [*tak'sēn*] a group of toxic diterpenoid alkaloids found in *Taxus* spp. Cause sudden death through depression of conduction in the myocardium and consequent heart failure and anoxia. It also causes depression of smooth muscle activity and possibly of activity of the respiratory center.

taxis [*tak'sis*] 1. an orientation movement of a motile organism in response to a stimulus; it may be either toward (positive) or away from (negative) the source of the stimulus; used also as a word ending, affixed to a stem denoting the nature of the stimulus. 2. exertion of force in manual replacement of a displaced organ or part.

taxon [*tak'son*] pl. *taxa* [Gr.] 1. a particular taxonomic grouping, e.g. a particular species, genus, family, order, class, phylum or kingdom. 2. the name applied to a taxonomic grouping.

taxonomist [*taks-on'ə-mist*] a specialist in taxonomy.

taxonomy [*tak-son'ə-me*] the orderly classification of organisms into appropriate categories (taxa), with application of suitable and correct names.

numerical t. a method of classifying organisms solely on the basis of the number of shared phenotypic characters, each character usually being given equal weight; used primarily in bacteriology.

Taxus [*tak'səs*] genus of the Taxaceae family of cone-bearing (gymnosperm) trees and shrubs; contain the toxic diterpenoid alkaloids of the taxine group which cause abdominal pain, convulsions, vomiting, dyspnea, diarrhea in most patients and acute heart failure and sudden death in a few cases. Includes *Taxus baccata* (common, English, Irish or churchyard yew), *T. brevifolia* (western or Californian yew), *T. canadensis* (American yew, ground hemlock), *T. cuspitata* (Japanese yew).

Tay–Sachs disease [*ta' saks'*] a sphingolipidosis of humans in which the inborn error of metabolism is a deficiency of the enzyme hexosaminidase A that results in accumulation of GM_2 ganglioside in the brain. Similar to GM_2**gangliosidosis** in German shorthaired pointer dogs.

Taylorella [*ta"lər-el'ə*] a genus of chemoorganotrophic, gram-negative rods in the family *Alcaligenaceae*.

T. asinigenitalis isolated from asymptomatic male donkeys; its pathogenicity is unknown.

T. equigenitalis the cause of **contagious** equine metritis. Previously called *Haemophilus equigenitalis*.

tazi see **Afghan hound**.

tazobactam [*taz"o-bak'tam*] a penicillanic acid sulfone derivative, similar to sulbactam; often combined with other antibiotics to extend their spectrum of activity.

TB 1. tuberculosis. 2. thoroughbred horse.

Tb chemical symbol, *terbium*.

tb tuberculosis; tubercle bacillus.

TBA trichlorobenzoic acid.

TBG thyroxine-binding globulin.

TBZ thiabendazole.

Tc chemical symbol, *technetium*.

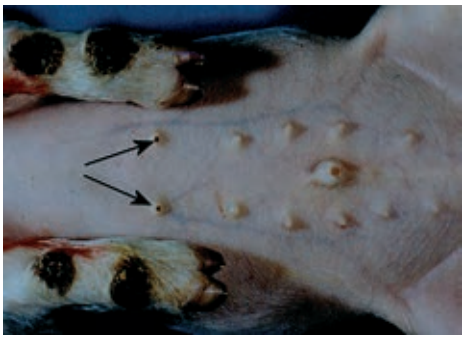
T-9: *Taxus baccata*. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

VetBooks.ir

Tc cell cytotoxic T **lymphocyte**; CTL.
TCA 1. trichloroacetic acid. 2. tricarboxylic acid cycle (Krebs cycle).
tCa total (blood) calcium.
TCA cycle tricarboxylic acid cycle.
TCDD tetrachlorodibenzodioxin.
TCE trichloroethylene.
TCHM traditional Chinese herbal medicine.
TCI 1. transcervical insemination. 2. Transition Cow Index™.
TCID tissue culture infective dose; that amount of a pathogenic agent that will produce pathological change when inoculated on tissue cultures.
$TCID_{50}$ median tissue culture infective dose; that amount of a pathogenic agent that will infect 50% of cell cultures inoculated. Usually expressed as $TCID_{50}$/mL.
TCM traditional Chinese medicine.
TCVM traditional Chinese veterinary medicine.
TCO_2 total carbon dioxide content of a plasma sample; equivalent to bicarbonate plus carbonic acid.
TCR T cell receptor.
TD Tracking Dog; the first level title awarded to dogs in scent tracking tests. The next level is Tracking Dog Excellent (TDX).
Td cell delayed hypersensitivity T lymphocyte. Called also T_{DTH} cell. This cell type is not individually well characterized and is probably a Th1 cell that is functioning to produce a delayed type hypersensitivity reaction.
TDE tetrachlorodiphenylethane–a **chlorinated hydrocarbon** insecticide.
TDM therapeutic drug monitoring.
TDN total digestible nutrients.
TDS total dissolved solids.
t.d.s. [L.] *ter die sumendum* (three times a day).
TDTH cell see **td cell**.
TDX Tracking Dog Excellent; the next higher level title after TD awarded to dogs in scent tracking competition. The higher title would be Variable Surface Tracking (VST).
TE Terminologia Embryologica.
Te chemical symbol, *tellurium*.
te ch'i the state in the body created by successful needle therapy.
tea plant [te] see ***Camellia sinensis***.
tea tree [te] *Melaleuca* spp.
Australian t.t. oil a volatile oil containing terpenes from *Melaleuca alternifolia* used widely in topical preparation, including pet shampoos, for its antiseptic and insect repellent properties; toxic if applied in large amounts to inflamed skin or if large amounts are ingested through self-grooming, producing tremors, diarrhea and potentially fatal seizures.
tear[1] [tār] the trilaminar fluid lubricating, nourishing, protecting and flushing the corneoconjunctival surface. Composed of aqueous secretions from the lacrimal glands, oily secretions from the meibomian glands, and mucin from the conjunctival goblet cells.
artificial t's ophthalmic solutions formulated to replace tears when their production or retention on the ocular surface is reduced, as in keratoconjunctivitis sicca or neuroparalytic keratitis. The most common preparations contain hyaluronate, polyvinylpyrrolidone or methylcellulose.
t. film, precorneal t. film the tears considered as a functional unit held over the corneoconjunctival surface by surface tension. Tear film deficiency may be qualitative (deficient aqueous as in keratoconjunctivitis sicca) or qualitative when one of the other two critical tear film layers is absent. See tear[1] (above).
t. film breakup time an indicator of tear film stability; premature breakup results from qualitative tear film deficiency and causes keratitis, conjunctivitis , or both.
t. gland lacrimal gland.
red t. syndrome see **sialodacryoadenitis**.
Schirmer t. test see **Schirmer tear test**.
t. staining syndrome abnormal drainageof tears with consequent overflow of tears typically at the medial canthus; results in constant wetness and staining of facial hairs; common in toy breeds of dogs and brachycephalic dogs and cats.
tear[2] [tār] a rent in membranes, e.g. in omentum and mesentery, or mucosae, e.g. rectal tear.
teart [tert] an old-English term for diarrhea in cattle grazing pastures in SW England subsequently found to be due to molybdenosis. Now commonly used as a term to describe pastures (teart-pastures) which have a high molybdenum content, because of the high concentrations of the mineral in the underlying soil.
t. scours see **copper** nutritional deficiency.
tease [tēz] 1. to pull apart gently with fine needles to permit microscopic examination. 2. to tantalize, e.g. sexually by parading a male in front of a female, or the opposite, in the mating capacity test.
teaser an animal used to sexually tease but not to impregnate the members of the opposite sex. Usually males and they may be surgically prepared to ensure that they cannot mate or are not fertile. In cattle and sheep vasectomized animals or castrates injected with testosterone are used; in horses an entire is used but at a distance so that no act of mating can take place.
t. buck male goat used as a teaser.
t. bull a bull that is used to make sexual advances to cows and detect those that are on heat without being able to fertilize them; this usually means that physical mating cannot occur but vasectomized bulls are able to do so. More commonly the bull has been altered surgically so that the penis is diverted or the bull wears an interfering harness.
t. male male animal used as a teaser.
teasing the act of parading a male before a female to see if she displays estrus, and is therefore in a state where mating is likely to be fertile.
teaspoon [te'] a household unit of volume or capacity approximately equal to 5 mL.
teat [tēt] a nipple, especially one of the large nipples of ruminants; the cavity of the mammary gland (the glandular part of the lactiferous sinus) opens into the cavity of the teat itself (the teat sinus) which in turn communicates with the exterior through the papillary duct(s) of which there may be one (cow), two (mare), or several (sow, bitch). The openings of these ducts are kept closed by a sphincter muscle. When the lactating female is stimulated to let down her milk the teat cistern fills with milk under pressure. At other times the teat is limp. See also **teat cup**, **teat cup liner**, **teat dip**, **teat sinus**.
accessory t. a supernumerary teat, especially a small one; very common in cows; may be attached to secreting mammary tissue; may have separate ductal systems or be offshoots from an existing, major duct.
t. angulation teats which stick out at an angle instead of straight down are an inconvenience in a modern milking parlor especially if automatic cup placers are in use. Considered to be an inherited defect.
t. blackpox see **black spot** (1).
blind t. characterized by the obvious presence of milk in the mammary gland but no milk can be gained through the teat orifice, nor can a teat cannula or sound be passed into the mammary gland cistern. The defect may be congenital with all or any part of the teat cistern and canal not present, or the defect may be at the junction of the teat and gland cisterns. Acquired permanent blockage of the duct system is usually due to trauma, occasionally infection, and can similarly be at any point in the teat cistern or duct. See also blind **quarter**.
bottle t. a cow's teat with a very distended base tapering down to a narrow neck at the tip; resembles an inverted bottle. They are a defect because of the difficulty in putting on the teat cups.
t. calculus mineralized concretions in the mammary ductal system; called also lactolith, **milk** stone.
t. cannula short, narrow, 1 inch diameter round-pointed metal or plastic tube used to pass from the exterior, through the teat canal and into the teat cistern. Used to relieve pressure in the gland when the teat canal is obstructed. Well-designed ones have a bulge followed by a constriction near the hub so that the tube is self-retaining. Called also teat tube.
t. chap superficial erythema, soreness due usually to continued wetting; a sequel to use of a too concentrated or otherwise irritant teat dip.
t. cistern the cavity inside the teat. Called also teat sinus or pars papillaris of the lactiferous sinus. It communicates with the mammary gland via the gland sinus and with the exterior via the papillary duct(s).
congenital t. defect includes supernumerary teats, fused teats, absence of the mammary gland and teat, absence of a teat canal or cistern, imperforate udder cistern orifice, teat angulation in

VetBooks.ir

cows; in sows insufficient teats, teats too far posteriorly, inverted or vestigial teats.
t. dipping the dipping of teats of dairy cows in a long-acting disinfectant at the end of each milking. It is an essential part of the NIRD mastitis control program. Pre-milking teat dips are also used in mastitis control. See also **teat dip**.
t. fibroma rare tumor of heifer teats.
t. fibrosarcoma rare tumor of heifer teats or udder.
t. fistula laceration of the teat wall in a lactating cow results in a permanent leaker so that milk drains out continuously and the quarter is at great risk from infection.
t. flora considered to be normal, i.e. without pathogenetic significance, in dairy cows-*Staphylococcus hyicus*, *S. epidermidis*, *Corynebacterium bovis*, coagulase negative staphylococci.
fused t.'s two teats joined together along their length, with a common teat cistern.
imperforate t. a congenitally obstructed teat due to failure of formation of the teat canal (lactiferous duct).
insufficient t.'s 12 is minimal in sows.
t. inversion the tip of the teat is inverted so that the meatus of the teat canal is in a hollow. The end of the teat may close over the sphincter and obstruct it during sucking; an inherited defect in sows.
t. leak see teat fistula (above).
t. lesions common site for lesions caused by epitheliotropic viruses, e.g. cowpox, mammillitis; trauma common cause, tread lesions in housed cows, barbed wire cuts in cows at pasture; infections, e.g. udder acne transmitted by teat cup liners or milker's hands.
milking machine t. injuries see **black spot**.
misplaced t. e.g. too far back in sows so that piglets cannot get access when the sow is lying down.
t. necrosis in piglets born onto rough, abrasive floors; results in a blind teat that may not be apparent until mature. Hind teats commonly affected in piglets with splayleg. Piglets with splayleg are particularly prone because of continual contact of anterior abdomen to the floor. Called also nipple necrosis.
t. occlusion due usually to tread trauma; rarely a congenital defect in which case all teats are usually affected.
t. orifice the opening to the papillary duct; normally held closed by the sphincter muscle in the wall of the teat and elastic tissue around the orifice. Invasion through the orifice is the primary route in the causation of most cases of mastitis.
t. papillomas better described as fibropapillomas of the bovine teat. May be long tag-like structures, or white sessile nodules 0.5 inch diameter or rice grain nodules all caused by different strains of a papillomavirus.
t. photosensitive dermatitis part of a generalized dermatitis characterized by localization of inflammation to lateral teat surface.
t. polyp in teat cistern causes intermittent obstruction requiring surgical removal.
rudimentary t. standard equipment in males; inherited defect in cows.
t. sanitization cleaning and disinfection before milking; most farmers reduce this to a wash with running cold water followed, in meticulous parlors, by drying with individual paper towels.
t. sealers, t. sealant are materials used to aid in bovine mastitis control. 1. a polyvinylpyrrolidone preparation used to put on teat skin to seal milk orifice and protect skin against infection for



T-10: Teat necrosis.

T-11: Teat slitter. From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide, 2nd Edition. Mosby, 2011.

long periods. 2. an inert preparation to be infused into the teat at drying off to protect against new infections during the dry period.
t. siphon see teat tube (below).
t. slitter a surgical instrument in the form of 2 mm diameter tube containing a sharp cutting blade concealed in its tip. The slitter is introduced into the teat cistern in the closed position, opened so that the blade protrudes and then withdrawn so as to slit the stenosed sphincter.
t. slough as part of gangrene of the gland.
t. sphincter the muscle in the teat wall around the external orifice of the teat; its relaxation is necessary for the rapid expulsion of milk during 'let-down'.
t. sphincter contracted due usually to injury; milking is uneven with much milk left in the affected quarter; requires surgical dilation.
t. spider membranous obstruction of the teat canal.
t. stenosis partial obstruction of the teat canal or cistern as a result of injury or inflammation.
t. stripping removing the last of the milk in the teat after machine milking by occluding the teat at the top between the thumb and forefinger and then pulling downwards so as to express all the milk from the teat. See also machine **stripping**, hand **stripping**, **handmilking**.
supernumerary t. in cows may be accompanied by a supernumerary mammary gland. May also be an adjunct to an existing teat and also share its teat cistern.
t. tube a 1.5 mm diameter metal or plastic tube with a tapered end for insertion in the external orifice of the cow's teat. Exit from the lumen is via holes in the side wall of the tube. Vary in length from 1.5–4 inches depending on purpose. Used mostly for the infusion of medicament into the teat and udder, but also for clearing the teat canal and cistern of debris and for evacuating milk from a quarter with a blocked teat. Called also teat siphon, teat cannula.
t. tuberculoid granulomas granulomas in the teat wall and lower udder contain *Mycobacterium terrae*. See also **enzootic** nodular thelitis.
t. ulcerative dermatitis deep ulcers in cows bedded on infected straw.
vestigial t. rudimentary non-functional teats.
t. wart see teat **papillomatosis**.
teat canal an outmoded term for the short, small caliber duct(s) at the tip of the teat that communicates with the exterior. Called also papillary duct; formerly called streak canal. Now formally called *ductus papillaris*.
t. c. absent considered to be an inherited defect.
teat cup the solid metal cups which house the flexible teat cup liners at the end of the milk line on a milking machine. Called also teat cup shell.
t. c. cluster four cups and a manifold, called a claw, which connects them to make a cluster; designed to milk one cow.
t. c. crawl movement of the teat cup up the teat as internal pressure in the udder drops during milking. May pinch off the opening of the teat cistern and stop milk flow.
t. c. disinfection the principal objective of the disinfection procedure is the **teat cup liner**.
t. cup removal removal of the teat cups at the end of the milking process; performed manually or mechanically by the teat cup remover (see below).
t. c. remover an automatic device that turns off the vacuum pressure and pulls off the teat cups when the flow of milk from the quarter falls below a critical point.
teat cup liner the rubber inflation in the cup of a milking machine. Made of neoprene or silicone rubber, molded to approximate the

VetBooks.ir

shape of a teat or made of a simple extruded tube, consisting of a mouthpiece, a tube and a short milk tube which passes out the hole at the end of the teat cup and is connected to the milk line of the milking machine. Forced to alternately constrict and relax by variation of the vacuum pressure in the milking cup.

t. c. l. deflector shield a small disk in the bottom of the liner which prevents a jet of milk entering at the end of the milk line and impinging on the end of the teat; experiments show a significant reduction in mastitis new infection rates when they are installed.

t. c. l. disinfection disinfection of the liners between cows; performed manually, especially in barns where cows are milked in their stalls, or automatically, in some parlors as part of a complete cycle of backflush, disinfect, rinse.

t. c. l. slip the firm adhesion between the milking machine cup liner and the teat skin is lost and the cup drops down the teat, does not milk and squeaks or squawks as air leaks past the incomplete barrier; may cause milk droplets from the affected cup to impact on the ends of the other teats of the cow and result in the spread of mastitis infection.

teat dip for teat dipping or spraying in mastitis control. Suitable dips are chlorhexidine 1 in 5000, iodine preparations containing 100 ppm free iodine or chlorine solutions containing 800–1200 ppm of free chlorine, linear dodecyl benzene sulfonic acid.

barrier t. d. application of materials, latex or rubber-based, which physically protect the teat sphincter against infection; the common disadvantage is the difficulty in removing the material when milking commences.

linear dodecyl benzene sulfonic acid t.d. see **teat dip**.

teat sinus the cavity which occupies most of the volume of the teat; dorsally it is continuous with the mammary gland sinus; ventrally it leads into the papillary duct and to the exterior; its confines consist of the distensible teat wall. Called also teat cistern.

t. s. absent congenital defect immediately branding the animal as a cull.

TECABO total ear canal ablation and bulla osteotomy.

technetium (Tc) [*tek-ne'she-əm*] a chemical element, atomic number 43, atomic weight 99. See Table 4.

t.-99m (^{99m}Tc) the most frequently used radioisotope in nuclear medicine, a gamma emitter having a half-life of 6.04 hours and a primary photon energy of 140 keV.

technic [*tek'nik*] technique.

technician [*tek-nish'ən*] see **veterinary** technician.

animal t. after a basic training there is specialization into laboratory or agricultural animals, possibly zoo and wild animals.

technique [*tek-nēk'*] the method of procedure and details of a mechanical or chemical process or surgical operation.

t. chart set of rules for an X-ray machine with the objective of obtaining the same quality of performance at each operation. Includes the coordination of the variables, kilovolt peak (kVp), milliamperage and time (milliampere-seconds, mA·s), and tube-to-table distance, screen-film combination and processing.

technologist [*tek-nol'ə-jist*] see **veterinary** technologist.

tectorial [*tek-tor'e-əl*] pertaining to tectorium; of the nature of a roof or covering.

t. membrane a gelatinous, fibrous, tongue-like structure resting on the tactile hairs in the spiral organ of the inner ear.

tectorium [*tek-tor'e-əm*] Corti's membrane.

tectospinal [*tek"to-spi'nəl*] extending from the tectum of the midbrain to the spinal cord.

tectum [*tek'təm*] a rooflike structure.

t. of mesencephalon, t. of midbrain the dorsal portion of the midbrain.

TED threshold erythema dose.

teeth [*tēth*] small, bonelike structures of the jaws for the biting and mastication of food. Plural of *tooth*. See also **dental**, **tooth**.

t. abscess see **alveolar[1] abscess**, **malar abscess**.

accessional t. the permanent molars, so called because they have no deciduous predecessors in the dental arch.

anelodont t. teeth that are not continuously growing; occur in carnivores, primates, herbivores, mice, rats and hamsters. Compare with elodont teeth (below).

anterior t. usually taken to include incisors and canines.

aradicular t. open-rooted; the apex remains open as the tooth grows continuously (elodont tooth; see below).

t. attrition see dental **attrition**.

baby t. see deciduous teeth (below).

brachyodont t. a type of dentition as seen in humans and pigs; the teeth have short crowns, well developed roots and a narrow root canal. See also **hypsodont**, **bunodont**.

bunodont t. see **bunodont**.

canine t. the long, pointed tooth in the interdental space between incisors and cheek teeth; there is one in each jaw on both sides.

carnassial t. see **carnassial tooth**.

t. cavity see dental **cavity**, pulp **cavity**.

cheek t. premolars and molars.

congenital t. enamel deficiency see inherited **enamel** defect.

deciduous t. the temporary set of teeth that erupt in the young and are shed before or near maturity. They have smaller crowns and root systems and are fewer in number than the permanent teeth that replace them. Occasionally, particularly in small breeds of dogs, shedding of the deciduous tooth may not occur when the permanent replacement has erupted, necessitating veterinary intervention. See retained teeth (below). Called also milk teeth, temporary teeth, baby teeth, primary teeth.

diphyodont t. see **diphyodont**.

displaced molar t. see inherited displacement of **molar[2]** teeth.

ectopic t. see **dental** cyst.

elodont t. see **elodont**.

embedded t. unerupted.

t. eruption time see Table 19.

t. excessive wear occurs in animals on high fluorine intake or on diets low in calcium.

fighting t. modified canine and incisor teeth on the top and lower jaws of mature male camelids. They curve slightly backward and are commonly removed or kept filed for reasons of safety. Called also fangs.

geminous t. see **gemination**.

t. grinding 1. grinding of the incisors to improve foraging ability. Has been done to sheep with an industrial angle grinder with indifferent results. 2. see also **bruxism**.

heterodont t. see **heterodont**.

homodont t. see **homodont**.

hypsodont t. see **hypsodont**.

impacted t. one so placed in the jaw that it is unable to erupt or to attain its normal position in occlusion.

incisor t. the front teeth used for cropping grass or rending flesh. From two to four in each quadrant, depending on the species, except that they are missing in the upper jaw of ruminants.

inherited molar t. displacement see inherited displacement of **molar[2]** teeth.

lophodont t. see **lophodont**.

t. maleruption defective eruption; includes delayed eruption and more usually eruption out of its normal position.

milk t. see deciduous teeth (above).

molar t. the permanent, primary cheek teeth that are not preceded by premolars. They are typically big teeth used for grinding and with ridges on their occlusal surfaces (lophodont) in horses, worn rounded cusps (bunodont) in pigs, or including crescents (selenodont) in cattle, and either cutting edges or flattened areas in carnivores.

monophyodont t. see **monophyodont**.

needle t. any small sharp teeth in piglets but principally the canine teeth.

permanent t. see permanent **dentition**.

t. pigmentation see **tetracycline** stain.

pink t. caused by staining with porphyrin, or by deficiency of dentin and enamel, a congenital defect.

polyphyodont t. see **polyphyodonty**.

premature t. loss a problem in New Zealand sheep. Characterized by acute then chronic gingivitis, then periodontitis and loss of teeth. Cause unknown.

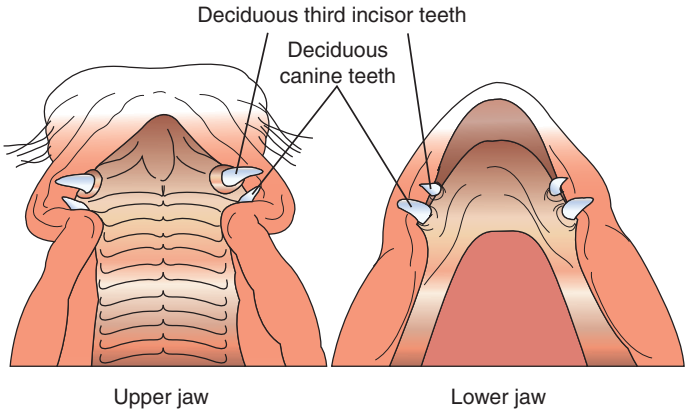
premolar t. cheek teeth present in both generations, found between the molars and canines. The first premolar is exceptional in humans because it erupts late and is never replaced. In domestic species, there are up to three or four deciduous, followed by up to four permanent premolars in both jaws and on both sides.

primary t. see deciduous teeth (above).

radicular t. the root apex is closed.

t. rasp see tooth **rasp**.

VetBooks.ir



T-12: Needle teeth of piglet, commonly clipped at birth so they do not cause injury to other piglets or sow's mammary gland.
From Holtgrew-Bohling K, Large Animal Clinical Procedures for Veterinary Technicians. 2nd Edition. Mosby, 2012.

VetBooks.ir

retained t. deciduous canines or incisors may be retained even though the permanent teeth have erupted. The deciduous crowns are likely to protrude at odd angles and cause difficult mastication, but more important is the probability that the erupting permanent teeth will be misdirected with damage to gums or palate or malocclusion. See **dental** interlock.
secodont t. see **secodont**.
sectorial t. a cutting tooth. See **carnassial tooth**.
selenodont t. see **selenodont**.
sharp t. the edges of molar teeth in the horse which require frequent rasping because of the injury that they might cause to the oral mucosa.
stained t. red-brown in inherited porphyrinuria in cattle, frequent dosing with tetracyclines, heavy staining with brown tartar in ruminants with a rumination and prehension problem, usually due to loss of anterior part of tongue.
supernumerary t. teeth in excess of the normal complement, e.g. double row of incisors. Called also polyodontia, heterotopic polydontia.
temporary t. see deciduous teeth (above).
wolf t. see **wolf tooth**.
teething [*tēth'ing*] the process of tooth eruption; seemingly an innocuous event in domestic animals.
Teflon [*tef'lon*] see **polytef**, **polytetrafluoroethylene**.
tegmen [*teg'mən*] pl. *tegmina* [L.] a covering structure or roof.
t. tympani 1. the thin layer of bone separating the tympanic antrum from the cranial cavity. 2. the roof of the tympanic cavity, related to part of the petrous portion of the temporal bone.
tegmentum [*təg-men'təm*] pl. *tegmenta* [L.] a covering.
mesencephalic t. the part of the mesencephalon that contains the motor nuclei of the oculomotor and trochlear nerves, the red nucleus and the reticular formation.
tegu large and powerful South American lizards in the genus Tupinambis; common in the pet trade.
teichoic acids [*ti-ko'ik*] antigenic polymers of glycerol or ribitol phosphates found attached to the cell walls or in association with membranes of gram-positive bacteria; they determine group specificity of some species, e.g. the staphylococci.
teicoplanin [*ti-ko-pla'nin*] a glycopeptide antibiotic, similar to vancomycin, from *Actinoplanes teichomyceticus*, used in the treatment of serious gram-positive infections.
tela [*te'lə*] pl. *telae* [L.] a thin weblike tissue or structure.
t. choroidea a thin, web-like layer of connective tissue; a component of the choroid plexus.
t. conjunctivae connective tissue.
t. elastica elastic tissue.
subcutaneous t. the deepest layer of the skin, between the dermis and the fascia of the muscles. Called also hypodermis.
submucosal t. the connective tissue that supports a mucous membrane and that lines the deep surface of the tunica muscularis of viscera. The tissue serves as a framework that adapts to the changes in shape and size of the organ.
subserosal t. the connective tissue beneath the serous layer of a viscus.
Teladorsagia [*te"lə-dor-sa'jə*] genus of nematodes in the family Trichostrongylidae. Includes *T. circumcincta* (*T. davtiani*, *T. trifurcata*), found in sheep, goats. Considered sometimes as a synonym of *Ostertagia*.
telangiectasia [*təl-an"je-ək-ta'zhə*] abnormal dilatation of capillaries and small venules in any tissue; may have a genetic basis.
telangiectasis [*təl-an"je-ek'tə-sis*] pl. *telangiectases*;; focal dilatation of hepatic sinusoids in older cattle, secondary to atrophy and disappearance of groups of hepatocytes for reasons unknown. Without clinical significance, but causes loss due to downgrading of liver at slaughter. Seen also in older cats.
telangiectatic [*təl-an"je-ək-tat'ik*] pertaining to or emanating from telangiectasis.
telangiosis [*təl-an"je-o'sis*] any disease of the capillaries.
tele- word element. [Gr.] *far away, operating at a distance, an end.*
teleauction auction, usually of livestock, over the telephone using a conference call mode so that a number of buyers can bid after hearing a description of the produce. The animals are often on the producer's farm. Avoids shipping and commingling.
telecanthus [*tel"ə-kan'thəs*] abnormally increased distance between the medial canthi of the eyelids.
telecardiography [*tel"ə-kahr"de-og'rə-fe*] the recording of an electrocardiogram by transmission of impulses to a site at a distance from the patient; now commonly done via a telephone to a referral center or consultant's office.
telecardiophone [*tel"ə-kahr'de-o-fōn*] an apparatus for making heart sounds audible at a distance from the patient.

T-13: Pink teeth in Holstein calf with inherited osteogenesis and dysplastic dentine.

T-14: Retained deciduous canine tooth in a dog.

teleceptor [tel'ə-sep"tər] a nerve terminal that is sensitive to stimuli originating at a distance. Such nerve endings exist in the eyes and ears.

telediagnosis [tel"ə-di"ag-no'sis] determination of the nature of a disease at a site remote from the patient on the basis of transmitted telemonitoring data or closed-circuit television consultation.

telefluoroscopy [tel"ə-flŏŏ-ros'kə-pe] television transmission of fluoroscopic images for study at a distant location.

telegony a discredited, superstitious belief that offspring bred from one sire may also inherit characteristics from another sire to which the dam had been successfully bred on a previous occasion.

Telemark cattle rare Norwegian breed of dairy cattle subject to an inherited lethal chondrodysplastic dwarfism; red or brindle with lyre horns.

telemedicine [tel"ə-med'ĭ-sin] the provision of consultant services by off-site veterinarians to other veterinarians on the scene, as by means of closed-circuit television.

telemetry [tə-lem'ə-tre] the making of measurements at a distance from the subject, the measurable evidence of phenomena under investigation being transmitted by radio signals.

telencephalon [tel"en-sef'ə-lon] [Gr.] *endbrain*. 1.region of the brain consisting of the cerebral hemispheres. 2. the anterior of the two vesicles formed by specialization of the forebrain in embryonic development.

teleneurite [tel"ə-noor'īt] an end expansion of an axon.

teleneuron [tel"ə-noor'on] a nerve ending.

teleomitosis [te'le-o-mi-to'sis] completed mitosis.

teleomorph [te'le-o-morf"] an end-stage, e.g. of a fungus.

teleorganic [te"le-or-gan'ik] necessary to life.

teleost [tel'e-ost] fish of the class Osteichthyes, having the skeleton completely ossified.

teleradiography [tel"ə-ra"de-og'rə-fe] 1. radiography with the X-ray tube located approximately 6 ft away from the plate in order to more nearly secure parallelism of the rays. 2. transmission of digitized radiographic and other diagnostic images for viewing remotely from where they were acquired.

teleradiotherapy [tel"ə-ra"de-o-ther'ə-pe] treatment with ionizing radiation from an X-ray source located at a distance from the body.

telescope the name frequently given to rigid endoscopes.

teletherapy [tel"ə-ther'ə-pe] treatment in which the source of the therapeutic agent, e.g. radiation, is at a distance from the body. Called also external beam radiotherapy.

telluric [tə-lu'rik] 1. pertaining to tellurium. 2. pertaining to or originating from the earth.

tellurium (Te) [tə-lu're-əm] a chemical element, atomic number 52, atomic weight 127.60. See Table 4.

tel(o)- word element. [Gr.] *end*.

telocentric chromosome [tel"o-sen'trik] having the centromere at one end of the chromosome (terminal centromere) so that the chromosome has only one arm.

telodendritic zones [tel"o-den'drik] one of the three functionally significant zones of neurons and their transmission of impulses; includes terminal modifications which permit transfer of information to the next element in the path.

telodendron, telodendrion [tel"o-den'dron] any of the fine terminal branches of an axon.

telogen [tel'o-jən] the quiescent or resting phase of the hair cycle, following catagen, the hair having become a club hair and not growing further.

t. effluvium, t. defluxion, t. defluvium widespread loss of hair due to large numbers of hair follicles being in synchronized telogen. In animals, may be associated with stress, severe malnutrition and drug therapy. In bitches, and less frequently queens, it is a common postpartum change.

t. hair follicle one in a resting stage.

telognosis [tel"og-no'sis] diagnosis based on interpretation of radiographs transmitted by radio or telephonic communication.

telolemma the covering of a motor end-plate, made up of sarcolemma and an extension of Henle's sheath.

telomere [tel'o-mēr] an extremity of a chromosome, which has specific properties, one of which is a polarity that prevents reunion with any fragment after a chromosome has been broken.

telomorph the sexual form of a fungus.

telophase [tel'o-fāz] the last of the four stages of mitosis and of the two divisions of meiosis.

telotherapy the use of X-rays or radioactive compounds applied from a distance away from the body, as compared with **brachytherapy**, which delivers radiotherapy by being placed onto or into tissue.

TEM 1. transmission electron microscope. 2. triethylenemelamine. 3. transmissible encephalopathy of mink.

temazepam [tə-maz'ə-pam] a benzodiazepine tranquilizer.

TEME thromboembolic meningoencephalitis. See **hemophilosis**.

temephos [tem'ə-fos"] an organophosphorus insecticide.

temocillin a semisynthetic penicillin, very resistant to β-lactamase.

temperament [tem'pər-ə-mənt] the peculiar behavioral character and mental cast of an animal.

t. change can be important in animal management or indicative of disease, e.g. vicious change in mare with ovarian adenocarcinoma, assumption of male characters in cow with ovarian tumor, disengagement in dogs with brain tumor. In food animals, castration of male livestock and spaying of females is practiced to aid management with limited restraint. In companion animals desexing practiced for population control also has marked effect on temperament.

temperateness said of climate; includes consideration of temperature, humidity and wind speed, especially an absence of extremes of them. See also effective **temperature**.

t. index comparable to comfort index in human meteorology.

temperature [tem'pər-ə-chər] the degree of sensible heat or cold, expressed in terms of a specific scale. See also **hypothermia**, **hyperthermia**.

absolute t. that reckoned from absolute zero (−459.67°F or −273.15°C).

air t. the temperature of the surrounding air as measured by a dry-bulb thermometer.

ambient t. temperature of the immediate environment.

body t. a prime technique for assessing health status of a patient. Always a rectal temperature. Average temperatures above which hyperthermia, pyrexia or fever can be said to occur are listed under **pyrexia**.

core t. that of the brain and major viscera.

critical t. 1. that below which a gas may be converted to a liquid by pressure. 2. the environmental temperature at which the body is unable to maintain a constant body temperature and at which heat production must be increased (cold temperatures) or at which heat loss must be increased (high temperatures).

effective t. the combination of air temperature, humidity and wind speed. See also **temperateness** index.

environmental t. air temperature.

nonpermissive t. one at which a conditional gene mutation is nonfunctional. See also temperature-sensitive **mutation**.

normal body t. that usually registered by a healthy animal. See **pyrexia**.

permissive t. one at which a conditional gene mutation can express its normal function. See also temperature-sensitive **mutation**.

phase transition t. temperature, usually between 30°C and 40°C, at which biological membranes change from a rigid gel phase to a thinner, more fluid phase.

premortal t. fall the sudden fall in body temperature of a previously fevered animal just before death.

rectal t. the body temperature as measured by a rectal thermometer which has been in situ and in contact with the mucosa of the rectum with the anal sphincter tightly closed for at least 30 seconds. Alternative equipment is a dipolar electrode in a rectal probe.

t. stress exposure to excessively high or low environmental temperature.

windchill t. a combination of wind velocity and air temperature. See also effective temperature (above).

temperature–humidity index [tem'pər-ə-chər] air temperature as measured by a wet-bulb thermometer and an expression of apparent temperature and comfort of animals in it.

temperature-sensitive [tem'pər-ə-chər] living organisms that are sensitive to temperatures outside of a narrow range, e.g. virus vaccine that does not replicate at deep body temperature, but does replicate in the respiratory tract.

t.-s. (ts) mutants strains of microorganisms that are able to grow at certain low temperatures, say 90°F (32°C), which is referred to

VetBooks.ir

as the permissive temperature, but are unable to grow at higher temperatures, say 102°F (39°C), which is referred to as the nonpermissive temperature. Such conditionally lethal mutants have been much used in the genetic analysis of microorganisms. At the nonpermissive temperature the protein product of a particular gene is unstable and hence nonfunctional, whereas the protein function is normal at the permissive temperature. These mutants have also been selected for use in vaccines because of their growth requirements for lower temperatures and lower pathogenicity, e.g. ts strains of *Mycoplasma gallisepticum, M. synoviae* and *M. hyponeumoniae*, which, when administered intranasally, grow in the upper, but not the lower, respiratory tract and thus do not cause serious disease.

t.-s. proteins proteins that are functional at lower temperatures, but not at higher ones. See temperature-sensitive mutants (above).

template [tem'plət] the macromolecule that serves as a pattern for the synthesis of another macromolecule. In nucleic acid synthesis, the DNA from which a new strand is copied. See also **deoxyribonucleic acid**, **PCR**[1].

temple [tem'pəl] the lateral region on either side of the head, above the zygomatic arch; a term commonly used in humans (where it originally signified the passage of time (Latin *tempus* = time) because this is where the first gray hairs are often seen in men). The term is not used in animals, except with reference to the temporal bone, muscle temporomandibular joint, temporal vessels and nerves, etc. See also **temporal**.

tempolabile [tem"po-la'bəl] subject to change with the passage of time.

temporal [tem'pə-rəl] 1. pertaining to the temple. Said of bones and muscles—see Tables 10 and 13. 2. pertaining to time; limited as to time; temporary.

t. distribution distribution of events or population in chronological time; a suitable scatter graph may reveal clusters that have epidemiological significance.

t. lobe a long, tongue-shaped process constituting the lower lateral portion of the cerebral hemisphere.

t. summation occurs in the transmission of nerve impulses when a volley of impulses arrives at a synapse so that the duration of the impulses is briefer than the postsynaptic potential and their deliveries of transmitter are combined to create a larger than normal response.

temporary interim; for a short time only.

temporomandibular [tem"pə-ro-mən-dib'u-lər] pertaining to the temporal bone and mandible.

t. dysplasia subluxation with open-mouth jaw locking occurs in Irish setters and Basset hounds, caused by developmental abnormalities in the condyloid process of the mandible and the mandibular fossa of the temporal bone. Called also temporomandibular joint (TMJ) syndrome.

t. joint syndrome see temporomandibular dysplasia (above).

temporomaxillary [tem"pə-ro-mak'sĭ-lar"e] pertaining to the temporal bone and maxilla.

temporo-occipital [tem"pə-ro-ok-sip'ĭ-təl] pertaining to the temporal and occipital bones.

temporosphenoid [tem"pə-ro-sfe'noid] pertaining to the temporal and sphenoid bones.

tempostabile [tem"po-sta'bəl] not subject to change with time.

TEN toxic epidermal necrolysis.

ten eighty (1080) **sodium** fluoroacetate.

ten eighty one (1081) **fluoroacetamide**.

10 Point Plan see **Milk and Dairy Beef Residue Prevention Protocol 10-Point Plan**.

Tenacibaculum maritimum cause of marine flexibacter disease, previously called *Flexibacter maritimum*.

tenacious [tə-na'shəs] viscid; adhesive.

tenaculum [tə-nak'u-ləm] a hooklike surgical instrument for grasping and holding parts.

tenascin [ten-as'in] adhesive glycoprotein contributing to the cell-to-basal lamina-to-matrix interface.

tender said of wool whose fibers break easily because of a weakness caused by an illness or feed stress.

tenderizing [ten'dər-nis] natural tenderizing is caused by the action of enzymes already in tissues. This effect can be enhanced by quick freezing before rigor mortis sets in, and by hanging the meat at the proper temperature for the proper time, especially just before cooking. Called also conditioning. Artificial tenderizing is carried out by stretching or pounding the meat with a proper hammer with a hobnail hammer face, by electrical stimulation or by application of one of the commercial enzyme preparations of papain (from pawpaw) or bromelin (from pineapple).

tenderness [ten'dər-nis] a state of unusual sensitivity to touch or pressure.

rebound t. a state in which pain is felt on the release of pressure over a part.

tenderstretch tenderizing see **tenderizing**.

tendinitis [ten"dĭ-ni'tis] inflammation of tendons and of tendon–muscle attachments. It is one of the commonest causes of lameness. Tendinitis may be associated with a calcium deposit (calcific tendinitis), which may also involve the bursa around the tendon or near the joint, causing bursitis.

tendinoplasty [ten'dĭ-no-plas"te] tenoplasty.

tendinosuture [ten"dĭ-no-soo'chər] tenorrhaphy.

tendinous [ten'dĭ-nəs] pertaining to, resembling, or of the nature of a tendon.

tendo [ten'do] [L.] *tendon*.

t. Achilles, t. calcaneus **Achilles tendon**, the thick tendon of the triceps surae muscles (gastrocnemius and coleus) that inserts on the tuber calcanei; called also calcaneal tendon. Compare with tendo calcaneo communis (below).

t. calcaneo communis the common calcaneal tendon. It is made up of the aggreated tendons in the distal part of the crus that include those of the triceps surae (gastrocnemius and soleus that make up the Achilles tendon proper), the flexor digiti superficialis m., and the hamstrings (biceps femoris and semitendinosus muscles); because the term is long-winded, often Achilles tendon is preferred even though strictly it is not the same. Animals that are hamstrung have this tendon severed and become hopelessly crippled.

tendolysis [ten-dol'ə-sis] tenolysis; the freeing of a tendon from adhesions.

tendon [ten'dən] a sheet, cord or band of strong white fibrous tissue that connects a muscle to a bone or other structure. When the muscle contracts, or shortens, it pulls on the tendon. Tendons serve to convey an action to a remote site, change the direction of pull and focus the force. Sheetlike tendons (aponeuroses) serve to support and squeeze, cordlike ones to act on joints. See also **cunean** tendon.

t. aponeuroses see **aponeurosis**.

bowed t. chronic tendinitis of one or more of the 'back tendons' (i.e. those behind the metacarpal bones), especially of the superficial flexor tendon, usually of the front limbs, of a horse. The horse is lame or inclined to lameness, the tendon is thickened and is visibly enlarged. It may be painful on palpation in the early, acute stages. The superficial flexor tendon is particularly vulnerable because with each foot fall it is obliged to stretch more than the others and each stretch-recoil event generates heat in the core of the tendon that exacerbates the condition.

calcaneal t. see **Achilles tendon**.

t. cartilaginous metaplasia focal metaplasia with the formation of cartilage in tendons causes no apparent harm and is considered to be normal.

common calcanean t. see **Achilles tendon**.

congenital t. contracture an inherited contracture of multiple tendons is identified in cattle. The joints are fixed in extension or flexion and cause serious dystocia. See also **Akabane virus** disease.

contracted t's see tendon contracture (below).

t. contracture contraction of tendon which can be congenital or acquired. Causes of congenital contracted tendons are not known but intrauterine positioning and disturbed fetal growth may be factors. Acquired flexural deformities can involve the deep digital flexor or superficial digital flexor tendons. Most commonly of the flexor tendons of the digit in the horse. The action of the affected limb is restricted and the limb is not fully extended at rest causing the animal to stand up on its toe. Correction is attempted by splints and casts and the parenteral administration of oxytetracycline which affects the structural organization of collagen. Called also contracted tendons.

flexor t's tendons of the superficial and deep flexor muscles of the digit. Commonly strained, lacerated and separated in the racing horse.

T-15: Congenital contracture of flexor tendons.
From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

T-16: Tenesmus.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

VetBooks.ir

t. graft done in horses with badly torn or ruptured flexor tendons. Autologous grafts are taken from the lateral digital extensor tendon.
hamstring t. see **hamstring**.
t. implants see **carbon fiber implants**.
internal biceps t. a core of fibrous tissue within the biceps muscle of horses which serves a significant role in the stay apparatus.
interosseous t. **suspensory** ligament (1).
t. luxation slipping of the superficial flexor tendon of the hindlimb of the horse off the tuber calcis, usually in the medial direction; also occurs rarely in dogs and ostriches. See also **perosis**.
t. osseous metaplasia a pathological ossification within a tendon; can cause restriction of function. See also tendon ossification (below).
t. ossification occurs extensively in gallinaceous birds in the tendons of the legs and feet, the wings and the epaxial musculature. Although the ossification may be extensive the birds are normal and the reasons for the changes are unknown.
prepubic t. the tendon of insertion of the two abdominal recti muscles on to the pubis.
t. sheath a fluid-filled sleeve that resembles a synovial bursa wrapped around the tendon so as to form a continuous sheath, except for the **mesotendon**.
t. splitting performed by slitting the superficial flexor tendon (or the suspensory ligament) along its long axis and from lateral to medial sides as a treatment for tendinitis. The objective is to stimulate vascularization and hasten repair.
t. sprain see **sprain**.
sprained t. see tendon strain (below).
t. strain the injury caused to flexor tendons in the horse during racing. Most commonly affected is the superficial flexor tendon in the front limb. See also bowed tendon (above). Called also sprained tendon.
symphysial t. a vertical median sheet which hangs from the pubic symphysis and provides an origin for the medial thigh muscles.
tendonectomy surgical severance of a tendon. Called also tenotomy.
tendonitis [*ten"də-ni'tis*] tendinitis.
tendonography radiographic study of tendons and tendon sheaths, usually accomplished by the use of a contrast agent; largely replaced by ultrasonography.
tendovaginal [*ten"do-vaj'ĭ-nəl*] pertaining to a tendon and its sheath.
tendovaginitis [*ten"do-vaj"ĭ-ni'tis*] inflammation of a tendon and its tendon sheath.
Tenebrio molitor [*tə-nēb're-o*] a pest of stored grain which may attack the claws of setting hens and tissues of newly hatched birds. Other mealworm species are known to have the same effect. Called also yellow mealworm.
tenectomy [*tə-nek'tə-me*] excision of a lesion of a tendon or of a tendon sheath.
deep digital flexor t. cat claws remain retracted.
tenesmus [*tə-nez'məs*] ineffectual and painful straining at defecation or in urinating. Called also straining. See also **strangury**.
tenia [*te'ne-ə*] pl. *teniae* [L.] a flat band or strip of soft tissue. A concentration of external longitudinal muscle and elastic fibers, e.g. on the large intestine of horses, pigs and some other species, dividing it into two to five longitudinal segments which are divided further into transient haustra or pockets. See tenia ceci and tenia coli (below).
t. ceci one of the several longitudinal muscular bands on the external surface of the cecum of some species, such as the horse, pig and rabbit, that puckers the tract into haustra.
t. coli the bands on the surface of the colon of some species. In the horse the thickened bands (tenia libera, tenia mesocolica and tenia omentalis) formed by longitudinal fibers in the tunica muscularis of the colon, the number varying from one to four.
teniacide [*te'ne-ə-sīd"*] 1. lethal to tapeworms. 2. an agent lethal to tapeworms.
teniafuge [*te'ne-ə-fūj"*] a medicine for expelling tapeworms.
teniamyotomy [*te'ne-ə mi-ot'ə-me*] an operation involving a series of transverse incisions of the teniae coli.
teniasis [*te-ni'ə-sis*] infection with tapeworms of the genus *Taenia*. The adult tapeworms do not cause a clinically recognizable disease. The larval stages may cause clinical signs described under **coenurosis** or **cysticercosis**.
teniid pertaining to or emanating from cestodes in the family Taeniidae.
Tennessee walking horse a horse, originating in a Standardbred stallion, and bred for show and pleasure; the breed is characterized by its showy fast walk which can lapse into a pacing gait unless care is taken. It is a fast, four-beat gliding walk reputed to be the most comfortable of all of the gaits for the rider. A robust, less elegant version of the **American Saddle horse**, about 15–15.2 hands high, usually black or chestnut with white markings.
tennis racket spore classical shape of *Clostridium tetani* bacterium containing a terminal spore. Called also drumstick spore.
ten(o)- word element. [Gr.] *tendon*.
tenodesis [*tə-nod'ə-sis*] suture of the end of a tendon to a bone.
tenolysis [*tə-nol'ĭ-sis*] the operation of freeing a tendon from adhesions.
tenomyoplasty [*ten"o-mi'o-plas"te*] plastic repair of a tendon and muscle, applied especially to an operation for inguinal hernia.
tenomyotomy [*ten"o-mi-ot'ə-me*] excision of a portion of a tendon and muscle.
tenonectomy [*ten"ə-nek'tə-me*] excision of part of a tendon to shorten it.
tenonitis [*ten"ə-ni'tis*] 1. tendinitis. 2. inflammation of Tenon's capsule, the episcleral connective tissue surrounding the sclera; episcleritis.
tenonometer [*ten"ə-nom'ə-tər*] an apparatus for measuring intraocular pressure; tonometer.
Tenon's capsule [*tə-naw'*] condensation of connective tissue on the outer surface of the sclera from the limbus to where it becomes continuous with the extraocular muscle fascia.
tenontitis [*ten"on-ti'tis*] tendinitis.
tenont(o)- word element. [Gr.] *tendon*.
tenontography [*ten"on-tog'rə-fe*] a written description or delineation of the tendons.
tenontology [*ten"on-tol'ə-je*] the sum of what is known about the tendons.
tenontothecitis [*tə-non"to-the-si'tis*] tenosynovitis.
tenophyte [*ten'o-fīt*] a growth or concretion in a tendon.
tenoplasty [*ten'o-plas"te*] plastic repair of a tendon.
tenoreceptor [*ten'o-re-sep"tər*] a nerve receptor in a tendon.
tenorrhaphy [*tə-nor'ə-fe*] suture of a tendon.
three-loop t. a technique used for the repair of avulsion injuries of tendons, particularly the gastrocnemius tendon. It involves

multiple throws of suture material through the tendon and the site of attachment. Its advantages are better closure of gaps with minimal distortion of tendon ends and disruption of blood flow.

tenositis [ten"o-si'tis] tendinitis.

tenostosis [ten"os-to'sis] osseous **metaplasia** of tendon.

tenosuspension surgical attachment of the head of the humerus to the acromion by a strip of tendon; carried out as a treatment for habitual dislocation of the shoulder.

tenosuture [ten"o-soo'chər] tenorrhaphy.

tenosynovectomy [ten"o-sin"o-vek'tə-me] excision or resection of a tendon sheath.

tenosynovitis [ten"o-sin"o-vi'tis] inflammation of a tendon and its sheath, the lubricated layer of tissue in which the tendon is housed and through which it moves. It is painful, and may temporarily disable the affected part. Arthritis frequently involves tendon sheaths. A less common cause of tenosynovitis is injury to the tendon sheath and subsequent infection.

villonodular t. a condition marked by exaggerated proliferation of synovial membrane cells, producing a solid tumor-like mass, may occur in periarticular soft tissues and less frequently in joints.

tenotomy [tə-not'ə-me] transection of a tendon.

graduated t. partial transection of a tendon.

tenovaginitis [ten"o-vaj"ĭ-ni'tis] tenosynovitis.

tenrec an insect-eating mammal related to the hedgehogs and shrews belonging to the family Tenrecidae. They are unusual amongst mammals in that they have a cloaca.

TENS transcutaneous electrical nerve stimulator.

Tensilon [ten'sĭ-lon] trademark for **edrophonium** chloride; used in the diagnosis of myasthenia gravis, known as the Tensilon test.

tension [ten'shən] 1. the act of stretching or the condition of being stretched or strained. 2. the partial pressure of a component of a gas mixture or of a gas dissolved in a fluid, e.g. of oxygen in blood. 3. voltage.

arterial t. blood pressure within an artery.

t. band wires heavy gauge wire is inserted in fracture fragments and around pins placed in the fragments in order and adjusted to create compression on the fracture site. Suited for treatment of apophyseal or epiphyseal avulsion fractures. See also tension band **plate**.

intraocular t. see intraocular **pressure**.

t. line the direction of pull on the skin in any given region; usually corresponding with alignment of fibrous connective tissue. Called also Langer's line, cleavage line. A map of the body, drawn to show the various lines of pull, or tension, is useful in planning surgical closure of skin incisions, particularly ones with defects, in order to minimize forces that might cause dehiscence.

surface t. tension or resistance that acts to preserve the integrity of a surface.

tissue t. a state of equilibrium between tissues and cells that prevents overaction of any part.

tension–time index [ten'shən] developed as a measure of the total tension of, for example, the left ventricle and is a product of the mean systolic pressure, times the duration of systole, times the heart rate.

tensor [ten'sor] any muscle that stretches or makes tense.

t. veli palatini see Table 13.1C.

tent [tent] a conical, expansible plug of soft material for dilating an orifice or for keeping a wound open, so as to prevent its healing except at the bottom.

t. pegging equine sport invented in India. The horse is ridden at a canter and the rider attempts to uproot a tent peg from the ground with a sharp-pointed lance.

sponge t. a conical plug made of compressed sponge used to dilate the os uteri.

tentacle [ten'tə-kəl] a slender, whiplike appendage in some animals, especially invertebrates, that may function in prehension and feeding or as a sense organ.

tenting see **skin** tenting test.

tentorial [ten-tor'e-əl] pertaining to the tentorium of the cerebellum.

t. hernia see transtentorial **hermiation**.

tentorium [ten-tor'e-əm] pl. *tentoria* [L.] a part resembling a tent or covering.

t. cerebelli the fold of meninges that separates the rostral or superior aspect of the cerebellum from the occipital lobes of the cerebral hemispheres. Ossifies early in life to become the osseous tentorium. Used to delineate the caudal fossa, which contains the cerebellum, pons and medulla oblongata, from the rostral fossa, which contains the cerebral hemispheres and rostral brainstem.

tenuazonic acid a metabolic product of *Alternaria* spp. fungus.

tephrosis incineration or cremation.

tepor [L.] *gentle heat*.

tepoxalin a nonsteroidal anti-inflammatory drug for treating osteoarthritis in dogs.

TEPP tetraethyl pyrophosphate.

ter- word element. [L.] *three, three-fold*.

ter in die [L.] three times a day; abbreviation is t.i.d.

tera- (T) [Gr.] *monster*; a prefix used in the metric system of measurement to designate an amount 10^{12} (a million million or a trillion) times the unit specified by the root to which it is joined, as terabyte.

teras pl. *terata* [L., Gr.] a monster.

teratism [ter'ə-tiz-əm] an anomaly of formation or development.

terat(o)- word element. [Gr.] *monster, monstrosity*.

teratoblastoma [ter"ə-to-blas-to'mə] a neoplasm containing embryonic elements, differing from a teratoma in that its tissue does not represent all germinal layers.

teratocarcinoma [ter"ə-to-kahr"sĭ-no'mə] a malignant neoplasm consisting of elements of teratoma with those of embryonal carcinoma or choriocarcinoma, or both; occurring most often in the testis, occasionally in uterus.

teratogen [ter'ə-to-jən] an agent or influence that causes physical defects in the developing embryo.

teratogenesis [ter"ə-to-jen'ə-sis] the production of deformity in the developing embryo, or of a monster.

teratogenic [ter"ə-to-jen'ik] pertaining to or emanating from teratogen.

teratogenicity the capacity to act as a teratogen.

heat t. occurs rarely as a result of high temperatures in early pregnancy. Observed defects are of the central nervous system, and of the limbs including arthrogryposis and selective shortening.

teratogenous [ter"ə-toj'ə-nəs] developed from fetal remains.

teratogeny [ter"ə-toj'ə-ne] teratogenesis.

teratoid [ter'ə-toid] resembling a monster.

t. medulloepithelioma contains elements of cartilage, skeletal muscle and brain tissue.

teratology [ter"ə-tol'ə-je] that division of embryology and pathology dealing with abnormal development and congenital deformations.

teratoma [ter"ə-to'mə] a true neoplasm made up of a number of different types of tissue, none of which is native to the area in which it occurs; usually found in the ovary or testis. See also **dermoid** cyst.

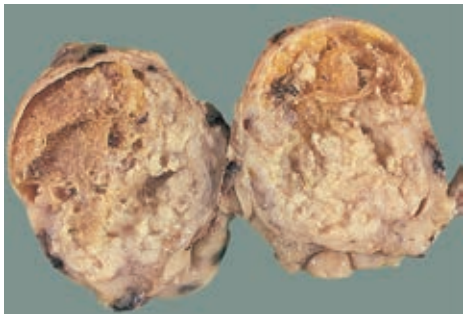
malignant t. a solid, malignant ovarian tumor resembling a dermoid cyst but composed of immature embryonal or extraembryonal elements derived from all three germ layers, and showing malignant features histologically.

teratomatous [ter"ə-to'mə-təs] pertaining to or of the nature of teratoma.

teratosis [ter"ə-to'sis] teratism.

teratospermia [ter"ə-to-spur'me-ə] malformed spermatozoa in the semen.

teratozoospermia [ter"ə-to-zo"o-spur'me-ə] the ejaculate contains a high percentage of morphologically abnormal spermatozoa.



T-17: Teratoma from a dog.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

terazosin [tər-a′zo-sin] a selective α_1-antagonist used to decrease internal urethral sphincter resistance in the treatment of detrusor-urethral dyssynergia.

terba *Chrozophora plicata*.

terbinafine [tur′bĭ-nə-fēn″] a synthetic allylamine antifungal agent used orally or topically in the treatment of fungal skin infections and particularly those involving the nails.

terbium (Tb) [ter′be-əm] a chemical element, atomic number 65, atomic weight 158.924. See Table 4.

terbutaline [tər-bu′tə-lēn] a β-adrenergic receptor antagonist used as a bronchodilator.

terebration [ter″ə-bra′shən] an act of boring or trephining.

terefa, terepha Jewish classification of meat meaning unsuitable for human food.

teres [te′rēz] [L.] *long and round*.

t. ligament a round ligament; those of the bladder and liver are vestiges of umbilical vessels; that of the uterus is a rounded band from the broad ligament containing some smooth muscle.

terfenadine [tər-fen′ə-dēn] a nonsedating, histamine H_1 antagonist. It has been withdrawn from use because of serious side effects.

term [tərm] a definite period, especially the period of gestation, or pregnancy.

terminal [tur′mĭ-nəl] 1. forming or pertaining to an end. 2. a termination, end or extremity, especially a nerve ending. 3. the end-stages of a fatal illness.

t. cisterns the SER (smooth endoplasmic reticulum) in skeletal muscle fibers is a network of cisterns and tubules; the cisterns are attachments to the tubules and two tubules and a terminal cistern make up a triad.

t. crossbreeding a breeding program in which crossbreds are produced by mating two sets of purebreds but without further breeding among the crossbreds; a continuing F_1 generation.

efferent t. nerve endings transmitting nerve stimuli to effector organs; include neuromuscular spindles and Golgi apparatus.

t. ileitis see terminal **ileitis**.

t. pathway see terminal **complement** pathway.

t. redundancy a stretch of several hundred nucleotides that is repeated at each end of the DNA molecule.

Terminalia oblongata* subsp. *oblongata Australian tree in the Combretaceae family of plants. Leaves contain toxic hydrolyzable tannins (punicalagin) which cause nephrosis, hepatic necrosis in large doses. Clinically there is photosensitization, diarrhea and edema. Chronic cases show frequent straining and dribbling of urine. Causes Mackenzie river disease. Called also *T. bursarina*, yellow-wood.

Terminologia Anatomica (TA) [tur″mĭ-no-lo′je-ə an″ə-tom′ĭ-kə] the publication of internationally accepted terminology for human gross or topographical anatomy. See also **Nomina Anatomica Avium**, **Nomina Anatomica Veterinaria**.

terminatio pl. *terminationes* [L.] an ending; the site of discontinuation of a structure, as the free nerve endings (terminationes nervorum liberae), in which the peripheral fiber divides into fine branches that terminate freely in connective tissue or epithelium.

termination signal a specific sequence in DNA at which the RNA polymerase and the newly made RNA transcript are released from their DNA association.

Terminologia Embryologica (TE) the standardized list of words to be used in the description of prenatal human ontogeny, embryologic and fetal structures; produced by the Federative International Committee on Anatomical Terminology.

terminology [tur″mĭ-nol′ə-je] 1. the vocabulary of an art or science. In medical and veterinary sciences, accurate terminology is essential for proper data storage and retrieval and requires an internationally recognized nomenclature of diseases, pathology, clinical indicants, treatments and surgical operations. See also **SNOMED-CT**, **SNOVET**. 2. the science that deals with the investigation, arrangement and construction of terms.

terminus [tur′mĭ-nəs] pl. *termini* [L.] an ending.

tern a large, marine bird in the family Laridae, together with gulls. They are effortless fliers, great divers and poor walkers. Can be infected with avian influenza virus.

ternary [ter′nə-re] 1. third in order. 2. made up of three elements or radicals.

Ternidens [ter′nĭ-dənz] a genus of strongylid worms in the family Chabertiidae.

T. deminatus found in the large intestine of primates and occasionally humans. They cause anemia and the development of nodules in the intestinal wall similar to those of *Oesophagostomum* spp.

terpene [tur′pēn] any hydrocarbon of the formula $C_{10}H_{16}$. A principal component of toxic oleoresins extracted from conifer trees and of **turpentine** and **camphor**.

terpin [tur′pin] a product obtained by the action of nitric acid on oil of turpentine and alcohol.

t. hydrate an expectorant.

Terranova a genus of nematodes in the family Anisakidae that parasitize elasmobranch fish.

terrapin specifically, turtles in the genera *Trachemys*, also known as sliders, and the species *Malaclemys terrapin* (diamondback terrapin); see also **turtle**.

terrarium a closed glass container in which plants or small animals are cultivated.

terriers a group of dog breeds, most were developed as farm dogs in the British Isles for the hunting of vermin and ground dwelling mammals, e.g. rats, badgers, foxes and rabbits. The name is derived from the Latin *terra* because the dogs commonly pursue their quarry into burrows. Most have a harsh, wiry coat for the purpose. Includes such breeds as the **Airedale**, **Australian**, **Bedlington**, **Boston**, **Bull**, **Cairn**, **Dandie Dinmont**, **English toy**, **Fox**, **Glen of Imaal**, **Irish**, **Jack Russell**, **Kerry blue**, **Lakeland**, **Manchester**, **Norfolk**, **Norwich**, **Parson Russell**, **Scottish**, **Sealyham**, **Silky**, **Skye**, **Soft-coated wheaten**, **Staffordshire**, **Tibetan**, **Welsh**, **West Highland white** and **Yorkshire**.

territoriality [ter″ĭ-tor″ĭ-al′ĭ-te] see territorial **aggression**.

tertian [tur′shən] recurring in 3-day cycles (every second day).

tertiary [tur′she-ar-e] third in order.

t. structure proteins unique structure made up of secondary structure elements (such as helices, β-sheets) folded in a specific way to determine the three-dimensional, biologically-active conformation of a protein.

tertigravida [tər-tĭ-grav′ĭ-də] a female pregnant for the third time; gravida III.

tertipara [tər-tip′ə-rə] a female which has had three pregnancies that resulted in viable offspring; para III.

Tervuren, Tervueren see **Belgian** Tervuren.

Teschen disease [tesh′ən] see porcine viral **encephalomyelitis**.

Teschovirus a genus in the family *Picornaviridae*, associated with porcine viral **encephalomyelitis**.

tesla (T) [tes′lə] the SI unit of magnetic flux density, equal to one weber per square meter.

tessellated [tes′ə-lāt″əd] divided into squares, like a checker board.

test [test] 1. an examination or trial. 2. a significant chemical reaction. 3. a reagent. See also under specific names of tests.

***cis-trans* t.** used in microbial genetics to determine whether two mutations that have the same phenotypic effect, in a haploid cell or a cell with single phage infection, are located in the same gene or in different genes; the test depends on the independent behavior of two alleles of a gene in a diploid cell or in a cell infected with two phages carrying different alleles.

critical titer t. the titer of a test at which the patient is judged to have reacted positively to the test.

t. day day on which all lactating animals in a dairy herd have their milk weighed and sampled and data such as calving dates, dry-off dates, and breeding dates, is collected for analysis. Generally conducted once a month.

diazo t. a group of tests for bilirubin conjugates in urine and therefore suitable for the detection of biliary and hepatic disease. Based on the combination of bilirubin with a stable diazonium compound.

t. efficiency the percentage of the times that the test gives the correct answer compared to the total number of tests.

exact t. a statistical test based on the exact distribution of the data under the null hypothesis, rather than on a normal approximation.

hypothesis t. the method by which a hypothesis is judged.

sodium sulfanilate clearance t. see **sulfanilate**.

t. station set up by the government or a cooperative organization for the purpose of testing individual livestock provided by farmers for productivity in terms of egg production, milk yield, weight gain. The feeding and measurement are under the control of the station.

VetBooks.ir

statistical t. used to decide between two hypotheses.
surrogate t. an indirect test, e.g. milk somatic cell count for evidence of mastitis.
tolerance t. 1. an exercise test to determine the efficiency of the circulation. 2. determines the body's ability to metabolize a substance or to endure administration of a drug, e.g. insulin tolerance test.
triglyceride absorption t. see **fat** absorption test.
urine concentration t. see **water** deprivation test.
V-t. a dexamethasone suppression test followed by an ACTH response test; the name refers to the change in plasma cortisone concentrations, first depressed then elevated, which if plotted on a graph would form a V.
test and slaughter a disease control program based on selective slaughter of animals, usually chosen by an immunological test but also by other methods such as microbiological culture, PCR testing of biopsy material, or genetic analysis. Used as a method to eradicate a disease from a herd or a country.
test mating the technique of mating a suspected heterozygote with a group of known heterozygotes to test whether the suspect is in fact a carrier of the subject gene. The test needs an adequate number of test animals to achieve statistical significance.
test meal a portion of food or foods given for the purpose of determining the functioning of the digestive tract.
barium t. m. a meal containing barium sulfate as the opaque constituent. See also **barium** study.
motor t. m. food or drink whose progress through the stomach, pylorus and intestinal tract is observed fluoroscopically.
opaque t. m. a meal containing some substance opaque to X-rays, permitting visualization of the gastrointestinal tract.
test tube a tube of thin glass, closed at one end; used in chemical tests and other laboratory procedures.
testectomy [təs-tek'tə-me] the removal of a testis. Called also orchiectomy, orchidectomy.
tester population in breeding programs it is often necessary to evaluate a strain or breed; the evaluation is carried out by mating the population to be tested with a tester herd.
testes [tes'tēz] [L.] plural of *testis*.
testicle [tes'ti-kəl] testis.
testicular [tes-tik'u-lər] pertaining to the testis.
t. agenesis absence of one or both testes, usually part of a wider range of defects.
t. anomaly includes hypoplasia, cryptorchidism, agenesis, heterotopia, polyorchidism, cystic rete testis and heterotopic Leydig cells and accessory adrenal cortical tissue.
t. biopsy percutaneous sampling of tissue for laboratory examination; disruption of normal spermatogenesis can be expected.
t. calcinosis a sequel to chronic inflammation and concurrent with fibrosis; common in older rams.
t. degeneration the most frequent cause of male infertility; many causes; regeneration and return to normal function possible provided some spermatogonia survive the insult and the basement membrane of the tubules is undamaged.
t. descent includes the passive descent from the roof of the abdomen to near the inguinal canal,followed by the sorter, also passive, descent through the inguinal canal into the scrotum.
t. feminization syndrome an extreme form of male pseudohermaphroditism, with female external development, including secondary sex characteristics, but with the presence of testes and absence of uterus and tubes; it is due to end-organ resistance to the action of testosterone.
t. fibrosis a sequel to inflammation or degeneration; common in old bulls.
t. foreign body constriction malicious application of a constricting foreign body, usually an elastic band, around the base of the scrotum in dogs is an occasional cause of orchitis and often necessitates castration with scrotal ablation. Called also the 'nasty child syndrome', although 'bull terrier bite' would probably be more common.
t. hypoplasia occurs as an uncomplicated state, or as part of cryptorchidism or intersex anomaly; an inherited defect in Swedish Highland cattle.
t. inflammation see **orchitis**.
t. lobuli lobules created in the testis by connective tissue septa. Formally called *lobuli testis*.
t. mediastinum the central dividing plane of tissue which divides the testis and is continuous with its tunica albuginea.
t. septuli interlobular connective tissue partitions that extend from the mediastimum testis to the tunica albuginea and which divide the testis into lobules. Formally called *septula testis*.
t. torsion causes pain and swelling of the scrotum, abdominal pain and vomiting. In dogs, testicles with neoplasms are predisposed to torsion. Occurs occasionally in stallions (180° torsion), with no apparent detrimental consequences on health or fertility.
t. tumors includes interstitial cell and Sertoli cell tumors and seminomas.
testis [tes'tis] pl. *testes* [L.] the male gonad; either of the paired, egg-shaped glands normally situated in the scrotum; called also testicle. The testes produce the spermatozoa, the male reproductive cells, which are ejaculated into the female vagina during coitus, and the male sex hormone, testosterone, which is responsible for the secondary sex characters of the male.
ectopic t. the testis is in an abnormal position away from the normal descent pathway.
nonscrotal t. includes ectopic and cryptorchid testis.
retained t. see **cryptorchid**.
supernumerary t. polyorchidism.
t. tubuli contorti seminiferous **tubule**.
undescended t. see **cryptorchid**. Called also retained testicle.
testis-determining factor a single gene on the short arm of the Y chromosome.
testitis [tes-ti'tis] inflammation of a testis; called also **orchitis**.
testoid [tes'toid] a term applied to testicular hormones and other natural or synthetic compounds having a similar effect.
testosterone [tes-tos'tə-rōn] the most important male sex hormone (**androgen**) produced by the Leydig cells of the testes in response to luteinizing hormone (LH) secreted by the pituitary. Its chief function is to stimulate the development of the male reproductive organs and the secondary sex characters, such as the crest. It is necessary for the appearance of normal male sexual behavior. It encourages growth of bone and muscle, and helps maintain muscle strength. It is occasionally secreted in large amounts also by granulosa–theca cell tumors of the ovary, especially in mares.
t. cyclopentylpropionate, t. cypionate, t. propionate esters with a long period of activity.
t.-responsive dermatosis a bilaterally symmetrical alopecia, primarily affecting the flanks, ventral abdomen and caudomedial aspect of the thighs of male dogs. The cause is believed to be hypotestosteronism.
Testudo genus of tortoises in the family Testudinidae. Includes *T. graeca* (spur-thighed tortoise), *T. hermannii* (Hermann's tortoise). See also **turtle**.
tetanic [tə-tan'ik] 1. tonic. 2. pertaining to tetanus.
t. convulsions convulsions characterized by prolonged muscle spasm without intervening periods of relaxation. The legs are extended, the neck is dorsiflexed. Seen in strychnine poisoning and tetanus.
tetaniform [tə-tan'ĭ-form] resembling tetanus.
tetanigenous producing tetanic spasms.
tetanization [tet"ə-nĭ-za'shən] the induction of tetanic convulsions or muscular spasms.
tetanize [tet'ə-nīz] to induce tetanic convulsions or muscular spasms.
tetanolepsin a toxin produced by *Clostridium tetani* which causes red cell hemolysis; it is not clinically significant.
tetanolysin [tet"ə-nol'ĭ-sin] the hemolytic fraction of the exotoxin formed by *Clostridium tetani*, the causative organism of tetanus; not known to play role in pathogenesis.
tetanospasmin [tet"ə-no-spaz'min] the neurotoxic exotoxin produced by *Clostridium tetani*, which inhibits release of gamma amino butyric acid by inhibitory neurons, through its action on the neurotransmitter vesicle protein, synaptobrevin, resulting in tetanic spasms.
tetanus [tet'ə-nəs] a highly fatal disease of all animal species caused by the neurotoxin of *Clostridium tetani*. The bacterial spores are deposited in tissue, usually by traumatic injury, retained placenta or endometrial injury and, under anaerobic conditions, vegetate. Clinical features of the disease are remarkably similar in all species but there are differences in susceptibility to the disease. The muscle

VetBooks.ir

spasms cause a stiff gait, rigid posture (sometimes called 'sawhorse stance'), extension or elevation of the tail, protrusion of the third eyelid and trismus (lockjaw). Horses show flaring of the nostrils. In dogs, spasms of facial muscles cause abnormally erect ears and retraction of the lips that resembles the 'risus sardonicus' seen in humans with tetanus. Stimulation precipitates generalized muscle contractions and tetanic spasms or convulsions. The disease can be prevented by immunization with tetanus toxoid or the use of antitoxin, but this is done routinely only in humans and horses. Usually isolated cases, but outbreaks can follow management procedures to a group of animals, such as castration.

t. antitoxin see tetanus **antitoxin**.

idiopathic t. a loosely defined syndrome of outbreaks of tetanus in young cattle without a wound being found; current practice is to refer to such outbreaks as being caused by the ingestion of pre-formed tetanus toxin.

localized t. tetany occurs predominantly in one limb, closest to the site of entry of the organism, but then usually spreads to the opposite limb and then the whole body. Seen in dogs and particularly cats.

t. neonatorum tetanus resulting from infection of the umbilical cord.

t. toxin see tetanus **toxin**.

t. toxoid see **toxoid**.

tetany [*tet'ə-ne*] continuous tonic spasm of a muscle; steady contraction of a muscle without distinct twitching. It is manifested clinically by rigidity of limbs, pricking of ears, flaring of nostrils. In extreme tetany as in tetanus, the rigidity is lead-pipe in nature in that the resistance to bending is constant. In less severe tetany, e.g. an upper motor neuron lesion, there is resistance at first but as soon as this is overcome the limb flexes easily.

grass t. see **lactation tetany** (2).

hyperventilation t. tetany produced by forced inspiration and expiration continued for a considerable time.

hypocalcemic t. see **lactation tetany**, puerperal tetany (below).

hypomagnesemic t. a highly fatal disease of calves fed solely on a milk diet and therefore lacking in magnesium. Clinically there is muscle tremor, hypersensitivity to touch and convulsions. In between fits the calves may appear relatively normal. Death is common. Called also milk tetany. An alternate name for lactation tetany.

lactation t. see **lactation tetany**.

latent t. tetany elicited by the application of electrical and mechanical stimulation.

magnesium-deficiency t. a product of experimental nutrition but see also **lactation tetany**.

milk t. see hypomagnesemic tetany (above).

parathyroid t., parathyroprival t. tetany due to removal or hypofunctioning of the parathyroid glands.

t. pastures lush grass or cereal crop pastures, in the early spring when they have grown rapidly and their magnesium content is low. The weather is also inclined to be inclement with a high wind-chill factor and there is little or no shelter for the recently calved cows.

puerperal t. a syndrome of hypocalcemia in bitches, usually of small breeds, typically 2–3 weeks after whelping, caused by the loss of extracellular calcium in lactation. Affected bitches show restlessness, panting and severe muscular spasms, all of which are relieved by the administration of intravenous calcium. Also occurs infrequently in queens. Called also lactational tetany.

recurrent t. see Scottie **cramp**.

transit t. of cows, see **transit** tetany; of mares, see **lactation tetany**.

tether to tie an animal up by the head or neck so that it can graze but not move away. See also **Barton tether**.

tetmosol acaricide toxic to birds if used to excess. Called also monosulfiram.

tetra any one of a number of brightly colored tropical fish in the family Characinidae, much favored for home aquariums. Includes neon tetra (*Paracheirodon innesi*).

tetr(a)- word element. [Gr.] *four*.

tetrabrachius [*tet"rə-bra'ke-əs*] conjoined twins having four forelimbs.

tetrabromophenol test [*tet"rə-bro"mo-fe"nol*] an impregnated paper dip test for protein in urine. A change of color from yellow to green or even blue is a positive reaction and the concentration of protein can be estimated by the degree of color change.

tetracaine [*tet'rə-kān*] a member of the procaine series of compounds. It is a local and spinal anesthetic used in the form of the hydrochloride salt. Can be administered by local injection but is also useful by topical application to conjunctiva, mucosae and skin. Called also amethocaine.

tetrachlorodibenzodioxin [*tet"rə-klor"o-di-ben"zo-di-ok'sin*] a by-product in the manufacture of trichlorophenol which causes fatal centrilobular fibrosis and veno-occlusive disease in animals and humans.

tetrachlorodifluorethane a fasciolicide, some samples of which cause interference with blood clotting and the development of extensive hemorrhages, myocarditis and congestive heart failure. It is not recommended for general use. Called also Freon-112, difluorotetrachloroethane.

tetrachlorodiphenylethane non-degradable insecticide; relatively nontoxic; overuse in dogs causes adrenal cortical atrophy.

tetrachloroethane [*tet"rə-klor"o-eth'ān*] has had some usage as an anthelmintic and has a similar activity as carbon tetrachloride with less, but still significant risk of toxicity.

tetrachloroethylene [*tet"rə-klor"o-eth'ə-lēn*] a clear, colorless liquid used extensively at one time as an anthelmintic but now superseded in all species by safer and more effective drugs. Overdosing causes incoordination immediately, hepatic insufficiency later.

tetrachlorvinphos an organophosphorus insecticide used for ectoparasites.

tetracosactrin cosyntropin.

tetracycline [*tet"rə-si'klēn*] an antibiotic produced by cultures of *Streptomyces aureofaciens* and *S. rimosus*. It is effective against many different microorganisms, including rickettsiae, certain viruses, and both gram-negative and gram-positive microorganisms. Administration is associated with pigmentation of developing teeth and bones, and in horses can be followed by severe colitis.

t. stain discoloration of dentin and enamel caused by systemic treatment with tetracycline during dental development; usually yellow to brown or green to gray.

tetrad [*tet'rad*] a group of four similar or related entities, as (1) any element or radical having a valence, or combining power, of four; (2) a group of four chromosomal elements formed in the pachytene stage of the first meiotic prophase; (3) a square of cells produced by division into two planes of certain cocci (sarcina).

tetradactyly [*tet"rə-dak'tə-le*] the presence of four digits on the hand or foot.

tetradifon an acaricide used in horticulture; minimally toxic and only if taken in over a long period. The liver is the principal target.

Tetradymia North American genus in plant family Asteraceae; contain an unidentified hepatoxin which causes secondary photosensitization. Includes *T. canescens* (spineless horsebrush), *T. glabrata* (spring rabbitbush, little leaf horsebrush, coal oil bush).

tetraethyl lead [*tet"rə-eth'il*] the additive in leaded petrol. See also **lead**[1] poisoning.

tetraethyl pyrophosphate (TEPP) [*tet"rə-eth'il pi"ro-fos'fāt*] an insecticide used industrially and in agriculture and not to be used on animals. Accidental administration can cause death within an hour.

Tetragonia tetragonioides plant in the family Aizoaceae; contains soluble oxalates capable of causing oxalate poisoning. Called also *T. expansa*, New Zealand spinach, warrigal green.

tetragonum [*tet"rə-go'nəm*] [L.] *a four-sided figure*.

tetrahydrobiopterin [*tet"rə-hi"dro-bi-op'tər-in*] pterin cofactor in the 3 mixed-function oxygenases which catalyze the hydroxylation of aromatic amino acids. Hereditary deficiency of phenylalanine hydroxylase which catalyzes the conversion of phenylalanine to tyrosine is responsible for phenylketonuria (PKU).

tetrahydrocannabinol (THC) [*tet"rə-hi"dro-kə-nab'i-nol*] the active principle of cannabis, occurring in two isomeric forms, both considered psychomimetically active.

tetrahydrofolate [*tet"rə-hi"dro-fo'lāt*] H_4 folate; a coenzyme derived from the reduction of folic acid through dihydrofolate; involved in the metabolism of single carbon units in all redox states except CO_2; an important cofactor in the synthesis of purines.

tetrahydronorharmane toxic carboline found in *Peganum* spp. plants.

VetBooks.ir

tetrahydropteroylglutamate [tet"rə-hi"dro-ter"o-əl-gloo'tə-māt] see **tetrahydrofolate**.

tetrahydropyrimidines a group of broad-spectrum anthelmintics including pyrantel and morantel.

tetrahymena [tet"rə-hi'mə-nə] free-living, freshwater ciliate sometimes capable of infecting and causing disease in fish.

tetraiodophenolphthalein [tet"rə-i"o-do-fe"nol-thal'ēn] a contrast agent used in radiography of the gallbladder and bile duct. Called also iodophthalein.

tetraiodothyronine thyroxine; see **thyroid** hormones. Called also T_4.

tetralogy [tĕ-tral'ə-je] a group or series of four.

t. of Fallot a congenital defect of the heart that combines four structural anomalies: pulmonary stenosis (narrowing of the pulmonary artery); ventricular septal defect, or abnormal opening between the right and left ventricles; dextroposition of the aorta, in which the aortic opening overrides the septum and receives blood from both the right and left ventricles; and right ventricular hypertrophy, or increase of volume of the myocardium of the right ventricle. This is almost always a lethal defect. There is poor exercise tolerance, dyspnea, often cyanosis. A loud murmur and a strong thrill are palpable on the left side.

tetramastigote 1. having four flagella. 2. an organism with four flagella.

Tetrameres [tĕ-tram'ər-ēz] a genus of roundworms in the family Tetrameridae. They show marked sexual dimorphism, the female being globular and the male slender and filiform. They inhabit the proventriculus of birds and may kill young birds.

T. americana found in fowl and turkey.

T. confusa found in the fowl and pigeon.

T. crami found in domestic and wild ducks.

T. fissispina found in fowl, duck, turkey, pigeon and wild aquatic birds.

T. mohtedai found in fowl.

T. pattersoni found in quail.

tetrameres [tĕ-tram'ər-ēz] spiruroid nematodes in the family Tetrameridae.

tetrameriasis infestation with **tetrameres**.

tetrameric [tet"rə-mer'ik] having four parts.

tetramethylthiuram disulfide relatively nontoxic acaricide. Experimentally rams show testicular degeneration, hen birds lay soft-shelled eggs and eggs with other abnormalities. Called also thiram.

tetramine [tet'rə-mēn] 2,2,2,-tetramine (**trientine**) and 2,3,2-tetramine are copper chelating agents used to remove copper in chronic hepatobiliary disease, particularly Bedlington terrier copper-associated hepatopathy.

tetramisole [tĕ-tram'ĭ-sōl] a mixture of dextro- and levo isomers used as an anthelmintic. It is effective with a broad spectrum but a narrow safety margin; it has been superseded by the isomer **levamisole**. Signs of toxicity include lip-licking, salivation, head shaking, tremor, excitement.

L-tetramisole levamisole.

Tetramitus rostratus a coprophilic, flagellate protozoan found in stagnant water and human and rat feces, but no pathogenic effect is ascribed to it. A member of the family Tetramitidae.

tetranortriterpenes a class of plant toxins, e.g. the meliatoxins found in the plant *Melia azaderach* var. *australasica*.

Tetraodontidae [tet"rə-o-don'tĭ-de] the family of marine fish known as toadfish or pufferfish. They are extremely poisonous and ingestion causes severe illness and often death due to **tetrodotoxin**.

tetraparesis [tet"rə-pə-re'sis] muscular weakness affecting all four extremities most commonly as a result of neurological disease.

tetrapeptide [tet"rə-pep'tīd] a peptide which, on hydrolysis, yields four amino acids.

Tetrapetalonema a filarioid nematode found in the peritoneal cavity of primates and insectivores but even in very large numbers appear not to exert any damaging effect.

tetraplegia [tet"rə-ple'jə] paralysis of all four extremities; **quadriplegia**.

tetraploid [tet'rə-ploid] 1. characterized by tetraploidy. 2. an individual or cell having four sets of chromosomes.

tetraploidy [tet'rə-ploi-de] the state of having four sets of chromosomes (4n).

tetrapod although appearing to be synonymous with quadruped, i.e. a four-limbed, four-tooted vertebrate animal, it is more properly restricted to the taxonomic superclass that includes amphibia, reptiles, birds and mammals, i.e. all animals that dwell on land or have descended from ancestors that once lived on land; accordingly tetrapods include all vertebrates except fish, even snakes and whales, because they are descended from tetrapods. Compare with **quadruped**, **amniote**, and **anamniote**.

Tetrapterys tropical American plant genus in family Malpighiaceae; contains unidentified cardiotoxin which causes cardiac irregularity, congestive heart failure. Includes *T. acutifolia*, *T. multiglandulosa*.

tetrasomy [tet'rə-so"me] the presence of two extra chromosomes of one type in an otherwise diploid cell.

tetraster a figure in mitosis produced by quadruple division of the nucleus.

tetrathyridium one of the forms of metacestodes in the life cycles of the cestodes of domestic animals, e.g. *Mesocestoides* spp.

Tetratrichomonas a genus of protozoa with four anterior flagella in the family Trichomonadidae.

T. anatis found in ducks but not pathogenic.

T. anseri found in the cecum of geese; not pathogenic.

T. bovis see *T. pavlovi* (below).

T. buttreyi found in the cecum and colon of pigs; no evidence of pathogenicity.

T. gallinarum found in fowl, duck, guinea fowl, quail, pheasant, partridge, and probably Canada goose. Causes hepatic lesions similar to those caused by *Histomonas meleagridis*.

T. microti found in the cecum of rodents.

T. ovis found in the cecum of sheep; not pathogenic.

***T. pavlovi* (syn. *T. bovis*)** found in the cecum of calves with diarrhea.

tetravalent [tət-rə-va'lənt] having a valence of four.

tetrodotoxin [tet'ro-do-tok"sin] a highly lethal neurotoxin present in numerous species of puffer and toadfish (suborder Tetraodontoidea) and in newts of the genus *Taricha* (tarichatoxin). In humans, ingestion results, within minutes, in malaise, dizziness and tingling about the mouth, which may be followed by ataxia, convulsions, respiratory paralysis and death. Dogs and cats are occasionally poisoned after eating these fish at the seashore and are similarly affected.

tetroxoprim a folate antagonist used in the treatment of toxoplasmosis. Called also piritrexin.

Texas fever see **babesiosis**.

Texas longhorn a breed of beef cattle, of all colors but mostly red, and any pattern of marking; accoutred with a formidable spread of horns.

Texel a Dutch marsh type of long-woolled, polled, meat sheep.

textiform [teks'tĭ-form] formed like a network.

textoblastic [teks"to-blas'tik] forming adult tissue; regenerative; said of cells.

texture [teks'chər] the structure or constitution of tissues.

TF transfer factor.

TG 1. thyroglobulins. 2. triacylglycerol.

TGE transmissible gastroenteritis.

TGEV transmissible gastroenteritis virus.

TGFβ transforming growth factor beta

TGH abbreviation for to go home; used in medical records.

Th chemical symbol, *thorium*.

Th cell helper T **lymphocyte**.

Th1 cell type 1 helper T *lymphocyte*. When stimulated produce specific cytokines (interferon-γ and TNG-β) resulting in a strong cytotoxic immune response.

T-18: Texas longhorn cattle.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

T-19: Texel meat sheep. From Sambraus HH, Livestock Breeds. Mosby, 1992.

Th2 cell type 2 helper T *lymphocyte*. When stimulated produce specific cytokines (IL-4, IL-10) resulting in a strong humoral immune response.

thalamencephalon [*thal"ə-mən-sef'ə-lon*] that part of the diencephalon including the thalamus, metathalamus and epithalamus.

thalamocoele the third ventricle of the brain.

thalamocortical [*thal"ə-mo-kor'tĭ-kəl*] pertaining to the thalamus and cerebral cortex.

thalamolenticular [*thal"ə-mo-lən-tik'u-lər*] pertaining to the thalamus and lenticular nucleus.

thalamus [*thal'ə-məs*] pl. *thalami* [L.] either of two large ovoid structures composed of gray matter and situated at the base of the cerebrum. The thalamus functions as a relay station in which sensory pathways from the spinal cord and brainstem form synapses on their way to the cerebral cortex. Specific locations in the thalamus are related to specific areas on the body surface and in the cerebral cortex. A sensory impulse from the body surface travels to the thalamus, where it is received as a primitive sensation and then is sent on to the cerebral cortex for interpretation as to location, character and duration. The thalamus has numerous connections to other areas of the brain as well, and these are thought to be important in the integration of cerebral, cerebellar and brainstem activity.

thalassoposia the drinking of sea water.

Thalictrum European member of the plant family Ranunculaceae; contains the toxin protoanemonin; causes abdominal pain, diarrhea, salivation. Called also meadow rue.

thallium (Tl) [*thal'e-əm*] a chemical element, atomic number 81, atomic weight 204.37. See Table 4. Its salts are active poisons. See **thallotoxicosis**.

t.-201 (^{201}Tl) a radioactive isotope of thallium having a half-life of 73.5 hours; the principal emission is 71 keV X-rays.

t. poisoning see **thallotoxicosis**.

t. scan a scintillation scan involving the use of thallium-201 which localizes in the myocardium after intravenous injection. Areas of inadequate perfusion pinpoint the site of coronary artery occlusions.

thallotoxicosis [*thal"o-tok"sĭ-ko'sis*] thallium salts, especially the acetate and sulfate which have been used as rat baits, are very poisonous. Acute poisoning is manifested by severe abdominal pain, vomiting and hemorrhagic gastritis. Chronic poisoning causes characteristic hyperkeratosis and alopecia, plus tremors and convulsions, vomiting, diarrhea and respiratory difficulty.

thallous [*thal'əs*] pertaining to thallium.

t. acetate a rodenticide. See **thallotoxicosis**.

t. chloride (Tl-201) the form in which thallium-201 is injected intravenously for myocardial perfusion imaging.

t. sulfate a rodenticide. See **thallotoxicosis**.

thallus 1. a simple plant body not differentiated into root, stem and leaf, characteristic of mycelial fungi and some algae. 2. the actively growing vegetative organism as distinguished from reproductive or resting portions, as in fungi. A fungal colony on agar medium.

THAM salt tromethamine, an alkalizing agent used in the manufacture of pharmaceuticals.

Thamnidium one of the fungi responsible for the growth of white whiskers on stored raw meat.

Thamnosma North American plant genus in the family Rutaceae; contains furanocoumarins; causes primary photosensitization. Includes *T. montana, T. texana*. Called also Dutchman's breeches, Texas desert rue, blisterweed.

thanat(o)- word element. [Gr.] *death*.

thanatobiological pertaining to life and death.

thanatognomonic indicating the approach of death.

thanatoid resembling death.

THC tetrahydrocannabinol.

Thea sinensis see ***Camellia***.

thebesian named after Adam Christian Thebesius (1686–1732), a German physician and anatomist.

t. foramina minute openings in the walls of the heart, especially the right atrium, through which the smallest cardiac veins empty into the heart.

t. valve the valve of the coronary sinus as it enters the right atrium.

t. veins smallest cardiac veins: numerous small veins arising in the muscular walls and draining independently into the cavities of the heart, and most readily seen in the atria.

theca pl. *thecae* [L.] a case or sheath.

t. cell an epithelioid cell of the corpus luteum.

t. cordis pericardium.

t. folliculi an envelope of condensed connective tissue surrounding a vesicular ovarian follicle, comprising an internal vascular layer (*theca interna*) and an external fibrous layer (*theca externa*).

granulosa t. cell tumor may secrete estrogen and progesterone in dogs and cause persistent or irregular estrus, alopecia, enlargement of nipples and vulva. Uterine changes range from cystic endometrial hyperplasia to pyometra.

thecal pertaining to a theca.

t. cone thecal cells in the ovarian stroma arrange themselves into a cone and may displace superficially situated follicles to make way for a deeper situated follicle which is undergoing enlargement.

thecitis tenosynovitis.

thecography contrast radiography following injection of radiopaque material into the subarachnoid space of the brain to outline the floor of the cranial vault, particularly the pituitary gland and optic nerves.

thecoma theca cell tumor.

thecostegnosis contraction of a tendon sheath.

Theileria a genus of protozoan parasites in the family Theileriidae. They are transmitted by ticks, multiply in leukocytes and then invade erythrocytes.

***T. annulata* (syn. *T. dispar*)** found in cattle and water buffalo, transmitted by *Hyalomma* spp. ticks and causes Mediterranean or tropical theileriosis, a clinical disease similar to **East Coast fever**.

T. buffali found in cattle and buffalo in Australia and transmitted by *Haemaphysalis longicornis* and *H. bancrofti*. Similar to *T. mutans*. Only sporadic cases of clinical disease and is seen mostly in splenectomized calves.

T. camalensis found in camels, transmission thought to be by *Hyalomma* spp. ticks.

T. cervi nonpathogenic, found in splenectomized deer.

T. dispar see *Theileria annulata* (above).

T. hirci found in sheep and goats. Transmitting vector uncertain but probably the tick *Rhipicephalus bursa*. Causes a disease similar to **East Coast fever** in cattle.

T. lawrenci found in cattle, buffalo and water buffalo. Transmitted by the tick *Rhipicephalus appendiculatus*; causes fatal **corridor disease**.

T. mutans found in cattle, transmitted by ticks including *Rhipicephalus* and *Haemaphysalis* spp. and causes a benign bovine **theileriosis**.

T. orientalis usually benign but can cause severe anemia in imported cattle.

T. ornithorhynci found in platypus.

T. ovis found in sheep and goats, transmitted by ticks of the genera *Rhipicephalus*, *Dermacentor*, *Haemaphysalis* and *Ornithodoros* spp. It causes a mild form of **theileriosis**.

T. parva found in cattle, African buffalo and Indian water buffalo; transmitted by *Rhipicephalus appendiculatus* and possibly other ticks. It causes the widespread and serious disease **East Coast fever**.

T. sergenti doubtful identity; mostly benign in cattle.

T. tarandi found in reindeer, transmitted by *Ixodes persulcatus* and causes an acute disease.

T. taurotragi mildly pathogenic; found in cattle in Africa, Asia.

T. velifera mildly pathogenic; found in cattle.

theileriasis [*thi"lə-ri'ə-sis*] theileriosis.

theileriosis [*thi-le"re-o'sis*] a disease caused by *Theileria* spp. In general the diseases may be acute and severe or mild. Severe disease is characterized by high fever, nasal discharge, jaundice, petechiation of mucosae, enlargement of the spleen and lymph nodes, enlargement of the kidneys and transient hemoglobinuria. Diagnosis is based on finding protozoa in the blood, lymph or in the lymph node aspirates or biopsies. A feature, considered to be diagnostic is the presence of Koch's blue bodies or spots, lymphocytes containing macroschizonts, and detectable in smears stained with common blood-stain. The disease in cattle is notifiable to the OIE (see Table 22). See also **East Coast fever**, **corridor disease**, **turning sickness**.

benign t. caused by *Theileria orientalis*.

cerebral t. infection with *Theileria parva* or aberrant forms of *T. taurotragi* originating from the eland. Called also **turning sickness**.

Mediterranean t. caused by *Theileria annulata*; occurs in North Africa, southern Europe and Asia. Called also tropical theileriosis.

oriental t. a mild form of East Coast fever caused by *Theileria orientalis*.

tropical t. Mediterranean coast fever.

Theiler's disease [*ti'lər*] murine encephalomyelitis caused by a picornavirus which is a normal inhabitant of the intestine.

Thelazia a genus of spiruroid worms in the family Thelaziidae. Parasites of the lacrimal duct or conjunctival sac of mammals and birds. The larvae are deposited in the conjunctival sac by the intermediate host, *Musca* spp. flies. Causes **thelaziasis**.

T. alfortensis found in cattle.

T. bubalis found in water buffalo.

T. californiensis occurs in cat, dog, humans, sheep and deer.

T. callipaeda occurs in dog, rabbit and humans.

T. erschowi found in pig.

T. gulosa found in cattle.

T. lacrymalis found in horses.

T. leesi found in dromedary.

T. rhodesii found in cattle, but also sheep, goat, buffalo.

T. skrjabini found in cattle.

thelaziasis [*the"lə-zi'ə-sis*] infestation of the conjunctival sac with *Thelazia* spp. Causes conjunctivitis, lacrimation, blepharospasm and keratitis.

theleplasty [*the'le-plas"te*] a plastic operation on the nipple or teat.

thelitis [*the-li'tis*] inflammation of a nipple or teat.

thelium [*the'le-əm*] 1. a papilla. 2. a nipple.

Thelohanellus a genus of myxosporid protozoa in the class Myxosporea; parasites of freshwater fish.

T. piriformis causes cutaneous abscesses in cyprinid and coregonid fishes.

Thelohania a genus of parasitic protozoa in the phylum Microspora.

T. apodemi found in the brain of field mice.

T. baueri found in the ovary of the stickleback fish.

thelorrhagia [*the"lo-ra'jə*] hemorrhage from the nipple.

thelygenic [*thel"ə-jen'ik*] producing only female offspring.

T-20: *Thelazia* spp. in a dog's conjunctival sac. From Dziezyc J, Color Atlas of Canine and Feline Ophthalmology. Saunders, 2004.

T-21: Theilitis in a ewe with contagious ecthyma.

Thelypodium lasiophyllum North American plant of the family Brassicaceae; can cause nitrate–nitrite poisoning. Called also mustard.

thenium closylate [*then'e-əm klo'sə-lāt*] a very effective anthelmintic against hookworms in dogs, commonly teamed with piperazine to include control of ascarids.

Theobaldia one of the genera of mosquitoes which are the definitive hosts for *Plasmodium* spp., the cause of avian malaria.

Theobroma cacao [*the"o-bro'mə*] tree of South American origin of the family Sterculiaceae; seeds are the source of cocoa, chocolate; contains the toxic xanthine alkaloid theobromine that in excess causes diarrhea, sudden death in dogs and other animals. Commercial waste products from the plant may be fed to animals and cause **theobromine** poisoning.

theobromine [*the"o-bro'min*] an alkaloid prepared from dried ripe seed of the tropical American tree *Theobroma cacao*; or made synthetically from xanthine; used as a diuretic, myocardial stimulant, vasodilator and smooth muscle relaxant; available as theobromine calcium salicylate, sodium formate, sodium salicylate and salicylate.

theophylline [*the-of'ə-lin*] an alkaloid derived from tea or produced synthetically; it is a smooth muscle relaxant used chiefly for its bronchodilator effect in the treatment of chronic obstructive pulmonary emphysema, bronchial asthma, chronic bronchitis and bronchospastic distress. It also has myocardial stimulant, coronary vasodilator, diuretic and respiratory center stimulant effects.

t. cholinate oxtriphylline, a smooth muscle relaxant, myocardial stimulant and diuretic.

t. ethylenediamine a smooth muscle relaxant, myocardial stimulant and diuretic. Called also aminophylline.

theory [*the'ə-re*] 1. the doctrine or the principles underlying an art as distinguished from the practice of that particular art. 2. a formulated hypothesis or, loosely speaking, any hypothesis or opinion not based upon actual knowledge.

cell t. all organic matter consists of cells, and cell activity is the essential process of life.

recapitulation t. see **recapitulation theory**.

theque [Fr.] a round or oval collection, or nest, of melanin-containing nevus cells occurring at the dermoepidermal junction of the skin or in the dermis proper.

therapeutic pertaining to therapeutics, or treatment of disease; curative.

t. decision making the use of decision theory in making decisions about treatment of individual cases.

t. incompatibility is the result of antagonistic pharmacological effects of several drugs in the one patient.

t. plasma concentration the blood concentration of a drug at which the desired therapeutic effect is obtained.

t. substances medicines with an identifiable value in the treatment of diseases of animals.

therapeutics [*ther"ə-pu'tiks*] 1. the science and art of healing. 2. a scientific account of the treatment of disease.

therapy [*ther'ə-pe*] the treatment of disease; therapeutics. See also **treatment**.

animal-assisted t. the treatment of humans, usually for mental or psychological illness, which incorporates familiarization with a companion or pleasure animal. Called also pet-facilitated or pet-assisted therapy. See also **animal** facilitated therapy.

VetBooks.ir

anticoagulant t. the use of drugs to render the blood sufficiently incoagulable to discourage thrombosis.
blanket t. treatment of all animals in the group used usually as a protective measure against infection, or because a large proportion are suspected to be infected and it is more cost-effective to treat all of them than to test and treat selectively.
electrothermal t. the use of heat to destroy cells, particularly in tumors.
heat t. see **hyperthermia** (2).
immunosuppressive t. treatment with agents, such as X-rays, corticosteroids and cytotoxic chemicals, which suppress the immune response to antigen(s); used in organ transplantation, autoimmune disease, allergy, multiple myeloma, etc.
inhalation t. see **aerosol**.
neoadjuvant t. given before the primary treatment, such as chemotherapy, hormone therapy, radiation therapy.
occupational t. not a significant part of veterinary activity, but the term is applied to the teaching of tricks and activity patterns to big cats in captivity so that they escape boredom.
oxygen t. supplemental oxygen administered for the purpose of relieving hypoxemia and preventing damage to the tissue cells as a result of oxygen lack (**hypoxia**). Companion animals are usually placed in a special cage with oxygen piped to it. A mask is used for short-term administration. Large animals can be supplied by a nasal tube taped in place to deliver oxygen into the pharynx.
pet-assisted t., pet-facilitated t. see **pet**-assisted therapy.
physical t. use of physical agents and methods in rehabilitation and restoration of normal bodily function after illness or injury; it includes massage and manipulation, therapeutic exercises, hydrotherapy, and various forms of energy (electrotherapy, actinotherapy and ultrasound). See also **physical** therapist.
radiation t. treatment of disease by means of ionizing radiation. See also **radiotherapy**.
replacement t. treatment to replace deficient formation or loss of body products by administration of the natural body products or synthetic substitutes.
systemic t. treatment with a drug that is absorbed into the bloodstream and distributed to all parts of the body except where there is a specific **barrier**.
serum t. serotherapy; treatment of disease by injection of serum from immune animals.
substitution t. the administration of a hormone to compensate for glandular deficiency.
swimming exercise t. a form of physical therapy employed in animals, usually horses or dogs.
vacuum t. see **cupping**.
vaporization t. see **aerosol**.

theriogenological, theriogenologic [*the"re-o-jen"o-log'ĭ-kəl*] pertaining to or emanating from theriogenology.
theriogenologist [*the"re-o-jən-ol'ə-jist*] a veterinarian skilled in theriogenology.
theriogenology [*the"re-o-jən-ol'ə-je*] the discipline of animal reproduction; that branch of veterinary science which comprises the study of the normal physiology and anatomy and the pathology and diseases of the male and female reproductive tracts of animals. It includes the subjects of obstetrics and gynecology, as dealt with in human medicine, reproduction on a herd and flock basis, and with artificial insemination and embryo transfer and, in some countries, with neonatology.
theriotherapy treatment of all diseases of animals.
therm [*thərm*] the amount of heat input required to raise the temperature of 1000 kg of water by 1°C. One therm=1000 kilocalories =1 megacalorie (Mcal)=106 megajoule.
thermaburn thermal burn.
thermal [*thur'məl*] pertaining to heat.
t. death point the state of heat content, as measured by temperature, at which the life of an organism ceases. Important in a consideration of sterilization procedures for certain organisms, especially those that produce spores.
t. energy the energy of heat.
t. injury see **burn**.
t. processing the preservation of food by the application of heat either in boiling water, by live steam, in an autoclave or by flame.
t. sensation the sense of temperature.
t. stress see **hyperthermia** (1), **heat**[1] stroke, **fever**.
thermelometer [*thur'məl-om'ə-tər*] an electric thermometer for measuring small temperature changes.
thermic [*thur'mik*] pertaining to heat.
thermistor [*thər-mis'tər*] a thermometer whose impedance varies with ambient temperature and so is able to measure extremely small temperature changes.
therm(o)- word element. [Gr.] *heat*.
Thermoactinomyces vulgaris [*thur"mo-ak"tĭ-no-mi'sēz*] thermophilic antigens of this and other fungi are thought to cause extrinsic allergic alveolitis (bovine farmer's lung); serum precipitins of the antigens have been found in cattle affected by the disease.
thermocautery [*thur"mo-kaw'tər-e*] cauterization by a heated wire or point.
thermochemistry [*thur"mo-kem'is-tre*] the aspect of physical chemistry dealing with temperature changes that accompany chemical reactions.
thermocoagulation [*thur"mo-ko-ag"u-la'shən*] coagulation of tissue with high-frequency currents.
thermocouple [*thur'mo-kup"əl*] a pair of dissimilar electric conductors so joined that with the application of heat an electromotive force is established; used for measuring small temperature differences.
thermodiffusion [*thur"mo-dĭ-fu'zhən*] diffusion influenced by a temperature gradient.
thermodilution [*thur"mo-dĭ-loo'shən*] a technique for measuring size of a fluid-filled cavity by injecting a very cold sample of known volume and by measuring the change in temperature of the whole, assessing the degree of thermodilution, and hence the total volume of the cavity.
thermoduric [*thur"mo-du'rik*] able to endure high temperatures.
thermodynamics [*thur"mo-di-nam'iks*] the branch of science dealing with heat and energy, their interconversion, and problems related thereto.
thermoexcitory [*thur"mo-ek-si'tə-re*] stimulating production of bodily heat.
thermogenesis [*thur"mo-jen'ə-sis*] the production of heat, especially within the animal body.
diet-induced t. a portion of dietary calories in excess of those required for immediate energy requirements are converted to heat rather than stored as fat. Some types of obesity may be related to a defect in this mechanism.
neonatal t. thermogenesis is relatively inefficient in neonates, especially piglets, so that it becomes very important to protect them from cold stress. Most of their heat gain comes from the metabolism of their stores of brown fat.
nonshivering t. increased heat production due to enhancement of normal calorigenic metabolic processes.
shivering t. much the fastest thermogenic process which the static body can use. Shivering is an involuntary function with a tremor rate of about 10 per second.
thermogenin [*thər-moj'ə-nin*] a protein found in brown adipose tissue which uncouples oxidative phosphorylation from ATP production in mitochondria by collapsing the proton gradient across the membrane, generating heat by non shivering thermogenesis; the main mechanism by which heat is produced in hibernation and in human infants. Called also uncoupling protein-1 or UCP-1.
thermogram [*thur'mo-gram*] 1. a graphic record of temperature variations. 2. the visual record obtained by thermography.
thermograph [*thur'mo-graf*] 1. an instrument for recording temperature variations. 2. thermogram (2). 3. the apparatus used in thermography.
thermography [*thər-mog'rə-fe*] a technique wherein an infrared camera photographically portrays the body's surface temperature, based on self-emanating infrared radiations; used as a diagnostic aid in the detection of superficial tumors and the assessment of joint and tendon disease; also used in the study of pain.
thermohygrograph an instrument which measures the environmental temperature and humidity at the same time, usually both continually.
thermoinhibitory [*thur"mo-in-hib'ĭ-tor-e*] retarding generation of bodily heat.
thermolabile [*thur"mo-la'bəl*] easily affected by heat.
thermolysis [*thər-mol'ĭ-sis*] 1. chemical dissociation by means of heat. 2. dissipation of bodily heat by radiation, evaporation, etc.

VetBooks.ir

thermometer [*thər-mom'ə-tər*] an instrument for determining temperatures, in principle making use of a substance (such as alcohol or mercury) with a physical property that varies with temperature and is susceptible of measurement on some defined scale. See also **Celsius** thermometer, **Fahrenheit** thermometer.
centigrade t. one having the interval between two established reference points divided into 100 equal units, as the Celsius thermometer.
clinical t. one used to determine the temperature of the patient in clinical situations.
electronic t. a clinical thermometer using a sensor based on thermistors, solid-state electronic devices whose electrical characteristics change with temperature. The reading is recorded within seconds, some having a red light or other device to indicate when maximum temperature is reached. Available models include handheld, desk-top and wall-mounted units, all having probes that are inserted orally or rectally. It is expected that electronic thermometers worn by the patient will have some use.
kelvin t. one employing the **kelvin** scale.
recording t. a temperature-sensitive instrument by which the temperature to which it is exposed is continuously recorded.
rectal t. a clinical thermometer that is inserted in the rectum for determining body temperature.
resistance t. one that uses the electric resistance of metals for determining temperature (thermocouple).
self-registering t. recording thermometer.
thermometry [*thər-mom'ə-tre*] measurement of temperature.
thermophile [*thur'mo-fīl*] a microorganism that grows best at elevated temperatures.
thermophore [*thur'mo-for*] 1. a device or apparatus for retaining heat. 2. an instrument for estimating heat sensibility.
thermopile [*thur'mo-pīl*] a number of thermocouples in series, used to increase sensitivity to change in temperature or for direct conversion of heat into electric energy.
thermoplacentography [*thur"mo-plas"ən-tog'rə-fe*] use of thermography for determination of the site of placental attachment.
Thermoplasma a genus of archebacteria which lack a cell wall; found in coal refuse piles.
thermoplastic materials [*thur"mo-plas'tik*] materials used in making casts for broken limbs. Malleable when warmed in hot water or heated with a hairdrier, very quick setting and very strong, e.g. Hexcelite.
thermoplegia heat stroke.
thermopolypnea quickened breathing due to high body temperature or great environmental heat.
Thermopolyspora polyspora a fungus growing on stored forage thought at one time to be involved in the etiology of atypical interstitial pneumonia of cattle.
Thermopsis North American plant genus of the legume family Fabaceae; contain toxic quinolizidine alkaloids; causes myopathy, stiff gait, recumbency; includes *T. montana* (poison bean), *T. rhombifolia* (*T. montana*), *T. mollis* (*T. fraxinifolia*), *T. villosa*. Called also buckbean, poison bean, yellow bean, false lupin, mountain thermopsis, golden banner.
thermoreceptor [*thur"mo-re-sep'tər*] a nerve ending sensitive to stimulation by heat.
cutaneous t's come in two varieties, cold receptors and warm receptors. Called also peripheral receptors although the latter include, besides cutaneous receptors, those in the mucosae.
thermoregulation [*thur"mo-reg"u-la'shən*] the physiological process controlling the balance between heat production and heat loss in the body so as to maintain body temperature; a function of a center in the hypothalamus. A lesion in that location can produce a central hyperthermia or hypothermia.
thermoregulatory mechanism [*thur"mo-reg'u-lə-tor"e*] the anatomical system that controls the body temperature; includes the temperature end-organs in the skin, the afferent nerves, the thalamus and hypothalamus, vasodilatation, respiratory center, the sweat glands, the muscular system and the hormonal and enzymic systems involved in the calorigenic metabolism of, stored fat and protein.
thermosensitivity [*thur"mo-sen"sĭ-tiv'ĭ-te*] the central perception of temperature is located in the anterior hypothalamus (preoptic region) and in the spinal cord. The preoptic sensitivity is the more important in mammals, the spinal cord center in birds.
thermostabile [*thur"mo-sta'bəl*] not affected by heat.
thermostasis [*thur"mo-sta'sis*] maintenance of temperature, as in warm-blooded animals.
thermostat [*thur'mo-stat*] a device interposed in a heating system by which temperature is automatically maintained between certain levels.
thermostatic control a control system for the maintenance of a fixed temperature.
thermosteresis [*thur"mo-stə-re'sis*] deprivation of heat.
thermosystaltic [*thur"mo-sis-tawl'tik*] contracting under the stimulus of heat; thermosystaltism.
thermosystaltism [*thur"mo-sis'təl-tiz-əm*] contraction of muscles in response to changes in temperature.
thermotaxis [*thur"mo-tak'sis*] 1. normal adjustment of bodily temperature. 2. movement of an organism in response to the stimulation of a temperature gradient.
thermotherapy [*thur"mo-ther'ə-pe*] therapeutic use of heat.
thermotolerance the state of being relatively unaffected by hot conditions.
thermotonometer [*thur"mo-to-nom'ə-tər*] an instrument for measuring the amount of muscular contraction produced by heat.
thermotropism [*thər-mot'ro-piz-əm*] the orientation of a living cell in response to a heat stimulus.
Theromyzon tessulatum a small leech that normally parasitizes the nasal sinuses of geese, but which may migrate to the conjunctival sacs and cause keratoconjunctivitis.
Thesium genus of South African plants in family Santalaceae; contains bufadienolide cardiac glycosides; causes cardiomyopathy, sudden death; includes *T. lineatum* (vaalstorm, witstorm), *T. namaquense* (namaqua, gifbossie).
theta [*tha'tə*] eighth letter in the Greek alphabet, Θ or θ.
theta rhythm a rhythmic hippocampal electrical discharge correlated with movement and locomotion.
Thevetia see ***Cascabela***.
thevetin a cardiac glycoside which occurs in *Cascabela thevetia* (*Thevetia peruviana*).
THF tetrahydrofolic acid.
thiabendazole [*thi"ə-ben'də-zōl*] a very safe and effective, broad-spectrum anthelmintic used widely in sheep. Also used extensively in horses in combination with piperazine. Poisoning with thiabendazole has been recorded but it is a very unusual occurrence requiring a massive overdose. It is capable of causing incoordination and collapse initially, and subsequently toxic nephrosis with terminal uremia. Also a fungicide.
thiacetarsamide sodium [*thi-as"ət-ahr'sə-mīd*] a parenteral anthelmintic used against adult heartworms in dogs with significant hepatic and renal toxicity. Commonly known as Caparsolate.
thialbarbital, thialbarbitone a short-acting, intravenous anesthetic agent used in all species.
thiamin [*thi'ə-min*] thiamine
thiambutene see **diethylthiambutene hydrochloride**.
thiaminase [*thi-am'ĭ-nās*] an enzyme that catalyzes the splitting of thiamine into a pyrimidine and a thiazole derivative. Is present in some ferns, e.g. bracken, and in some species of fish so that diets containing these materials are likely to be deficient in thiamine. Thiaminase activity by microbes in the rumen is though to be one cause of **polioencephalomalacia** in cattle.
thiamine [*thi'ə-min*] vitamin B_1; a component of the B complex group of vitamins, found in various foodstuffs and present in the free state in blood plasma and cerebrospinal fluid. The pharmaceutical products are thiamine hydrochloride and thiamine pyrophosphate. Spelled also thiamin.
t. nutritional deficiency an unlikely event in food animals with two exceptions: the secondary deficiency caused in horses and pigs by thiaminase in bracken and the primary deficiency in horses fed a diet almost entirely of turnips. In companion animals, the deficiency is much more common. Dogs, and particularly cats, fed diets in which thiamine has been destroyed, usually by excessive heat in processing but also by the inclusion of raw fish of certain marine species or sulfur dioxide as a food preservative, will develop signs of deficiency which include ataxia, mydriasis and convulsions. See also **polioencephalomalacia**.
thiamphenicol [*thi-əm-fen'ĭ-kōl*] an analog of chloramphenicol with similar activity, but reportedly a lower incidence of aplastic anemia in humans.

thiamylal [*thi-am'ĭ-lal*] an ultrashort-acting thiobarbiturate used as an intravenous anesthetic. The pharmaceutical product is thiamylal sodium.

thiazide [*thi'ə-zīd*] any of a group of benzothiadiazine sulfonamide derivatives, typified by chlorothiazide, that act as diuretics by inhibiting the reabsorption of sodium in the proximal renal tubule and stimulating chloride excretion, with resultant increase in excretion of water. Includes **bendroflumethiazide**, **chlorothiazide** and **hydrochlorothiazide**.

thiazolidinediones [*thi"ə-zōl"ə-dēn-di'ōn*] a class of oral antidiabetic agents used in cats.

thick forelegs see juvenile **hyperostosis**.

thick leg disease of poultry, see **osteopetrosis**.

thick stomach worms see ***Ascarops*** *strongylina*, ***Physocephalus*** *sexalatus*.

thidiazuron a defoliant in cotton crops. It is not actually poisonous for animals but it may enter the human food chain via eggs and milk.

thiemia [*thi-e'me-ə*] sulfur in the blood.

thienamycin [*thi-en"ə-mi'sin*] a broad spectrum, β-lactamase resistant antibiotic in the carbapenem class.

thienopyridines a class drugs that inhibit ADP-induced platelet aggregation; used for their antiplatelet activity in preventing thromboembolism.

thiethylperazine [*thi-eth"əl-par'ə-zēn*] a phenothiazine derivative useful as an antiemetic.

thigh the portion of the leg above the stifle; the femur.

t. bone femur.

second t. in dogs, refers to the area from stifle to hock. Called also gaskin, calf.

thigmotaxis [*thig"mo-tak'sis*] movement of an organism in response to contact. Called also stereotaxis.

thigmotropism [*thig-mot'ro-piz-əm*] the orientation of an organism in response to the stimulus of contact.

Thiloa glaucocarpa South American plant in the family Combretaceae; contains nephrotoxic tannin; called also sipauba, vaqueta.

thimble weed see ***Rudbeckia***.

thimbling [*thim'bling*] the condition produced by the partial shedding of the horn on a claw of a pig. The horn separates from its laminae and a new claw's horn grows, gradually pushing the old horn off giving the effect that the pig is wearing a thimble. A good indication that the pigs have had a recent attack of foot-and-mouth disease.

thimerosal [*thi-mer'o-səl*] a mercury-containing compound used as a local antibacterial agent in the form of the tincture. Used also as a preservative in pharmaceutical preparations. Called also mercurothiolate, thiomersal, thiomersalate and known generally as Merthiolate.

thin 1. the body state in which the animal's weight is below normal but the eyes are bright and the coat good and the animal is physiologically and clinically normal. 2. the state of tissue in which the volume of connective tissue is diminished and other tissues lacking in size.

t. tubules renal tubules; includes thin ascending and thin descending tubules.

thin ewe syndrome a debilitating disease of adult ewes probably of mixed etiology but often associated with multiple internal abscesses containing *Corynebacterium pseudotuberculosis*, sometimes *Moraxella* spp.

thin-shelled egg thin egg shells can be caused by a nutritional deficiency of calcium, phosphorus, vitamin D, copper or manganese. Other causes are sulfonamides in the diet, end of the laying season, a diet contaminated by DDT and diseases at a chronic or subclinical level, e.g. infectious bronchitis. See also thin-shelled **egg**.

thin sow syndrome the sow loses weight during pregnancy and after farrowing and does not return to feed or weight gain. There are no identifiable clinical signs. *Oesophagostomum* spp. and *Hyostrongylus* spp. infestations play a part in some cases but a bad environment and bullying of timid sows are also important as is feed intake during lactation.

thinness the state of being **thin**. Called also light condition.

thi(o)- word element. [Gr.] *sulfur*.

thioarsenites [*thi"o-ahr'sə-nīt*] salts of the hypothetical orthothioarsenious acid, e.g. arsenamide (Caparsolate), used as anthelmintics, herbicides, insecticides, wood preservatives. They are organic arsenicals and potentially toxic.

thiobarbiturate [*thi"o-bahr-bit'u-rāt*] a salt or derivative of thiobarbituric acid. Some are used as general anesthetics, some of them unstable in solution. Thiobarbital is used as a thyroid inhibitor.

thiobarbituric acid reactive substances [*thi"o-bahr"bĭ-tu'rik*] low-molecular-weight end products formed during the decomposition of lipid peroxidation products. They react with thiobarbituric acid to form a fluorescent red adduct. Used as a measure of oxidative stress.

thiocarbamates [*thi"o-kahr'bə-māt*] non-cholinesterase inhibiting herbicides (allate, diallate, ETPC) which are poisonous causing clinical signs including tremor, dyspnea, salivation, vomiting and bloat.

thioctic acid see **lipoic acid**.

thiocyanate [*thi"o-si'ə-nāt*] a salt analogous in composition to a cyanate, but containing sulfur instead of oxygen and relatively nontoxic. It is one of the compounds produced in the body as a detoxicating mechanism. Continued ingestion can cause goiter.

thioesterase enzyme that catalyzes the hydrolytic cleavage of energy-rich thioester bonds as in acetyl CoA.

thioglycollate medium one used for culturing anaerobic bacteria.

thioglucoside, thioglycoside a glucosinolate goitrogen found in plants, acts by inhibiting thyroidal hormonogenesis; its effects are only marginally reversible, if at all.

thioguanine [*thi"o-gwah'nēn*] an antineoplastic (2-aminopurine-6-thiol) used in the treatment of leukemia.

thiomolybdate forms insoluble complexes in the rumen with copper, contributing to the development of nutritional deficiency of copper.

thionamides see **thioureylenes**.

thiones goitrogens produced by the hydrolysis of glucosinolates present in the seeds of cruciferous plants.

thionine [*thi'o-nēn*] a dark green powder, purple in solution, used as a metachromatic stain in microscopy.

thiopental [*thi"o-pen'tal*] a thiobarbiturate used extensively as a short-acting general anesthetic, administered by intravenous injection. Called also thiopentone.

thiopentone [*thi"o-pen'tōn*] see **thiopental**.

thiophanate a benzimidazole anthelmintic which was withdrawn from sale.

thiopronine mercaptopropionylglycine.

thioridazine [*thi"o-rid'ə-zēn*] a phenothiazine tranquilizer used in the treatment of stereotypic and aggressive behavior in dogs.

thiosemicarbazide a rodenticide with the capacity to cause pulmonary edema. Has an action similar to **α-naphthylthiour** (ANTU).

thiostrepton [*thi"o-strep'ton*] a polypeptide antibiotic produced in cultures of *Streptomyces*. Is not absorbed from the alimentary tract and is used for topical application, especially mastitis preparations.

thiosulfate [*thi"o-sul'fāt*] any salt of thiosulfuric acid. See also **sodium** thiosulfate.

thiotepa [*thi"o-tep'ə*] triethylenethiophosphoramide; a cytotoxic alkylating agent used as an antineoplastic agent, particularly in the urinary bladder and body cavities.

thiouracil [*thi"o-u'rə-sil*] a thyrotoxic agent that inhibits the oxidation of iodine thus preventing the formation of thyroxine. Used to treat hyperthyroidism, and has been used as a fattening agent in cattle.

thiourea [*thi"o-u-re'ə*] a goitrogenic agent used in industry as a photographic fixative. Mode of action is as for **thiouracil**.

thioureylenes a group of antithyroid agents used in the treatment of hyperthyroiditis; includes **methimazole**, **carbimazole** and **propylthiouracil**.

thioxanthene [*thi"o-zan'thēn*] a class of structurally related neuroleptic drugs, including chlorprothixene and thiothixene.

thiram see **tetramethylthiuram disulfide**.

third compartment syndrome see body **fluids**.

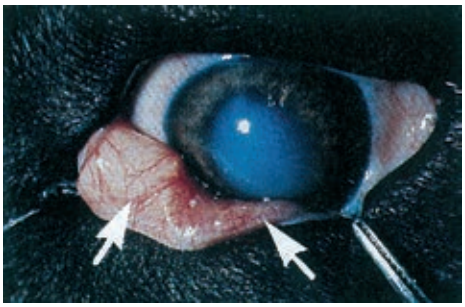
third eye pineal eye, a photoreceptor organ, in lower vertebrates.

third eyelid see **membrana** nictitans, **nictitating membrane**. The formal anatomical name is *palpebra III* or *plica semilunaris conjunctivae*.

t. e. eversion the free margin of the third eyelid is rolled outwards because of a curvature of the cartilage. More prevalent in large breeds of dogs and may be an inherited defect in Saint Bernards and German shorthaired pointers.

t. e. protrusion syndrome see **cherry eye**.

VetBooks.ir



T-22: Eversion of the third eyelid in a dog. From McCurnin D, Poffenbarger EM, Small Animal Physical Diagnosis and Clinical Procedures. Saunders, 1991.

third phalanx fracture important, and most common in horses; pasture soundness may be achieved but degenerative joint disease is a common sequel.

thirst [*thərst*] a sensation, often referred to the mouth and throat, associated with a craving for drink; ordinarily interpreted as a desire for water. Cellular dehydration also influences thirst and therefore water intake. Other factors may influence the role of the hypothalamus in maintaining water balance. See also **polydipsia**.

psychogenic t. see psychogenic **polydipsia**.

thistle any of a large number of plants in the family Asteraceae. Some poisonous ones are milk or variegated thistle (***Silybum marianum***), yellow star thistle (***Centaurea*** *solstitialis*).

bull t., St. Mary's t. *Silybum marianum*.

Canada t. ***Cirsium arvense***.

cockspur t., Maltese t. *Centaurea melitensis*.

Kansas t., Texas t. ***Solanum*** *rostratum*.

plumeless t., winged t. ***Carduus***.

Russian t. ***Salsola*** *australe*.

St. Barnaby's t. *Centaurea solstitialis*.

shore t., slender t. ***Carduus***.

sow t. ***Sonchus***.

thixotropism, thixotropy the property of certain gels of becoming fluid when shaken and then becoming solid again.

Thlaspi arvense North American annual weed of cultivation in the plant family Brassicaceae. It contains allyl isothiocyanate and causes hemolysis and gastric distress; also photosensitization. Called also mithridate mustard, field penny-cress, fanweed, stinkweed.

Thomas splint see Schroeder–Thomas **splint**.

thoracectomy [*thor"ə-sek'tə-me*] thoracotomy with resection of part of a rib.

thoracentesis [*thor"ə-sen-te'sis*] surgical puncture and drainage of the thoracic cavity. The procedure may be done as an aid to the diagnosis of inflammatory or neoplastic diseases of the lung or pleura, or it may be used as a therapeutic measure to remove accumulations of fluid from the thoracic cavity.

thoracic [*thə-ras'ik*] pertaining to the chest. See also **thoracolumbar**.

t. asymmetry if obviously distorted can mean that the flatter side has a collapsed lung. Not a helpful sign in cattle because of the normal asymmetry caused by the rumen.

t. breath sounds breath sounds produced in the bronchi, bronchioles and alveoli by the passage of air; contrast with tracheal breath sounds.

t. cage the bony structure enclosing the thorax, consisting of the ribs, vertebral column and sternum.

t. cavity see **thorax**; called also chest.

t. duct ligation a surgical procedure used in the treatment of chylothorax where medical management is unsuccessful.

t. girdle the incomplete ring of bones that support the thoracic limb, made up of the scapula, clavicle, coracoid and occasionally other elements. Mammals have coracoids reduced to a bony process born on the scapula (except in monotremes) and nongrasping animals have no clavicles so that the girdle consists only of the scapula. Grasping or climbing animals have a clavicle. Birds have a complete bony girdle. Called also pectoral girdle.

t. inlet the entrance of the chest between the two first ribs, the manubrium, and the first thoracic vertebra.

t. limb forelimb.

t. pain such as that caused by broken ribs, torn intercostal muscles, pleurisy can cause a grunt at the end of each inspiration.

t. peristaltic sounds can be of assistance in diagnosing diaphragmatic hernia in a dog or cat but they occur commonly in normal horses and cattle.

t. positioner a sterilizable M-shaped metal trough which can be laid on an operating table and an animal propped up in it for surgery.

t. respiration the diaphragm and abdominal muscles remain immobilized and play little part in respiration, as in peritonitis with diaphragmatic hernia.

t. segmental spinal cord degeneration characteristic lesion in the inherited disease Merino degenerative **axonopathy**.

t. surgery surgical procedures involving entrance into the chest cavity. Until techniques for endotracheal anesthesia were perfected, this type of surgery was extremely dangerous because of the possibility of lung collapse. By administering anesthesia under pressure through an endotracheal tube it is now possible to keep one or both lungs expanded, even when they are subjected to atmospheric pressure.

t. symmetry lack of symmetry between the two sides, viewed from above, can suggest lung collapse or a space-occupying lesion on the smaller side; in ruminants the presence of the rumen always enhances the size of the left side.

t. tube see chest **tube**.

t. vertebrae the vertebrae between the cervical and lumbar vertebrae, giving attachment to the ribs and forming part of the dorsal wall of the thorax.

t. wall includes the ribs, sternum and thoracic vertebrae, the intercostal, superficial and deep, muscles, and the external respiratory muscles (transverse thoracic, rectus thoracis, serratus dorsalis and scalenus), and the costal pleura.

t. wall flap a surgical approach to the thoracic cavity that combines an intercostal incision and sternotomy. It allows great exposure to structures of the cranial mediastinum and caudal cervical region.

t. wall wound penetration through to the pleural cavity results in pneumothorax and collapse of the lung on that side.

thorac(o)- word element. [Gr.] *chest*.

thoracoacromial [*thor"ə-ko-ə-kro'me-əl*] pertaining to the thorax and acromion.

thoracoceloschisis [*thor"ə-ko-se-los'kĭ-sis*] thoracogastroschisis.

thoracocentesis [*thor"ə-ko-sen-te'sis*] thoracentesis.

thoracocyllosis [*thor"ə-ko-si-lo'sis*] deformity of the thorax.

thoracocyrtosis [*thor"ə-ko-sir-to'sis*] abnormal curvature of the chest wall.

thoracodelphus [*thor"ə-ko-del'fəs*] conjoined twins with one head, two forelimbs, and four hindlimbs, the bodies being joined above the navel.

thoracodidymus [*thor"ə-ko-did'ĭ-məs*] thoracopagus.

thoracodynia [*thor"ə-ko-din'e-ə*] pain in the thorax.

thoracogastroschisis [*thor"ə-ko-gas-tros'kĭ-sis*] a developmental anomaly resulting from faulty closure of the body wall along the midventral line, involving both thorax and abdomen, i.e. fissure of the thorax and abdomen.

thoracolumbar [*thor"ə-ko-lum'bər*] pertaining to the thoracic and lumbar vertebrae.

t. disk intervertebral disk between vertebrae in the thoracolumbar segment of the vertebral column.

t. outflow symphathetic nervous system.

t. spinal cord lesion associated with proprioceptive deficits, paresis or paralysis in the hindlimbs with normal or increased segmental reflexes. Depending on the severity of the lesions, a panniculus reflex cutoff, urinary incontinence and overflow, and absent deep pain sensation may be present. No abnormalities are seen in the front limbs.

t. syndrome spinal cord lesions between T3 and L3 cause spastic paresis to paralysis in the hindlegs and sensory loss caudal to the level of the lesion depending on the severity of the lesion. Most commonly seen in dogs with intervertebral disk protrusions.

thoracolysis [*thor"ə-kol'ĭ-sis*] the freeing of adhesions of the chest wall.

thoracomelus [*thor"ə-kom'ə-ləs*] a fetus with a supernumerary limb attached to the thorax.

thoracopagus [*thor"ə-kop'ə-gəs*] conjoined twins united at the thorax, facing each other, often with partly fused or compromised hearts.

VetBooks.ir

thoracopathy [*thor"ə-kop'ə-the*] any disease of the thoracic organs or tissues.
thoracoplasty [*thor'ə-ko-plas"te*] surgical removal of ribs, allowing the chest wall to collapse a diseased lung.
thoracoschisis [*thor"ə-kos'kĭ-sis*] congenital fissure of the thoracic wall.
thoracoscope [*thə-rak'o-skōp*] an endoscope for examining the pleural cavity through an intercostal space.
thoracoscopy [*thor"ə-kəs'kə-pe*] examination of the pleural space with a thoracoscope.
thoracostenosis [*thor"ə-ko-stə-no'sis*] abnormal contraction of the thorax.
thoracostomy [*thor"ə-kos'tə-me*] incision of the chest wall, with maintenance of the opening for drainage.
thoracotomy [*thor"ə-kot'ə-me*] incision of the chest wall; may be intercostal, by rib resection or trans-sternal.
transsternal t. the usual intercostal incision is extended across the sternum to the opposite intercostal space. Used when very wide exposure to the thorax is required.
thorax [*thor'aks*] the part of the body between the neck and abdomen; the chest. It is separated from the abdomen by the diaphragm. The walls of the thorax are formed by pairs of ribs, attached to the sides of the spine and curving toward the sternum. The cranial pairs of ribs are attached to the sternum, the next few connect with cartilage connected to the sternum and often the last one or two (the floating ribs) are unattached distally. The cavity of the thorax is divided by a thick partition, the mediastinum. The principal organs in the thoracic cavity are the heart with its major blood vessels, and the lungs with the bronchi. The trachea enters the thorax to connect with the lungs, and the esophagus travels through it to connect with the stomach caudal to the diaphragm. See also **thoracic**.
thorium (Th) [*thor'e-əm*] a chemical element, atomic number 90, atomic weight 232.038. See Table 4. Formerly used as a radiographic contrast medium.
thorn apple, thornapple plants in the genus see ***Datura***. Includes entire-leaved or hairy thorn apple (*D. metel*), fierce, long-spined or long-spurred thorn apple (*D. ferox*), native (Australia) thorn apple (*D. leichhardtii*).
thorn-headed worm see **thorny-headed worm**.
Thorn test [*thorn*] a test of adrenal cortical function which originally measured the glands' response to ACTH by the change in the eosinophil count of blood samples taken before and after the injection. The modern version of the test measures the response by estimating plasma cortisol concentrations.
thorny-headed worm member of the phylum Acanthocephala, a group of parasitic worms. See ***Corynosoma***, ***Filicollis***, ***Macracanthorhynchus***, ***Oncicola*** and ***Polymorphus***.
Thoroughbred an English lightweight racing horse, incorporated into many breeds to improve speed and elegance. Black, brown, bay, chestnut or gray, usually 16–16.2 hands high.
thoroughfare channel central channel in the arteriolar system; flow through the channel is controlled by the sphincter effect of the branch of the arteriole, the metarteriole.
thoroughpin tenosynovitis of the deep flexor tendon sheath of the hindlimb of the horse manifested by soft, nonpainful swellings just above the point of the hock and on the medial and lateral aspects of the hock. There is no lameness.
Thr threonine.
thread iris see ***Moraea*** *setifolia*.
threadworm [*thred'wərm*] any nematode worm.
abdominal t. ***Setaria***[1] *equina*.

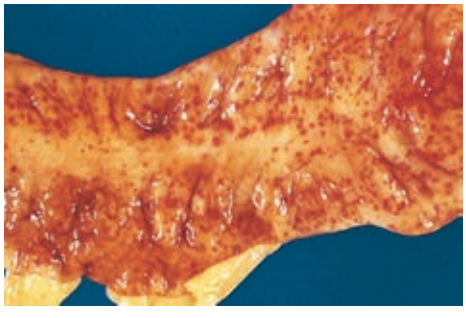
T-23: English thoroughbred horse.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

T-24: Thoroughpin.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

three-day event a competition in the pleasure horse sport comprising usually one day each for dressage, cross country and show jumping.
three-day sickness see **ephemeral fever**.
three-in-one technique an extra-articular technique for the treatment of cranial cruciate ligament rupture using medial and lateral imbrication sutures.
three-way cross one in which a crossbred animal is mated with an animal from another population, e.g. AB × C.
3X rule in normal blood samples, hemoglobin × 3 = hematocrit (± 2%); a rapid check on the accuracy of laboratory results.
Threlkeldia see ***Neobassia proceriflora***.
threonine (Thr) [*thre'o-nēn*] a naturally occurring, hydroxy amino acid.
threpsology the scientific study of nutrition.
threshold [*thresh'ōld*] the level that must be reached for an effect to be produced, as the degree of intensity of stimulus which just produces a sensation.
t. phenomenon a theory explaining pruritus which states that some degree of pruritus is tolerated by a patient, but a small increase from an additional source raises the patient above their threshold and causes clinical signs.
renal t. that concentration of a substance in plasma at which it begins to be excreted in the urine; varies between species.
t. traits heritable traits which have specific thresholds, e.g. four rather than three toes on a guinea pig's hindfeet, alive or dead at a specific age.
t. unit the distance between two thresholds when an inherited abnormality can occur at a number of levels, e.g. completely patent ductus arteriosus, through partial closure (ductus diverticulum) and complete closure. See also threshold traits (above).
thrifty said of livestock that put on body weight or produce in other ways with a minimum of feed. The opposite of illthrift.
thrill [*thril*] a vibration caused by the movement of fluid felt by the examiner on palpation. Created by turbulence in a fluid column passing through an incompetent valve, or from a vessel of smaller caliber to a larger. The larger the orifice the bigger the thrill. Also by sharp firm percussion on one part of the abdomen and feeling a shock wave over a distant part of the abdomen—the so-called fluid wave.
diastolic t. one felt over the precordium during diastole in advanced aortic insufficiency.
presystolic t. one felt just before the systole over the apex of the heart.

VetBooks.ir

systolic t. one felt over the precordium during systole in aortic stenosis, pulmonary stenosis and ventricular septal defect.
thyroid t. palpable over a colloid goiter with a large blood supply.
thrix [*thriks*] hair.
t. annulata a condition in which a hair appears to be marked by alternating bands of white; called also ringed hair.
-thrix word element. [Gr.] *hair*.
throat [*thrōt*] the part of the body that includes the **larynx** and **pharynx**, where the passageways that link the nose and mouth with the respiratory and digestive systems of the body cross over. Called also the fauces.
t. abscess 1. one in the retropharyngeal lymph node causing partial obstruction to swallowing, dysphagia, and palpable through the pharynx and mouth in cattle. 2. an abscess in the parotid area just below the ear and behind the mandible. Usually ascribed to grass seed penetration.
t. cellulitis see **pharyngeal** phlegmon.
t. lash, t. latch 1. the strap on a horse's bridle that goes under the throat and buckles just below the left ear. 2. the area under the throat where the head and neck are joined and where the harness throat latch fits.
throb [*throb*] a pulsating movement or sensation.
thrombapheresis thrombocytapheresis.
thrombasthenia [*throm"bəs-the'ne-ə*] a platelet abnormality characterized by defective clot retraction and impaired ADP-induced platelet aggregation. There are mild bleeding tendencies. Inherited as an autosomal recessive disorder in Otterhounds, Great Pyrenees dogs and horses. Called also Glanzmann disease, Glanzmann–Naegeli syndrome.
thrombectomy [*throm-bek'tə-me*] surgical removal of a clot from a blood vessel.
medical t. enzymatic dissolution of a blood clot in situ.
thrombin [*throm'bin*] an enzyme resulting from activation of prothrombin, which catalyzes the conversion of fibrinogen to fibrin. It is also a potent stimulus to the aggregation of platelets. A preparation from prothrombin of bovine origin is used as a topical hemostatic.
t.-antithrombin complexes (TAT) formed when thrombin is generated in the presence of antithrombin; assays are used to detect activation of coagulation.
t.–thrombomodulin complex thrombomodulin, a specific endothelial cell surface receptor, converts thrombin, a very weak activator of protein C in the anticoagulant pathway, to the status of a very active protein C activator.
t. time the time required for a standardized solution of thrombin to clot plasma. It is a measure of the rate of conversion of fibrinogen to fibrin. Called also thrombin clotting time.
thromb(o)- word element. [Gr.] *clot, thrombus*.
thromboangiitis [*throm"bo-an"je-i'tis*] inflammation of a blood vessel, with thrombosis.
thromboarteritis [*throm"bo-ahr"tər-i'tis*] thrombosis associated with arteritis.
thromboasthenia [*throm"bo-əs-the'ne-ə*] thrombasthenia.
thromboclasis [*throm-bok'lə-sis*] the dissolution of a thrombus.
thrombocrit the percentage of blood volume filled by platelets.
thrombocyst, thrombocystis [*throm'bo-sist, throm"bo-sis'tis*] a sac formed around a clot or thrombus.
thrombocytapheresis [*throm"bo-si"tə-fə-re'sis*] the selective separation and removal of thrombocytes (platelets) from withdrawn blood, the remainder of the blood then being retransfused into the donor. Called also plateletpheresis and thrombapheresis.
thrombocyte [*throm'bo-sīt*] a blood **platelet**.
thrombocythemia [*throm"bo-si-the'me-ə*] an increase in the number of circulating blood platelets.
essential t. see primary thrombocythemia (below).
primary t. a clinical syndrome with repeated spontaneous hemorrhages, either external or into the tissues, and greatly increased number of circulating platelets. Called also essential thrombocythemia.
reactive t. see secondary thrombocythemia (below).
secondary t. non-neoplastic causes; includes inflammation, iron deficiency, exercise, blood loss. Called also reactive thrombocythemia.
thrombocytocrit the volume of packed blood platelets in a given quantity of blood; also, the instrument used to measure platelet volume.
thrombocytolysis [*throm"bo-si-tol'ĭ-sis*] destruction of blood platelets (thrombocytes).
thrombocytopathy [*throm"bo-si-top'ə-the*] any qualitative disorder of blood platelets.
hereditary t. calcium-diacylglycerol guanine nucleotide exchange factor I gene mutations are associated with loss of function in platelets in Landseer Newfoundlands, Spitz and Basset hound dogs and Simmental cattle, causing epistaxis, gingival bleeding and petechiation on mucosal membranes and skin. Platelet numbers are normal. It is an autosomal recessive trait. See also **Chediak-Higashi syndrome**, canine **cyclic** hematopoiesis, **thrombasthenia**.
thrombocytopenia [*throm"bo-si"to-pe'ne-ə*] decrease in number of platelets in circulating blood. See also **purpura**.
alloimmune t. due to alloantibodies generated in response to blood transfusions or to maternal alloimmunization. Caused by the exposure of the platelets of a newborn animal to platelet alloantibodies which are present in the colostrum of the dam. Occurs in piglets as a syndrome of spontaneous hemorrhage at a few days of age. See also immune-mediated thrombocytopenia (below).
consumption t. excessive utilization of thrombocytes at hemorrhage sites causes significant reduction in circulating platelets.
drug-induced t. that associated with a drug being administered. Some drugs named as causing thrombocytopenia are phenylbutazone, diphenylhydantoin, sulfonamides, digitoxin and phenothiazine tranquilizers.
essential t. see megakaryocytic **leukemia**.
idiopathic t. (ITP) see immune-mediated thrombocytopenia (below).
immune-mediated t. (IMT) a loss of platelets caused by the presence of antiplatelet antibodies which can be demonstrated by the platelet factor-3 (PF-3) release test and immunofluorescence of megakaryocytes. Platelet production may be normal or impaired, also caused by antibodies directed against megakaryocytes. Includes alloimmune, autoimmune and some drug-induced thrombocytopenias.
infectious cyclic t. recurring cycles of parasitemia and reduced numbers of thombocytes in the peripheral blood are seen in dogs infected with ***Anaplasma*** *platys*. Clinical signs are rarely observed, but coinfection may potentiate clinical disease caused by *E. canis*.
isoimmune t. see alloimmune thrombocytopenia (above).
myelophthisic t. that due to neoplastic invasion of the bone marrow.
pseudo-t. erroneously low numbers of thrombocytes reported, particularly in automated counting techniques, because of clumping.
secondary t. one part of another disease, such as a multi-system immune-mediated disorder.
surface-induced t. a form of nonimmune-mediated platelet destruction caused by exposure of platelets to a damaged or artificial surface.
thrombin-induced t. thrombin stimulates platelet aggregation and reduces circulating numbers.
vaccine-induced t. live-virus vaccines may be associated with a transient, nonimmunogenic aggregation and reduction in numbers of platelets.
thrombocytopenic of the nature of or pertaining to thrombocytopenia.



T-25: Punctate petechial hemorrhages of the colonic mucosa, a consequence of thrombocytopenia. From Kumar V, et al, Robbins Basic Pathology, 8th Edition. Saunders, 2007.

VetBooks.ir

thrombocytopoiesis [*throm"bo-si"to-poi-e'sis*] the production of blood platelets (thrombocytes); occurs primarily in the bone marrow, but also in other sites of hematopoiesis, such as the spleen and lung.

thrombocytosis [*throm"bo-si-to'sis*] increase in the number of platelets in the circulating blood. See also **thrombocythemia**.

thromboembolic [*throm"bo-em-bol'ik*] pertaining to or emanating from **thromboembolism**.

t. meningoencephalitis see **hemophilosis**.

t. parasitism see thromboembolic **colic**.

thromboembolism [*throm"bo-em'bo-liz-əm*] the lesion created by a **thromboembolus**. The exact form of the disease depends on the location of the thromboembolism, e.g. aortic, iliac, intestinal, pulmonary. See also **thrombus**.

thromboembolus [*throm"bo-em'bo-ləs*] solid or semisolid thrombotic material that travels with the blood flow until it is impacted in a blood vessel as it narrows. Most commonly affects arteries but may block the portal vein or its branches.

t. colic see thromboembolic **colic**.

t. meningoencephalitis see **hemophilosis**.

thromboendarterectomy [*throm"bo-end-ahr"tər-ek'tə-me*] excision of an obstructing thrombus together with a portion of the inner lining of the obstructed artery.

thromboendarteritis [*throm"bo-end-ahr"tar-i'tis*] inflammation of the innermost coat of an artery, with thrombus formation.

thromboendocarditis [*throm"bo-en"do-kahr-di'tis*] formation of a thrombus on a heart valve which has previously been eroded.

thrombogenesis [*throm"bo-jen'ə-sis*] clot formation.

thrombogram [*throm"bo-gram*] results of the counts and evaluation of thrombocytes (platelets).

thrombohemorrhagic [*throm"bo-hem"ə-raj'ik*] the state of being hemorrhagic due to thrombocyte deficiency or malfunction.

consumption t. disorder hemorrhagic state due to excessive consumption of platelets.

thromboid [*throm'boid*] resembling a thrombus.

thrombokinase [*throm"bo-ki'nās*] activated clotting factor X.

thrombokinetics [*throm"bo-ki-net'iks*] the dynamics of blood coagulation.

thrombolymphangitis [*throm"bo-lim"fan-ji'tis*] inflammation of a lymph vessel due to a thrombus.

thrombolysis [*throm-bol'ī-sis*] dissolution of a thrombus.

thrombolytic [*throm"bo-lit'ik*] 1. dissolving or splitting up a thrombus. 2. an agent that dissolves or splits up a thrombus.

thrombomodulin [*throm"bo-mod'u-lin*] an antithrombotic substance contained in the apical membrane of endothelial cells. See also **thrombin**-thrombomodulin complex.

thrombon [*throm'bon*] the circulating blood platelets and their precursors.

thrombopathia see **thrombocytopathy**.

thrombopathy [*throm-bop'ə-the*] thrombocytopathy.

hereditary t. an inherited bleeding tendency in which the platelets do not function properly. See hereditary **thrombocytopathy**.

thrombopenia [*throm"bo-pe'ne-ə*] thrombocytopenia.

thrombophilia [*throm"bo-fil'e-ə*] a tendency to the occurrence of thrombosis.

thrombophlebitis [*throm"bo-flə-bi'tis*] inflammation of a vein associated with thrombus formation. See also **thrombosis**.

thromboplastic [*throm"bo-plas'tik*] causing or accelerating clot formation in the blood.

thromboplastid [*throm"bo-plas'tid*] a blood platelet.

thromboplastin [*throm"bo-plas'tin*] a substance in blood and tissues which, in the presence of ionized calcium, aids in the conversion of prothrombin to thrombin. Extrinsic and intrinsic thromboplastin are formed as the result of the interaction of different clotting factors; the factors that combine to form extrinsic thromboplastin are not all derived from intravascular sources, whereas those that form intrinsic thromboplastin are. Called also clotting factor III.

activated partial t. time (APTT, aPTT) a test of intrinsic and common coagulation pathways. An intrinsic pathway activator (such as kaolin, silica, ellagic acid), phospholipid and calcium are added to plasma and the time taken for clot formation is measured. Prolonged times are observed in acquired and hereditary factor deficiencies and in the presence of specific coagulation inhibitors.

differential t. time used in differentiating the cause of hemophilia. Reagents containing either factor VIII or factor IX are added in the partial thromboplastin time test to demonstrate which factor corrects the prolonged clotting time.

extrinsic t. the prothrombin activator formed as a result of interaction of coagulation factors III, VII, and X which, with factor IV, aids in the formation of thrombin.

t. generation time (TGT) evaluates the first stage in blood coagulation by measuring the efficiency of prothrombinase formation.

intrinsic t. the prothrombin activator formed as a result of interaction of coagulation factors V, VII, IX, X, XI and XII and platelet factor 3 (PF-3), which, with factor IV, aids in the conversion of prothrombin to thrombin.

plasma t. antecedent (PTA) deficiency occurs in cattle and Springer spaniels, Kerry blue terriers and cats; see also **hemophilia** C. Called also factor XI.

plasma t. component (PTC) **clotting** factor IX; deficiency causes **Christmas disease**. Called also Christmas factor, antihemophilic factor B, autoprothrombin II.

t. time see activated partial thromboplastin time (above).

tissue t. factor III, a material derived from several sources in the body (e.g. brain, lung), and is important in the formation of extrinsic prothrombin converting principle in the extrinsic pathway of blood coagulation. Called also tissue factor.

thrombopoiesis [*throm"bo-poi-e'sis*] 1. thrombogenesis. 2. thrombocytopoiesis.

thrombopoietic cell [*throm"bo-poi-et'ik*] cells in the normal hemopoietic production line; are in two classes proliferative phase and maturation phase.

thrombopoietin (TPO) [*throm"bo-poi'ə-tin*] a specific thrombopoiesis-stimulating cytokine produced primarily in the liver, kidneys and bone marrow; causes proliferation and maturation of megakaryocytes, and delivery of platelets to the circulaation.

thromboprophylaxis the prevention of thrombus formation. Treatment given in the management of animals predisposed to thromboembolism, such as cats with cardiac disease; usually utilizes aspirin, warfarin or antiplatet drugs, such as the thienopyridines.

thromboresistance [*throm"bo-re-zis'təns*] a function of intact endothelium contributed to by the production of a prostaglandin, prostacyclin, a potent inhibitor of platelet aggregation.

thrombosis [*throm-bo'sis*] formation, development, or presence of a thrombus. A thrombus may form whenever the flow of blood in the arteries or the veins is impeded. If the thrombus detaches itself

T-26: Jugular thrombophlebitis. The jugular vein has a large thrombus (arrow) attached to the wall at the site of prolonged catheterization.
From McGavin MD, Zachary J, Pathologic Basis of Veterinary Disease, 4th Edition. Mosby, 2006.

VetBooks.ir

T

from the wall and is carried along by the bloodstream, the clot is called an embolus. The condition is known as **embolism**. Because blood normally flows more slowly through the veins than through the arteries, thrombosis is more common in the veins than in the arteries. The effect of a thrombosis is engorgement of the obstructed vein, usually further aggravation of the thrombus formation, and edema of the local area drained by the vein. The clinical signs will depend on the location of the vessel, e.g. cerebrovascular, pulmonary.

caudal vena cava t. see **vena** caval thrombosis.

iliac t. see **iliac** artery thrombosis.

thrombospondin [*throm"bo-spon'din*] an osteoblast product which binds to connective tissues and serum proteins and binds calcium to hydroxyapatite and to osteonectin.

thrombostasis [*throm-bos'tə-sis*] stasis of blood in a part with formation of thrombus.

thrombosthenin [*throm"bo-sthe'nin*] a contractile protein present in platelets and instrumental in producing retraction of a blood clot.

thrombotic [*throm-bot'ik*] pertaining to or emanating from **thrombosis**.

t. meningoencephalitis see **hemophilosis**.

thromboxane [*throm-bok'sān*] an intermediate in the metabolic pathway of arachidonic acid, formed from prostaglandin endoperoxides, and released from suitably stimulated platelets; the unstable form, thromboxane A_2, is a potent inducer of platelet aggregation and constrictor of arterial smooth muscle.

thrombus [*throm'bəs*] an aggregation of blood factors, primarily platelets and fibrin with entrapment of cellular elements, frequently causing vascular obstruction at the point of its formation. The lesion and the syndrome produced by the thrombus depend on its location, e.g. pulmonary artery.

mural t. one attached to the wall of the endocardium in a diseased area.

obturating t. one which continues to grow distal to its site of attachment and the free end trails downstream with the current of blood.

occluding t. one that occupies the entire lumen of a vessel and obstructs blood flow.

parietal t. one attached to a vessel or heart wall.

saddle t. one formed at the terminal aorta and extending into the iliac arteries. Occurs most commonly in cats with iliac arterial thromboembolism. See **aortic** embolism.

throw 1. in the restraint of horses and cows, to **cast** (2) them. 2. when tying a knot, the action of making a loop and passing it around an object; commonly the suture material which has already been placed to commence a knot.

throw nets nets used in the capture and restraint of wild and zoo animals. A strong net which is flat when open but has a drawstring around its edge. It can be thrown over an otherwise unmanageable animal such as a seal, the drawstring pulled tight and the apex of the net and the drawstring end pulled tight in opposite directions.

throwback see **atavism**.

thrush [*thrush*] chronic, superficial, necrotic lesion of mucosa or epithelium. 1. stomatitis of the newborn caused usually by *Monilia* spp. See also **candidiasis**. 2. alimentary tract mycosis in birds usually associated with infection by *Monilia, Candida* spp. 3. a chronic disease of the horn of the sole of a horse's foot. *Fusobacterium necrophorum* is usually present and the smell is offensive. See also **candidiasis**.

t.-breast heart alternating strips of myocardium in cases of myocardial degeneration in which some of the strips appear more yellow than the others.

crop t. see thrush (2) (above).

frog t. see thrush (3) (above).

thrypsis [*thrip'sis*] a comminuted fracture.

thulium (Tm) [*thoo'le-əm*] a chemical element, atomic number 69, atomic weight 168.934. See Table 4.

thumb [*thum*] the radial or first digit of the hand; it has only two phalanges and is opposable to the four fingers of the hand. It is present in primates and a few other arborial (scansorial) animals. Called also pollex.

thumps [*thumps*] exaggerated expiratory movement and effort without necessarily any increase in respiratory rate nor evidence of dyspnea.

diaphragmatic t. see synchronous **diaphragmatic** flutter.

thoracic t. pumping respiration of pigs with pneumonic pasteurellosis, due possibly to pleuritis.

thunarphobia fear of thunder; a common behavior problem in companion animals.

thunderstorms a storm characterized by thunder and lightning caused by strong rising air currents; identified as agents of animal disease because of their involvement causing (1) spasmodic colic; (2) lightning strike; (3) injuries of cattle acquired in stampedes initiated by storms. As well, a cause of lost dogs and cats that flee in terror.

fear of t. see **thunarphobia**.

Thy thymine.

Thy-1 antigen a cell membrane molecule of thymus lymphocytes; also known as CD90.

Thygesen embryotome see **fetotome**.

thym(o)- word element. [Gr.] *thymus;mind, soul, emotions*.

thymectomize [*thi-mek'tə-mīz*] to excise the thymus.

thymectomy [*thi-mek'tə-me*] excision of the thymus.

-thymia word element. [Gr.] *condition of mind*.

thymic [*thi'mik*] pertaining to the thymus.

t. corpuscles acidophilic bodies in the thymic medulla with poorly defined function.

t. humoral factor see **thymosin**.

t. hypoplasia is the central lesion in **combined immune deficiency syndrome** of Arab foals and inherited **parakeratosis** of cattle, both inherited diseases.

t. inflammation see **thymitis**.

inherited t. deficiency see thymic hypoplasia (above).

t. lymphocyte see T **lymphocyte**.

thymicolymphatic [*thi"mĭ-ko-lim-fat'ik*] pertaining to the thymus and lymphatic nodes.

thymidine (Thy) [*thi'mĭ-dēn*] a nucleoside of DNA.

thymidine kinase (tk) gene a gene coding for thymidine kinase that is expressed in most mammalian cells and some viruses (herpes-, pox-viruses). Used as a selectable marker in that tk minus (tk^-) cells and viruses do not survive in medium containing hypoxanthine, aminopterin and thymidine (HAT medium); such cells cotransfected with a vector carrying a tk gene (tk+) can be rescued.

thymin [*thi'min*] former name for thymopoietin.

thymine [*thi'mēn*] a pyrimidine base in **deoxyribonucleic acid** (DNA).

thymitis [*thi-mi'tis*] inflammation of the thymus.

thymocyte [*thi'mo-sīt*] a lymphocyte arising in the thymus; a T lymphocyte.

thymokinetic [*thi"mo-ki-net'ik*] tending to stimulate the thymus.

thymol [*thi'mol*] a phenol obtained from thyme oil and other volatile oils or produced synthetically; used as a topical antifungal and antibacterial, and as an antimicrobial agent in trichloroethylene.

t. iodide a mixture of iodine derivatives of thymol, containing not less than 43% of iodine; mild antiseptic and fungicide.

thymoma [*thi-mo'mə*] thymic **lymphoma**.

thymopathy [*thi-mop'ə-the*] any disease of the thymus.

thymopoietin [*thi"mo-poi'ĕ-tin*] a polypeptide hormone secreted by the thymus, which induces the proliferation of lymphocyte precursors and their differentiation into T lymphocytes.

thymoprivic, thymoprivous [*thi"mo-priv'ik, thi-mop'rĭ-vəs*] pertaining to or resulting from removal or atrophy of the thymus.

thymosin [*thi'mo-sin*] a humoral factor secreted by the thymus, which promotes the maturation of T lymphocytes. See also **thymus**.

thymus [*thi'məs*] a primary lymphoid organ lying in the cranial mediastinum or in the neck or throat, (depending on the species), which reaches its maximum development during puberty and continues to play an immunological role throughout life, even though its function declines with age; essential to the regulation of immune responses generally and the development of cell-mediated immunity. Called also sweetbread.

t. atrophy leads to failure of the cell-mediated arm of the body's immunity.

thymus-derived originating in the thymus.

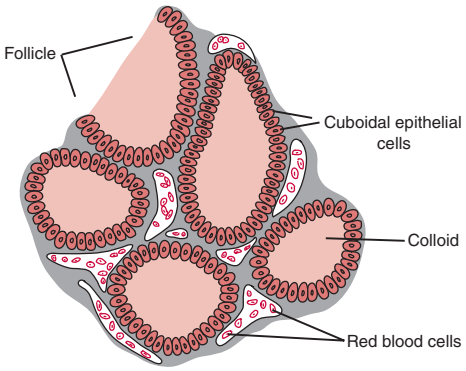
t.-d. lymphocytes see T **lymphocyte**.

Thynnascaris a genus of nematodes in the family Anasakidae. The adults parasitize fish.

T. aduncum occurs in fish.

T

thyratron switch [*thi'rə-tron*] a gas-filled triode used as a switch on an X-ray machine.
thyr(o)- word element. [Gr.] *thyroid*.
thyroadenitis [*thi"ro-ad"ə-ni'tis*] inflammation of the thyroid.
thyroaplasia [*thi"ro-ə-pla'zhə*] defective development of the thyroid with deficient activity of its secretion.
thyroarytenoid [*thi"ro-ar"ĭ-te'noid*] pertaining to the thyroid and arytenoid cartilages.
thyrocalcitonin [*thi"ro-kal"sĭ-to'nin*] calcitonin.
thyrocardiac [*thi"ro-kahr'de-ak*] pertaining to the thyroid and heart.
thyrocardiac disease see **thyrotoxic** heart disease.
thyrocele tumor of the thyroid gland; goiter.
thyrochondrotomy [*thi"ro-kon-drot'ə-me*] surgical incision of the thyroid cartilage.
thyrocricotomy [*thi"ro-kri-kot'ə-me*] incision of the cricothyroid membrane, the lower part of the fibroelastic membrane of the larynx.
thyroepiglottic [*thi"ro-ep"ĭ-glot'ik*] pertaining to the thyroid and epiglottis.
t. ligament connects the epiglottis to the thyroid cartilage of the larynx.
thyrogenic, thyrogenous originating in the thyroid.
thyroglobulin [*thi-ro-glob'u-lin*] 1. an iodine-containing glycoprotein of high molecular weight, occurring in the colloid of the follicles of the thyroid gland; the iodinated tyrosine moieties of thyroglobulin form the active hormones thyroxine and tri-iodothyronine. 2. a substance obtained by fractionation of thyroid glands from the pig, administered orally as a thyroid supplement in the treatment of hypothyroidism.
t. autoantibody (TgAA) used as a screening test to detect dogs with lymphocytic thyroiditis and at risk of developing hypothyroidism; the predictive value is debated.
thyroglossal [*thi"ro-glos'əl*] pertaining to the thyroid and tongue.
t. cyst developmental abnormality near the site of the thyroid diverticulum; may exist as a subepiglottic cyst, surrounded by thyroid follicular cells, embedded in the root of tongue; may cause inspiratory dyspnea and exercise intolerance.
t. duct vestigial canal of the epithelial outgrowth from the floor of the pharynx that develops into the thyroid gland. Parts of the duct and accessory thyroid tissue derived from it may become cystic or undergo neoplastic transformation.
thyrohyal [*thi"ro-hi'əl*] 1. pertaining to the thyroid cartilage and the hyoid bone. 2. the thyrohyoid bone.
thyrohyoid [*thi"ro-hi'oid*] 1. pertaining to the thyroid gland or cartilage and the hyoid bone. 2. the member of the chain of hyoid bones that articulates with both the thyroid cartilage and the basihyoid.
t. membrane the membrane connecting the thyroid cartilage to the hyoid bone.
thyroid [*thi'roid*] 1. resembling a shield. 2. the thyroid gland (see below) secreting thyroid hormones (see below). 3. a pharmaceutical preparation of cleaned, dried, powdered thyroid gland, obtained from those domesticated animals used for food by humans.
accessory t. an additional isolated thyroid gland, often small, or several such masses, located anywhere from the larynx to the diaphragm; it may be sufficient to supply the patient's need of thyroid hormone. Most common in dogs.
t. C cell see **C cell**.
t. cartilage the shield-shaped cartilage of the larynx.
t. diverticulum primordium of the thyroid gland; appears as an outgrowth of the foregut between the first two pharyngeal pouches. This tube of epithelial cells grows ventrally into mesenchyme; the tube becomes the thyroglossal duct, the tip divides into two lobes, the thyroid glands.
t. dysfunction see **hypothyroidism**, **hyperthyroidism**.
ectopic t. migration of thyroid diverticulum tissue to aberrant sites such as the thymus. These cause no apparent abnormality.
t. extract a pharmaceutical substance derived from thyroid glands, used in the treatment of hypothyroidism. See thyroid (3) (above).
t. function tests used to assess the functional capacity of the thyroid glands; most commonly employed in dogs and cats. Include plasma T_4, plasma T_3, free T_4 radioiodine uptake, and TSH response tests.
t. gland the largest of the **endocrine** glands, situated in the neck caudal to the larynx. It produces hormones (see below) that are vital in maintaining normal growth and metabolism. It also serves as a storehouse for iodine.



T-27: Microscopic appearance of the thyroid gland. From Guyton AC, Hall JE, Textbook of Medical Physiology, 10th Edition. Saunders, 2000.

t. hormones iodothyronines secreted by the thyroid gland, principally **thyroxine** (tetraiodothyronine, T_4) and **tri-iodothyronine** (T_3); derived from iodination of tyrosyl residues in thyroglobulin. The pharmaceutical names for T_4 and T_3 are levothyroxine and liothyronine, respectively. Regulate basal metabolic rate.
nodular t. hyperplasia see nodular **goiter**.
t. parafollicular cell see **C cell**.
t. peroxidase enzyme catalyzing the process of organification in the thyroid gland.
t. radioiodine uptake used as a thyroid function test but superseded these days by estimates of T_4 (thyroxine).
t.-stimulating hormone (TSH) see **thyrotropin**.
t. tumor mostly follicular adenomas in old-aged dogs, cats and horses; papillary adenomas are rare.
thyroidectomize [*thi"roid-ek'tə-mīz*] to subject to thyroidectomy.
thyroidectomy [*thi"roid-ek'tə-me*] surgical excision of the thyroid gland; indicated in the treatment of neoplasia or hyperfunction of the gland, although hyperthyroidism in cats is more likely to be treated medically.
thyroidism hyperthyroidism; also, a morbid condition due to excess doses of thyroid.
thyroiditis [*thi"roid-i'tis*] inflammation of the thyroid gland.
autoimmune t. see lymphocytic thyroiditis (below).
Hashimoto's t. see also **Hashimoto's disease**, lymphocytic thyroiditis (below).
immune-mediated t. see lymphocytic thyroiditis (below).
lymphocytic t. progressive cellular infiltration of the thyroid gland, predominantly by lymphocytes, and replacement by fibrous tissue, resulting in hypothyroidism, associated with the presence of autoantibodies against thyroglobulin, follicular cell microsomes, and a second colloid antigen. It occurs in dogs, particularly Beagles, obese (OS) chickens, buffalo rats and primates. The disease has some similarity to Hashimoto's disease of humans.
thyroidization [*thi"roid-ĭ-za'shən*] in renal disease that is characterized by severe proteinuria, the hyaline tubular casts may histologically resemble thyroid follicular colloid.
thyroidotomy [*thi"roid-ot'ə-me*] incision of the thyroid.
thyromegaly [*thi"ro-meg'ə-le*] goiter.
thyromimetic [*thi"ro-mi-met'ik*] producing effects similar to those of thyroid hormones or the thyroid gland.
thyroparathyroidectomy [*thi"ro-par"ə-thi"roi-dek'tə-me*] excision of the thyroid and parathyroids.
thyroprival, thyroprivic [*thi"ro-pri'vəl*] pertaining to, marked by, or due to deprivation or loss of thyroid function.
thyroprotein see **iodinated** casein.
thyroptosis [*thi"rop-to'sis, thi"ro-to'sis*] caudal displacement of a goitrous thyroid.
thyrosis any disease based on disordered thyroid action.
thyrotherapy [*thi"ro-ther'ə-pe*] treatment with preparations of thyroid.
thyrotomy [*thi-rot'ə-me*] 1. surgical division of the thyroid cartilage. 2. the operation of cutting the thyroid gland.
thyrotoxic [*thi'ro-tok"sik*] marked by toxic activity of the thyroid.
t. crisis a fulminating increase in all the clinical signs of thyrotoxicosis.
t. heart disease heart disease associated with hyperthyroidism, marked by atrial fibrillation, cardiac enlargement and congestive

VetBooks.ir

heart failure. Most commonly seen in association with hyperthyroidism in aged cats. Called also thyrocardiac disease.
t. storm thyrotoxic crisis.
thyrotoxicosis [*thi"ro-tok"sĭ-ko'sis*] a morbid condition due to overactivity of the thyroid gland.
thyrotrope [*thi'ro-trōp*] one of the basophils (beta cells) of the adenohypophysis, the granules of which secrete thyrotropin.
thyrotroph thyrotrope.
thyrotrophic hormone [*thi"ro-tro'fik*] thyroid-stimulating hormone, secreted from the pars distalis of the adenohypophysis.
thyrotrophin [*thi-rot'rə-fin*] thyrotropin.
thyrotropic [*thi"ro-tro'pik*] 1. pertaining to or marked by thyrotropism. 2. having an influence on the thyroid gland.
thyrotropin [*thi-rot'rə-pin*] a hormone secreted by the anterior lobe of the pituitary gland that has an affinity for and specifically stimulates the thyroid gland. Called also thyroid-stimulating hormone (**TSH**).
t. releasing hormone (TRH) a tripeptide produced in the hypothalamus and released into the hypothalamohypophyseal portal circulation to reach the adenohypophysis where it triggers the release of thyrotropin (thyroid-stimulating hormone; TSH). Called also TSH-releasing factor or hormone.
t. releasing hormone (TRH) stimulation test, response test measures serum concentrations of thyrotropin-stimulating hormone (TSH) before and after administration of TRH.
t.-stimulating hormone (TSH) stimulation test, response test measurement of serum concentrations of thyroid hormone(s) (T_3 and/or T_4) before and after the administration of TSH is a more reliable indicator of the functional capacity of the thyroid glands than single determinations and may distinguish between primary and secondary hypothyroidism.
thyrotropism affinity for the thyroid gland.
thyrotrops one of the five types of secretory cell found in the adenohypophysis; secrete thyroid-stimulating hormone.
thyroxine, thyroxin [*thi-rok'sin*] a hormone of the **thyroid** gland that contains iodine and is a derivative of the amino acid tyrosine. The chemical name for thyroxine is tetraiodothyronine (symbol, T_4); it is formed and stored in the thyroid follicles as thyroglobulin, the storage form. Thyroxine is released from the gland by the action of a proteolytic enzyme. T_4 is deiodinated in peripheral tissues to form tri-iodothyronine (T_3), which is the active form. Thyroxine acts as a catalyst in the body and influences a great variety of effects, including metabolic rate (oxygen consumption); growth and development; metabolism of carbohydrates, fats, proteins, electrolytes and water; vitamin requirements; reproduction; and resistance to infection. Thyroxine can be extracted from animals or made synthetically; it is used in the treatment of hypothyroidism and some types of goiter.
free t. (fT_4) the unbound, metabolically active fraction of thyroxine, which is a very small fraction of the total thyroxine.
free t. index (T_7) calculated from the values for T_4 and the T_3 uptake.
t.-binding globulin (TBG) most (99.95%) of the thyroxine in plasma is bound to globulin and a small amount bound to prealbumin.
t.-binding prealbumin bound to a small fraction of circulating T_4. This is the only known function of prealbumins.
L-t. see **levothyroxine**.
total t (tT_4 the concentration of free and bound thyroxine.
Thysaniezia a genus of cyclophyllidean cestodes in the family Thysanosomatidae.
T. giardi occurs in the small intestine of sheep, goat and cattle. Appears to be of little pathogenic significance. Called also *Helictometra giardi*.
Thysanosoma actinioides [*this"ə-no-so'mə*] a cyclophyllidean cestode in the family Thysanosomatidae found in the small intestine and biliary and pancreatic ducts of sheep, cattle and deer. Causes condemnation of livers and may cause unthriftiness. Called also fringed tapeworm.
Ti chemical symbol, *titanium*.
tiabendazole a benzimidazole effective against *Strongyloides* spp in dogs.
tiamulin a semi-synthetic derivative of **pleuromutilin**, effective against *Mycoplasma*, *Brachyspira* and *Haemophilus*. Also used as a feed additive and growth promotant in pigs. The fumarate is water-soluble and can be administered in drinking water.
Tibetan apso see **Lhasa apso**.
Tibetan mastiff a very large (180 lb), powerful dog with pendulous ears, thick, medium length coat that forms a ruff around the neck and shoulders and is profuse on the long tail. The breed is affected by an inherited hypertrophic neuropathy.
Tibetan spaniel a small (9–15 lb), active dog with short legs and a thick, silky coat that is short on the face but flat and of medium length on the body with feathering on the legs, tail and buttocks. The tail is carried over the back. The head is slightly domed with a medium length nose and a slightly undershot jaw.
Tibetan terrier a medium-sized (18–30 lb), muscular dog with a profuse, medium length coat that covers the face and body. The ears are pendulous and the thickly haired tail is carried over the back. The breed is affected by ceroid lipofuscinosis.
tibia [*tib'e-ə*] the inner and larger bone of the hindlimb between the stifle and the hock; it articulates with the femur and head of the fibula above and with the talus below. See also Table 10.
rotated t. a disease of young turkeys characterized by rotation of the shaft of the tibiotarsus of one leg causing the metatarsus to point laterally and the bird to assume a spraddle leg posture. Up to 15% of a flock may be affected.
t. valga a bowing of the leg in which the angulation is away from the midline of the body.
t. vara a bowing of the leg in which the angulation is toward the midline of the body; bowleg.
tibia sours taint in a ham around the tibia, a much commoner site for taint than the femur.
tibial [*tib'e-əl*] pertaining to the tibia.
t. crest a longitudinal prominence on the cranial border of the proximal tibia. Its proximal end (tibial tubercle) has a growth plate separate from the proximal tibia; hyperflexion injuries to the stifle may result in avulsion of this growth plate in dogs, seen in radiographs as a dorsal displacement of the tibial tubercle and patella.
caudal t. vein a venepuncture site in birds.
t. dyschondroplasia a disease of broiler chickens and turkeys caused by a combination of dietary and genetic factors and characterized by dyschondroplasia in the proximal end of the tibiotarsal bone. In badly affected birds the leg is bowed and pathological fractures occur.
t. hemimelia see inherited tibial **hemimelia**.
t. nerve block see tibial **block**.
t. nerve injury results in overflexion of the hock (dropped hock).
t. rotation see rotated **tibia**.
t. tarsal bone see **talus**.
t. compression test a test of cruciate ligament damage; with the femur fixed and stifle flexion prevented, force is applied to the tibia through pressure on the metatarsus.
tibialis [L.] *tibial*.
tibiofemoral [*tib"e-o-fem'ə-rəl*] pertaining to the tibia and femur.
tibiofibular [*tib"e-o-fib'u-lər*] pertaining to the tibia and fibula.
t. joint see Table 11.
tibiotarsal [*tib"e-o-tahr'səl*] pertaining to the tibia and tarsus.
tic [*tik*] a spasmodic twitching movement made involuntarily by muscles that are ordinarily under voluntary control. In dogs, the **myoclonus** associated with infection by distemper virus is sometimes called a tic or chorea.
-tic suffix meaning pertaining to.
ticarcillin a semisynthetic penicillin with an extended spectrum of activity; effective against *Pseudomonas aeruginosa*..
tick [*tik*] a blood-sucking arachnid parasites in the superfamily Ixodoidea. There are two types, hard (family Ixodidae) and soft (family Argasidae).
Argentine t. ***Margaropus winthemi***.
argasid t. soft-bodied ticks of the family Argasidae.
bird t's. see ***Haemaphysalis chordeilis***, ***Argas***.
black-legged t. see ***Ixodes***.
blue t. see ***Rhipicephalus*** *(Boophilus) decoloratus*.
bont t. see ***Amblyomma hebraeum***.
brown ear t. see ***Rhipicephalus appendiculatus***.
brown winter t. see ***Dermacentor nigrolineatus***.
California black-legged t. see ***Ixodes pacificus***.
castor bean t. see ***Ixodes ricinus***.
cattle t. any one of a large variety of tick species, the title being used locally to designate the preponderant species. Includes New Zealand cattle tick (*Haemaphysalis longicornis*), North

VetBooks.ir

American cattle tick (*Rhipicephalus (Boophilus) annulatus*), tropical cattle tick (*R. (B.) microplus*).
cayenne t. see ***Amblyomma*** *cajennense*.
t. collar a neck collar made of a PVC resin which releases particles of insecticide over a period of several months and aids in the control of tick infestations in companion animals.
dog t. varies with the country; includes American dog tick (*Dermacentor variabilis*); Australian dog tick (*Ixodes holocyclus*); British dog tick (*Ixodes canisuga*); brown dog tick (*Rhipicephalus sanguineus*); yellow dog tick (*Haemaphysalis leachi leachi*).
ear t. see ***Otobius*** *megnini*.
t. fever see **babesiosis**, **anaplasmosis**.
fowl t. see ***Argas*** *persicus*.
Gulf Coast t. see ***Amblyomma*** *maculatum*.
hard t. ticks of the family Ixodidae and members of *Ixodes*, *Margaropus*, *Hyalomma*, *Rhipicephalus*, *Haemaphysalis*, *Aponomma*, *Dermacentor*, *Amblyomma*, *Rhipicentor* spp. They have a hard chitinous shield on the dorsal surface of the body, on the entire back of the male but only the anterior portion of the female.
hedgehog t. see ***Ixodes*** *hexagonus*.
Lone Star t. see ***Amblyomma*** *americanum*.
moose t. see ***Dermacentor*** *albipictus*.
mouse t. ***Ixodes*** *muris*.
nonscutate t. see **soft** ticks.
Pacific Coast t. see ***Dermacentor*** *occidentalis*.
Pajaroello t. see ***Ornithodorus*** *coriaceus*.
t. paralysis the female of several species of ticks but most commonly *Ixodes* or *Dermacentor* spp. elaborates a salivary neurotoxin that typically causes an ascending flaccid paralysis in many animal species and humans but particularly in companion animals and young food animals. Affected dogs first develop weakness and paralysis of the hindlimbs, then forelimbs and ultimately respiratory paralysis. There is reversible myocardial depression leading to pulmonary edema and death unless the tick is removed and, in some cases, treatment with hyperimmune serum is given.
t. pyemia an infection of lambs caused by *Staphylococcus aureus*, predisposed by infection with *Anaplasma phagocytophilia*, and transmitted by the bites of ticks. Newborn lambs die of septicemia or develop signs of arthritis, meningitis or dermatitis. Called also staphylococcal pyemia.
rabbit t. ***Haemaphysalis*** *leporispalustris*.
red-legged t. see ***Rhipicephalus*** *evertsi*.
Rocky Mountain wood t. see ***Dermacentor*** *andersoni*.
rotund t. see ***Ixodes*** *kingi*.
scrub t. see ***Ixodes*** *holocyclus*.
seed t. larval form, the stage prior to the nymph.
sheep t. sheep ked. See ***Melophagus*** *ovinus*.
shingle t. see ***Dermacentor*** *albipictus*.
shoulder t. see ***Ixodes*** *scapularis*.
soft t., soft-bodied t. ticks lacking a dorsal shield or scutum; members of the family Argasidae, e.g. *Argas persicus*. Called also nonscutate.
spinose ear t. see ***Otobius*** *megnini*.
spotted fever t. ***Dermacentor*** *andersoni*.
t.-stained said of wool or fleece that is heavily discolored by the feces of sheep ked (*Melophagus ovinus*).
t. toxicosis see **sweating** sickness.
tropical bont t. ***Amblyomma*** *variegatum*.
tropical horse t. ***Dermacentor*** *nitens*.
variegated t. see ***Amblyomma*** *variegatum*.
t. vectors ticks act as vectors of protozoa, bacteria, viruses, rickettsia.
wallaby t. see ***Haemaphysalis*** *bancrofti*.
winter t. see ***Dermacentor*** *albipictus*.
wood t. see ***Dermacentor*** *andersoni*.
t. worry an all-embracing term to describe the debilitating effects of heavy tick infestations. Includes anemia, irritation by the ticks, local infection as a result of bites, secondary blowfly and screwworm infestation.
tick berry ***Lantana*** *camara*.
tick-bite fever ***Rickettsia*** *conori*.
tickborne fever an infectious disease of cattle and sheep in the temperate regions of Europe, caused by *Anaplasma phagocytophilum* (called previously *Rickettsia bovina* and *R. ovina* or *Cytoectes phagocytophila*), and transmitted by the tick *Ixodes ricinus*. The organism is a parasite of white blood cells and the disease is characterized by fever, polypnea and abortion. Infection impairs the immune system and predisposes tick pyemia, pneumonic pasteurellosis and louping ill.
central European t. fever a meningoencephalitis of humans caused by a flavivirus which is present in the milk of ruminants although the principal reservoir is the tick *Ixodes ricinus*.
ticking a coat color pigmentation pattern in which hairs of one color are distributed in small groups throughout the background color, e.g. Australian cattle dog. Called also speckling.
tickling sensation no evidence exists that animals experience a tickling sensation but it is assumed that they do.
ticlopidine [*ti-klo'pĭ-dēn*] an antiplatelet drug used in thrombotic diseases such as heartworm disease in dogs.
ticrynafen a diuretic, similar to the thiazide diuretics, but with greater uricosuric activity in humans. Called also tienilic acid (INN). Withdrawn from the market because of health risks.
t.i.d. [L.] *ter in die* (three times a day).
tidal volume [*tī'dəl*] the amount of gas passing into and out of the lungs in each respiratory cycle.
tide [*tīd*] a physiological variation or increase of a certain constituent in body fluids.
acid t. a temporary increase in the acidity of the urine that sometimes follows fasting.
fat t. the increase of fat in the lymph and blood following a meal.
postprandial alkaline t. the metabolic alkalosis that accompanies the active secretion of gastric acid following a meal.
tidemark undulating line that forms in the deep layer of the articular plate when growth of the bone ceases. It mineralizes but does not ossify. Called also blue line.
tie see **genital** lock.
tie and ride an event that combines trail running and endurance riding with the object to get all three team members (two humans and one horse) across a 20–100 mile cross-country course by alternating riding and running. The horse is tied to a tree or fence post while it waits for a runner to catch up.
tie-bush see ***Wikstroemia indica***.
tie-stall a stall just large enough to accommodate one animal which is usually tied in by a neckchain if it is a cow, or by a halter if it is a horse. Stall design can influence the incidence of foot injury, lameness, cow cleanliness and mastitis. See also **stall**.
tied-in a conformation defect in an animal in which a limb is perceptibly thinner at one point, e.g. tied-in below the knee, or below the hock.
Tiedmann's glands see **Bartholin's glands**.
tienilic acid ticrynafen.
Tiffanie a semi-longhaired breed of cats recognized in the UK; derived from the Burmese, but in a wide range of coat colors or patterns.
tigecycline [*ti"gə-si'klēn*] an antimicrobial in the glycylcycline classs of antibiotics, similar in structure to tetracyclines.
tigemonam a monobactam antibiotic used orally.
tiger (*Panthera tigris*) the large and powerful, yellow and black vertically striped cat, native to India, the Himalayas, East and Southeast Asia. Subspecies include Siberian tiger (*P. t. altaica*) and Bengal tigers (*P. t. tigris*). All are endangered species; they are illegally hunted for trophy skins and for body parts, which are used in traditional Chinese medicine.
t. heart the striped and mottled myocardium of young cattle affected by a malignant form of foot-and-mouth disease.
t. stripe see reticulated **leukotrichia**.
t. stripe colon the striking lesion of parallel lines of hemorrhages and congestion in the colon of cattle with rinderpest, acute mucosal disease and bovine malignant catarrhal fever. Called also zebra marks.
Tiger River disease listeriosis.
tight junction a cell junction in which there is no intercellular space between cell membranes and so is impermeable. See also cell **junction**.
tight-lip syndrome a congenital defect seen almost exclusively in Shar pei dogs in which there is inadequate development of the lower lip anterior vestibule. The lower lip curls over and may catch between the upper and lower incisors, canines or premolars and may entrap the mandible, thereby limiting normal growth and resulting in malocclusion unless surgically corrected at an early stage.

VetBooks.ir

TIL tumor-infiltrating lymphocytes.
Tilapia freshwater, tropical fish of the family Cichlidae; important in aquaculture.
T. macrocephala see **African** mouth brooder.
T. nilotica Nile tilapia; see ***Oreochromis niloticus***.
tilapia a common name for the large numbers of cichlid fish; important in aquaculture, particularly in Africa and Asia. Includes fish in the genera ***Tilapia***, ***Oreochromis*** and *Sarotherodon*.
tiletamine [*ti-let'ə-mēn*] a dissociative anesthetic agent, most commonly used in combination with zolazepam which provides better muscle relaxation and reduces the incidence of convulsions and muscle tremors.
Tilletia tritici [*tĭ-le'she-ə*] the fungus of wheat grain, called also wheat smut; the smut is thought to contain an unidentified toxin believed to cause glomerulonephritis and poor weight gain in pigs.
tilmicosin [*til-mi'kə-sin*] a macrolide with antibacterial and antimycoplasma activity. Cardiotoxicity is a risk with accidental self-injection.
timbo de Palmeira see ***Ateleia glazioviana***.
time [*tīm*] a measure of duration. See under adjectives for specific times, e.g. **bleeding** time.
developing t. for an X-ray film is about 3–5 minutes, but automatic processors complete the task in 90 seconds.
t. horizon the period until which the economic analysis under consideration applies.
t. series a distribution of data according to occurrence.
t.–space series a distribution of data according to the time and the place of occurrence.
timer [*tīm'ər*] the device on the X-ray machine that controls the period of exposure to the beam. It may be a simple clockwork, wind-back timer, or one of two electronic timers which are capable of fast and repeated exposures. Only electronic timers are allowed on modern machines.
timolol [*ti'mo-lol*] a β-adrenergic blocking agent with antihypertensive and antiarrhythmic properties. Also used topically to decrease aqueous humor production in the management of glaucoma.
Timor pony dark-colored pony, about 12 hands high, tough, wiry, agile. Originated in the Southeast Asian island of Timor.
timothy grass see ***Phleum pratense***.
tin (Sn) a chemical element, atomic number 50, atomic weight 118.69. See Table 4.
dibutyl t. dilaurate a cesticide used in poultry and cage birds. It is fed to chickens and is toxic if fed accidentally to calves. Causes tremor, diarrhea and convulsions.
tinct. tincture.
tincture [*tink'chər*] an alcoholic or hydroalcoholic solution prepared from an animal or vegetable drug or a chemical substance.
benzoin t., compound a mixture of benzoin, aloes, storax and tolu balsam in alcohol; used as a topical protectant.
iodine t. a mixture of iodine and sodium iodide in a menstruum of alcohol and water; used as an anti-infective for the skin.
tine [*tīn*] one of the branches of the antlers of so-called cervine deer such as red deer, wapiti, whitetail and sika. In contrast, deer with small or short branches have palmate antlers (moose, elk, fallow deer). Individual tines have been given special names, such as the brow tine, over the forehead, then bez and trez, to be followed by a cluster of three or more brances called the royals. 'Monarchs' are red deer stags with a total of a dozen tines, 'Imperials' with 14 or more. See also **antler**.
tinea [*tin'e-ə*] **ringworm**; a name applied to many different kinds of fungal infection of the skin, the specific type (depending on characteristic appearance, etiological agent and site) usually being designated by a modifying term. Often used in humans but uncommonly in animals.
t. nigra superficial phaeohyphomycosis.
t. versicolor a skin disease of humans in which infection by *Malassezia furfur* (*Pityrosporum orbiculare*) causes skin lesions which differ in color from surrounding, noninfected skin. A similar disease has been described on the udder of goats.
ting point therapy a modern variant of classic acupuncture, based on symptomatic point selection plus classic meridian concepts of traditional Chinese medicine, and used in the treatment of diseases of the lower limbs of horses.
tingible [*tin'jĭ-bəl*] stainable.
tinidazole [*ti-nid'ə-zōl*] an analog of metronidazole with a longer half-life but similar activity and uses.
tinnitus [*tin'ĭ-təs*] a noise in the ears, as ringing, buzzing or roaring.
objective t. one heard by others than the patient; reported in dogs and horses.
subjective t. one heard only by the patient; difficult to determine in animals.
-tion suffix meaning act or state of.
tiopronin [*ti-o'pro-nin*] a drug with properties similar to penicillamine; used in the treatment of cystine urolithiasis. Called also 2-mercaptopropionylglycine, thiopronine.
TIP translation-inhibitory protein.
tip [*tip*] 1. removal of the terminal 1–2 inches of horns in rams or cattle where they represent a risk to the animal from being caught in fences and the like, or to the people handling them. The horn at this point is insensitive and the operation can be performed without anesthetic. 2. outer extremity of a staple of wool.
hairy t. long, hairy fibers protrude beyond the tip of the wool staple; usually an example of non-selective breeding programs.
t. spraying spraying of an insecticide on the tip of the fleece anticipating its migration to deeper layers.
tipped pelvis see tipped **pelvis**.
tipping [*tip'ing*] an orthodontic procedure which forcibly pivots a tooth so that its crown is moved labially or lingually. Animals so treated should not be used for breeding.
tippy said of wool that has an open loose tip so that weather stain goes a long way down the staple. May be a natural defect or be the result of a long period of heavy rain.
tirefond [Fr.] an instrument like a corkscrew for raising depressed portions of bone.
tissue [*tish'oo*] a group or layer of similarly specialized cells that together perform certain special functions. For anatomically specific tissues see under their identifying titles, e.g. adipose, connective.
t. death see **necrosis**.
t. density the penetrability of tissue by X-rays, bone and tooth being most dense, blood and soft tissue the next, fat the next, and gas and air least.
t. edema an abnormal accumulation of tissue fluid.
t. factor see tissue **thromboplastin**.
t. fluid the extracellular fluid that constitutes the environment of the body cells. It is low in protein, is formed by filtration through the capillaries, and the excess drains away as lymph. See also **interstitial** fluid.
t. inhibitors inhibitors of fibrinolysis; present in placenta.
indifferent t. undifferentiated embryonic tissue.
t. necrosis fever fever caused by pyrogens released by necrotic pyrogens.
t. plasminogen activator see plasminogen **activator**.
t. reacting agent substances that have a poorly defined but advantageous local effect on tissues.
t. receptor site a cell receptor common to cells of a particular tissue.
t. residue residues of chemical substances that are unacceptable to local pure food legislation especially sulfonamides, estrogens, chlorinated hydrocarbons, heavy metals. These are thought or known to have a deleterious effect on people eating or drinking the relevant animal product. See also chemical food **residue**.
t. sensitivity the susceptibility of individual tissues to injury by X-ray. The injury may be by way of inflammation, necrosis or cessation of cell growth. Fast-growing tissues in which the cells have a high mitotic index are the most sensitive, especially gonads, germinative layer of skin and erythropoietic tissues.
soft t. tissue other than bone and cartilage.
supportive t's cartilage, connective tissue and bone.
t. therapy see **glandular therapy**.
t. typing identification of tissue types for purposes of predicting acceptance or rejection of grafts and organ transplants. The process and purposes of tissue typing are essentially the same as for blood typing. The major difference lies in the kinds of antigens being evaluated. White blood cells, particularly lymphocytes, are used for tissue typing. The acceptance of allografts depends particularly on the matching of MHC antigens. If the donor and recipient are not MHC identical, the allograft is rejected. See also **typing**.

tit sign a small projection on the lesser curvature of the stomach seen on radiographs of dogs with pyloric stenosis due to accentuation of a haustral pouch.

titanium (Ti) a chemical element, atomic number 22, atomic weight 47.90. See Table 4.

t. dioxide used in ointment or lotion to protect the skin from the rays of the sun.

titer the quantity of a substance required to react with or to correspond to a given amount of another substance.

agglutination t. the highest dilution of a serum which causes clumping of microorganisms or other particulate antigens.

titi see titi **monkey**.

titoki ***Alectryon*** *excelsus*.

titrate [*ti'trāt*] to analyze by titration, to neutralize.

titration [*ti-tra'shən*] 1. in chemistry, the determination of a given component in solution by addition of a liquid reagent of known strength until a given end point, e.g. change in color, is reached indicating that the component has been consumed by reaction with the reagent. 2. in serology, the serial dilution of serum, often in two- or 10-fold steps to determine the highest dilution that still contains detectable amounts of antibody. The reciprocal of that dilution is referred to as the antibody titer of that serum. 3. in microbiology, the serial dilution of a suspension of microorganisms; each dilution, usually in replicates of 4 or 5, is then inoculated onto a substrate such as an agar plate (bacteria) or into cell cultures or eggs (viruses) such that the number of organisms present in one or more of the higher dilutions can be accurately counted and used to infer the number of organisms in the original undiluted suspension.

Dean and Webb t. an obsolete test for measuring antibody in which varying dilutions of antibody are mixed with a constant quantity of antigen; antibody activity is determined by the dilution in which flocculation occurs most rapidly, i.e. the end point.

titre titer.

titrimetry [*ti-trim'ə-tre*] analysis by titration.

titubation [*tit"u-ba'shən*] the act of staggering or reeling; a staggering gait with shaking of the trunk and head, commonly seen in cerebellar disease.

Tl chemical symbol, *thallium*.

TLC tender loving care; thin-layer chromatography; total lung capacity.

TLI trypsin-like immunoreactivity.

Tm chemical symbol, *thulium*.

TME transmissible mink encephalopathy.

TMJ syndrome temporomandibular joint syndrome.

TMR total mixed ration.

TMTD tetramethylthiuram disulfide.

TNF tumor necrosis factor.

TNM tumor, nodes and metastases; a system of cancer staging (see TNM **staging**).

TNS transcutaneous neural stimulation.

to-and-fro system a closed-circuit, rebreathing system used in inhalation anesthesia. A canister of soda lime is interposed between the animal and the rebreathing bag. Fresh gas is fed into the system as close as possible to the animal.

toad [*tōd*] amphibians in the order Anura; they have thick, rough skin and produce venom in the parotid glands that is a deterrent to predators. True toads are in the genus ***Bufo***.

fire bellied t's. (*Bombina* spp.) very small, brightly colored toads; popular as aquarium or terrarium pets.

toadfish see **Diodontidae**, **Tetraodontidae**.

toados colloquial for toadfish.

toadstool name may derive from German *todstuhl* (for death seat); for poisonous toadstools see ***Ramaria*** and ***Clavaria***.

tobacco [*tə-bak'o*] the dried prepared leaves of ***Nicotiana*** *tabacum*, an annual plant widely cultivated which is the source of various pyridine alkaloids, the principal one being **nicotine**, a potent poison. Small animals ingesting cigarettes can be poisoned. Includes Burley tobacco (*N. tabacum*), coyote tobacco (*N. attenuata*), desert tobacco (*N. trigonophylla*), native (Australia) tobacco (*N. debneyi, N. suaveolens, N. megalosiphon*), tree tobacco (*N. glauca*), wild tobacco (*N. risticum*, Aztec tobacco).

Indian t. ***Lobelia*** *berlandieri*.

wild tree t. ***Solanum*** *mauritianum*.

tobacco-chewers sheep that have had their tongues bitten off or pulled out by foxes or crows when they were lambs. Difficulty in controlling the regurgitated cud causes the juices to run out through the commissures of the lips and stain the chin. They resemble humans who chew tobacco.

tobiano a color pattern of American Paint horses controlled by a dominant gene. White extends from the dorsal midline in a ventral direction; the limbs are usually white and the distal half of the tail black. One or both eyes may be blue or partially blue. Most of the head, and always the poll and ears, are black. See also **overo**.

tobosa grass *Hilaria mutica*, may cause poisoning when it is infested with *Claviceps cinerea*. Called also tobo grass.

tobramycin [*to"brə-mi'sin*] an aminoglycoside antibiotic, similar to kanamycin and neomycin, produced by cultures of *Streptomyces tenebrarius*. Less nephrotoxic than gentamicin.

tocainide [*to-ka'nīd*] an antiarrhythmic agent, similar to lidocaine, used in treating ventricular arrhythmias. No longer marketed in the USA.

tocalote, tocolote *Centaurea melitensis*.

toc(o)- word element. [Gr.] *parturition, labor*. See also words beginning *toko-*.

tocology the science of reproduction and the art of obstetrics.

tocolysis [*to-kol'ĭ-sis*] relaxation of the contracting pregnant uterus or undilated cervix to facilitate delivery in a dystocia or to briefly postpone parturition to ensure that surveillance is available.

tocolytic [*to"ko-lit'ik*] pertaining to tocolysis.

tocometer [*to-kom'ə-tər*] tokodynamometer.

tocopherol [*to-kof'ər-ol*] an alcohol isolated from wheat germ oil or produced synthetically; it has the properties of **vitamin E**.

α-t. vitamin E.

tocotrienol [*to"ko-tri'ə-nol*] one of the eight structurally related compounds which are grouped together as vitamin E; tocotrienol indicates a compound with an unsaturated side chain.

toe [*to*] a digit of the foot.

t. abscess see **foot** abscess.

t. crack see **sandcrack**.

curled t. see **curled toe paralysis**.

kicked-up t. a common injury in dogs, particularly racing Greyhounds, in which the deep flexor tendon is ruptured causing the affected claw to be elevated above others on the foot. Called also knocked-up toe.

t. out the limb is rotated slightly so that the toe points a little outward.

t. picking a vice of very young chickens that are hungry because feed supplies are inaccessible or inadequate. They pick each other's toes and start an outbreak of cannibalism.

sand t. see **sand** toe.

seedy t. see **seedy toe**.

splayed t. see **splayed digits**.

sprung t. a problem of racing Greyhounds characterized by dislocation of the proximal interphalangeal joint through rupture of the medial collateral ligament. The toe is displaced laterally, usually overriding the next toe.

toe-dragging stiff or tired gait in which unadequate flexing of the limbs causes dragging of the toes.

toe-pieces bars welded across the sole of a horseshoe behind the toe to give a draft horse grip on icy ground.

toelt, tölt a symmetric four-beat gait typical of the Icelandic horse; similar to the **rack**. Seen also in Faroe and Nordic ponies.

toenail [*to'nāl*] occur in some animals, e.g. elephants, instead of the more conventional claws.

Togaviridae [*to"gə-virĭ-de*] a large family of viruses; presently two genera are defined: *Alphavirus*, which contains arthropod-borne viruses that cause eastern, western and Venezuelan encephalitis, and *Rubivirus*, which contains rubella virus of humans and is not arthropod-borne. Members of both genera have similar physicochemical properties. They are enveloped (toga=cloak) about 60 nm diameter, contain a single-stranded, plus sense RNA genome, replicate in the cytoplasm of cells and mature by budding through cytoplasmic membranes. Flaviviruses, which are also arthropod-borne, were once included in the family, but are now a separate family, *Flaviviridae*.

togavirus [*to'gə-vi"rəs*] a virus in the family ***Togaviridae***.

Toggenburg a polled dairy goat, brown to mouse-gray in color, with white facial stripes and extremities.

toilet the cleansing and dressing of a wound.

T-28: Toggenburg goat. From Sambraus HH, Livestock Breeds. Mosby, 1992.

tok(o)- word element. [Gr.] *parturition, labor*. See also words beginning *toco-*.

tokodynagraph [to"ko-di'nə-graf] a tracing obtained by the tokodynamometer.

tokodynamometer [to"ko-di"nə-mom'ə-tər] an instrument for measuring and recording the expulsive force of uterine contractions.

tolazamide [tol-az'ə-mīd] a first generation sulfonylurea derivative, used as a hypoglycemic agent in the treatment of diabetes mellitus.

tolazoline [tol-az'o-lēn] an α-adrenergic receptor antagonist; a smooth muscle relaxant and peripheral vasodilator; used to reverse the effects of xylazine.

tolbutamide [tol-bu'tə-mīd] a first generation sulfonylurea derivative, used as an oral hypoglycemic agent in the treatment of diabetes mellitus.

t. tolerance test the blood glucose curve after an intravenous injection of the hypoglycemic agent tolbutamide parallels the curve in a glucose tolerance test.

tolerance [tol'ər-əns] the ability to endure without effect or injury.

drug t. 1. decreased susceptibility to the effects of a drug due to its continued administration. 2. the maximum permissible concentration of a drug in or on animal feed or food at any particular time relative to slaughter.

high-dose t. in immunology, that induced by the intravenous administration of high doses of aqueous proteins.

immunological t. specific nonreactivity of the immune system to a particular antigen, which is capable under other conditions of inducing an immune response. There is, under normal circumstances, tolerance to self-antigens; identical (monozygotic) twins and dizygotic cattle or sheep twins where there has been placental fusion and exchange of bone marrow stem cells are also tolerant of each other's tissues The administration of antigens either at high or low dose and infection with certain viruses during critical early stages of immunological development may also induce tolerance.

t. level the concentration of a drug or chemical permitted by law to be present in human food.

t. limits the numerical limits within which a previously identified proportion of values of a variable, or observations in a population, can be expected to occur.

low-dose t. that induced by repeated administration of low doses of the antigen.

oral t. that induced by oral administration of the antigen.

self-t. the non-reactivity of the immune system to self-antigens.

zero t. when no detectable amount of a chemical substance is permitted in human food.

tolerization the induction of tolerance, including the use of allergens, rendered nonimmunogenic, to stimulate formation of allergen-specific suppressor T lymphocytes that will suppress IgE synthesis; used in the treatment of atopy.

tolerogen [tol'ər-o-jən] an antigen that induces a state of specific immunological unresponsiveness to subsequent challenging doses of the antigen.

tolerogenesis [tol"ər-o-jen'ə-sis] induction of immunological tolerance.

tolfenamic acid a nonsteroidal anti-inflammatory drug used for management of acute and chronic pain in dogs and cats.

Tollwut [Ger.] *rabies*. Called also *wut*.

tolmetin [tol'met-in] a nonsteroidal anti-inflammatory analgesic, and antipyretic that causes gastrointestinal ulceration and hemorrhage in dogs.

tolnaftate [tol-naf'tāt] a topical antifungal agent.

tolonium chloride [to-lo'ne-əm] see **toluidine blue**.

toltrazuril a triazinon drug with anticoccidial and antiprotozoal activity.

Tolu balsam see **balsam**.

toluene [tol'u-ēn] the hydrocarbon C_7H_8 used as an anthelmintic against roundworms and hookworms in dogs. Vomiting occurs in some animals at even therapeutic dose rates. Overdosing causes incoordination and tremor soon after treatment, followed by diarrhea.

toluidine blue [tol-u'ĭ-din] an antiheparin compound, used also as a biological stain. It has a strong affinity for granules in mast cells. Called also tolonium chloride.

t. b. test a screening test for mucopolysaccharidosis, e.g. Hurler's syndrome; filter paper impregnated with toluidine blue turns blue when moistened with urine containing excessive amounts of chondroitin sulfuric acid.

***o*-toluidine test** a test for the presence of hemoglobin in feces or urine. The toluidine can be in solution, in a tablet or impregnated onto absorbent paper. A positive test is the development of a green to blue color.

tolyl [tol'əl] any of three univalent radicals $CH_3C_6H_4$ derived from toluene.

tom 1. intact male feline. 2. male turkey.

tomato ***Solanum lycopersicum*** (*Lycopersicum esculentum*).

t. pomace residual pulp after extraction of juice from tomato fruit.

tombstones a cellular phenomenon in pemphigus vulgaris; rows of basal cells of the epidermis remain attached to the basal membrane, reminiscent of rows of tombstones.

-tome word element. [Gr.] *an instrument for cutting, a segment*.

tomia the sharp ventral edges of the upper beak of birds.

tom(o)- word element. [Gr.] *a section, a cutting*.

tomogram [to'mo-gram] an image of a tissue plane or slice produced by tomography.

tomograph [to'mo-graf] an apparatus in which the X-ray tube and film are moved in opposite directions during an exposure so that only a single plane of tissue remains in focus during the exposure. Other planes above and below are blurred by the motion.

tomography [to-mog'rə-fe] any method that produces images of single tissue planes. In conventional radiology, tomographic images (body-section radiographs) are produced by motion of the X-ray tube and film or by motion of the patient that blurs the image except in a single plane. In reconstruction tomography (CT and PET) the image is produced by a computer program. Called also laminagraphy, planigraphy, body-section technique.

axial computed t. the e-ray tube rotates while the patient on the scan table is stationery. The scan table is then moved by a preprogrammed increment before the x-tube repeats a rotation.

computed transaxial t. see computed tomography (below).

computed t. (CT) a radiological imaging modality that uses computer processing to generate an image (CT scan) of the tissue density in a 'slice' about 0.5 inch thick through the patient's body. Called also computed axial tomography (CAT) and computed transaxial tomography (CTAT). Because CT is noninvasive and has high contrast resolution, it has replaced some radiographic procedures using contrast media. However, in some areas the injection of contrast further enhances the image. CT also has a better spatial resolution than scintillation imaging (about 1 mm for CT compared with 15 mm for a scintillation camera).

helical computed t. the scan table moves the patient through a fan of X-rays generated from a continuously rotating X-ray tube. This reduces data acquisition time.

multidetector array computed t. more than 1 detector array (4–256 detectors) is used allowing for greater patient area to be examined each rotation of the X-ray tube. This reduces patient scan time.

positron emission t./computed t. (PETCT) both positron emission tomography (PET) and computed tomography (CT) are incorporated onto a single gantry. Co-registration of images from both modalities improves the spatial resolution of PET images.

positron emission t. (PET) a combination of computed tomography and scintillation scanning. Natural biochemical substances or drugs tagged with a positron-emitting radioisotope are administered to the subject. After injection, the tagged substance (tracer) is localized in specific tissues like its natural analog. When

VetBooks.ir

T-29: (A) Dog in position for a brain computed tomogram. (B) Computed tomography (CT) control panel located outside the shielded CT room. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

the isotope decays, it emits a positron, which then annihilates with an electron of a nearby atom, producing two 511 keV gamma rays traveling in opposite directions 180° apart. When the gamma rays trigger a ring of detectors around the subject, the line between the detectors on which the decay occurred is stored in the computer. A computer program (reconstruction algorithm), like those used in computed tomography, produces an image of the distribution of the tracer in the plane of the detector ring. Most of the isotopes used in PET scanning have a half-life of only 2–10 minutes. Therefore, they must be produced by an on-site cyclotron and attached chemically to the tracer and used within minutes. Because of the expense of the scanner and cyclotron, PET is used only in research centers.

ultrasonic t. the ultrasonographic visualization of a cross-section of a predetermined plane of the body; see B-mode **ultrasonography**.

-tomy word element. [Gr.] *incision, cutting.*

ton a measure of weight or mass. Includes short (or USA) 1 ton=2000 lb, long (or UK) 1 ton=2240 lb, and metric ton=10^3 kg. See also **tonne**.

tone [*tōn*] 1. normal degree of vigor and tension; in muscle, the resistance to passive elongation or stretch. 2. a healthy state of a part; tonus. 3. a particular quality of sound or voice.

tongs [*tongs*] long-handled, about 3 feet, shaped like pincers with knobs on the ends of the grasping blades. Applied by standing behind the subject in a confined space and closing the jaws to grasp the animal's head just below the ears. Used for restraint of pigs and similarly built animals up to about 100 lb body weight. See also **nose** tong.

tongue [*tung*] a muscular organ on the floor of the mouth; it aids in chewing, swallowing, and is the location of organs of **taste**. The taste buds are located in the papillae that project from the upper surface of the tongue.

t. abscess as well as true abscesses there are pseudoabscesses, common in companion birds, which are accumulations of inspissated, keratinized, epithelial debris, caused usually by a nutritional deficiency of vitamin A.

bifid t. a tongue with a lengthwise cleft.

bird t. see **microglossia**.

black t. see **blacktongue**.

burr t. physical injury to tongue by foreign bodies especially plant awns and burrs.

cleft t. bifid tongue.

coated t. one covered with a whitish or yellowish layer consisting of desquamated epithelium, debris, bacteria, fungi, etc.

curled t. a deformity of the tongue in young turkey poults caused by a ration composed of finely ground feed fed as a dry powder. Feeding the same ration as a mash prevents the disease.

t. cyst see **thyroglossal** cyst.

t. deformity the tongue may be shrunken because of prior inflammation, the tip may have been torn off, e.g. in lambs by predators. There is difficulty in prehending food and in managing in the mouth so that saliva and ruminal juices drool down the chin staining skin. Called tobacco chewers.

t. edema caused by local obstruction to venous blood flow, most dramatically displayed in a fetus presented anteriorly but delayed in parturition because of incompatibility in size between it and the birth canal, or bee or other hymenoptera sting.

t. frenulum see lingual **frenulum**.

furrowed t. a tongue with numerous furrows or grooves on the dorsal surface, often radiating from a groove on the midline.

geographic t. a tongue with denuded patches, surrounded by thickened epithelium.

hairy t. one with the papillae elongated and hairlike.

t. hypertrophy an occasional congenital anomaly in pigs.

t. inflammation see **glossitis**.

inherited smooth t. a congenital defect in cattle characterized by the absence of papillae on the dorsum of the tongue, hypersalivation, poor haircoat and illthrift. Called also epitheliogenesis imperfecta lingua bovis.

lolling t. one that protrudes from the mouth, usually to one side. Seen in some short-nosed dogs and as a vice in horses.

t. lyssa see **lyssa** (2).

t. paralysis see **glossoplegia**.

t. protrusion caused by paralysis (hypoglossal nerve dysfunction), *Phalaris* spp. poisoning, swelling, e.g. edema, laceration.

t. rolling a vice in housed cattle. The animal rolls its tongue around in its half-opened mouth and may partially swallow it.

short t. syndrome squamous metaplasia of the mucus glands of the tongue in frogs, together with similar changes in the urinary bladder and kidney; caused by vitamin A deficiency.

split t. may be congenital or the result of injury to the tongue.

timber t. wooden tongue.

t. vice see tongue rolling (above).

wooden t. see **actinobacillosis**.

t. worm see ***Linguatula serrata***.

tongue-tie [*tung'ti*] abnormal shortness of the frenulum of the tongue, resulting in limitation of its motion; called also ankyloglossia. Occurs in dogs.

tonic [*ton'ik*] 1. producing and restoring normal tone. 2. characterized by continuous tension. 3. a patent medicine dedicated to the restoration of normal 'tone' to bodily functions generally. Usually a pharmaceutical rag-bag of stimulants, aromatics and alcohol, the paramount example of polypharmacy.

t.–clonic see **clonic**–tonic.

t. convulsion see tonic **seizure**.

t. neck response a postural reaction in which extension of the head and neck causes extension of the forelimbs in a normal dog or cat.

t. seizure see tonic **seizure**.

tonicity [*to-nis'i-te*] the state of tissue tone or tension; in body fluid physiology, the effective osmotic pressure equivalent.

tonification gentle stimulation of the acupuncture point; compare with sedation of it.

t. points acupuncture points used to increase or stimulate energy flow along a meridian or to stimulate an organ.

tonin an enzyme found in many tissues; can generate angiotensin II and bradykinin from their precursors; it appears to sustain blood pressure.

Tonkinese a cat breed derived from crossing the Burmese and Siamese; the build is intermediate between the two. They have the points of Siamese and coat color of Burmese. The eyes are aqua color.

tonnabossie see ***Pavetta***.

tonne measure of weight or mass; 1 tonne=1000 kg. Called also metric ton. See also **ton**.

ton(o)- word element. [Gr.] *tone, tension.*

tonoclonic [*ton"o-klon'ik*] both tonic and clonic; said of muscular spasms. See also tonic–clonic **seizure**.

tonofibril [*ton'o-fi"bril*] one of the fine fibrils in epithelial cells, thought to give a supporting framework to the cell.

tonogram [*to'no-gram*] the record produced by tonography.

tonograph [*to'no-graf*] a tonometer that measures change in intraocular pressure over time.

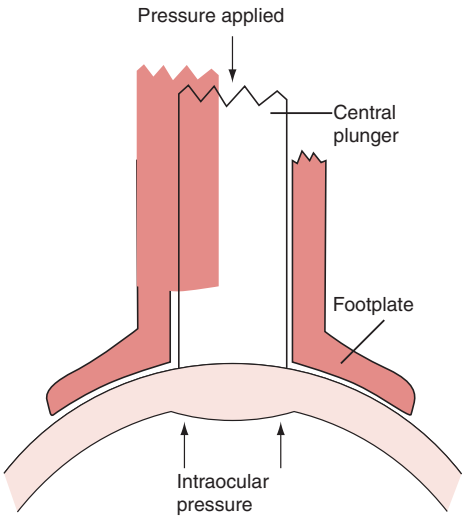
tonography [*to-nog'rə-fe*] the recording of changes in intraocular pressure due to sustained pressure on the eye, and thereby an estimate of the facility of outflow of aqueous humor from the anterior chamber of the eye..

carotid compression t. a test for occlusion of the carotid artery by measuring ocular pressure and pulse before, during, and after the proximal portion of the carotid artery is compressed by the fingers.

tonometer [*to-nom'ə-tər*] an instrument for measuring tension or pressure, especially intraocular pressure.

applanation t. instrument for estimating intraocular pressure based upon the force required to flatten or applanate an area of cornea. Includes the MacKay–Marg, Halberg, Dräger, Tono-Pen and Goldmann tonometers.

indentation t. instrument for estimating intraocular pressure based upon the pressure required to indent the cornea; an example is the Schiøtz tonometer.



T-30: Principles of the tonometer.
From Guyton AC, Hall JE, Textbook of Medical Physiology, 10th Edition. Saunders, 2000.

rebound t. instrument for estimating intraocular pressure based upon the force with which a small object propelled onto the cornea rebounds from it; an example is the TonoVet.

tonometry [*to-nom'ə-tre*] measurement of tension or pressure, e.g. intraocular pressure. See also **tonometer**.

digital t. estimation of the degree of intraocular pressure by pressure exerted on the eye by the finger of the examiner. Too inaccurate to be clinically useful.

tonoplast the limiting membrane of an intracellular vacuole, the vacuole membrane.

tonoscope 1. an apparatus for rendering sound visible by registering the vibrations on a screen. 2. a device for examining the head or brain by means of sound. 3. tonometer.

tonsil [*ton'sil*] 1. a small mass of lymphoid tissue, especially that found in close association with the mucous membrane of the throat; generally used alone to designate the palatine tonsil. Other structures referred to as tonsils are the cecal, lingual, esophageal, paraepiglottic, pharyngeal and tubal lymphoid aggregations. 2. a small mass of tissue.

cecal t. the accumulated mass of lymphoid tissue in the wall of cecum especially the proximal segment of the avian cecum.

cerebellar t. a rounded mass forming part of the cerebellum on its inferior surface.

esophageal t. large volume of lymphoid tissue in the caudal segment of the duck's esophagus.

follicular t. a tonsil bearing numerous invaginations of its surface epithelium (fossulae) each surrounded by lymphoid tissue to form a follicle, as in the palatine tonsils of cattle or the lingual tonsils of the horse.

lingual t. diffuse collection of lymphoid tissue near the tongue root of most mammals.

palatine t. tonsils found on the ventrolateral border of the soft palate, between the palatoglossal arches and the glossopharyngeal arches, which are large and housed in a tonsillar sinus in dogs and cats, are absent from the pig and are follicular in ruminants and the horse.

T-31: Schiøtz tonometer.
From Maggs DJ, Miller PE, Ofri R, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2008.

paraepiglottic t. a collection of lymphoid tissue craniolateral to the epiglottic base.

pharyngeal t. a collection of lymphoid tissue in the roof of the nasopharynx in pigs.

soft palate t. lymphoid tissue within the soft palate; principal tonsils in pigs in which it forms twin smooth patches of mucosa.

tubal t. the lymphoid tissue clustered close to the pharyngeal orifice of the auditory tube.

tonsillar [*ton'sĭ-lər*] pertaining to or emanating from **tonsil** (1).

t. inflammation see **tonsillitis**.

tonsillectomy [*ton"sĭ-lek'tə-me*] excision of tonsils, most commonly performed in dogs.

tonsillitis [*ton"sĭ-li'tis*] inflammation and enlargement of a tonsil, especially the palatine tonsils.

follicular t. tonsillitis especially affecting the crypts.

parenchymatous t. that affecting the whole substance of the tonsil.

pustular t. a variety characterized by formation of pustules.

tonsillolith [*ton-sil'o-lith*] a calculus in a tonsil.

tonsillotomy [*ton"sĭ-lot'ə-me*] incision of a tonsil.

tonus [*to'nəs*] tone or tonicity; the slight, continuous contraction of a muscle, which in skeletal muscles aids in the maintenance of posture and in the return of blood to the heart.

tooth [*tōōth*] pl. *teeth*; one of the small, bonelike structures of the jaws for the biting and mastication of food. See also **dental**, **teeth**.

embedded t. one that has a covering of soft tissue remaining when fully erupted. Can appear to be unerupted.

t. fracture may involve injury to the enamel, cementum or dentin of crown or roots. Uncomplicated frature of the crown may require only smoothing of the surfaces and sealing of the dentin tubules. Complicated fractures are those in which the pulp is exposed, requiring endodontic treatment.

fusion t. two separate tooth buds join; may be a single tooth or two joined only at the roots.

impacted t. one that is not completely erupted and has a covering of bone or another tooth.

dilacerated t. a distorted or malformed tooth.

t. mobility an indicator of dental health; a measurement included in dental charting.

peg t. a small pointed tooth with one cusp.

t. resorption the resorption of the tooth root hard tissue by odontoclasts. It may involve one, several or all teeth and be initiated by trauma, periapical disease, pressure from adjacent neoplasm (benign or malignant), some forms of endodontic treatment, drugs or systemic disease. See feline **odontoclastic** resorptive lesions.

toothbrush technique see **Mackenzie brush technique**.

Toowoomba canary grass ***Phalaris*** *aquatica*.

top continuous band of combed parallel wool fibers which have not yet been twisted.

topcoat the coarse, outer layer in the typical haircoat of dogs, composed mainly of guard **hairs**. This may predominate to the exclusion of the finer, soft undercoat in some breeds.

topcross progeny resulting from the mating of animals belonging to different families within a breed.

topcrossbred progeny resulting from the mating of inbred males to non-inbred females of another breed.

tophaceous [*to-fa'shəs*] gritty or sandy; pertaining to **tophi**.

tophus [*to'fəs*] pl. *tophi* [L.] 1. a chalky deposit of sodium urate occurring in **gout**; tophi form most often around the joints in cartilage, bone, bursae and subcutaneous tissue. Reptiles overfed in cool weather are particularly prone. 2. dental calculus.

topi (*Damaliscus lunatus*) medium-sized, short-horned, East African antelope.

topical [*top'ĭ-kəl*] pertaining to a particular area, as a topical antiinfective applied to a certain area of the skin and affecting only the area to which it is applied.

t. agent a pharmaceutical preparation for topical application.

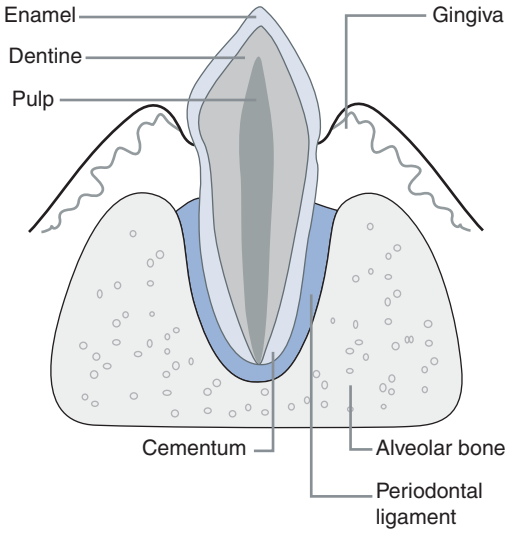
topincross progeny resulting from the mating of inbred males to non-inbred females of the same breed.

topiramate an anticonvulsant drug.

topline the top line of the animal as seen from the side at a distance of 10 feet or more. The general predilection is for the neat and tidy, straight topline.

topknot in dogs, a distinctive tuft or growth of hair on top of the head; characteristic of Dandie Dinmont terriers and Irish water spaniels.

VetBooks.ir



T-32: Basic anatomy of the tooth and periodontium. From Gorrel C, Small Animal Dentistry. Saunders, 2008.

top(o)- word element. [Gr.] *particular place or area*.
topmaker a commercial wool processor specializing in the manufacture of tops for sale to spinners.
topminnow see ***Gambusia***.
topographic [*top"o-graf'ik*] describing or pertaining to special regions, especially as they relate to a particular surface.
topography [*to-pog'rə-fe*] a description of a region or a special part of the body, especially of the mutual relationships of adjacent structures.
topoisomerase [*to"po-i-som'ə-rās*] an enzyme involved in DNA replication that introduces a single-strand nick in the DNA enabling it to swivel and thereby relieve the accumulated winding strain generated during unwinding of the double helix.
toponarcosis local anesthesia.
topping mowing the top, rank growth on an overgrown pasture to provide a more palatable and nutritious supply of feed.
toro de lidia [Span.] **fighting bull** breed of beef cattle.
torocyte a bowl-shaped erythrocyte with a sharply defined central pallor ('punched out') and densely staining periphery. Easily confused with codocytes, but an artifactual change. Called also a doughnut cell.
Torovirus a genus in the *Coronaviridae* family that includes Berne virus, recovered from horses in Switzerland, and Breda virus, recovered from diarrheic calf feces in the USA. Virions are enveloped and contain an elongated helical nucleocapsid with a single-stranded negative sense RNA genome. The capsid is bent into an open torus or doughnut-shaped structure.
torpedo fusiform swellings of proximal axonal segments of cerebellar Purkinje cells in cases of perennial ryegrass mycotoxicosis and some forms of storage disease.
torpid [*tor'pid*] not acting with normal vigor and accuracy.
torpor [*tor'por*] [L.] *sluggishness*.
torque [*tork*] a rotatory force.
Torrymeter an instrument for estimating freshness of meat. The estimates are based on changes in the dielectric properties of the meat as it ages.
torsalo grub larvae of *Dermatobia hominis*.
torsion [*tor'shən*] 1. the act of twisting, e.g. of an artery in hemostasis. 2. the state of being twisted. For specific torsions see **abomasal**, **cecal**, **colonic**, **gastric**, **liver**, **mesenteric**, **splenic**, **testicular**, **uterine**.
torsiversion [*tor"si-vur'zhən*] turning of a tooth on its long axis out of normal position.
torso the body, exclusive of the head and limbs.
torticollis [*tor"ti-kol'is*] wryneck, a contracted state of the cervical muscles, producing torsion of the neck. The deformity may be congenital, or secondary to pressure on the accessory nerve, to inflammation of tissues in the neck, or to muscle spasm.
tortipelvis [*tor"ti-pel'vis*] distortions of the spine and hip produced by a disorder marked by irregular muscular contractions of the trunk and extremities.
tortoise land turtles in the family Testudinidae; characterized by a domed carapace and thick legs with non-webbed feet. See also **turtle**.
tortoiseshell a coat color in cats consisting of a mixture of black and shades of red to yellow, usually broken into large patches. The color can be found in a variety of cats, both long- and shorthaired, and specific breeds, such as Burmese. Tortoiseshell-and-white is another variety, called calico in the USA and chintz in the United Kingdom. Because the genes for black and orange (including shades from red to yellow) are carried on an X chromosome, but not the same one, only females can carry both colors. Males from similar breeding are either orange or black. There are isolated examples of tortoiseshell or tortoiseshell-and-white male cats, but almost all are sterile due to the chromosomal abnormality of XXY. These are considered models of the human condition, **Klinefelter's syndrome**. Rarely, the phenomenon may be attributed to somatic mutations, crossing over of chromosomes or mosaicism.
Torula [*tə-roo'lə*] former name for ***Cryptococcus***.
toruli [*tor'u-li*] small elevations, papillae.
t. tactiles small tactile elevations associated with special guard hairs scattered on the skin of cats and dogs.
toruloid knotted or beaded, like a yeast cell.
Torulopsis a genus of ascomycetous yeasts, now obsolete. Species are now classified as *Candida, Cryptococcus, Histoplasma,* or *Rhodotorula*.
T. glabrata see ***Candida glabrata***.
torulopsosis infection by ***Torulopsis***.
torulosis see **cryptococcosis**.
torulus [*tor'u-ləs*] pl. *toruli* [L.] *a small elevation*.
torus [*tor'əs*] pl. *tori* [L.] a swelling or bulging projection; a pad.
carpal t. chestnut on the leg of a horse; the stopper pad of a dog. Called also carpal pad.
t. digitales digital pads on the feet of dogs, cats and other species with paws.
t. corneus bulb of the heel in ungulates.
t. linguae the eminence on the dorsum of the tongue in ruminants.
t. metacarpal, t. metatarsal metacarpal pads, metatarsal pads.
t. pyloricus a fleshy protuberance at the pylorus of some species such as ruminants and pigs, that projects into the lumen of the pyloric canal.
tarsal t. chestnut on the leg of a horse. Called also tarsal pad.
t. ungulae the pad of the hoof that in horses is made up of the frog (*cuneus ungulae*) and the digital cushion (*pulvinus digitalis*).
tosylate [*to'sə-lāt*] USAN contraction for *p*-toluenesulfonate.
total body water includes the intracellular water and the extracellular water, the latter consisting of the interstitial or tissue fluid and the intravascular fluid or plasma. The extracellular fluids also contain the transcellular fluids that are formed by active transport processes and include saliva, cerebrospinal fluid, and the fluids of the eye and the secretory glands and so on. It may be ingested water or water produced by the body's metabolic processes (metabolic water).
total digestible nutrients (TDN) a method of expressing the energy value of a feed. Estimated as follows:

$$\%\text{TDN} = \frac{\text{DCP} + \text{DCF} + \text{DNFE} + (\text{DEE} \times 2.25)}{\text{feed consumed} \times 100}$$

where DCP=digestible crude protein, DCF=digestible crude fat, DNFE=digestible nitrogen-free extract, DEE=digestible ether extract. One pound of TDN=2000 kcal of digestible energy.
total frequency the number of observations in a set of data.
total intravenous feeding the only sustenance the patient gets is in solution via an intravenous device.
total milk solids butter fat, casein, lactose, minerals.
total parenteral nutrition see parenteral **nutrition**.
total peripheral resistance a measure of the total resistance to blood flow provided by the entire vascular system.
total regional flow flow rate for a local area, e.g. a specific organ; depends largely on the resistance provided by the organ's vasculature, itself dependent on the lengths of the vessels and their diameters.
total solids meter refractometer.
total worm count see worm **count**.

VetBooks.ir

totipotential [to"ti-po-ten'shəl] exhibiting totipotency; characterized by the ability to develop in any direction; said of single cells that can give rise to an entire organism, as seen in the zygote.

toucan a bizarre bird with an enormous brightly colored beak. It is insectivorous and a member of the woodpecker group. There are several genera, e.g. *Ramphastos* and *Pteroglossus* in the order Piciformes.

touch [tuch] 1. the sense by which contact of an object with the skin is recognized. 2. palpation with the finger. Touch is actually not a single sense, but several. There are separate nerves in the skin to register heat, cold, pressure, pain and touch. These thousands of nerves are distributed unevenly over the body, so that some areas are more responsive to cold, others to pain, and others to heat or pressure. Each of these types of nerves has a different structure at the receiving end. A touch nerve has an elongated bulb-shaped end, and a nerve responsive to cold a squat bulb; the nerve that registers warmth has what looks like twisted threads, and the nerve for deep pressure has an egg-shaped end. Pain receptors have no protective sheath.

t. receptors see **sense**.

Toulouse a gray goose, with white underparts and orange legs and beak.

tourniquet [toor'nĭ-kət] a device for compression of an artery or vein, most commonly used in companion animals to facilitate obtaining blood samples or giving intravenous injections.

Rumel t. one constructed of ligature doubled back through a tube, with the exposed loop used to temporarily occlude large vascular structures.

touting the making of personal representations by a veterinarian to persons who are not clients in an attempt to solicit their business.

Touton giant cell [too'ton] large multinucleated cells characteristic of xanthomatous lesions. The cells are usually filled with lipid.

tovero a coat color pattern of the American Paint horse. There is dark pigmentation around the ears, poll region, around the mouth and spots on the chest, neck, flanks and base of tail. One or both eyes are blue.

towel sterilizable piece of cloth with good water absorbing capacity used to mop up, as a temporary instrument store at a surgical site, as a local drape.

t. clamps see towel **forceps**.

toxaemia see **toxemia**.

toxalbumin a class of directly cytotoxic proteins (lectins) found in plants and snakes; plant toxalbumins, concentrated in seeds, occur in *Abrus precatorius* (abrin), *Adenia digitata* (modeccin), *Ricinus communis* (ricin), *Robinia pseudoacacia* (robin) and other plants.

toxaphene [toks'ə-fēn] an insecticide. See **chlorinated hydrocarbons**.

toxascariasis disease caused by infestation with *Toxascaris* spp.

Toxascaris a genus of roundworms in the family Ascarididae.

T. leonina found in the small intestine of dog, cat, fox and wild carnivora. Causes toxascariasis.

toxemia [tok-se'me-ə] 1. the condition resulting from the spread of bacterial products (toxins) by the bloodstream. 2. a condition resulting from metabolic disturbances. Clinically there is depression, lethargy, separation from the group, reduced appetite, slow growth, poor production, low fecal output, weak pulse of normal rate, hemic murmur, weakness, albuminuria. There may be localizing signs such as pressure by an abscess. See also **toxemic** shock.

T-33: Toulouse geese. From Sambraus HH, Livestock Breeds. Mosby, 1992.

alimentary t. toxemia due to absorption from the alimentary canal of chemical poisons generated therein; a form of autointoxication.

pregnancy t. see **pregnancy** toxemia.

toxemic [tok-se'mik] emanating from or pertaining to **toxemia**.

t. agalactia see **mastitis–metritis–agalactia**.

t. jaundice a complex of diseases in sheep including phytogenous chronic copper poisoning in which copper accumulation is fostered by plants with a high copper to molybdenum ratio, hepatogenous chronic copper poisoning resulting from ingestion of plants that cause hepatic damage that results in copper accumulation in the liver. The clinical signs include jaundice, toxemia, and possibly severe anemia.

t. shock caused by the presence of large quantities of potent toxins in the bloodstream. They cause peripheral vasodilatation and a precipitate fall in blood pressure accompanied by mucosal pallor, hypothermia, tachycardia and muscle weakness, e.g. in coliform toxicosis.

toxic [tok'sik] poisonous; pertaining to poisoning.

t. shock syndrome see **toxemic** shock.

toxicant [tok'sĭ-kənt] a chemical substance that, in relatively small amounts, is capable of poisoning.

toxicity [tok-sis'ĭ-te] the characteristic or quality of being poisonous, especially the degree of virulence of a toxic microbe or of a poison. See also **toxicosis**.

t. rating includes slightly toxic (with an oral LD_{50} in rats of 5000–15000 mg/kg) up to supertoxic (with an LD_{50} of less than 5 mg/kg).

toxic(o)- word element. [Gr.] *poison, poisonous*.

Toxicodendron plant genus in the family Anacardiaceae; contain urushiols and cause a serious contact dermatitis in humans and dogs; includes *T. diversilobum* (*Rhus toxicodendron*, *R. diversiloba*, western poison oak), *T. quercifolium* (*R. quercifolia*, eastern poison oak), *T. radicans* (*R. toxicodendron*, *R. radicans*, poison ivy), *T. vernix* (*R. vernix*, poison sumac, poison elder).

toxicodynamics the physiological mechanisms by which toxins are absorbed, distributed, metabolized and excreted.

toxicogenic [tok"sĭ-ko-jen'ik] producing or elaborating toxins.

toxicoid [tok'sĭ-koid] resembling a poison.

toxicoinfectious botulism see wound **botulism**.

toxicologist [tok"sĭ-kol'ə-jist] a specialist in toxicology.

toxicology [tok"sĭ-kol'ə-je] the science or study of poisons.

developmental t. abnormalities of development caused by exposure to deleterious agents; embryotoxicity.

genetic t. errors in the transmission of genetic information induced by a toxic agent; mutagenesis.

toxicopathy [tok"sĭ-kop'ə-the] toxicosis.

toxicopexy [tok'sĭ-ko-pek"se] the fixation or neutralization of a poison in the body.

toxicophidia [tok"sĭ-ko-fid'e-ə] venomous serpents collectively.

Toxicoscordion see ***Zigadenus***.

toxicosis [tok"sĭ-ko'sis] any disease condition due to poisoning. See also **poisoning** and under the titles of individual toxins. Compare with **toxicity**.

toxidrome [tok'sĭ-drōm] a set of clinical signs that suggest a specific class of poisoning.

toxiferous [tok-sif'ər-əs] conveying or producing a poison.

toxigenic [tok"sĭ-jen'ik] caused by or producing toxins.

t. diarrhea see secretory **diarrhea**.

toxigenicity [tok"sĭ-jə-nis'ĭ-te] the capacity to produce toxins.

toxin [tok'sin] a poison, especially a protein or conjugated protein produced by certain animals, some higher plants and pathogenic bacteria. *Antigenic toxins*, produced by bacteria or helminths, stimulate production of antitoxins. Exotoxins are produced by bacteria and diffuse into surroundings, e.g. tetanus toxin, or can be ingested preformed, e.g. botulinum toxin. Endotoxins are released into the surrounding tissue only when the bacteria break down. They are lipopolysaccharides and form part of the cell wall, e.g. coliform endotoxins. *Metabolic toxins*, e.g. toxic amines absorbed from damaged intestine, ketones, lactic acid from carbohydrate engorgement, ammonia in liver damage, creatinine in renal dysfunction. See also **metabolic** toxins.

dermonecrotic t. an exotoxin produced by certain bacteria that causes extensive local necrosis on intradermal inoculation.

extracellular t. exotoxin.

intracellular t. endotoxin.

VetBooks.ir

tetanus t. the potent neurotoxic exotoxin produced by *Clostridium tetani*. Called also tetanospasmin.

toxinology [tok"sin-ol'ə-je] the science dealing with the toxins produced by certain higher plants, animals and humans and by pathogenic bacteria.

toxipathic pertaining to or caused by the pathogenic action of toxins, of whatever origin.

toxipathy toxicosis.

tox(o)- word element. [Gr., L.] *toxin, poison*.

Toxocara a genus of nematode parasites in the family Ascarididae.

T. canis the adults are found in the small intestine of the dog and fox; infection is via oral, transmammary and transplacental routes; the larvae migrate through tissues, including to the fetus where they establish a prenatal infection, eventually passing through the lungs and then to the alimentary tract. In hosts other than the dog and fox migration in abnormal tissues occurs and the life cycle is not completed. Is the cause of ocular and visceral **larva** migrans in humans.

T. cati the adults are found in the small intestine of domestic and wild cats. Larvae pursue a migratory course through tissues; intrauterine infection of the fetus does not occur, but transmammary transmission does.

T. pteropodis found in flying fox bats.

T. vitulorum occurs in the small intestine of cattle, buffalo and in sheep and goats. Calves are infected via the milk of the dam.

toxocariasis [tok"so-kə-ri'ə-sis] infection by worms of the genus *Toxocara*. Heavy infestations in young puppies and kittens may be responsible for abdominal distention, signs of colic, diarrhea and poor growth. Somatic tissue migration of larvae in neonatal puppies may cause respiratory and nervous signs.

toxoid [tok'soid] a toxin treated by heat or chemical agent to destroy its deleterious properties without destroying its antigenicity. Most of the clostridial diseases, e.g. tetanus, are controlled by vaccination with toxoids.

toxophilic [tok"so-fil'ik] easily susceptible to poison; having affinity for toxins.

toxophore [tok'so-for] the group of atoms in a toxin molecule that produces the toxic effect.

toxophorous [tok-sof'ə-rəs] bearing poison; producing the toxic effect.

Toxoplasma a genus of apicomplexan parasite in the family Sarcocystidae. Only one species in the genus *Toxoplasma gondii*.

T. gondii a coccidian parasite of the intestine of all felids, including especially the domestic cat, jaguarundi, ocelot, mountain lion, leopard cat and bobcat, which are all definitive hosts. Most vertebrates, including humans and birds, can be infected with different stages and experience one or other forms of the disease **toxoplasmosis**. Oocysts are the infective stage of importance in farm animals, and the environmental infective stage for herbivores. Oocysts excreted in the feces of cats can survive in soil for many months and are ingested by the intermediate (e.g. livestock) host, and the parasite invades tissues to produce tissue cysts. The invasion can include the fetus. Tissue cysts in the intermediate host can cause damage to the nervous system, myocardium, lung tissue, and placenta. The parasite is an important causative agent of abortion in sheep and humans. Bradyzoites or tachyzoites in animal tissues are a source for toxoplasmosis in humans, dogs and pigs.

toxoplasmin an antigen prepared from mouse peritoneal fluids rich with *Toxoplasma gondii*; injected intracutaneously as a test for toxoplasmosis.

toxoplasmosis [tok"so-plaz-mo'sis] a contagious disease of all species caused by the sporozoan parasite *Toxoplasma gondii*. The principal manifestation in animals is as abortion in ewes. It is also a cause of sporadic cases of pneumonia, central nervous system disease, and less often retinochoroiditis, and hepatitis in dogs and cats. Clinical signs include fever, malaise, lymphadenitis, abortion, fetal malformation. Major importance as a zoonosis from bradyzoites in meat and oocytes in cat feces. Infection in humans is common but disease is uncommon. Immunocompromised humans and pregnant women are at higher risk.

toy breeds the very small, decorative breeds of dogs, generally less than 20 lb weight, developed mainly for companionship and as novelties. Includes **Affenpinscher**, **Bichon frise**, **Cavalier King Charles spaniel**, **Chihuahua**, **Chinese crested**, **English toy terrier**, **Brussels griffon**, **Italian greyhound**, **Japanese chin**, **King Charles spaniel**, **Lowchen**, **Maltese**, **Miniature pinscher**, **Papillon**, **Pekingese**, **Pomeranian**, **Pug**, **Silky terrier**, Toy **Poodle**.

t. b. hypoglycemia see juvenile **hypoglycemia**.

Toy fox terrier a small (3.5–9 lb) dog with a short, glossy predominantly white coat, but the head is predominantly colored. The ears are large and erect. The upright tail may be docked to a short length. Called also American fox terrier, AmerToy.

toyon *Heteromeles salicifolia*.

TPA total parenteral alimentation.

TPLO tibial plateau leveling osteotomy.

TPN total parenteral nutrition.

TPO 1. triple pelvic osteotomy. 2. thrombopoietin.

TPP 1. total plasma protein. 2. thiamine pyrophosphate.

TPR 1. temperature, pulse, respiration. 2. total peripheral resistance.

tr. tincture.

trabecula [trə-bek'u-lə] pl. *trabeculae* [L.] a small beam or supporting structure; various fibromuscular bands or cords providing support in various organs, such as heart, penis and spleen.

bone t. anastomosing bony spicules in cancellous bone which form a meshwork of intercommunicating spaces that are filled with bone marrow.

septomarginal t., t. septomarginalis the bundles of cardiac muscle that pass from the interventricular septum to the peripheral ventricular wall of the heart and which serve mainly to support Purkinje fibers that convey electrical impulses rapidly to the more remote parts of the heart in order to synchronize systole. Formerly called moderator bands.

trabecular meshwork solid trabeculae and interspersed spaces within the iridocorneal angle and through which the aqueous humor exits the eye. Called also iridocorneal meshwork.

trabeculate [trə-bek'u-lāt] marked with crossbars or trabeculae.

trabeculation [trə-bek"u-la'shən] the formation of trabeculae in a part.

traberkrankheit scrapie.

trace element [trās] essential ingredients of the diet of a particular species of animals but the amount required is very small. Includes copper, cobalt, iron, iodine, manganese, molybdenum, selenium and zinc. Chromium, fluorine and silicon are also necessary in some experimental diets but their addition to livestock diets is not considered to be essential. See also **macroelement**. Called also trace minerals.

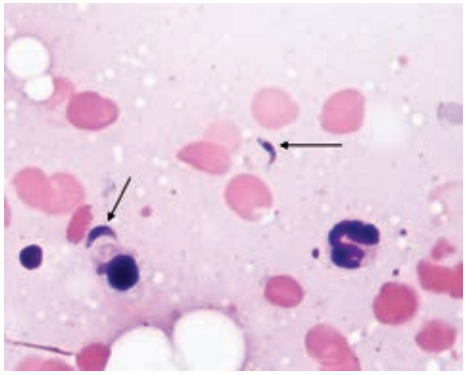
traceback an epidemiological strategy of locating the origin of an outbreak. The usual tactic is to enforce the use of identifying markers such as brands, tailtags, electronic sensing of implanted responders or eartags with codes identifying the vendors.

tracer [trās'ər] a means by which something may be followed, as (1) a mechanical device by which the outline or movements of an object can be graphically recorded, or (2) a material by which the progress of a compound through the body may be observed.

radioactive t. a radioactive isotope replacing a stable chemical element in a compound introduced into the body, enabling its metabolism, distribution and elimination to be followed in the living animal.

traces long leather straps that run from the collar of a cart harness to the cart and provide the traction for moving it.

trachea [trā'ke-ə] the air passage extending from the larynx to the main bronchi; called also the windpipe. This tube is reinforced by a series of C-shaped rings of cartilage that keep the passage



T-34: *Toxoplasma gondii* tachyzoites (arrows) appear as small crescent-shaped bodies with a light blue cytoplasm and a dark-staining pericentral nucleus. From Cowell RL, et al, Diagnostic Cytology and Hematology of the Dog and Cat, 3rd Edition. Mosby, 2007.

VetBooks.ir

uniformly open. The gaps between the rings are bridged by strong fibroelastic membranes. The arms of the C are bridged by the tracheal muscle which can vary the luminal diameter. The trachea is lined with mucous membrane bearing cilia that continously sweep foreign material out of the breathing passages toward the mouth.

tracheal [*tra'ke-əl*] pertaining to or emanating from **trachea**.

t. band sign on contrast radiography of a dilated esophagus, the impression made ventrally by the trachea.

t. collapse, collapsing t. a disorder of the tracheal membrane (trachealis muscle) or chondrogenesis of tracheal rings that results in a functional tracheal stenosis. Affected dogs, usually of miniature or toy breeds, have a cough and reduced exercise intolerance. See also goose honk **cough**.

t. compression pressure on the trachea sufficient to cause displacement and reduction in caliber, usually inside the thorax; most readily detected radiographically.

t. cough a nonproductive, or only slightly productive, resonant cough, often occurring in paroxysms and easily elicited by pressure on the cervical trachea. Typically associated with tracheitis.

t. duct paired lymphatic ducts running down the side of the trachea, commencing at the retropharyngeal lymph nodes, receiving tributaries from other nodes of the head and neck and terminating in either the thoracic duct or the jugular or other vein at the entrance to the chest.

t. hypoplasia a congenital defect in brachycephalic dogs in which the tracheal lumen is greatly reduced in size. Bronchopneumonia commonly occurs.

t. inflammation see **tracheitis**.

t. intubation refers usually to the passage of an endotracheal tube for the purposes of anesthesia, resuscitation or external control of respiration for any other reason. See also tracheal tube (below).

t. percussion a sharp percussion stroke on the trachea creates a sound which can be auscultated over the lung area.

t. rupture due usually to blunt trauma; there is escape of air into surrounding tissues which results in subcutaneous and mediastinal emphysema.

t. stenosis may be congenital or acquired, resulting from trauma or surgical procedures on the trachea. Causes respiratory distress, coughing, and secondary infections of the upper respiratory tract.

t. transection occurs as a result of trauma, in cats particularly from hyperextension of the head and neck, causing dyspnea.

t. tube a metal tube used in horses that have a long-term obstruction of the upper respiratory system. Different to a tracheotomy tube it is a flattened tube fixed to a broad flange with suture holes at its edge and a bend of 90° at 0.5 inch from the flange. See also **endotracheal** tube.

tracheitis [*tra"ke-i'tis*] inflammation of the trachea; characterized by cough, pain and coughing on compression of the trachea and, in severe cases with obstruction of the airway, dyspnea.

trachelectomy [*tra"kə-lek'tə-me*] excision of the uterine cervix.

trachelematoma a hematoma on the sternocleidomastoid muscle.

trachelism [*tra'kə-liz-əm*] spasm of the neck muscles; spasmodic reaction of the head in epilepsy.

trachelismus [*tra"kə-liz'məs*] trachelism.

trachelitis [*tra"kə-li'tis*] cervicitis; inflammation of the uterine cervix.

trachel(o)- word element. [Gr.] *neck, necklike structure,* especially the cervix uteri.

trachelocystitis [*tra"kə-lo-sis-ti'tis*] inflammation of the neck of the bladder.

trachelomyitis inflammation of the muscles of the neck.

trachelopexy [*tra'kə-lo-pek"se*] fixation of the uterine cervix.

tracheloplasty [*tra'kə-lo-plas"te*] plastic repair of the uterine cervix.

trachelorrhaphy [*tra"kə-lor'ə-fe*] suture of the uterine cervix.

trachelotomy [*tra"kə-lot'ə-me*] incision of the uterine cervix.

trache(o)- word element. [Gr.] *trachea*.

tracheo-esophageal [*tra"ke-o-e-sof'ə-je-əl*] see **tracheoesophageal**.

tracheoaerocele [*tra"ke-o-ār'o-sēl"*] tracheal hernia containing air.

tracheobronchial [*tra"ke-o-brong'ke-əl*] pertaining to the trachea and bronchi.

t. lavage see tracheal **wash**.

tracheobronchitis [*tra"ke-o-brong-ki'tis*] inflammation of the trachea and bronchi.

canine infectious t. see **kennel cough**.

parasitic t. see ***Aelurostrongylus***, ***Capillaria***, ***Crenosoma***, ***Filaroides***, ***Paragonimus***, ***Strongyloides***.

tracheobronchoscopy inspection of the interior of the trachea and bronchus.

tracheocele [*tra'ke-o-sēl"*] hernial protrusion of the tracheal mucous membrane.

tracheoesophageal [*tra"ke-o-e-sof'ə-je-əl*] pertaining to or arising from the trachea and the esophagus.

t. fistula a communication between the trachea and the esophagus; can occur during fetal life due to faulty separation of the laryngotracheal groove from the foregut; often associated with esophageal stenosis or atresia, aspiration pneumonia.

t. ridge primordium of the embryonic tracheoesophageal septum.

t. septum the partition which develops by fusion of the tracheoesophageal ridges; completes the separation of the trachea and esophagus in the developing embryo.

t. stripe sign in X-rays, the dorsal wall of the trachea and the adjacent ventral wall of the esophagus may be visualized because of air in the esophagus.

tracheography radiography of the trachea preferably after the intratracheal injection of an oily contrast agent.

tracheolaryngeal [*tra"ke-o-lə-rin'je-əl*] pertaining to the trachea and larynx.

tracheolaryngotomy [*tra"ke-o-lar"ing-got'ə-me*] incision of the larynx and trachea.

tracheomalacia [*tra"ke-o-mə-la'shə*] softening of the tracheal cartilages.

tracheopathy [*tra"ke-op'ə-the*] disease of the trachea.

tracheopharyngeal [*tra"ke-o-fə-rin'je-əl*] pertaining to the trachea and pharynx.

Tracheophilus a genus of digenetic trematodes in the family Cyclocoelidae, parasites of aquatic birds.

T. cucumerinum found in the trachea, air sacs and esophagus of domestic and wild ducks; causes obstruction leading to dyspnea and asphyxia.

***T. cymbius* (syn. *T. sisowi*)** found in the trachea and bronchi of domestic and wild ducks; cause tracheal obstruction and asphyxia.

tracheophony [*tra"ke-of'ə-ne*] a sound heard in auscultation over the trachea.

tracheoplasty [*tra'ke-o-plas"te*] plastic repair of the trachea.

tracheopyosis purulent tracheitis.

tracheorrhagia [*tra"ke-o-ra'jə*] hemorrhage from the trachea.

tracheoschisis [*tra"ke-os'kĭ-sis*] fissure of the trachea.

tracheoscopy [*tra"ke-os'kə-pe*] inspection of the interior of the trachea.

tracheostenosis [*tra"ke-o-stə-no'sis*] constriction of the trachea.

tracheostoma [*tra"ke-os'to-mə*] an opening through the neck and into the trachea.

tracheostomize [*tra"ke-os'tə-mīz*] to perform tracheostomy upon.

tracheostomy [*tra"ke-os'tə-me*] creation of an opening into the trachea through the neck, with insertion of an indwelling tube to facilitate passage of air or evacuation of secretions. The procedure may be an emergency measure or an elective one.

t. tube two identical down-curving, semicircular tubes are fitted one inside the other. They both have wide flanges which fit against the skin when the tubes are inserted in and down through the tracheostomy incision. When the tubes are snugly in position the inner tube is rotated through 180° making the tube self-retaining.

tracheotome [*tra'ke-o-tōm*] an instrument for incising the trachea.

tracheotomy [*tra"ke-ot'ə-me*] incision of the trachea through the skin and muscles of the neck for exploration, for removal of a foreign body, or for obtaining a biopsy specimen or removing a local lesion.

t. tube see **tracheostomy** tube.

Trachyandra plant genus of South African origin, in family Liliaceae; contains an unidentified toxin; causes an acquired lipofuscinosis storage disease with exercise intolerance, incoordination, recumbency, tremor, paralysis; includes *T. divaricata* (branched onion weed), *T. laxa*.

Trachymene Australian plant genus of the Apiaceae family; contains an unidentified toxin; thought to cause bowie (bentleg), a congenital limb deformity, and sudden death of sheep; includes *T. cyanantha*, *T. glaucifolia*, *T. ochracea*. Called also wild parsnip.

trachyphonia [*tra"ki-fo'ne-ə*] roughness of the voice.

T

T-35: Tracheostomy in a horse.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

tracing [trās'ing] a graphic record produced by copying another, or scribed by an instrument capable of making a visual record of movements.

track leg severe sprain of the triceps or semitendinosus muscle in the racing Greyhound caused by injury while racing or training. There is severe lameness and the affected muscle is tense, swollen and painful.

tracker dog disease see canine **ehrlichiosis**.

tract [trakt] a longitudinal assemblage of tissues or organs, especially a bundle of nerve fibers having a common origin, function and termination, or a number of anatomical structures arranged in series and serving a common function. For anatomically specific tracts see under their identifying titles, e.g. alimentary, respiratory.

tractable easy to manage; tolerable.

traction [trak'shən] the exertion of a pulling force, as that applied to a fractured bone or dislocated joint to maintain proper position and facilitate healing, or, in obstetrics, that along the axis of the pelvis to assist in delivery of a fetal part.

t. hook see **Krey–Schottler hook**.

t. splint see Schroeder–Thomas **splint**.

tractor vaporizing oil English farmer's term for tractor fuel widely used during the second world war; approximates kerosene or paraffin.

tractotomy [trak-tot'ə-me] see **olfactory** tractotomy.

tractus [trak'təs] pl. *tractus* [L.] tract; certain collections of nerve fibers in the central nervous system.

Tradescantia garden and house plant genus in the family Commelinaceae; suspected to cause allergic contact dermatitis in dogs. Called also wandering jew.

traditional Chinese medicine an ancient health care system based on the concept of vital energy (*Qi*) and the opposing forces of yin (negative energy) and yang (positive energy). It incorporates **herbal medicine**, exercises, meditation and **acupuncture**.

trafficking see **homing**.

tragacanth [trag'ə-kanth] the dried gummy exudation from *Astragalus gummifer* or other species of *Astragalus*; used as a suspending agent for drugs. Called also gum tragacanth.

Tragelaphus a genus of African bushbuck antelopes in the subfamily Bovinae; includes *T. angasii* (nyala), *T. oryx* (eland), *T. scriptus* (kewel), *T. sylvaticus* (bushbuck), *T. spekei* (sitatunga), *T. strepciceros* (greater kudu).

tragi plural of *tragus*.

tragus [tra'gəs] pl. *tragi* [L., Gr.] the knob-like projection at the base of the external ear supported by a plate of cartilage, part of the auricular cartilage.

trail drive see **trailing**.

trail herding movement of livestock by men on horses or, particularly with sheep, by dogs.

trail-ride a cross-country group saunter on horseback, principally with a view to seeing the sights. May be recreational or competitive in which skills in navigating natural obstacles are tested.

trailer-table a mobile operating table for large animals, moved from farm to farm behind a vehicle.

trailing movement of a group of livestock from one place to another along a trail, usually by men on horseback. Historically, in North America the principal method in the 19th century of getting cattle from southern rangelands to railroads or markets in the north or to northern rangelands for fattening. Usually involved trailing a herd of several thousand cattle over long distances travelling about 15 miles per day.

train of four [trān əv fōr] a method of monitoring neuromuscular blockade in which four twitch responses are used to demonstrate depletion of acetylcholine.

trained-off pertaining to Greyhounds or racehorses which lose racing form during training or a racing program in the absence of any apparent physical or metabolic disease.

training [trān'ing] 1. in racing horses and Greyhounds, a program of exercise to improve the animal's physical performance in a particular task. The effects of training include enlargement of spleen with greater erythrocyte storage and mobilization, increased heart size and stroke volume, and increased hemoglobin content of blood. A performance trial is the only satisfactory way of measuring the gains achieved. 2. in behavior includes **breaking-in** and **obedience training** in dogs.

trait 1. any genetically determined condition; also, the condition prevailing in the heterozygous state of a recessive disorder. 2. a distinctive behavior pattern.

t. A-46 see inherited **parakeratosis**.

qualitative t. a characteristic that is expressed only in descriptive terms, e.g. fine bone, deep chest.

quantitative t. a characteristic that is expressed mathematically, e.g. an annual yield of milk of 15000 lb.

sex-linked t. the gene for the trait is located on the chromosomes which determine the sex of the individual.

Trakehner horse Russian and German light horse produced by crossing Thoroughbred and Arab; chestnut, bay or gray.

tramadol [tram'ə-dol"] an analgesic with partial μ agonist opioid activity as well as 5HT inhibition and α_2-adrenoceptor agonist activity.

tramlines non-vascular, parallel linear markings on radiographs that represent bronchial walls.

tranexamic acid [tran"ək-sam'ik] an antifibrinolytic agent, used orally or intravenously to control hemorrhage.

trandolapril [tran-do'lə-pril"] an angiotensin coverting enzyme (ACE) inhibitor used to treat hypertension.

tranquilizer [trang"kwĭ-līz'ər] any of a group of compounds that calm or quiet an anxious patient. There are two types: the *major tranquilizers* called also **neuroleptics** (2) or antipsychotic agents, such as acepromazine, and the *minor tranquilizers* called also antianxiety agents, such as diazepam (Valium). See also **psychotropic** drugs.

t. gun see **blow dart**.

trans [tranz] 1. in organic chemistry, having certain atoms or radicals on opposite sides of a nonrotatable parent structure. 2. in genetics, having unlike members of a pseudoallelic, or closely linked, gene pair on the same member of a pair of homologous chromosomes. Compare *cis*.

t. acting in molecular biology a sequence or regulatory protein that is produced on one DNA molecule and acts on another, e.g. a sequence on one chromosome produces a regulatory protein that regulates expression of a gene on another chromosome. See also **cis** acting.

trans- word element. [L.] *through, across, beyond*.

transabdominal [trans"ab-dom'ĭ-nəl] across the abdominal wall or through the abdominal cavity.

t. needle biopsy insertion of a biopsy needle, such as Menghini or Tru-Cut, through the abdominal wall, for the purpose of obtaining a tissue sample from an organ, most commonly liver or kidney.

transacylase [trans-a'sə-lās] an enzyme that catalyzes the transfer of acyl groups.

T-36: Trakehner horse.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

transaldolase [*trans-al'do-lās*] key enzyme of the non-oxidative pentose phosphate pathway which transfers the dihydroxyacetone group from sedoheptulose 7-phosphate to glyceraldehyde 3-phosphate to form fructose 6-phosphate.
transamidase an enzyme that catalyzes the transfer of an amide group from one molecule to another.
transamidation the process of transferring an amide group from one molecule to another.
transaminase [*trans-am'ĭ-nās*] an enzyme that catalyzes the transfer of an amino group from one molecule to another.
glutamic–oxaloacetic t. (GOT) see **aspartate aminotransferase** (AST).
glutamic–pyruvic t. (GPT) see **alanine aminotransferase** (ALT).
transamination [*trans"am-ĭ-na'shən*] the reversible exchange of amino groups between different amino acids and .α-keto acids.
transanimation resuscitation of an asphyxiated person or animal by mouth-to-mouth breathing. See also artificial **respiration**.
transaortic [*trans"a-or'tik*] performed through the aorta.
transarticular across an articulation.
t. stabilization placement of external skeletal fixation devices above and below a joint and connected by rigid bars. Useful where supporting soft tissues are damaged, requiring immobilization of the joint.
transatrial [*trans-a'tre-əl*] performed through the atrium.
transaudient [*trans-aw'de-ənt*] penetrable by sound waves.
transaxial [*trans-ak'se-əl*] directed at right angles to the long axis of the body or a part.
transbasal [*trans-ba'səl*] through the base, as a surgical approach through the base of the skull.
transcalciferin an alpha globulin, synthesized in the liver; carries 1,25 vitamin D in the plasma. Called also vitamin D binding protein.
transcalent penetrable by heat rays.
transcalvarial [*trans"kəl-var'e-əl*] through or across the calvaria.
transcatheter [*trans-kath'ə-tər*] performed through the lumen of a catheter. Includes the delivery of intravascular devices such as balloon, coils and stents to dilate or close cardiovascular defects. See also balloon **valvuloplasty**.
transcellular fluids [*trans-sel'u-lər*] cerebrospinal fluid, aqueous humor of the eye, synovial fluids, urine, bile, pancreatic juice and so on.
transcervical [*trans-sur'vĭ-kəl*] 1. performed through the cervical opening of the uterus. 2. across or through the neck of a structure.
transcobalamin [*trans"ko-bal'ə-min*] a group of proteins (of intestinal cells) that bind to cyanocobalamin (vitamin B_{12}) and transport it to other tissues.
transcortical [*trans-kor'tĭ-kəl*] connecting two parts of the cerebral cortex.
transcortin [*trans-kor'tin*] an α-globulin that binds and transports biologically active, unconjugated cortisol in plasma.
transcript [*trans'kript*] an RNA molecule, formed during **transcription**, from a DNA template.
primary t. the RNA molecule produced by **transcription** prior to processing, including splicing.
transcriptase [*trans-krip'tās*] RNA polymerase; an enzyme that catalyzes the synthesis (polymerization) of RNA from ribonucleoside triphosphates, with DNA serving as a template.
reverse t. RNA-directed DNA polymerase; an enzyme of retroviruses and hepadnaviruses that catalyzes the transcription of RNA to DNA.
viral t. see reverse transcriptase (above).
transcription [*trans-krip'shən*] the synthesis of an RNA copy from a nucleotide sequence in a limited region of DNA. See also **deoxyribonucleic acid** and **transcriptase**.
t.-control region the *cis*-acting DNA sequences regulating transcription of a specific gene.
t. factor (TF) a general term for any protein, other than RNA polymerase, required to initiate or regulate transcription in eukaryotic cells. General TFs are involved in the formation of the transcription-preinitiation complexes near the start site and are required for transcription of all genes; specific TFs stimulate (activators) or inhibit (suppressors) transcription of particular genes by binding to their regulatory sequences.
nested set t. a hallmark of the replication strategy of viruses in the order *Nidovirales* that includes coronaviruses, toroviruses and arteriviruses, in which a so-called nested set of subgenomic mRNAs are produced that have identical 5′-leader sequences and a common 3′-termini, but because of discontinuous transcription each mRNA has a unique coding sequence and is transcribed into a unique viral protein.
reverse t. the synthesis of a DNA copy from a RNA template, catalyzed by reverse transcriptase.
t. unit see **operon**.
transcriptome [*trans-krip'tōm*] the entire set of RNA transcripts made by a single organism; includes mRNA, tRNA, rRNA and a still not completely defined set of small RNAs that include microRNAs (miRNA), small interfering RNAs (siRNA), and small nuclear RNAs (snRNA).
transcutaneous [*trans"ku-ta'ne-əs*] transdermal.
t. electrical nerve stimulator (TENS) provides pain relief by exciting sensory nerves and stimulating either the pain gate mechanisms and/or endogenous opioid systems.
transdermal [*trans-dur'məl*] across the skin, particularly with reference to the absorption of drugs applied topically for systemic effect.
t. patch a drug-impregnated adhesive patch applied to the skin for controlled release of the active compound. See also **fentanyl**.
transdifferentiation see **alveolar[2]. Metaplasia**.
transducer [*trans-doo'sər*] a device that translates one physical quantity to another, e.g. pressure or temperature to an electrical signal. In ultrasonography, the device that emits sound waves.
annular array t. an ultrasound transducer with crystals arranged in concentric rings with different frequencies of sound produced. It allows for a greater depth of focus.
linear array t. an ultrasound transducer with crystals arranged in a line. It gives a rectangular field of view.
neuroendocrine t. a neuron, such as a neurohypophyseal neuron, that on stimulation secretes a hormone, thereby translating neural information into hormonal information.
sector t. an ultrasound transducer which produces a fan-shaped field of view.
transducin [*trans-doo'sin*] GDP/GTP-regulated protein, composed of three subunits designated α, β and γ, involved in the visual process. Photoactivated rhodopsin activates transducin to bind GTP, the transducin-GTP complex activates G-phosphodiesterase (G-PDE) by removing the inhibitory γ-subunit of G-PDE. The activated G-phosphodiesterase catalyzes the conversion of cGMP to GMP. Since the major action of cGMP is to open Na+-channels, the decrease in cGMP closes the Na+-channels leading to hyperpolarization of the nerve.
transductant a bacterium which has undergone transduction.
transduction [*trans-duk'shən*] the transfer of a genetic fragment from one bacterium to another by bacteriophage.
transdural [*trans-doo'rəl*] through or across the dura mater.
transection [*tran-sek'shən*] a cross-section; division by cutting transversely.
transepidermal elimination [*trans"ep-ĭ-dur'məl*] a mechanism for the elimination of foreign constituents from the dermis.
transepithelial occurring through or across an epithelium.
transfaunation [*trans"faw-na'shən*] see **cud** transfer.
transfection [*trans-fek'shən*] an introduction of free DNA into a cell.
transfer factor (TF) [*trans'fər*] see transfer **factor**.
transfer RNA tRNA; see **ribonucleic acid**.
transferase [*trans'fər-ās*] an enzyme that catalyzes the transfer, from one molecule to another, of a chemical group that does not exist in free state during the transfer.
glucuronyl t. enzyme which converts bilirubin to a soluble glucuronide.
glutathione *S*-t's widely distributed enzymes catalyzing the detoxification of many compounds but particularly xenobiotics by linkage of the cysteine moiety of glutathione with the compound.
ornithine carbamoyl t. (OCT) catalyzes the transfer of carbamoyl, as from carbamoylphosphate to L-ornithine to form orthophosphate and citrulline in the synthesis of urea. Found almost exclusively in the liver. Determination of serum concentration is used as an indicator of hepatocellular damage, particularly in cattle, sheep and pigs.
peptidyl t. a ribosomal enzyme that transfers the growing peptide from its carrier tRNA to the α-amino group of the amino acid residue of the aminoacyl-tRNA specified by the next codon of the mRNA.
transferation see **transfection**.

transferrin [*trans-fer'in*] a complex of iron and apotransferrin; the major iron transport protein in plasma. Usually measured indirectly by total iron-binding capacity.
t. saturation a calculation used to assess iron status; serum iron concentration divided by total iron-binding capacity, expressed as a percentage.
transfix [*trans'fiks*] to pierce through or impale.
transfixation [*trans-fik'shən*] the process of transfixing.
t. ligature the suture material is passed through the stump to be ligatured, tied around a half of the stump, then around the entire stump.
t. pin used in orthopedic surgery in young animals, or where a medullary pin or plates are not applicable. The pin passes completely through the bone and is fixed by attachment to external bar splints. A series of them enable the surgeon to immobilize a number of fragments of a comminuted fracture.
transfixion a method of amputation in which the knife is passed directly through the soft parts, the cutting being done from within outward.
transforation perforation of the fetal skull.
transformation [*trans"for-ma'shən*] change of form or structure; conversion from one form to another. In oncology, the change that a normal cell undergoes as it becomes malignant. In statistics a functional change to the variable.
bacterial t. the process of intercellular transfer of genetic information in which a small portion of the total DNA of a lysed bacterium enters a related bacterium and is incorporated into the DNA genome of the recipient.
cell t. the changes in types of proteins expressed and growth characteristics that take place in cells infected by some viruses, including tumor formation by retroviruses.
transformer an induction apparatus for changing electrical energy at one voltage and current to electrical energy at another voltage and current, through the medium of magnetic energy, without mechanical motion.
t. fluid may cause poisoning due to its polychlorinated biphenyl content.
transforming growth factor a family of extracellular signaling molecules important in the transformation of cells and in growth and development.
transfusion [*trans-fu'zhən*]the introduction of whole blood or blood components directly into the bloodstream. Among the elements transfused, in addition to whole blood, are packed red blood cells, plasma, platelets, granulocytes and cryoprecipitate, a plasma protein rich in antihemophilic factor VIII. See also **autotransfusion**.
autologous blood t. transfusion of the animal's own blood.
blood t. whole blood is most often indicated to maintain or replace blood volume, to provide deficient blood elements and improve coagulation, to maintain or improve transport of oxygen, and in liver failure in which toxins accumulate in the blood, or in some other types of toxemia.
direct t. transfer of whole blood from the donor through a tube, directly to the recipient.
exchange t. blood is removed from the recipient at the same time and in the same amount as blood is being administered from the donor.
incompatible t. see transfusion reaction (below).
t. reaction a group of clinical signs due to antibody in the recipient's blood reacting with the transfused red blood cells when blood for transfusion is incorrectly matched, or when the recipient has an adverse reaction to some element of the donor blood. Most commonly, there is an immune-mediated hemolysis involving alloantibodies, which may be naturally occurring or the result of an earlier transfusion, in the recipient's serum and the donor's erythrocytes. In ruminants, signs appear during the transfusion, beginning with hiccough, then tremor, dyspnea, lacrimation, fever, ruminal tympany, hemoglobinuria and subsequent abortion. If death occurs, it is because of pulmonary edema. Similar signs are seen in other species. Urticaria and erythema sometimes occur in dogs and cats. Nonimmunological transfusion reactions include cardiovascular overload, hypocalcemic tetany from citrate (used as the anticoagulant) overload, and disease transmission.
t. therapy the administration of whole blood or blood components, usually in the treatment of bleeding disorders.
transgene [*trans'jēn*] a gene that has been incorporated into the genome of another organism.
transgenesis transfer of genes from one individual into the genome of another who transmits it to successive generations.
transgenic [*trans-jen'ik*] the product of transgenesis.
t. animal animals that carry a foreign (could be human) gene that has been deliberately inserted into their genome. One use is in research where the cause of a disease can be potentially attributed to one or a small number of genes.
transglutaminase [*trans"gloo-tam'in-ās*] the activated form of protransglutaminase, which forms stabilizing covalent bonds within fibrin strands; called also coagulation factor XIIIa.
transhumance a husbandry procedure in which livestock are moved to another climatic region at particular seasons, e.g. mountain grazing in summer. It is a system which encourages the spread of some diseases such as pneumonic pasteurellosis.
transiliac [*trans-il'e-ak*] across the two ilia.
transillumination [*trans"i-loo"mĭ-na'shən*] the passage of strong light through a body structure, to permit inspection by an observer at an angle different from the angle of illumination.
dental t. used to assess the vitality of a tooth; light transmits well through healthy teeth, while those with diseased pulp are more opaque.
ocular t. intense light directed through the sclera is transmitted to the interior of the eye, producing a tapetal reflex or light visible within the pupil. Useful in differentiating staphylomas from intraocular masses.
transit [*tran'sit*] being conveyed from one place to another; in animal husbandry parlance used to mean being transported, usually with the qualification that the journey is undertaken over long distances without adequate preparation. Untoward sequels are heat stroke and transit tetany, especially in overweight and late pregnant animals.
t. erythema the carcasses of pigs which have been transported long distances before slaughter develop large patches of superficial erythema where they have lain for long periods. The stained areas have to be trimmed.
t. fever see **bovine** respiratory disease.
t. tetany, t. recumbency of mares, see **lactation tetany**. Of ruminants it is a syndrome of recumbency, complete anorexia, rumen stasis and a gradual onset of coma and death after a course of 2–3 days. There may be tetany and excitement in the early stages. Occurs in ruminants transported long distances or forced to take too much exercise when in advanced pregnancy. Called also railroad disease, railroad sickness.
transit animals animals in sale yards, staging on a long move, e.g. to agistment, on dealer's premises, in veterinary hospital, holding yards at abattoirs.
transit time the time required for ingesta to pass through the gastrointestinal tract; a shorter transit time is seen in conditions associated with gut hypermotility, such as diarrhea. Delayed passage from any cause results in a longer transit time.
transition [*tran-zi'shən*] 1. changing from one state to another; see also **metamorphosis**. 2. in molecular biology, a point mutation in which one purine base replaces another purine. See base substitution **mutation**.
t. cow a dairy cow in the period two to three weeks prepartum until two to three weeks postpartum. Management during this period is a determinant of clinical and subclinical postpartum diseases that can significantly affect productivity and profitability.
t. matrix see transition **matrix** (3).
t. period see transition cow (above).
t. state intermediate, higher free energy stage than initial stage in the reaction, often one in which the reacting molecule is strained or distorted or has an unfavorable electronic structure.
Transition Cow Index™ (TCI) a patented tool to evaluate the effectiveness of transition cow management. It uses Dairy Herd Improvement Association (DHIA) data from the previous lactation in an equation to predict performance at the first test day of the new lactation. The index is the difference between actual performance to that predicted. The cumulative value of all individual TCIs for cows calving within a defined period allows herd trends in transition cow management to be measured. Used to benchmark current proprams and monitor the effectiveness of interventions.

VetBooks.ir

transitional cell cells which make up an epithelium, consisting of several layers of soft cuboidal cells which flatten out when stretched. Best seen lining the lower urinary tract.

t. c. tumors 1. adenomas, papillomas and carcinomas of transitional epithelium in the urinary tract; they are the most common tumors of the urinary bladder in dogs. 2. carcinoma of the upper respiratory tract.

transketolase [*trans-ke'to-lās*] an enzyme that participates in the transfer of ketol groups in the pentose phosphate pathway. Determination of activity in the red blood cell is an indirect indicator of thiamine deficiency.

translation [*trans-la'shən*] the synthesis of a polypeptide using messenger RNA as a template, a complex process involving ribosomes and transfer RNAs; every three bases (a codon) along the mRNA beginning with the start codon specifies one amino acid in the polypeptide chain. See also **deoxyribonucleic acid**.

nick t. an *in vitro* procedure for introducing radiolabeled nucleotides into DNA. A method for preparing labeled probes for use in a wide variety of hydridization techniques both *in vitro* and *in vivo*. The DNA fragment to be labeled is nicked (single strand breaks are produced) using DNase, and the nicked DNA is mixed with DNA polymerase I and NTPs, one or more of which are labeled. Labels may be antigenic, fluorophore or radioactive (32P at the alpha phosphate position). The polymerase elongates the 3′ strand end while simultaneously removing nucleotides from the 5′ strand end at the nick.

translocation [*trans"lo-ka'shən*] the attachment of a fragment of one chromosome to a nonhomologous chromosome. See also **chromosomal** abnormality. The translocations recorded include adjacent section, alternate segregation, centric fusion, distal segment, eye color, heterozygote, interstitial segment, reciprocal, Robertsonian.

Robertsonian t. that in which the breaks occur at the centromeres and entire chromosome arms are exchanged, usually involving two acrocentric chromosomes.

translucent [*trans-loo'sənt*] slightly penetrable by light rays.

transmembrane [*trans-mem'brān*] across a membrane; usually referring to a cell membrane.

transmethylase [*trans-meth'ə-lās*] an enzyme that catalyzes the transfer of a methyl group from a donor to an acceptor.

transmethylation [*trans"məth-ə-la'shən*] the transfer of a methyl group (CH_3^-) from a donor to an acceptor.

transmigration [*trans"mi-gra'shən*] 1. diapedesis. 2. change of place from one side of the body to the other.

transmissible [*trans-mis'ĭ-bəl*] said of a disease capable of being transmitted from one animal to another. There are very many such diseases but most are not included below because the word 'transmissible' is not a part of the disease's name in common usage.

canine t. venereal tumor (TVT) see canine transmissible **venereal** tumor.

t. gastroenteritis 1. a highly infectious disease of baby pigs caused by a coronavirus. It is manifested by vomiting and diarrhea, severe dehydration and a high mortality rate. In older pigs the syndrome is similar but less severe and many pigs survive—others are infected but show no clinical signs. A disease notifiable to the OIE (see Table 22). Called also TGE. 2. a disease of turkeys caused by a coronavirus. It affects birds of all ages and is characterized by wet droppings and weight loss. See **turkey** coronaviral enteritis. Called also bluecomb.

t. lymphosarcoma, t. reticulum cell tumor see canine transmissible **venereal** tumor.

t. murine colonic hyperplasia caused by *Citrobacter rodentium* and characterized by diarrhea, weight loss, rectal prolapse, and a high mortality rate in young mice.

t. porcine genital papillomatosis see **papillomatosis**.

t. serositis see sporadic bovine **encephalomyelitis**.

transmission [*trans-mish'ən*] 1. transfer, as of an infection from one patient to another. 2. of nervous impulses. See **neuromuscular** transmission. 3. heredity.

airborne t. spread of infection by droplet nuclei or dust through the air. Without the intervention of winds or drafts the distance over which airborne infection takes place is short, say 10–20 feet.

arthropod t. by insect or arachnid, either mechanically via a contaminated proboscis or feet, or biologically when there is growth or replication of the organism in the arthropod. See also **trans-stadial**.

biological t. involving a biological process, e.g. passing a stage of development of the infecting agent in an intermediate host. Opposite to mechanical transmission.

colostral t. a form of vertical transmission via successive generations.

contact t. the disease agent is transferred directly by biting, sucking, chewing or indirectly by inhalation of droplets, drinking of contaminated water, traveling in contaminated vehicles.

cyclopropagative t. the agent undergoes both development and multiplication in the transmitting vehicle.

developmental t. the agent undergoes some development in the transmission vehicle.

fecal-oral t. the infectious agent is shed by the infected host in feces and acquired by the susceptible host through ingestion of contaminated material.

horizontal t. lateral spread to others in the same group and at the same time; spread to contemporaries.

indirect t. via another medium, e.g. housing or bedding, without the animals ever being close to each other.

mechanical t. the transmitter is not infected in that tissues are not invaded and the agent does not multiply.

propagative t. the agent multiplies in the transmission vehicle.

vector t. see **vector**.

vertical t. from one generation to the next, perhaps transovarially or by intrauterine infection of the fetus. Some retroviruses are transmitted in the germ line, i.e. their genetic material is integrated into the DNA of either the ovum or sperm.

transmural [*trans-mu'rəl*] through the wall of an organ; extending through or affecting the entire thickness of the wall of an organ or cavity.

t. pressure gradient pressure difference across a wall, as of a capillary. See also **Starling's hypothesis**.

transmutation [*trans"mu-ta'shən*] 1. evolutionary change of one species into another. 2. the change of one chemical element into another.

transonic in ultrasonography, the complete transmission of sound so the image appears black; anechoic; echolucent.

transorbital [*trans"or'bĭ-təl*] performed through the bony socket of the eye.

transovarial [*trans"o-var'e-əl*] via the ovary. The infectious agent, often a virus, is passed to the fetus in the ovum, having been infected from the dam's circulation. A common occurrence in ticks and other arthropods, e.g. babesiosis in ticks.

transparent [*trans-par'ənt*] permitting the passage of rays of light so that objects may be seen through the substance.

t. overlay technique imposing different sets of data on a basic map by a succession of transparent acetate overlays.

transpeptidase an enzyme that catalyzes the transfer of an amino or peptide group from one molecule to another.

transperitoneal rectal tear [*trans"per-ĭ-to-ne'əl*] see **rectal** tear.

transphosphorylase an enzyme that catalyzes the transfer of a phosphate group from one molecule to another.

transphosphorylation [*trans-fos"for-ə-la'shən*] the exchange of phosphate groups between organic phosphates, without their going through the stage of inorganic phosphates.

transpiration [*tran"spĭ-ra'shən*] discharge of air, vapor or sweat through the skin.

transplacental [*trans"plə-sen'təl*] through the placenta.

transplant [*trans'plant*] 1. an organ or tissue taken from the body and grafted into another area of the same individual or another individual. 2. to transfer tissue from one part to another or from one individual to another.

ovum t. see **ovum** transplant.

t. rejection see **rejection**.

transplantation [*trans"plan-ta'shən*] the transfer of living organs and tissue from one part of the body to another or from one individual to another. Transplantation and grafting mean the same thing, though the term grafting is more commonly used to refer to the transfer of skin. See **grafting** (1). Occasionally an organ is transplanted from one place to another within the body (autotransplants). Kidneys, for example, have been relocated to enable them to continue functioning after the ureters have been damaged. See also graft **rejection**.

t. antigen see **histocompatibility** antigen.

VetBooks.ir

bone marrow t. has been used in the treatment of a variety of hematopoietic and immunological disorders, e.g. in dogs with aplastic anemia.
corneal t. full-depth or partial-depth (lamellar) grafts of corneal tissue from a donor or within the recipient eye by translocation.
t. immunology the study of immune responses that distinguish between self and nonself and the rejection of transplanted tissue or organs.
tendon t. the procedure is not favored in horses where it was at one time used as a treatment for tendonitis. The success rate for return to racing performance is poor.

transponder implantable microchips used in animal identification; enclosed in inert glass; generate an alphanumeric code when stimulated by an external scanner's low-frequency radio signal. With ruminants the transponder may be in an intra-ruminal bolus. See also electronic **identification**, **microchip**.

transport [*trans'port*] 1. movement of materials in biological systems, particularly into and out of cells and across epithelial layers. 2. transport of animals, see **transit**, **transportation**.
active t. the movement of ions or molecules assisted by a carrier protein across the cell membranes and epithelial layers, usually against a concentration gradient, resulting directly from the expenditure of metabolic energy. For example, under normal circumstances more potassium ions are present within the cell and more sodium ions extracellularly. The process of maintaining these normal differences in electrolytic composition between the intracellular fluids is active transport. The process differs from simple diffusion or osmosis in that it requires the expenditure of metabolic energy.
t. death death during transportation, e.g. porcine stress syndrome.
t. host see paratenic **host**.
t. media see transport **medium**.
membrane t. proteins specific proteins associated with the plasma membrane of cells that are responsible for transferring solutes including ions, sugars, amino acids, nucleotides and many metabolites across cell membranes.
t. myopathy see exertional **rhabdomyolysis**.
t. stress stress imposed by lack of access to water and feed, physical exhaustion caused by standing for long periods, heat stress, aggression by other animals.
t. tetany see **transit** tetany.

transportation an essential part of the livestock industries. It is an expensive on-cost to a farming enterprise. It also represents a source of contact infection and of stress and reduced resistance to infection, and of shrinkage in animals, from 4–9% in cattle transported long distances over 3–4 days. Codes of ethics and guidelines for structure and use of transportation facilities are enforced in many countries.

transposase [*trans-poz'ās*] an enzyme that acts on transposable elements in DNA mutagenesis.

transposition [*trans"po-zi'shən*] displacement to the opposite side; in genetics, the nonreciprocal insertion of material deleted from one chromosome into another, nonhomologous chromosome.
t. of arterial trunks see transposition of great vessels (below).
t. of great vessels a congenital heart defect, in which the position of the chief blood vessels of the heart is reversed. Called also transposition of arterial trunks.
ulnar styloid t. a surgical procedure for correction of growth deformity resulting from premature closure of the distal ulnar physis. The distal tip of the ulna is fused to the distal radial epiphysis.

transposon [*tranz-po'zon*] genetic elements that can be moved from one place and inserted in another place in the genome. See transposable **genetic** elements.

transpubic [*trans-pu'bik*] performed through the pubic bone after removal of a segment of the bone.

trans-segmental [*trans"səg-men'təl*] extending across segments.

trans-septal [*tran-sep'təl*] extending or performed through or across a septum.

trans-stadial across or between stages of a process or disease.
t. vector transmission when an infection is picked up by one stage in the vector's life cycle and transmitted to succeeding stages in its metamorphosis.

transthalamic [*trans"thə-lam'ik*] across the thalamus.

transthoracic [*trans"thə-ras'ik*] through the thoracic cavity or across the chest wall.
t. needle biopsy insertion of a fine needle through the thoracic wall for the purpose of obtaining a sample of lung tissue for cytological, microbiological or histopathological examination.

transtracheal aspiration, transtracheal wash [*trans-tra'ke-əl*] introduction of a tracheal catheter via a cutaneous incision between two tracheal rings (transtracheal), passage of the catheter to the bronchi, introduction of normal saline, and aspiration of a sample for cytology and microbiological examination.

transtympanic [*trans"tim-pan'ik*] across the tympanic membrane or the cavity of the middle ear.

transudate [*trans'u-dāt*] a fluid substance that has passed through a membrane or has been extruded from a tissue; in contrast to an exudate, a transudate is characterized by high fluidity, low specific gravity and a low content of protein, cells or solid matter derived from cells.
modified t. one with additional protein and/or cells. It may be a transitional stage, progressing to an exudate.

transudation [*trans"u-da'shən*] 1. passage of serum or other body fluid through a membrane or tissue surface. 2. transudate.

transudative diathesis see **exudative** diathesis.

transureteroureterostomy [*trans"u-re"tər-o-u-re"tər-os'tə-me*] a method of urinary diversion consisting of anastomosis of one ureter to the other but maintaining the patency of the proximal and distal parts of the transplanted ureter.

transurethral [*trans"u-re'thrəl*] performed through the urethra.

transvaginal [*trans-vaj'ĭ-nəl*] through the vagina.
t. ultrasound guided aspiration (TUGA) a technique used for ovum pick up in vivo, consisting of aspiration of oocytes from follicles following their visualization by an ultrasound transducer inserted into the vagina. Commonly used in large domestic species for collection of oocytes for in vitro fertilization.

transversalis [L.] *transverse*.
t. fascia the fascia between the peritoneum and the abdominal muscles.

transverse extending from side to side; situated at right angles to the long axis.
t. ligaments see Table 12.
t. trabeculae see **growth** arrest line.

transversectomy [*trans"vər-sek'tə-me*] excision of a transverse process of a vertebra.

transversus [*trans-vur'səs*] [L.] *transverse*.

transvesical [*trans-ves'ĭ-kəl*] through the bladder.

trap-death syndrome deaths in small wild mammals subjected to close confinement in cages; includes gastric hemorrhage and ulceration.

trapnest a laying box in which the hen releases a spring when she enters. When it is released the egg that she has laid is recorded. A device for measuring eggs laid by each bird.

trapping an essential technique for sampling wildlife populations in surveys of their diseases or in order to establish the size and variety of the population, especially if carried out systematically with the traps set out in a grid formation. See also **capture–recapture method**.
removal t. a means of measuring a wild animal population by the change in the population resulting from the trapping of a known number of animals and their removal to a distant site.

traps devices for the trapping of wild animals. Mostly used with an attractant, varying with the target species. Once in the target area the trap is sprung. The trap may be a limb snare, frowned on in many circles now, a cage with a dropdown door, a net dropped from above or fired from a gun, a sticky surface, a funneled entrance to a cage and so on.

traquenard [Fr.] an irregular trot; trotting with the front legs while galloping with the rear legs; a cause for disqualification in racing.

Traube—Hering waves radiations of impulses from the respiratory center to the vasomotor center in the medulla oblongata during inspiration can increase arterial pressure.

trauma [*trou'mə*] a wound or injury, especially damage produced by external force, e.g. surgical operation, impact, blunt instrument.
birth t. an injury to the fetus during the process of being born.
self-inflicted t. see **self-trauma**.
unapparent t. trauma to a patient which could be fatal but is inapparent because it leaves no external mark.

traumatic [*trə-mat'ik*] 1. pertaining to, resulting from, or causing trauma. 2. in cattle, and in all ruminants, a special meaning is perforation of the reticular wall by a swallowed foreign body.
t. hepatitis penetration by a foreign body from externally via the skin or internally from the reticulum.
t. laminitis see **laminitis**.
t. liver abscess caused usually by perforation of the stomach wall by a foreign body. Causes toxemia, leukocytosis, fever and pain on percussion over the posterior right ribs.
t. mastitis see traumatic **mastitis**.
t. peritonitis see traumatic **peritonitis**.
t. reticulopericarditis caused by an extension of reticuloperitonitis, especially in cows in late pregnancy; characterized by congestive heart failure with marked edema of the brisket and jowl, 'washing machine' heart sounds and disappearance of the normal sounds. There is a marked leukocytosis, fever and toxemia.
t. reticuloperitonitis (TRP) caused by perforation of the reticular wall by a sharp foreign body in any ruminant but most common in adult dairy cows being fed processed feeds.Prevalence now much reduced by the use of twine rather than wire for binding hay bales. Manifested by an acute fall in milk yield and appetite, a humped back and disinclination to move, pain on percussion over the xiphisternum, ruminal stasis, fever and a leukocytosis. Called also hardware disease, reticulitis, traumatic peritonitis.
t. reticulopleurisy inflammation of the wall of the reticulum and nearby pleura of cattle caused by the penetration of a foreign body from the reticulum into the pleural cavity. Characterized by toxemia, fever, leukocytosis, pain on percussion over the ribs, fast shallow grunting respiration, elbows abducted.
t. reticulosplenitis inflammation of the wall of the reticulum and nearby spleen of cattle caused by penetration of a foreign body into the spleen. Characterized by toxemia, leukocytosis, fever and pain on percussion over the upper posterior right ribs.
t. shock see vasogenic **shock**.
t. splenitis see traumatic reticulosplenitis (above).
t. wet lung see **shock** lung.
traumatism [*traw'mə-tiz-əm*] 1. the physical state resulting from an injury or wound. See also **shock**. 2. a wound.
traumat(o)- word element. [Gr.] *trauma*.
traumatology [*traw"mə-tol'ə-je*] the branch of surgery dealing with wounds and disability from injuries.
traumatopnea [*traw"mə-top'ne-ə*] passage of air through a wound in the chest wall; a sucking injury.
travel edema wateriness of lamb carcasses, especially in the shoulders, when the lambs are transported long distances just before slaughter.
travel sickness see **motion sickness**.
traveller's joy ***Clematis*** *vitalba*.
tread [*tred*] injury to the coronet of the horse's hoof by treading on it by the opposite hoof, or by another horse when they are being worked in a team. If the coronary matrix is injured there may be a subsequent crack or deformity.
treading a part of a restlessness syndrome or a neurosis in ruminants or horses; the patient repeatedly changes weight from one limb to the opposite of the pair, lifting the hoof slightly at each change; the action looks as though the patient is treading grapes to make wine. The action is restricted largely to the hindlimbs and usually indicates subacute abdominal pain.
treatment [*trēt'mənt*] management and care of a patient or the combating of disease or disorder.
active t. treatment directed immediately to the cure of the disease or injury.
causal t. treatment directed against the cause of a disease.
conservative t. treatment designed to avoid radical medical therapeutic measures or operative procedures.
empirical t. treatment by means that experience has proved to be beneficial.
expectant t. treatment directed toward relief of untoward clinical signs, leaving the cure of the disease to natural forces.
palliative t. treatment that is designed to relieve pain and distress, but does not attempt a cure.
preventive t., prophylactic t. that in which the aim is to prevent the occurrence of the disease.
rational t. that based upon knowledge of disease and the action of the remedies given.
specific t. treatment particularly adapted to the special disease being treated.
supporting t. that which is mainly directed to sustaining the strength of the patient.
symptomatic t. treatment of the primary clinical abnormalities rather than the underlying cause, which may not be known.
treats see **food** rewards.
tree [*tre*] an anatomical structure with branches resembling a tree.
bronchial t. the trachea, bronchi and successive branching generations of the respiratory passages.
decision t. see **decision** tree.
tracheobronchial t. the trachea, bronchi and their branching structures.
Treeing Walker coonhound a medium-sized (50–70 lb) hound with powerful shoulders, long ears and a short, smooth tricolor coat, resembling Beagles or Foxhounds.
trefoil broadly, plants with compound leaves of three leaflets; includes plants in the ***Medicago*** and ***Lotus*** genera of the family Fabaceae; big trefoil (*L. major*), birdsfoot trefoil (*L.* spp.), burr trefoil (*M. polymorphia*), red-flowered birdsfoot trefoil (*L. cruentus*).
t. dermatitis photosensitization of uncertain cause from ingestion of **Medicago** *polymorpha* (*M. denticulata*).
Treg cell regulatory T **lymphocyte**. Called also suppressor T cell.
Trema a genus of plant in the family Ulmaceae; cause acute liver necrosis in herbivores in Australia and Brazil. Includes *T. tomentosa* (*T. aspera*, poison peach, peach-leaf poison bush), *T. micrantha*.
trematocides drugs effective in the treatment of immature and adult flukes, e.g. rafoxanide, closantel, triclabendazole, diamphenethide. Bromsalans, oxyclozanide, nitroxynil and carbon tetrachloride are effective only against mature fluke.
trematode [*trem'ə-tōd*] parasitic worm; member of the subclass Digenea (class Trematoda) containing the flukes of domestic animals, called also digenetic trematodes. These cause parasitic disease of most systems, including the blood, eye, liver, reproductive tract, respiratory system, skin and urinary system.
trematodiasis [*trem"ə-to-di'ə-sis*] infestation by trematodes.
trematoxin an uncharacterized toxic glycoside in ***Trema*** *tomentosa*.
tremblante du mouton [Fr.] *scrapie*.
trembler pup hypomyelinogenesis in young puppies, particularly Bernese mountain dogs.
trembles [*trem'bəlz*] porcine **congenital tremor syndrome**.
trembling visible muscle tremor caused by fever, fear, weakness, electrolyte imbalance, especially hypocalcemia and hypomagnesemia, and neuromuscular disease.
t. disease of sheep, scrapie; of piglets, congenital tremor syndrome.
tremetol toxic alcohol in ***Eupatorium*** *rugosum* and *Haplopappus heterophyllus*.
tremor [*trem'ər*] a continuous repetitive twitching of skeletal muscle, usually palpable and visible. The diseases characterized by tremor only, the tremor syndromes, may be caused by degenerative disease of the nervous system, e.g. hypomyelinogenesis, and by many toxins, especially plant ones. Tremor is also a sign in many other diseases of the nervous system.
action t. rhythmic, oscillatory, involuntary movements of the limbs.
coarse t. that involving large groups of muscle fibers contracting slowly.
congenital t. syndrome of piglets see **congenital tremor syndrome**.
epidemic t. see avian **encephalomyelitis**.
fibrillary t. rapidly alternating contraction of small bundles of muscle fibers.
fine t. one in which the vibrations are rapid.
intention t. a tremor that occurs or worsens when voluntary movement, particularly fine motor movement, is attempted. Called also kinetic tremor. See also volitional tremor (below).
kinetic t. see intention tremor (above).
rest t. tremor occurring in a relaxed and supported limb.
static t. one in which antigravity muscles are active.
t. syndrome see **shaker dogs**. Called also white dog shaker syndrome.
volitional t. trembling of the entire body during voluntary effort.
tremorgen group of toxins produced by fungi, e.g. *Penicillium* spp., which cause serious muscle tremors.
tremorgen staggers incoordination caused by tremorgens, usually mycotoxins.
tremorgenic pertaining to or emanating from tremorgens.

VetBooks.ir

t. neurotoxicosis seen in cattle fed *Aspergillus clavatus*-infested sprouting grains, some associated with production in hydroponic fodder factories, and manifest with posterior ataxia, tremors, progressive paresis, hypersensitivity, occasionally aggression, loss of milk production, recumbency, and clonic convulsions. Histologically, there is degeneration and necrosis of large neurones in nuclei of the brainstem, the ventral horns of the spinal cord, and in spinal ganglia. The causative toxin is not identified.

tremortin-A see **penitrem-A**.

tremulous [*trem'u-ləs*] shaking, trembling or quivering.

trench mouth fusospirochetal stomatitis. See also **Vincent's angina**.

trendscriber the apparatus used in trendscription.

trendscription a programmed method of continuous electrocardiographic monitoring, wherein the tracing is condensed on a rotating drum recorder and the program permits selective sampling of rhythm data.

trepan trephine.

trepanation [*trep"ə-na'shən*] trephination.

trephination [*tref"ĭ-na'shən*] use of the trephine for creating an opening in the skull or in the sclera.

trephine [*trə-fēn'*] 1. a crown saw for removing a circular disk of bone, chiefly from the skull. See also **Galt trephine**, **Michel**'s trephine. 2. an instrument for removing a circular area of cornea for keratectomy and grafting techniques, e.g. Castroviejo trephine. 3. to remove with a trephine.

trephocyte [*tref'o-sīt*] a cell which provides nourishment for another cell, e.g. Sertoli cell, avian thrombocytes.

Treponema a genus of spirochetes (family *Spirochaetaceae*), motile gram-negative, spiral-shaped rods.

T. paraluiscuniculi causes benign venereal **spirochetosis** of rabbits called rabbit syphilis.

T. pedis **spp. nov.** spirochaete isolated from bovine digital dermatitis lesions.

treponemas members of the genus *Treponema* of bacteria.

treppe phenomenon [*trep'ə*] the gradual increase in muscular contraction following rapidly repeated stimulation. Called also staircase phenomenon.

tresis perforation.

tretamine triethylenemelamine.

tretinoin [*tret'ĭ-noin"*] the all-*trans* stereoisomer of retinoic acid, used in dermatology for the treatment of disorders of keratinization. It is a potent teratogen and must be used with great caution.

TRF thyrotropin releasing factor.

TRH thyrotropin releasing hormone.

tri- word element. [Gr., L.] *three*.

tri-allate a herbicide; large doses cause salivation, bradycardia, vomiting, weakness, tremor, dyspnea and convulsions.

triacetin [*tri-as'ə-tin*] glyceryl triacetate; used as a topical antifungal.

triacetyloleandomycin [*tri-as"ə-təl-o"le-an"do-mi'sin*] troleandomycin.

triacylglycerol [*tri-a"səl-glis'ər-ol*] glycerol esterified to three long chain fatty acids; the major component of vegetable oils and animal fats; most fat in excess of requirements is stored in adipose tissue in this form; the systematic chemical name for **triglyceride**.

t. lipase (LPS) enzyme that releases fatty acids from triacylglycerol by hydrolysis of the ester bonds; produced primarily by the pancreas and in smaller quantities by the gastric and intestinal mucosa. Determination of serum concentration is used to detect acute necrosis of pancreatic acinar cells. Called also steapsin, lipase, triglyceride lipase.

t. rich lipoprotein see triglyceride-rich **lipoprotein**.

triad [*tri'ad*] 1. an element with a valence of three. 2. a group of three similar bodies, or a complex composed of three items or units. See **portal** triad.

t's of the tarsus the various combinations of (usually three) injuries that occur in trauma to the hock joint, based first on injury to the central tarsal bone.

Virchow's t. see **Virchow's** triad.

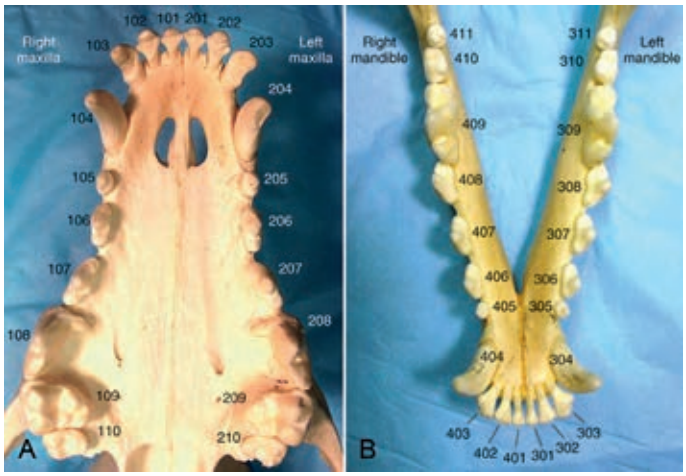
Whipple's t. see **Whipple's triad**.

Triadan system a system of identifying teeth in dental records. Each tooth has a three-digit number which identifies the quadrant, position and whether it is a primary or permanent tooth.

triaditis [*tri"ad-i'tis*] a term referring to a common syndrome of concurrent inflammatory bowel disease, chronic subclinical pancreatitis and cholangitis in cats.

Triaenophorus a genus of tapeworms in the family Triaenophoridae.

T. nodulosus adults occur in pike and other predatory fish; intermediate hosts are first copepods, and second fish, especially trout. The plerocercoids in the trout tissues cause loss of value and liver damage may cause deaths.



T-37: Triadan tooth numbering system in the dog. (A) Maxilla. (B) Mandible. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

triage [*tre-ahzh'*] setting priorities for treatment wherever multple patients require emergency treatment. The most critical patients are treated first. See also **A CRASH PLAN**.

t. nurse a nurse trained in triage procedures.

SAVE t. (Secondary Assessment of Victim Endpoint) a simple classification system with just three categories, based on prognosis if given different levels of treatment.

START t. (Simple Triage and Rapid Treatment) a color coding system that categorizes patients on the basis of the severity of injury and urgency of treatment.

trial [*tri'əl, trīl*] experiment; refers usually to the trying out of a substance or a material in order to determine its effect. The trial may be a **blind** experiment, a **clinical** trial, a double **blind** trial or a **pilot trial**.

clinical t., therapeutic t. a planned experiment using selected individual patients or herds of animals, designed to test the efficacy of a drug, procedure or treatment protocol by comparing the outcome with that observed in a comparable group of control animals.

response t. a field trial conducted to test a hypothesis, often about the cause of a disease but can encompass therapeutics or control of a disease. The hypothesis is tested by observing the response to an alteration in the system, e.g. in feeding or in management.

sequential t's. see sequential **analysis**.

trialling the running of Greyhounds and horses in practice races.

triamcinolone [*tri"am-sin'ə-lōn*] a prednisolone derivative used as an anti-inflammatory glucocorticoid in the form of the acetonide derivative and the diacetate ester.

triamterene [*tri-am'tər-ēn*] a weak diuretic which increases sodium and chloride excretion, but not potassium.

triangle [*tri'ang-gəl*] a three-cornered object, figure or area, as such an area on the surface of the body capable of fairly precise definition. Called also trigone.

facial t. a triangular area whose points are the basion and the alveolar and nasal points.

femoral t. the triangle bounded cranially by the sartorius, caudally by the pectineus and deeply by the iliopsoas muscles in the dog. The pulse of the femoral artery can be taken at this site.

vesical t. the area of the bladder wall within the triangle demarcated by the ureteral and urethral orifices. The bladder mucosa is smooth and firmly attached over this region and does not form folds.

Viborg's t. a surgical site on the side of the throat of the horse bounded by the caudal border of the mandible, the linguofacial vein and the tendon of the sternocephalic muscle.

triangularis [*tri-ang"gu-lar'is*] [L.] *triangular*.

Trianthema genus of the Aizoaceae family of plants; have a high soluble oxalate content and may cause acute oxalate poisoning. Includes *T. portulacastrum* (black or giant pigweed), *T. triquetra* (red spinach).

VetBooks.ir

T-38: *Triatoma infestans* (kissing bug).
Courtesy of CDC/WHO.

T-39: Medial entropion and trichiasis in a Pug, with resulting nasal keratitis and pigmentation.
From Dziezyc J, Color Atlas of Canine and Feline Ophthalmology. Saunders, 2004.

triaryl phosphates industrial chemicals used as plasticizers, lubricant additives and the like. Poisoning of animals has occurred and includes paralysis of the extremities and fetid diarrhea.

Triatoma a genus of bugs (order Hemiptera), the cone-nosed bugs, important in human medicine as vectors of *Trypanosoma cruzi* from its natural vectors, dogs, cats, foxes, monkeys and others. Includes *Triatoma dimidiata*, *T. infestans*, *T. protracta*, *T. sanguisuga* (vector for equine encephalomyelitis).

triatome a member of the genus ***Triatoma*** of true bugs.

triatomine pertaining to the genus ***Triatoma***.

triazines selective herbicides including atrazine, propazine, simazine, prometone, prometryne. They are poisonous if given in sufficient quantity but the syndrome, weight loss, anorexia and weakness, is too nonspecific to be valuable diagnostically.

triazole antifungals [*trī'ə-zōl*] azole derivatives with broad-spectrum antifungal activity; includes **fluconazole** and **itraconazole**.

tribe [*trīb*] a taxonomic category subordinate to a family (or subfamily) and superior to a genus (or subtribe).

triboluminescence [*trī"bo-loo"mĭ-nes'əns*] luminescence produced by mechanical energy, as by the grinding, rubbing, or breaking of certain crystals.

tribrachius [*trī-bra'ke-əs*] a fetus with three forelimbs.

Tribrissen a proprietary name for a mixture of trimethoprim and sulfadiazine.

tribromsalan see **bromsalans**.

tribulosis [*trib"u-lo'sis*] the steroidal saponin poisoning caused by ***Tribulus*** *terrestris*.

Tribulus a plant genus of the Zygophyllaceae family.

T. micrococcus Australian species contains an unidentified toxin, which causes incoordination, recumbency, paralysis in sheep; called also yellow vine.

T. terrestris 1. this weed contains toxic steroidal saponins which cause hepatic injury when eaten. The clinical syndrome consists of photosensitization, jaundice and hepatic encephalopathy. The disease is known also as 'geeldikkop' [Afrikaans], tribulosis and yellow bighead. Called also caltrop, puncture vine, devil's thorn. 2. causes Coonabarabran disease of sheep in Australia; an ataxia syndrome thought to be caused by β-carboline alkaloids.

tributyl triphosphorotrithioite [*trī-bu'tal*] an organophosphorus defoliant which causes typical signs of **organophosphorus compound** poisoning.

tricaine methanesulfonate the most commonly used anesthetic for fish. It is dissolved in water and enters into the systemic circulation via the gills, producing a general anesthesia. Called also MS-222.

tricarboxylic acid (TCA) cycle the cyclic metabolic mechanism by which the complete oxidation of the acetyl moiety of acetyl-coenzyme A is effected. It is the chief source of mammalian energy, during which acetyl groups derived from the metabolism of sugars, fatty acids and amino acid are oxidized to yield carbon dioxide, water and reduced coenzymes (NADH and $FADH_2$). Each turn of the cycle results in the production of 10 ATP molecules, one from substrate-level phosphorylation and 9 from oxidative phosphorylation coupled to the oxidation of NADH and $FADH_2$ via the electron transport chain. Called also Krebs cycle and citric acid cycle.

Tricephalobus gingivalis see ***Rhabditis*** *gingivalis*, ***Halicephalobus*** *gingivalis*.

tricephalus [*tri-sef'ə-ləs*] a fetus with three heads.

triceps [*trī'seps*] a muscle having three heads; the triceps muscle of the forearm.

t. brachii extends the forearm.

t. reflex contraction of the belly of the triceps muscle and slight extension of the forelimb when the tendon of the muscle is tapped directly, with the forelimb flexed and fully supported and relaxed.

trichiasis [*trĭ-ki'ə-sis*] 1. a condition of ingrowing hairs about an orifice, specifically in the periocular region. Compare with **distichiasis** and ectopic **cilia**. 2. the appearance of hair-like filaments in the urine.

caruncular t. (1) hairs from the lacrimal (or medial) caruncle that reach (and potentially abrade) the cornea or conjunctiva, particularly common in brachycephalic dogs. Called also aberrant dermis.

trichilemmal [*trik"ĭ-lem'əl*] pertaining to the outer root sheath of a hair.

t. cyst greatly enlarged hair follicles, filled with keratin. They resemble epidermoid cysts. Called also pilar cysts.

trichilemmoma [*trik"ĭ-ləm-o'mə*] a rare, benign neoplasm of the lower outer root sheath of the hair; resembles trichoepithelioma.

trichina pl. *trichinae* [Gr.] a single larval stage worm of those in the genus *Trichinella*.

Trichinella a genus of nematode parasites in the family Trichinellidae. Includes *T. spiralis, T. pseudospiralis, T. britovi, T. nativa, T. nelsoni, T. papuae* and *T. zimbabwensis* as well as a number of genotypes. Adult worms of the species listed are found in the intestinesand their first-stage larvae are found encapsulated in striated musculature of various animals. Three other members of uncertain taxonic status (genotypes) are also encountered. *T. spiralis* is a common cause of infection in humans as a result of ingestion of poorly cooked pork.

trichinellosis [*trik"ĭ-nə-lo'sis*] trichinosis.

trichinoscope a compression apparatus to squash a small sample of pork muscle and a projector to display the image of the tissue on a screen so that *Trichinella* spp. larvae can be identified.

trichinosis [*trik"ĭ-no'sis*] infection with the parasitic roundworm *Trichinella spiralis*, which enters the human body in infected meat eaten raw or insufficiently cooked. Found in most parts of the world with the exception of Australia and the Pacific Islands. A disease notifiable to the OIE (see Table 22). The larvae, or early forms, of *T. spiralis* live embedded in tiny capsule-like cysts of muscle tissue of infected pork. When the meat is properly cooked, the larvae are killed by the high temperature. If, however, the pork is undercooked, they survive; when the meat is eaten, digestive juices dissolve the cyst capsules and free the larvae in the intestines, where they grow to maturity.

artificial digestion for t. a sample of the meat to be examined is incubated with a mixture of pepsin and hydrochloric acid and the digesta examined under a microscope for specimens of *Trichinella spiralis*.

trichinous [*trik'ī-nəs*] affected with or containing trichinae.

trichlorfon [*tri-klor'fon*] an organophosphorus insecticide and anthelmintic, used in horses, often in combination with other anthelmintics, for treatment of endoparasites and cutaneous habronemiasis. Also used in dogs against whipworms and as a pour-on in cattle for control of warble flies. It is used in fishponds and commercial fish farms to control anchorworms, gill flukes and lice. Called also metrifonate.

trichloroacetate a relatively nontoxic herbicide.

trichloroacetic acid [*tri-klor"o-ə-se'tik*] an extremely caustic acid, CCl_3COOH, used as a topical caustic for local destruction of lesions and as a protein precipitating agent.

t. a. test a quantitative assay for urine total protein; proteins are precipitated and measured by the increased solution turbidity.

trichlorobenzoic acid [*tri-klor"o-ben-zo'ik*] a nonselective weedkiller of very low toxicity.

trichlorocarbanilide triclocarban.

trichloroethanol [*tri-klor"o-eth'ə-nol*] a metabolic product of chloral and an hypnotic and analgesic in its own right.

trichloroethylene, trichlorethylene [*tri-klor"o-eth'ə-lēn*] a volatile, nonflammable solvent with a similar odor to chloroform. Used in the extraction of oils and fats from plant and animal materials for the purpose of using the oil. The residue is available as animal feed. Has anesthetic and analgesic properties but is not recommended for use as either in animals.

t.-extracted soybean meal see trichloroethylene-extracted **soybean** meal.

trichloronaphthalene a **chlorinated naphthalene** used in industry and sometimes a cause of poisoning in cattle.

trichloronitromethane see **chloropicrin**.

trichlorophenol a wood preservative with fungistatic activity. Causes poisoning as with **pentachlorophenol**.

trichlorphon, trichlorfon [*tri-klor'fon*] an organophosphorus compound used as an anthelmintic. It is toxic for sheep at recommended dose rates and is also hazardous for cattle. In pregnant sows it causes congenital cerebellar agenesis in the piglets and has been associated with left laryngeal hypoplasia in young horses. A solution of the compound is unstable and should be discarded if not used on the same day as the metabolite is toxic.

trich(o)- word element. [Gr.] *hair*.

trichobezoar [*trik"o-be'zor*] rounded masses of felted hairs caused by animals licking themselves. Common in cats ('hairballs'), particularly the longhaired varieties, in rabbits and in shaggy cattle wintered outdoors. Can cause pyloric or intestinal obstruction and in cats, occasional vomiting. A common finding in the abomasum of normal ruminants during abattoir slaughter.

Trichobilharzia a genus of blood flukes (digenetic trematodes) in the family Schistosomatidae.

T. ocellata, T. physellae, T. stagnicolae found in the portal veins of birds, especially waterfowl.

trichoblastoma [*trik"o-blas-to'mə*] a benign neoplasm of the hair follicle, arising from the hair germ epithelium. They are usually solitary, firm, alopecic, dome-shaped or polypoid nodules located mostly on the head and neck. Poodles and Cocker spaniels appear to be predisposed.

trichocardia [*trik"o-kahr'de-ə*] a hairy appearance of the heart due to exudative pericarditis. See also **bread and butter pericarditis**. Called also cor villosum, shaggy heart.

Trichocephalus see ***Trichuris***.

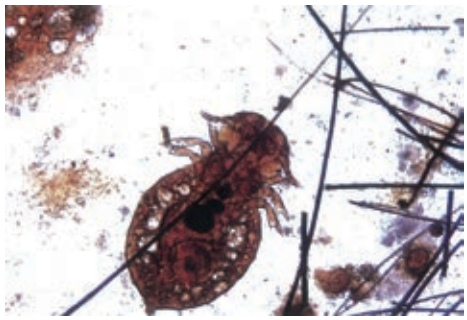
trichoclasia [*trik"o-kla'zhə*] brittleness of the hair.

trichoclasis [*trik-ok'lə-sis*] **trichorrhexis** nodosa.

Trichodectes a genus of biting lice in the subfamily of Ischnocera. Includes *T. canis* (dogs), *T. equi* (zebra and wild equids), *T. pinquis euarctidos* (wild black bear).

Trichodesma plant genus in the family Boraginaceae; contain pyrrolizidine alkaloids; cause hepatitis, dummy syndrome, photosensitization, death due to hepatic insufficiency; includes *T. ehrenbergii*, *T. incanum*, *T. zeylanicum* (camel bush).

Trichodina a genus of protozoa (Peritricha) which parasitizes the skin and gills of fish and causes local irritation. They have a characteristic disk-like appearance and are in constant revolving motion. Only pathogenic when in large numbers and/or in stressed fish.



T-40: *Trichodectes canis*. From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989.

Trichodinella a protozoan parasite of fish similar to and having similar effects to ***Trichodina***.

Trichoecius romboutsi a mite that causes hair loss and dermatitis in mice. Called also *Myocoptes romboutsi*.

trichoepithelioma [*trik"o-ep"ī-the-le-o'mə*] a benign skin tumor originating in the keratinocytes of the hair follicle outer sheath or the hair matrix. It occurs as single or sometimes multiple, firm, rounded skin nodules that may ulcerate. They are common in dogs, particularly Cocker spaniels. Called also epithelioma adenoides cysticum.

trichofolliculoma [*trik"o-fə-lik"u-lo'mə*] a benign neoplasm of the hair follicle with a large central follicle and numerous smaller follicle-like structures radiating from it; occur in dogs where they appear as firm nodules which may have tufts of hair protruding.

Trichoglossus genus of lorikeets. Includes *T. haematodus* (rainbow lorikeet).

trichogram [*trik"o-gram*] examination of the shafts, roots and tips of plucked hairs under the microscope; useful in assessing the status of hair follicle activity by examination of the hair bulbs, and in determining whether hair loss is due to self-trauma, which causes broken hairs. Also used to find follicular *Demodex* mites. See also **anagen**-telogen ratio, **barbering**.

trichography microscopic examination of hairs; see **trichogram**.

trichogranuloma [*trik"o-gran"u-lo'mə*] a pyogranulomatous dermal reaction to the traumatic implantation of pieces of hair, often seen in dermatophytosis.

trichohyalin granules [*trik"o-hi'ə-lin*] granules, like keratohyalin; found in cells of hair follicles.

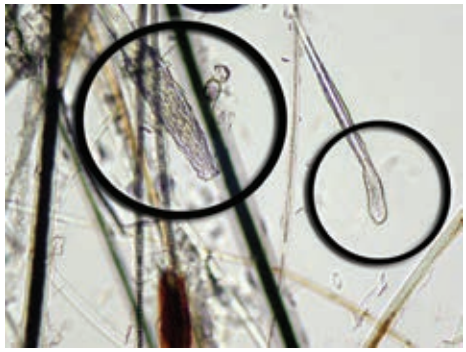
trichoid [*trik'oid*] resembling hair.

tricholemmoma [*trik"o-lem-o'mə*] a rare tumor of hair follicles arising from the external root sheath in dogs and cats. It appears as a well encapsulated intradermal and subcutaneous nodule with loss of hair in the overlying skin; resembles **trichoepithelioma**.

trichology [*trī-kol'ə-je*] the sum of knowledge about the hair.

trichomalacia [*trik"o mə-la'shə*] alopecia resulting from increased fragility and breakage of abnormal hairs; the hair follicles are normal. May be due to nutritional deficiencies (e.g., deficiency of copper or zinc in ruminants), intoxications (e.g., selenium in ruminants and thallium in dogs), hereditary predisposition (trichorrhexis nodosa in cats, trichomalacia in Golden retrievers) or acquired (solar, chemical or physical) injury to hairs.

trichome [*tri'kōm*] a filamentous or hairlike structure.



T-41: Trichogram. Microscopic image of a telogen hair root (left) and an anagen hair root (right). From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

trichomegaly [trik"o-meg'ə-le] excessive growth of eyelashes and eyebrows.

Trichomitus a genus of trichomonads in the family Trichomonadidae.

T. fecalis found in human feces.

T. rotunda found in the cecum and colon of pigs. Not thought to be pathogenic.

T. wenyoni found in the cecum and colon of rodents and rhesus monkeys.

trichomonacide [trik"o-mo'nə-sīd] an agent destructive to trichomonads.

trichomonad [trik"o-mo'nad] a parasite of the genera *Trichomonas*, *Tritrichomonas*, and *Tetratrichomonas*.

trichomonal [trik"o-mo'nəl] pertaining to trichomonads.

t. enteritis the cause-and-effect relationship between the numbers of trichomonads found in association with enteric disease, especially colitis in horses, is doubtful. The organisms may be opportunistic pathogens only.

Trichomonas a genus of flagellate protozoa parasitic in animals, birds, and in humans. Member of the family Trichomonadidae and characterized usually by the presence of one or more flagella (at the anterior end of the cell body).

T. caballi found in the colon of horses.

T. canistomae found in the mouth of dogs.

T. equi* (syn. *T. faecalis*)** see ***Tritrichomonas equi.

T. equibuccalis found in the mouth of horses.

T. felistomae found in the mouth of cats.

T. foetus see ***Tritrichomonas foetus***.

T. gallinae found in the upper digestive tract of many birds but mostly in pigeon squabs where it causes avian **trichomoniasis**.

T. gallinarum see ***Tetratrichomonas gallinarum***.

T. hominis see ***Pentatrichomonas hominis***.

T. intestinalis see ***Pentatrichomonas hominis***.

T. macacovaginae found in the vagina of the rhesus monkey.

T. phasioni causes diarrhea and dehydration of pheasant poults.

T. tenax found in the mouth of monkeys and humans but has no pathogenic effect.

trichomoniasis [trik"o-mo-ni'ə-sis] disease caused by infection with the protozoan parasite of the genus *Trichomonas* (or *Tritrichomonas* or *Tetratrichomonas*).

avian t. a disease of the upper digestive tract of young birds, especially pigeon squabs, caused by *Trichomonas gallinae*. Necrotic lesions are present in the mouth, pharynx, esophagus, crop and sometimes proventriculus and conjunctival sac. Called also canker, frounce, roup.

bovine t. a contagious venereal disease of cattle caused by *Tritrichomonas foetus* and characterized by infertility, abortion and pyometra.

trichomonosis trichomoniasis.

trichomycosis [trik"o-mi-ko'sis] any disease of the hair caused by fungi.

Trichonema a now discarded genus name of strongylid worms; replaced by the genera ***Cyathostomum***, ***Cylicocyclus***, ***Cylicodontophorus***, ***Cylicostephanus*** and others.

trichonodosis [trik"o-no-do'sis] a condition characterized by apparent or actual knotting of the hair.

trichopathy [trĭ-kop'ə-thē] disease of the hair.

Trichophora a protozoan parasite of fish.

trichophytid [trĭ-kof'ĭ-tid] a **dermatophytid** reaction to infection by *Trichophyton* spp.

trichophytin [trĭ-kof'ĭ-tin] a filtrate from cultures of *Trichophyton* spp. used in testing for trichophytosis.

trichophytobezoar [trik"o-fī"to-be'zor] a bezoar composed of animal hair and vegetable fiber.

Trichophyton a genus of fungi that may cause various infections of the skin, hair and nails. It utilizes keratin as a source of nourishment and is therefore localized in its pathogenicity to the skin and its appendages. The perfect state is in the genus *Arthroderma*. Called also *Achorion*.

T. equinum causes **ringworm** in horses. a zoophilic species.

T. gallinae now called *Microsporum gallinae*; the cause of favus in fowl. A zoophilic species.

T. megninii, T. rubrum, T. shoenleinii, T. tonsurans, T. violaceum anthropophilic species which occasionally infect animals.

***T. mentagrophytes* (syn. *T. gypseum*)** causes **ringworm** in horses, dogs and many other species.

T-42: *Trichophyton mentagrophytes* infection of four years duration in a dog.

T. mentagrophytes* var *erinacei occasionally causes ringworm in dogs and other species; the reservoir is the European hedgehog. A zoophilic and anthropophilic spcies.

T. simii causes **ringworm** in monkeys and poultry. A zoophilic species.

T. verrucosum causes **ringworm** in cattle, sheep and goats. A zoophilic species.

trichophytosis [trik"o-fī-to'sis] infection with fungi of the genus *Trichophyton*.

trichoptilosis [trik"o-tĭ-lo'sis] splitting of hairs at the end. A familial form has been described in Golden retrievers.

trichorrhexis [trik"o-rek'sis] the condition in which the hairs are split and feather-like.

t. nodosa structural abnormalities of the hair shaft result in breakage and hypotrichosis; seen in horses, dogs and humans. Physical or chemical damage to the hair is usually responsible.

trichoschisis [trik-os'kĭ-sis] trichoptilosis.

trichoscopy examination of the hair.

trichosis [tri-ko'sis] any disease or abnormal growth of the hair.

Trichosomoides crassicauda a nematode in the family Trichuridae; found in the urinary bladder of Norway and black rats and may cause granulomatous lesions.

Trichosporon a genus of yeast-like fungi that are soil saprophytes but may occasionally be pathogenic, especially as a cause of mastitis in cattle.

T. beigelii may be associated with disseminated infections in cats and cutaneous mycosis in horses.

T. capitatum has been incriminated in abortions in cattle and horses, and mastitis in cattle.

T. cutaneum an occasional cause of bovine mastitis.

trichosporonosis [tri-kos"pə-rə-no'sis] infection with fungi of the genus *Trichosporon*; occurs rarely in immunosuppressed cats as papular or nodular skin lesions around the nostril or at the site of bite wounds on the legs.

trichosporosis [trik"o-spə-ro'sis] see **trichosporonosis**

trichostrongyliasis, trichostrongylosis [trik"o-stron"jə-li'ə-sis] the disease caused by the infestation of the intestine and abomasum of ruminants by *Trichostrongylus* spp. Manifested by poor growth, wasting and persistent diarrhea. *T. axei* infestation is also seen in horses.

trichostrongylid a worm of the family Trichostrongylidae.

Trichostrongylus a genus of nematode parasites belonging to the family Trichostrongylidae, which infects animals and humans.

T. affinis found in the small intestine of rabbits, occasionally in sheep.

T. axei found in the abomasum of cattle, sheep, goats, deer, antelope and in the stomach of pigs, horses, donkeys and rarely humans.

T. capricola found in the small intestine of sheep and goats.

T. colubriformis found in the small intestine, sometimes abomasum also, in cattle, sheep, goat, antelope, camel. Also recorded in pig, human, dog and rabbit.

T. drepanoformis found in the small intestine of sheep.

T. falculatus found in the small intestine of sheep, goat and antelopes.

T. hamatus found in the intestine of sheep and steinbok.

T. longispicularis found in sheep and cattle.

T. orientalis found in the small intestine of humans and rarely sheep.

VetBooks.ir

T. probolurus found in the small intestine of sheep, goats, camels and rarely humans.
T. retortaeformis found in the small intestines of rabbits, hares.
T. rugatus found in the small intestines of sheep and goats.
T. skrjabini found in sheep, moufflon, roe deer.
T. tenuis found in the small intestine and ceca of domestic and wild birds.
T. vitrinus found in the small intestine of sheep, goats, deer, and occasionally in pigs, rabbits, camels and humans.

trichothecene [*tri-koth'ə-sēn*] a complex group of about 40 biologically active metabolites formed by *Fusarium* spp. fungi. Naturally occurring members of this group of mycotoxins are T-2 toxin, deoxynivalenol and nivalenol. They cause **fusariotoxicosis** in animals and toxic aleukia in humans.

Trichothecium roseum a toxic fungus causing nervous signs.

trichotillomania [*trik"o-til"o-ma'ne-ə*] a psychogenic dermatosis in which the animal pulls out its own hair; seen in cats.

trichotomous [*tri-kot'ə-məs*] divided into three parts.

trichuriasis [*trik"u-ri'ə-sis*] the disease caused by the infestation of the cecum by *Trichuris* spp. The most obvious clinical feature is diarrhea sometimes with mucus and blood.

Trichuris a genus of nematodes in the family Trichuridae, found in the large intestine of most species. Called also whipworms. Includes *T. cameli* (camels), *T. campanula* (cats), *T. discolor* (cattle, sheep. goat, buffalo, zebra), *T. globulosa* (ruminants), *T. leporis* (rabbits, hares, coypu), *T. ovis* (ruminants), *T. raoi* (dromedaries), *T. serrata* (cats), *T. skrjabini* (sheep, goats, camels), *T. suis* (pigs), *T. sylvilagi* (rabbits, hares, coypu), *T. tenuis* (dromedary), *T. trichiura* (humans, simian primates), *T. vulpis* (dogs, foxes).

trichurosis infection with the worm ***Trichuris***.

tricipital [*tri-sip'ĭ-təl*] 1. three-headed. 2. relating to the triceps muscle.

triclabendazole [*tri"klə-ben'də-zōl*] a highly effective fasciolicide against liver flukes. Although a benzimidazole, it is only effective against *Fasciola hepatica*.

triclocarban [*tri"klo-kahr'ban*] a bacteriostat and disinfectant used in soaps and other cleansing compounds. Called also trichlorocarbanilide.

triclosan [*tri-klo'san*] a biphenyl antibacterial disinfectant used most often in medicated shampoos.

tricolor describes a coat color of dogs and cats which has orange and black patches (similar to the **tortoiseshell**) but has in addition patches of white hair.

tricornuate having three horns, cornua or processes.

tricresol [*tri-kre'sol*] a mixture of *o*-, *m*- and *p*-cresols.

tricuspid [*tri-kus'pid*] having three points or cusps, as a valve of the heart.

t. dysplasia an uncommon congenital defect of the tricuspid heart valve seen in dogs and cats. It is inherited in Labrador retrievers as an autosomal dominant trait with incomplete penetrance; it has been mapped to chromosome 9 in this breed. There is a variety of forms of the defect which causes enlargement of the right atrium and ventricle. See also **Ebstein's anomaly**.

t. insufficiency a functional incompetence that may be caused by rupture of the chordae tendineae of the tricuspid valve, bacterial endocarditis, heartworms, endocardiosis or congenital anomalies, resulting in regurgitation of blood from the right ventricle into the right atrium during systole.

t. regurgitation see tricuspid insufficiency (above).

t. valve the valve located between the right atrium and right ventricle. Called also right atrioventricular valve.

tricyclic [*tri-sik'lik*] containing three fused rings in the molecular structure.

tridactylism [*tri-dak'tə-liz-əm*] the presence of three digits on each limb.

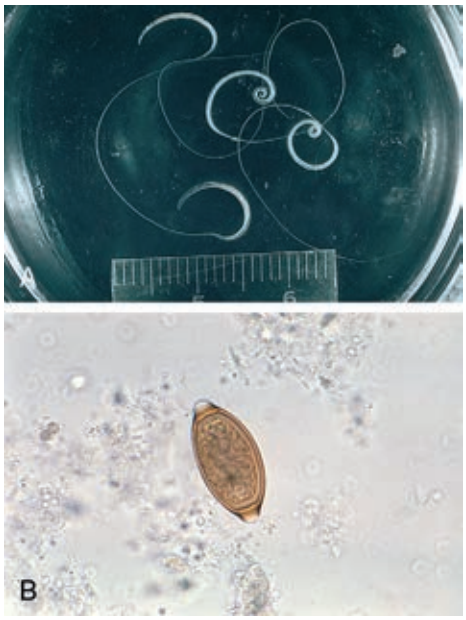
tridentate [*tri-den'tāt*] having three prongs.

tridermic [*tri-dur'mik*] derived from all three germ layers, the ectoderm, endoderm and mesoderm.

tridihexethyl an anticholinergic quaternary ammonium compound.

trientine triethylenetetramine dihydrochloride; a copper-chelating agent used in the treatment of chronic hepatopathies in which copper accumulates.

trier a meat inspector who inspects the viscera in an uneviscerated chicken carcass through a small incision in the abdominal wall. The prime target is the liver and if this appears to be unaffected by disease the carcass is passed. Called also abdominal trier.



T-43: (A) Adult *Trichuris vulpis*, the canine whipworm. (B) Egg of *Trichuris vulpis*. (A) From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012. (B) Courtesy of CDC/Dr Mae Melvin.

triethanolamine [*tri"eth-ə-nol'ə-mēn*] a mixture of alkanolamines consisting largely of triethanolamine and containing some di- and monoethanolamine; used as an alkalizing agent in pharmaceutical preparations.

triethylenemelamine an alkylating agent used as an antineoplastic agent; a cause of testicular degeneration. Called also tretamine.

triethylenethiophosphoramide [*tri-eth"ə-lēn-thi"o-fos-for'ə-mīd*] see **thiotepa**.

trifenmorph see 4-**tritylmorpholine**.

trifid [*tri'fid*] split into three parts.

trifluomeprazine [*tri"floo-pro'mə-zēn*] a phenothiazine tranquilizer.

trifluorothymidine [*tri-floor'ĭ-dēn*] a synthetic nucleoside that blocks DNA synthesis. Once used as an antiviral agent in the treatment of ocular herpesvirus infections.

triflupromazine a phenothizine tranquilizer used as a sedative and antiemetic. Called also fluopromazine.

trifluralin a dinitroaniline compound used as a herbicide. Excessive, accidental access causes diarrhea, anorexia, nervousness.

trifluridine an antiviral agent used topically in the treatment of herpesvirus infections of the eye.

trifluorothymidine see **trifluridine**.

trifoliol one of the coumestan group of phytoestrogens.

trifoliosis [*tri"fo-le-o'sis*] photosensitive dermatitis caused by the ingestion of burr trefoil (*Medicago polymorpha*).

Trifolium plant genus of the legume family Fabaceae; clovers. They are plants of the greatest importance in high-producing pastures but can have disadvantages in some circumstances, e.g. they are common causes of bloat in cattle. Major syndromes include hyperestrogenism (*T. alpestre*, *T. fragiferum*, *T. pratense*, *T. subterraneum*), neonatal goiter due to low-level cyanide poisoning (*T. repens*), slobbers (*T. pratense*), putative hepatopathy with encephalopathy and photosensitizaion (*T. hybridum*), molybdenum poisoning (*T. hybridum*), obstructive urolithiasis (*T. subterraneum*). Useful pasture plants are alpestrine clover (*T. alpestre*), alsike clover (*T. hybridum*), red clover (*T. pratense*), strawberry clover (*T. fragiferum*), subterranean clover (*T. subterraneum*), white clover (*T. repens*).

trifurcation [*tri"fər-ka'shən*] division or the site of separation into three branches.

trigeminal [*tri-jem'ĭ-nəl*] 1. triple. 2. pertaining to the fifth cranial (trigeminal) nerve.

t. nerve paralysis causes an inability to close the mouth (dropped jaw), difficulty in mastication and atrophy of the masticatory muscles together with a loss in facial sensation on the affected side. See also **mandibular** neuritis.

t. neuritis see seasonal **head** shaking.

t. neuropraxia see **mandibular** neuritis.

VetBooks.ir

trigeminy [*tri-jem'ĭ-ne*] the condition of occurring in threes, especially the occurrence of three pulse beats in rapid succession.

triggerfish brightly colored fish of the family Balistidae. They are food fish as well as popular as saltwater aquarium fish. They are aggressive and the defensive structure of the dorsal and ventral spines give rise to their name.

Triglochin genus of marsh plants in the family Juncaginaceae; can cause cyanide poisoning. Includes *T. maritima*, *T. palustris*. Called also seaside or marsh arrowgrass.

triglyceride [*tri-glis'ər-īd*] a compound consisting of three molecules of fatty acids esterified to one molecule of glycerol; a neutral fat that is the usual storage form of lipids in animals. Called also triacylglycerol.

t. absorption test see **fat** absorption test.

t. lipase see **triacylglycerol**.

medium-chain t. (MCT) short and medium length chain fatty acids (containing four to 12 carbon atoms) are much more rapidly digested than those with long chains. Coconut oil contains a high proportion of medium-chain triglycerides and may be used in the diet of dogs with malabsorption syndrome.

t. rich lipoprotein see triglyceride-rich **lipoprotein**.

trigonal [*tri'go-nəl*] 1. triangular. 2. pertaining to a trigone.

t.–colonic anastomosis a method of diverting urine flow by surgically joining the trigone of the bladder to the colon.

trigone [*tri'gōn*] 1. a triangular area. See also **triangle**. 2. the primary three cusps of an upper cheek tooth.

olfactory t. the triangular area of gray matter between the roots of the olfactory tract.

vesical t. see vesical **triangle**.

trigonectomy excision of the vesical trigone.

Trigonella foenum-graecum member of the plant family Fabaceae; the source of pharmaceutical fenugreek. Has caused poisoning in grazing livestock. Called also fenugreek.

trigonitis [*trig"o-ni'tis*] inflammation or localized hyperemia of the vesical trigone.

trigonum [*tri-go'nəm*] pl. *trigona* [L.] *trigone* or *triangle*.

tri-iodothyronine (T_3) [*tri-ī"o-do-thi'ro-nēn*] one of the thyroid hormones; an organic iodine-containing compound liberated from thyroglobulin by hydrolysis and deiodination of thyroxine. It has several times the biological activity of thyroxine.

t. (T_3) suppression test the difference between the serum concentration of T_3 and T_4 before and after oral administration of triiodothyronine for two days. With normal thyroid function, there is a marked decrease in T_3 concentration, but in hyperthyroidism there is little change. Used in cats when other laboratory indicators of hyperthyroidism are ambiguous.

t. uptake the uptake of the compound by red blood cells is used as a measure of thyroid function. Called also T_3 uptake.

trilabe [*tri'lāb*] a three-pronged lithotrite.

trilaminar [*tri-lam'ĭ-nər*] three-layered.

trilobate [*tri-lo'bāt*] having three lobes.

trilocular [*tri-lok'u-lər*] having three loculi or cells.

trilogy [*tril'ə-je*] a group or series of three.

t. of Fallot a term sometimes applied to concurrent pulmonic stenosis, atrial septal defect and right ventricular hypertrophy. See also **tetralogy** of Fallot.

trilostane [*tri'lo-stān*] an inhibitor of adrenal, ovarian and placental steroids. Used in the treatment of hyperadrenocorticism.

Trimenopon hispidum an amblycerid louse found on guinea pigs.

trimensual [*tri-men'su-əl*] occurring every 3 months.

trimeprazine [*tri-mep'rə-zēn*] a phenothiazine derivative; a mild central nervous depressant, moderate antiemetic and anticonvulsant, with powerful antihistaminic action; used as an antipruritic and antitussive.

trimercaptopropane an impurity in dimercaptopropanol which may cause poisoning.

trimester [*tri-mes'tər*] a period of 3 months.

trimetaphan a compound used in ganglionic blockade and as a vasodilator.

trimethobenzamide [*tri-meth"o-ben'zə-mīd*] an ethanolamine derivative; a strong antidopaminergic antagonist which is used as a central antiemetic.

trimethoprim [*tri-meth'o-prim*] an antibacterial closely related to pyrimethamine; administered in combination with a sulfonamide because these drugs blockade two consecutive steps in the synthesis of tetrahydrofolate by microorganisms. See also **sulfadiazine–trimethoprim**.

trimethylamine a smelly substance that taints milk. Formed in sugar beet residues by the fermentation of betaine.

trimethylene glycol [*tri-meth'ə-lēn*] an alcohol that causes marked growth rate depression in chickens.

trimethyllysine a form of lysine with three methyl groups on the N6 atom; component of histone proteins; precursor of carnitine, the coenzyme of fatty acid oxidation.

trimetrexate [*tri"mə-trek'sāt*] an antifolate and an antineoplastic agent, similar to methotrexate. Also used in the treatment of toxoplasmosis and *Pneumocystis* infections.

trimipramine [*tri-mip'rə-mēn*] a tricyclic antidepressant.

trimorphous [*tri-mor'fəs*] existing in three different forms.

trinitrophenol [*tri"ni-tro-fe'nol*] see **picric acid**.

Trinoton anserinum, T. anseris an amblycerid mite that is found on ducks and swans.

triocephalus [*tri"o-sef'ə-ləs*] a fetus with no organs of sight, hearing or smell, the head being a nearly shapeless mass.

Triodontophorus one of the genera of large strongyles of horses in the family Strongylidae. They are all parasites of the large intestine of equids.

T. brevicauda in the horse and ass.

T. minor in donkey.

T. serratus in horse, ass, mule, zebra.

T. tenuicollis found in the right dorsal colon of horses where it causes deep, hemorrhagic ulcers.

triol an organic compound containing three hydroxy groups, a trihydric alcohol, e.g. glycerol.

triolein [*tri-o'le-in*] see **olein**.

triorchidism [*tri-or'ki-diz-əm*] the presence of three testes.

triorthocresyl phosphate, triorthotolyl phosphate [*tri-or"tho-kres'əl fos'fāt, tri-or"tho-tol'əl fos'fāt*] the ortho isomer of cresyl phosphate; used in industry and very toxic to animals, causing degeneration of nerves, leading to stiffness, incoordination and paraplegia.

triorthotolyl phosphate [*tri-or"tho-tol'əl fos'fāt*] see **triorthocresyl phosphate**.

triose [*tri'ōs*] a monosaccharide containing three carbon atoms in a molecule.

triosephosphate isomerase [*tri'ōs fos'fāt i-som'ər-ās*] an enzyme in the Embden–Meyerhof pathway which catalyzes the reversible conversion of dihydroxyacetone phosphate to glyceraldehyde-3-phosphate.

trioxymethylanthraquinone emodin; yielded by the glycosides in the bark and seeds of elder and buckthorn. Ingestion of the bark causes colic, diarrhea and some deaths.

tripara [*trip'ə-rə*] tertipara.

tripe the scalded and cleaned rumen and reticulum. The omasum is discarded because of the difficulty in cleaning between the leaves.

tripelennamine [*tri"pə-len'ə-min*] an antihistamine used in treating allergic disorders and also as a stimulant in downer cows.

tripeptide [*tri-pep'tid*] a peptide formed from three amino acids.

tripery and guttery room at an abattoir set aside for salvaging, trimming and cleaning the rumen and reticulum for tripe, and the intestines for sausage casings.

triphasic [*tri-fa'zik*] having three phases.

triphenylmethane [*tri-fen"əl-meth'ān*] a substance from coal tar, the basis of various dyes and stains, including aurin, rosaniline, basic fuchsine and gentian violet.

triphosphatase [*tri-fos'fāt*] see **adenosine** triphosphatase.

triple energizer in acupuncture a non-existent organ which is the seat of specific physiological functions, e.g. it facilitates the flow of fluid, promotes the circulation and aids secretion, excretion and all of the vital functions. Called also San Jiao, triple heater, triple warmer, triple burner.

Triple Crown the three main events in the USA racing calendar for 3-year-old thoroughbreds, the Kentucky Derby, the Preakness Stakes and the Belmont Stakes.

triple-heater see **triple energizer**.

triple phosphate urolith [*trip'əl fos'fāt u'ro-lith*] see struvite **urolith**.

triple sugar iron (TSI) agar an indicator medium containing glucose, lactose and sucrose and ferrous sulfate or ferric ammonium to identify *Salmonella* spp. and other ***Enterobacteriaceae***.

triple sulfa [*trip'əl sul'fə*] various combinations of sulfonamides used therapeutically to reduce the occurrence of crystalluria.

VetBooks.ir

The therapeutic efficiency of the compound is additive but the solubilities are independent of each other.

triplegia [*tri-ple'jə*] paralysis of three extremities.

triplet [*trip'lət*] 1. one of three offspring produced at one birth. 2. a combination of three objects or entities acting together, as three lenses or three nucleotides. See also **codon**.

triplex [*tri'pleks*] triple or threefold.

triploid [*trip'loid*] having triple the haploid number of chromosomes (3n).

triploid jaw deformity defect of Atlantic salmon comprising a short, curved lower jaw with misaligned symphyses in the jaw. Cause uncertain, possibly genetic.

triploidy [*trip'loi-de*] state of being **triploid**.

triplokoria [*trip"lo-kor'e-ə*] the presence of three pupils in one eye.

triplumbic tetroxide red lead.

triprolidine [*tri-pro'li-dēn*] a histamine H_1 antagonist.

-tripsy word element. [Gr.] *crushing*; used to designate a surgical procedure in which a structure is intentionally crushed.

Triraphis mollis Australian grass of the Poaceae plant family; can cause cyanide poisoning; called also purple plume grass.

trisaccharide [*tri-sak'ə-rīd*] a sugar each molecule of which yields three molecules of monosaccharides on hydrolysis.

Trisetum flavescens European grass in the family Poaceae; contains a calcinogenic agent; causes **enzootic** calcinosis. Called also yellow (golden) oatgrass.

trismus [*triz'məs*] motor disturbance of the trigeminal nerve, especially spasm of the masticatory muscles, with difficulty in opening the mouth (lockjaw); a characteristic early sign of tetanus.

trisomy [*tri'so-me*] the presence of an additional (third) **chromosome** of one type in an otherwise diploid cell (2n+1); associated with many congenital deformities in humans.

trisplanchnic [*tri-splangk'nik*] pertaining to the three great visceral cavities, the skull, thorax and abdomen.

tristichia [*tri-stik'e-ə*] the presence of three rows of eyelashes.

trisulcate [*tri-sul'kāt*] having three furrows.

trisulfapyrimidine [*tri-sul"fə-pĭ-rim'ĭ-dēnz*] one of the commercially available triple sulfa mixtures; contains a mixture of the sulfonamides, sulfadiazine, sulfamerazine and sulfamethazine. See also **triple sulfa**.

trisulfide [*tri-sul'fīd*] a sulfur compound containing three atoms of sulfur.

triterpene [*tri-tur'pēn*] plant toxins, e.g. lantadenes A, B, found in *Lantana camara*, icterogenins A, B, C, found in *Lippia* spp. Called also triterpene acids.

t. acids see triterpene (above).

tetracyclic t. plant toxins found in *Cucumis* spp.

tritiated thymidine thymidine linked to the radioisotope tritium. Used to label DNA in the study of cellular and viral DNA synthesis.

triticale a cereal crop plant, a hybrid of wheat and rye, used only for livestock feed. Has the same energy content as wheat but a higher content of better quality protein. Yield of grain per acre is much less than that of wheat.

Triticum genus of cultivated cereals in the family Poaceae; grazing young green crop can contribute to hypomagnesemic tetany; includes *T. aestivum* (*T. vulgare*, wheat), *T. dicoccum* (emmer, close relative of wheat and similar quality to it but lower yield), *T. spelta* (spelt), *T. vulgare* (*T. aestivum*). *T. aestivum* sporadically causes photosensitization.

tritium (^{3}H) [*trit'e-əm*] the mass 3 isotope of hydrogen, obtained by bombardment of beryllium in the cyclotron with deuterium ions. It has a half-life of 12.3 years, and is used as an indicator or tracer in metabolic studies. See also **tritiated thymidine**.

Tritrichomonas a genus of protozoan parasites with three anterior flagella in the family Trichomonadidae.

T. caviae found in the cecum and colon of guinea pigs but is not pathogenic.

T. eberthi found in the ceca of the chicken, turkey and duck.

T. enteris found in the cecum and colon of *Bos indicus* and *Bos taurus*, but has no pathogenic effects.

T. equi thought at one time to be the cause of acute and chronic undifferentiated diarrhea in horses but usually considered to be non-pathogenic.

T. foetus found in cattle, pig, horse and deer; causes **trichomoniasis** in cattle and large bowel diarrhea in dogs and cats.

T-44: Scanning electron micrograph of *Tritrichomonas foetus*. From Noakes DE, Parkinson TJ, England GCW, Arthur's Veterinary Reproduction and Obstetrics, 8th Edition. Saunders, 2001.

T. minuta found in the cecum and colon of rat, mouse and hamster.

T. muris found in the cecum and colon of mouse, rat, hamster and wild rodent.

T. suis found in the stomach, small intestine, cecum and nasal passages of pigs.

triturable susceptible of being triturated.

triturate [*trich'ər-āt*] 1. to reduce to powder by rubbing. 2. a substance powdered fine by rubbing.

trituration [*trich"ər-a'shən*] 1. reduction to powder by friction or grinding. 2. a finely powdered substance.

triturator [*trich'ūr-a"tər*] an apparatus in which substances can be continuously rubbed.

4-tritylmorpholine a molluscicide used in the control of bilharziasis. Called also trifenmorph, Frescon.

trivalent [*tri-va'lənt*] having a valence of three.

t. phenylorganic arsenicals includes the pharmaceuticals thiacetarsamide, arsphencomplexamine. See also organic **arsenical**.

Trixacarus a genus of mange mites in the family Sarcoptidae.

T. caviae (syn.*Caviacoptes caviae*) causes mange in guinea pigs characterized by alopecia, pruritus and keratinization.

T. diversus causes mange in rats, mice and hamsters.

trixylenyl phosphate one of the compounds used in the manufacture of **triaryl phosphates**.

trixylyl phosphate an industrial aryl phosphate capable of causing organic phosphate poisoning in cattle.

tRNA transfer RNA (**ribonucleic acid**).

aminoacyl-tRNA transfer RNA to which its specific amino acid has been coupled by its specific aminoacyl-tRNA synthetase.

aminoacyl-tRNA binding site one of two tRNA binding sites on a ribosome that holds the incoming tRNA molecule charged with an amino acid. Called also A site.

aminoacyl-tRNA synthetases a set of enzymes that couple each of the 20 amino acids to its appropriate tRNA molecule.

initiator tRNA a special methionine tRNA that binds to the initiation codon AUG that forms part of the initiation complex at the start of mRNA translation.

peptidyl-tRNA binding site one of two tRNA binding sites on a ribosome that holds the tRNA that is normally linked to the polypeptide chain. Called also P site.

trocar a sharp-pointed, needle-like instrument equipped with a cannula; used to puncture the wall of a body cavity and withdraw fluid or gas. An especially large bore trocar and cannula, 1.0–1.5 cm diameter, is used in the treatment of bloat in cattle.

bleeding t. a large bore, about 10 gauge, needle with a ferruled hub for the attachment of rubber tubing.

VetBooks.ir

Duchenne's t. a trocar for obtaining specimens of deep-seated tissues.

trocarization the action of using a trocar to penetrate an organ or tissue.

trochanter [*tro-kan'tər*] one of three tuberosities on the femur, at the upper end of its lateral surface (greater trochanter), towards the upper end on its medial surface (lesser trochanter) and more distally on the lateral surface (third trochanter). The third trochanter is prominent in horses and rabbits.

trochlea [*trok'le-ə*] pl. *trochleae* [L.] a pulley-shaped part or structure; various bony or fibrous structures through or over which tendons pass or with which other structures articulate. See examples below.

femoral t. the articular surface on the cranial aspect of the distal femur upon which the patella glides.

humeral t. grooved articular surface at the distal end of the humerus; articulates with the radius and ulna.

trochlear [*trok'le-ər*] 1. pertaining to a trochlea. 2. pertaining to the fourth cranial (trochlear) nerve.

t. nerve see Table 14.

t. notch semicircular notch in the proximal extremity of the ulna, articulates with the trochlea of the humerus, overhung by the 'beak' of the ulna's anconeal process.

t. orbit a flat piece of cartilage, or loop of fibrous tissue, embedded in the dorso-medial wall of the orbit close to the edge of the orbit; acts as a pulley for the dorsal oblique muscle.

t. talus one of two articular surfaces on the talus. The *trochlea tali proximalis* articulates with the cochlea of the tibia in horses, and with the tibia and fibula in ruminants, pigs and carnivores; the *trochlea tali distalis* on the distal surface of the talus of pigs and ruminants for articulation with the central tarsal and fourth tarsal bones.

trochleoplasty deepening of the femoral trochlea is used to stabilize the patellofemoral joint in patellar luxation.

trochoid [*tro'koid*] pivot-like, or pulley-shaped.

trochoides [*tro-koi'dēz*] a pivot joint.

troglitazone [*tro"glĭ-ta'zōn*] a thiazolidinedione compound that enhances peripheral insulin receptor sensitivity; used in the management of diabetes mellitus. Withdrawn from the market.

Troglodytella ciliated protozoa isolated from cases of diarrhea in recently captured great apes, chimpanzees, gorillas and gibbons. Includes *T. abrassarti*, *T. gorillae*.

Troglostrongylus a genus of nematodes in the family Crenosomatidae found in the lungs of members of the family Felidae.

T. brevior found in the respiratory tract of cats.

T. subcrenatus found in the lungs of domestic and wild cats.

Troglotrema a genus of trematodes in the family Troglotrematidae.

T. acutum found in the frontal and ethmoidal sinuses of fox, mink and polecat and may destroy the walls of the sinuses.

T. salmincola see ***Nanophyetus*** *salmincola*.

trohoc study see **case**-control study.

trolamine [*tro'lə-mēn*] triethanolamine.

troleandomycin [*tro"le-an-do-mi'sin*] the triacetyl ester of oleandomycin; a macrolide antibiotic, similar to erythromycin. Called also triacetyloleandomycin.

Trollius europaeus European plant member of Ranunculaceae family; contains protoanemonin; causes abdominal pain, stomatitis, diarrhea. Called also globeflower.

Trombicula a genus of mites (family Trombiculidae), whose larvae are parasitic on all animal species and cause dermatitis. Some also transmit diseases from their natural hosts rodents to humans, e.g. scrub typhus. The larvae are also called chiggers.

T. akamushi transmits scrub typhus of humans.

T. alfreddugesi see ***Eutrombicula*** *alfreddugesi*.

T. autumnalis distinctively red mite found on all domestic animal species including poultry. Attacks humans. It causes dermatitis, e. g. between dog's claws and on the heels of horses. Called also harvest mite, aoutat, lepte automnale.

T. batatas causes dermatitis.

T. delhiensis transmits scrub typhus of humans from rodents.

T. minor the scrub-itch mite.

T. sarcina see ***Eutrombicula*** *sarcina*.

T. spendens causes dermatitis.

trombiculiasis see **trombiculidiasis**.

trombiculid a member of the Trombiculidae family of mites whose parasitic larvae (**chiggers**) infest vertebrates causing **trombiculidiasis**.

trombiculidiasis [*trom-bik"u-li'ə-sis*] dermatitis in all pastoral animal species and birds caused by mites of the family Trombiculidae. The bites produce wheals and intense pruritus followed by the development of moderate to severe dermatitis. This is mostly on the lower part of the face and the distal extremities. The disease is most likely to occur in autumn when the parasites are active and is often confined to particular fields that provide the best ecological niche for the mite.

trombiculosis infestation with ***Trombicula***.

tropane alkaloid plant toxins, e.g. atropine, hyoscyamine, scopolamine (hyoscine) found in solanaceous plants.

trophectoderm [*trof-ek'to-dərm*] the earliest trophoblast.

trophesy defective nutrition due to disorder of the trophic nerves.

trophic [*tro'fik*] pertaining to nutrition.

-trophic word element. [Gr.] *nourishing, stimulating*.

-tropin -tropic.

troph(o)- word element. [Gr.] *food, nourishment*.

trophoblast [*tro'fo-blast*] the peripheral cells of the blastocyst, which attach the fertilized ovum to the uterine wall and contribute to the placenta and the membranes that nourish and protect the developing organism. The inner cellular layer is the cytotrophoblast and the outer layer is the syntrophoblast.

trophocyte [*tro'fo-sīt*] a cell that provides nourishment for other cells.

trophology [*tro-fol'ə-je*] the science of nutrition of the body.

trophoneurosis [*tro"fo-nŭŏ-ro'sis*] any functional nervous disease due to failure of nutrition from defective nerve influence.

trophonosis [*tro"fo-no'sis*] any disease due to nutritional causes.

trophont [*tro'font*] sperm of the protozoon *Oodinium* spp. (called also *Piscinoodinium*, *Amyloodinium*) found attached to the skin or gills of fish.

trophonucleus [*tro"fo-noo'kle-əs*] macronucleus.

trophopathy [*tro-fop'ə-the*] disease due to derangement of nutrition.

trophoplast a granular protoplasmic body, a plastid.

trophotaxis [*tro"fo-tak'sis*] taxis in relation to nutritive materials.

trophotherapy [*tro"fo-ther'ə-pe*] treatment of disease by dietary measures.

trophozoite [*tro"fo-zo'it*] the active, motile stage of a protozoan parasite. Refers to the motile stage of flagellate protozoa, e.g. *Giardia* spp. and the stage that follows a sporozoite, e.g. some apicomplexan parasites.

-trophy suffix meaning growth or development.

tropia [*tro'pe-ə*] a manifest deviation of an eye from the normal position when both eyes are open and uncovered. See also **strabismus**.

-tropic word element. [Gr.] *turning toward, changing, tending to turn or change*.

tropical [*trop'ĭ-kəl*] pertaining to the tropics, the regions of the earth lying between the tropic of Cancer above the equator and the tropic of Capricorn below.

t. anhidrotic asthenia a condition due to generalized absence of sweating in conditions of high temperature. See also **anhidrosis**.

t. canine pancytopenia (TCP) see canine **ehrlichiosis**.

t. fish includes 400 species suitable for home aquariums. The common ones are **goldfish**, **mollies**, **guppy**, angelfish (***Pterophyllum***), **swordtail** and **sea** horse.

t. cattle tick ***Rhipicephalus*** *(Boophilus) microplus*.

t. horse tick ***Dermacentor*** *nitens*.

tropicamide [*tro-pik'ə-mīd*] a relatively rapidly but short-acting parasympatholytic agent used topically as a mydriatic of choice for ophthalmoscopic examination in domestic animals.

Tropilaelaps a genus of mites, two species of which (*T. clareae, T. koenigerum*) parasitize honey bees causing abnormal brood development and death, leading to colony decline and collapse. The natural hose if the giant Asian honey bee (*Apis dorsata*), but it readily infests colonies of the Western honey bee (*A. mellifera*). A disease notifiable to the OIE (see Table 22).

tropillo ***Solanum*** *elaeagnifolium*.

-tropin word element. [Gr.] *nourishing, stimulating*. See also -trophin.

tropine a crystalline alkaloid from atropine and various plants.

tropinin a protein aggregate in thin muscle filaments.

tropism [*tro'piz-əm*] a growth response in a nonmotile organism elicited by an external stimulus, and either toward (positive tropism) or away from (negative tropism) the stimulus; used as a word element combined with a stem indicating nature of the stimulus (e.g. phototropism) or material or entity for which an organism (or substance) shows a special affinity (e.g. neurotropism).

VetBooks.ir

trop(o)- prefix meaning changing.

tropocollagen [*tro"po-kol'ə-jən*] the molecular unit of all forms of collagen; it is a helical structure of three polypeptides.

tropomyosin [*tro"po-mi'o-sin*] a muscle protein of the I band that inhibits contraction by blocking the interaction of actin and myosin, except when influenced by troponin.

troponins [*tro'po-nin*] a complex of muscle proteins which, when combined with Ca^{2}+, influence tropomyosin to initiate contraction. Troponin I is a highly conserved polypeptide which forms a complex with troponin T and troponin C on the actin portion of the contractile mechanism of striated muscle throughout the body. Occurs in three isoforms, one of which is cTnI which is not found in smooth muscle nor in substantial concentrations in striated muscle. cTnI is released from the myocardium in proportion to the degree of tissue injury. Plasma concentrations are used as a biomarker of myocardial disease.

trospectomycin a derivative of spectinomycin with greater activity against gram-positive bacteria.

trot one of the natural gaits of the horse; a two-beat gait on alternating diagonals.

collected t. the head is held well in and the horse is not permitted to fully extend its limbs. The gait can be very showy but not fast nor a great coverer of distance.

extended t. not a racing trot in that the rhythm is not fast but the horse takes long strides and covers a lot of distance; the head and neck are extended.

Trotter trotting racehorse; includes American, Baltic, Cuban, French, German, Russian, etc. Trotters. See **AmericanTtrotter**.

trough [*trof*] 1. standard equipment for feeding and watering animals. 2. an M-shaped false top to be placed on a surgical table. A small patient laid in it is propped up in the groove. Made of sterilizable material. Useful also in radiology if made of radiolucent materials.

troughing collective term for water or feed troughs.

trout sport and food finfish in the family Salmonidae. Includes brown, brook, cutthroat, rainbow, sea trout and Great Lakes trout. Some are freshwater, some anadromous.

brook t. ***Salvelinus*** *fontinalis*.

brown t. *Salmo trutta*.

lake t. ***Salvelinus*** *namaycush*.

rainbow t. ***Oncorhynchus*** *mykiss*.

trovafloxacin [*tro"və-flok'sə-sin*] a fluoroquinolone antibiotic with activity against anaerobic bacteria. It has been withdrawn from use.

TRP traumatic reticuloperitonitis.

Trp tryptophan.

Tru-Cut biopsy needle a disposable needle with outer cannula and inner, notched rod in which a tissue specimen is cut, trapped and withdrawn. The needle is commonly used for percutaneous biopsy of lymph nodes, liver, kidney, etc.

truncal [*trung'kəl*] of the nature of or pertaining to the trunk.

truncate [*trung'kāt*] 1. to amputate; to deprive of limbs. 2. having the end cut squarely off.

truncus [*trung'kəs*] pl. *trunci* [L.] trunk; individual trunci are listed as trunks in Table 9 (arteries) and Table 14 (nerves).

t. arteriosus an artery issuing from the fetal heart, that develops into the aortic and pulmonary arches. The trunk may persist into extrauterine life. The single arterial trunk from the heart supplies blood to both aortic and pulmonary circuits.

t. brachiocephalicus a vessel arising from the arch of the aorta and giving origin to one or both of the common carotid and one or both subclavian arteries.

T-45: Trotter horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

t. celiacus celiac trunk.

t. pulmonalis pulmonary trunk.

trunk [*trungk*] 1. the main part, as the part of the body to which the head and limbs are attached, or a larger structure (e.g. vessel or nerve) from which smaller divisions or branches arise, or which is created by their union. 2. the extended nose of the elephant, containing many muscles giving it extraordinary strength and mobility. Anatomically it includes the nose and upper lip. There is a single finger-like papilla on the dorsal part of the tip in the Asian elephant and two papillae on the African elephant.

bicarotid t. a short artery which is the origin of the two common carotid arteries in ungulates.

brachiocephalic t. see Table 9.

celiac t. the arterial trunk arising from the abdominal aorta and giving origin to the left gastric, common hepatic, and splenic arteries; see Table 9.

costocervical t. a branch of the subclavian artery; see Table 9.

lumbar lymph t. a plexus of lymph vessels on the roof of the abdomen that drains into the cisterna chyli.

lumbosacral t. a nerve trunk formed by union of the ventral branches of the lumbar and sacral nerves; see also Table 9.

pudendoepigastric t. see Table 9.

pulmonary t. a vessel arising from the conus arteriosus of the right ventricle and bifurcating into the right and left pulmonary arteries; see also Table 9.

sympathetic t. see **sympathetic** trunk.

vagal t. see dorsal, ventral vagal trunks in Table 14.

trypan blue a supravital stain and a stain for amyloid. Also, a largely superseded trypanocide; causes tissue sloughs if injected around the vein, and stains tissues blue, an inconvenience in meat animals.

trypanocidal [*tri-pan"o-si'dəl*] destructive to trypanosomes. The common drugs used are **diminazene** aceturate, **homidium** bromide, **quinapyramine**, **suramin**.

trypanocide [*tri-pan'o-sīd*] a **trypanocidal** drug.

trypanolysis [*tri"pan-ol'i-sis*] the lysis of trypanosomes.

Trypanoplasma cyprini a fusiform protozoan parasite with a flagellum at each pole. A member of the family Cryptobiidae. May invade the vascular system and cause depression and emaciation. See also ***Cryptobia*** *cyprini*.

trypanoplasmiasis disease of finfish caused by *Trypanoplasma* spp.

Trypanosoma a multispecies genus of protozoa in the family Trypanosomatidae, parasitic in the blood, lymph and tissues of invertebrates and vertebrates, including humans; most species live part of their life cycle in the intestines of insects and other invertebrates, the flagellate stage being found only in the vertebrate host. The species which cause serious diseases of domestic animals are listed below. Species of minor pathogenicity include *T. avium* (birds), *T. binneyi* (platypus), *T. calmetti* (ducklings), *T. diazi* (capuchin monkeys), *T. dimorphon* (domestic animals generally), *T. gallinarum* (fowls), *T. melophagium* (sheep), *T. minasense* (monkeys, e.g. marmosets), *T. nabiasi* (rabbits), *T. primatum* (chimpanzees, gorillas), *T. rangeli* (humans, dogs, cats). Called also *T. ariarii*, *T. guatamalense*, *T. saimiriae* (squirrel monkeys), *T. sanmartini* (squirrel monkeys) and *T. theodori* (pigs). Called also *Trypanozoon*.

T. brucei **(syn. *T. pecaudi*)** causes a severe disease in all species including horse, cattle, sheep, dogs and cats.

T. congolense **(syn. *T. pecorum*, *T. nanum*, *T. montgomeryi*)** causes diseases in all domestic animals but most serious in humans (sleeping sickness), cattle (nagana); reservoir hosts are wild ruminants.

T. cruzi **(syn. *T. escomeli*)** a disease of humans (Chagas' disease, American trypanosomiasis) which has reservoirs in pigs, dogs and cats and many wild animals. It causes disease in these hosts and may be fatal to dogs.

T. equinum occurs in various species but is most serious in equids, in which it is characterized by posterior paralysis; called Mal de Caderas.

T. equiperdum a serious disease of equids which is transmitted venereally and is called **dourine**.

T. evansi causes infection in many species including camels, horses and dogs. The disease in horses is **surra**. In cattle and buffalo the disease is subclinical but these species act as reservoirs.

T. gambiense **(syn. *T. hominis*, *T. nigeriense*, *T. ugandense*)** a chronic disease of humans which can occur also in cattle, goats, sheep, horses, dogs and cats.

T. lewisi occurs in rats and may cause death in ratlings.

T. rhodesiense causes a serious disease in humans but only a mild one in ruminants and other domestic animals and monkeys.
T. suis found in pigs in which it causes a fatal disease.
T. theileri considered to be nonpathogenic in cattle, in which it occurs almost universally but may cause illness in stressed animals.
T. uniforme found in most ruminants. Similar to *T. vivax* in pathogenicity.
***T. vivax* (syn. *T. caprae, T. angolense*)** found in ruminants and horses but not pigs, dogs, cats. Causes a serious and fatal disease in cattle and goats, especially in animals under stress.

trypanosome [*tri-pan'o-sōm*] a protozoan of the genus *Trypanosoma*.

trypanosomiasis [*tri-pan"o-so-mi'ə-sis*] clinically a nondescript disease which may be peracute, acute or chronic. Called also nagana, mal de caderas and others. See also **dourine**, **surra**. The diagnosis is based on a positive blood smear and the presence of an insect vector, often a tsetse fly, or a history of mating in the case of dourine. Tsetse-transmitted trypanosomiasis is a disease notifiable to the OIE (see Table 22).
American t. a disease of humans caused by infection with *Trypanosoma cruzi*.

trypanosomicide [*tri-pan"o-so'mĭ-sīd*] 1. lethal to trypanosomes. 2. an agent that is lethal to trypanosomes.

trypanosomid [*tri-pan'o-so-mid*] a skin eruption occurring in trypanosomiasis.

trypanosomosis trypanosomosis.

trypanotolerance resistance to infection with trypanosomes, inherent in some breeds of cattle, e.g. the N'dama, Nigerian shorthorn, Lagune and others, and some other animals.

Trypanozoon see ***Trypanosoma***.

trypomastigote [*tri"po-mas'tĭ-gōt*] the characteristic developmental stage of trypanosomes, usually in the vertebrate host but may be in the invertebrate. A leaf-like form with an undulating membrane and often a free flagellum.

trypsin [*trip'sin*] a proteolytic enzyme formed in the intestine by the cleavage of trypsinogen by enterokinase. Trypsinogen enters the intestine as part of the intestinal juice. It is an endopeptidase that hydrolyzes peptides of arginine or lysine.
t. fecal tests may be measured qualitatively or quantitatively to diagnose exocrine pancreatic insufficiency. Largely superseded by more accurate diagnostic tests.
feline t.-like immunoreactivity (fTLI) see trypsin-like immunoreactivity (below).
t. inhibitor small protein synthesized in the exocrine pancreas which prevents conversion of trypsinogen to trypsin, so protecting itself against trypsin digestion. Pancreatic trypsin inhibitor competitively binds to the active site of trypsin and inactivates it at a very low concentration. The binding is amongst the strongest noncovalent associations, but only a fraction of the potential trypsin is so inhibited.
t.-like immunoreactivity (TLI) serum proteins, particularly trypsinogen, react immunologically as trypsin and a normal concentration is dependent upon a normally functional pancreas. Decreased values are associated with exocrine pancreatic insufficiency, while elevated concentrations are consistent with either acute or chronic pancreatitis or decreased renal excretion. Species-specific tests, cTLI (canine) and fTLI (feline) are used.

trypsinogen [*trip-sin'o-jən*] the inactive precursor of trypsin, secreted by the pancreas and activated to trypsin by contact with enterokinase.
t. activation peptide (TAP) a product of the cleavage of trypsinogen by enterokinase, together with trypsin. With acinar cell damage, there is cleavage by cathepsin B within the pancreas; TAP can be found in the plasma and urine.

tryptamines [*trip'tə-mēn*] poisonous compounds that occur in plants. Three tryptamine alkaloids in *Phalaris aquatica* are thought to be the cause of both nervous and cardiac forms of poisoning by this plant.

tryptase a protease that is active in inflammation and a mediator of anaphylaxis.

tryptic [*trip"tik*] relating to or resulting from digestion by trypsin.

tryptophan (Trp, W) [*trip'to-fan*] a naturally occurring amino acid, existing in proteins. High levels of intake of D,L-tryptophan are thought to be a significant cause of atypical interstitial pneumonia in cattle. The actual toxic agent is 3-methylindole, a metabolic product of D,L-tryptophan in the rumen.
DL-t. component of some roughages; high levels can cause acute bovine pulmonary emphysema and edema.
t. oxygenase first enzyme in the catabolic pathway for tryptophan. Essential step in the pathway to synthesis of nicotinamide nucleotides NAD+ and NADP+. Approximately 30% of the nicotinamide nucleotide requirement of some animals can be supplied through this enzyme. The cat is notably lacking in the latter capacity.

tryptophanase an enzyme that catalyzes the cleavage of tryptophan into indole, pyruvic acid and ammonia.

tryptophanuria [*trip"to-fə-nu're-ə*] excessive urinary excretion of trytophan.

Ts cell suppressor T **lymphocyte**. Called also regulatory T lymphocyte.

***tsang* organs** see **zang-fu organs**.

TSE transmissible spongiform encephalopathy.

tsetse an African fly of the genus ***Glossina***, which transmits trypanosomiasis. Includes forest tsetse (*Glossina brevipalpis, G. fusca*), riverine tsetse (*G. pallidipes, G. palpalis*), savannah tsetse (*G. longipalpis, G. morsitans*).
t. fly disease nagana.

TSH thyroid-stimulating hormone; called also **thyrotropin**, thyrotropic hormone. Determination of blood concentration has been used in dogs, along with other laboratory indicators, to diagnose or rule out a diagnosis of primary hypothyroidism.
cTSH canine TSH.
TSH releasing factor see **thyrotropin** releasing hormone.
TSH stimulation test administration of TSH will result in an increase in T_4 concentration and little or no resonse if hypothyroidism is present. Used most often in dogs.

TSST-1 toxic shock syndrome toxin.

TSTA tumor-specific transplantation antigen.

tsun the acupuncture basic unit of measurement; acupuncture 'inches'. This differs for each individual. in the horse equals the width of the 16th rib at the level of the tuber coxae.

tsutsugamushi fever scrub typhus.

tT_4 total thyroxine.

TTP thymidine triphosphate.

TU tuberculin unit.

tuatara an endangered, nocturnal, burrowing reptile in the family Sphenodontidae, found only in New Zealand. A primitive lizard whose closest relatives are extinct reptiles. It has a row of spikey scales down the back and a primitive, photosensitive organ on the head (like the iguana), which is often called a 'third eye' or 'parietal eye'.

tuba [*too'bə*] pl. *tubae* [L.] tube.

tube [*tōōb*] a hollow cylindrical organ or instrument.
chest t. one or more tubes inserted into the pleural space to provide relief from either **pneumothorax** or accumulations of fluid within the thoracic cavity and to allow for re-expansion of the lung.
drainage t. a tube used in surgery to facilitate escape of fluids. See also **drain** (2).
E t. esogostomy tube.
endobronchial t. a double-lumen tube inserted into the bronchus of one lung, permitting complete deflation of the other lung; used in anesthesia and thoracic surgery.
esophageal t. see nasogastric tue (below).
eustachian t. see **auditory** tube.
feeding t. one for administering food into the alimentary tract. See also **enterostomy** tube, **jejunostomy** tube, tube **gastrostomy**, nasoesophageal tube (below).
fermentation t. a U-shaped tube with one end closed, for determining gas production by bacteria. Called also a Durham tube.
G t. see tube **gastrostomy**.
J t. see **jejunostomy** tube.
Levin t. a gastroduodenal catheter of sufficiently small caliber to permit transnasal passage.
nasal t. see nasogastric tube (below).
nasoesophageal t. a feeding tube introduced through the nares and nasal cavity, then into the esophagus. Used in enteral feeding of dogs and cats.
nasogastric t. a tube of soft rubber or plastic that is inserted through a nostril and into the stomach.
otopharyngeal t. auditory tube.
pharyngostomy t. see **pharyngostomy** intubation.

T-46: Nasogastric intubation of bovine with a foal stomach tube. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

photomultiplier t. a vacuum tube that produces an electric current proportional to the intensity of light falling on its photocathode; it is sensitive enough to detect single photons.
t. rating chart provided by the manufacturer and containing the specifications for the safe operating limits of the X-ray tube in terms of kilovolt peak, milliamperes and time.
stomach t. a flexible tube used for introducing food, medication, or other material directly into the stomach, or for removal of undesirable contents from the stomach. It can be passed into the stomach via the nose or mouth. Passage via the mouth requires the protection of a mouth speculum.
suction drainage t. see suction **drainage**.
test t. a tube of thin glass, closed at one end; used in chemical tests and other laboratory procedures.
thoracostomy t. one inserted through an opening in the chest wall for application of suction to the pleural cavity to facilitate re-expansion of the lung in spontaneous pneumothorax. See also chest tube (above).
vacuum t. many clinical pathology specimens are now collected in evacuated test tubes. A needle connected to the tube through a rubber stopper is passed into a vein. The needle is then connected to the vacuum and the blood or other fluid withdrawn.
valve t. a thermionic diode that permits the flow of electric current in an X-ray machine in only one direction.
Wangensteen t. a small nasogastric tube connected with a special suction apparatus to maintain gastric and duodenal decompression.
tubectomy [*too-bek'tə-me*] excision of a portion of the uterine tube.
tuber [*too'bər*] 1. a swelling or protuberance, especially on a bone. 2. a short, thick, fleshy, underground stem carrying a number of buds each capable of growing into a new plant, e.g. potato. A storage phase of plant growth.
t. calcaneus, t. calcis the point of the hock that serves as the attachment for the common calcaneal tendon.
t. cinereum a mound on the undersurface of the forebrain to which the stalk of the pituitary gland is attached.
t. coxae, coxal t. the point of the hip; the most lateral point of the ilium. Called also the hooks or hook bones. Some hoists (the Bagshaw hoist) are placed over these prominences to lift a paralyzed cow.
facial t. the anterior point on the facial crest, just above the third and fourth cheek teeth of the horse. A homologous point in the cow.
t. ischii the caudal point on the floor of the pubis, the tuber ischium or pin bone.
sacral t. the most medial prominence on the ilium; above the sacroiliac joint.
t. scapulae supraglenoid tubercle.
t. spinae the tuber in the middle of the spine of the scapula that is well developed in pigs and horses but absent from ruminants and carnivores.
tubercle [*too'bər-kəl*] 1. a small, rounded nodule produced by the bacillus of tuberculosis (*Mycobacterium bovis*). It is made up of small spherical masses that contain giant cells and are surrounded by spindle-shaped epithelioid cells. 2. a nodule or small eminence, especially one on a bone, for attachment of a tendon. See also **cuneate** tubercle.
dysgonic t. (1) one from which it is difficult to culture mycobacteria; typical of *Mycobacterium bovis*.
eugonic t. (1) one from which mycobacteria can be isolated with ease; typical of *Mycobacterium avium*.
fibrous t. (1) a tubercle of bacillary origin that contains connective tissue elements.
genital t. see phallic tubercle (below).
gracile t. a small swelling; used as an anatomical landmark; that indicates the location of the gracilis nucleus in the medulla oblongata.
humerus t. the point of the shoulder; the greater tubercle on the head of the humerus.
infraglenoid t. a tubercle on the caudal border of the scapula for attachment of the triceps muscle.
intercondylar t's situated on the intercondylar eminence on the head of the tibia, there are medial and lateral tubercles. Called also intercondylar eminences.
intermediate humerus t. a small ridge between the greater and lesser tubercles of the horse's humerus; it serves to restrain the bicipital tendon.
intervenous t. a fold on the inner wall of the right atrium, directing the flow of blood from the venae cavae to the atrioventricular opening.
miliary t. one of the many minute tubercles formed in many organs in acute miliary tuberculosis.
phallic t. primordium of the penis; called also genital tubercle.
pubic t. a prominent tubercle at the lateral end of the pubic crest.
supraglenoid t. a tubercle on the scapula for attachment of the biceps muscle.
tubercular [*too-ber'ku-lər*] tuberculous.
tuberculate, tuberculated [*too-ber'ku-lāt"*] covered or affected with tubercles.
tuberculid [*too-ber'ku-lid*] a papular skin eruption usually attributed to allergy to tuberculosis.
papulonecrotic t. an eruption of crops of deep-seated papules or nodules, with central necrosis or ulceration.
tuberculigenous causing tuberculosis.
tuberculin [*too-ber'ku-lin*] a sterile liquid containing the growth products of, or specific substances extracted from the tubercule bacillus; used in various forms in the diagnosis of tuberculosis.
heat concentrated synthetic medium (HCSM) t. similar to old tuberculin, but grown on synthetic medium.
new t. a suspension of the fragments of tubercle bacilli, freed from all soluble materials and with glycerine added.
old t. a sterile solution of concentrated, soluble products of the growth of the tubercle bacillus, adjusted to standard potency by addition of glycerin and isotonic sodium chloride solution, final glycerin content being about 50%.
purified protein derivative (PPD) of t. a form of tuberculin used in the testing of animals for tuberculosis. It is a soluble protein fraction prepared from a synthetic medium on which the *Mycobacterium bovis* has been cultured. It has the advantage of reducing the number and severity of the reactions caused by nonspecific sensitizing materials in the culture medium in old tuberculin.
t. reaction the prototype delayed or type IV hypersensitivity; typified by swelling and redness at the site of inoculation of tuberculin.
t. tests tuberculin skin tests, with removal of test-positive (reactor) cattle, have allowed the eradication of bovine tuberculosis from many countries and are the international standard for ante mortem diagnosis of bovine tuberculosis in cattle herds and individual animals. Based on eliciting a delayed-type hypersensitivity response to the intradermal injection of tuberculin. In the *single intradermal test (SIT)* a small volume of bovine tuberculin is injected into a latral skin fold at the base of the tail (caudal fold SIT) or skin in the mid cervical area (cervical SIT). Approximately 72 hr after the injection, the site of injection is palpated for evidence of inflammation, or with the cervical SIT skin thickness is measured with calipers prior to injection and approximately 72 hr later. The *single intradermal comparative cervical tuberculin (SICCT) test* uses simultaneous injection of both bovine and avian tuberculins side-by-side into the skin of the neck. *M. bovis*-infected cattle show a greater response to bovine tuberculin than to avian tuberculin, whereas infections with other mycobacteria promote the reverse effect. The *interferon-γ (IFN-γ) test* is a cellular

VetBooks.ir

T-47: Tuberculin single intradermal test (SIT). Positive tuberculosis test. Swelling at 72 hours following intradermal injection of bovine tuberculin.

immune assay which can detect early infection. The main ancillary test in many countries as it improves specificity of testing and minimizes slaughtering animals with false-positive skin tests. It has also been used for ante mortem diagnosis of TB in goats, sheep, African buffalo. Marketed as a patented commercial kit under the trade name Bovigam®.

tuberculitis [too"bər-ku-li'tis] inflammation of or near a tubercle.

tuberculocele tuberculous disease of a testis.

tuberculofibroid characterized by a tubercle that has undergone fibroid degeneration.

tuberculoid [too-ber'ku-loid] resembling a tubercle or tuberculosis.

tuberculoma [too-ber"ku-lo'mə] a tumor-like mass resulting from enlargement of a caseated tubercle.

tuberculoprotein [too-ber"ku-lo'pro'tēn] protein fraction isolatable from a culture of *Mycobacterium* spp. See also purified protein derivative of **tuberculin**.

tuberculosis [too-ber"ku-lo'sis] applied generally to diseases caused by tuberculous group of bacteria in the genus *Mycobacteria*, which includes *Mycobacteria tuberculosis*, *M. bovis* and *M. avium*. See also **fish** tuberculosis, **mycobacteriosis**.

atypical mycobacterial t. see atypical **mycobacteriosis**.

avian t. see *Mycobacterium avium* tuberculosis (below).

bovine t. see *Mycobacterium bovis* tuberculosis (below).

cutaneous t. infection with *Mycobacterium tuberculosis* uncommonly involves the skin; in dogs and cats it can occur as cutaneous ulcers, abscesses, plaques and nodules. More often, the term is used to describe infection with atypical mycobacteria.

fish t. disease of aquarium fish caused by *Mycobacterium* spp. Causes weight loss, exophthalmos, cutaneous ulcers and pallor. At necropsy there are internal granulomas. The acid-fast organisms can be found in the ulcers. Also found in a variety of cultured species including shrimps.

***Mycobacterium avium* t.** causes a significant disease only in birds. In birds it is a chronic disease characterized by loss of body weight, poor egg production and eventual death. There are characteristic large gray, yellow or white tubercles in liver, spleen and intestinal wall. The disease is very persistent in a flock. In mammals it causes nonprogressive lesions, especially in lymph nodes, causing the animals to be positive to the tuberculin test.

***Mycobacterium bovis* t.** a chronic disease characterized by the development of tubercles or discrete nodular lesions in any organ. These may develop a necrotic center containing yellow-orange pus, often caseous. Diffuse involvement of lungs causing bronchopneumonia, and of uterus causing metritis, and of the udder also occur. The common clinical syndrome is wasting with localizing signs dependent on the organs involved. Subject of test and slaughter programs in most countries. A common lesion in horses is osteomyelitis of a cervical vertebra. Bovine tuberculosis is a disease notifiable to the OIE (see Table 22).

***Mycobacterium tuberculosis* t.** infection with the human mycobacteria causes transient, usually lesionless infections in animals.

open t. 1. that in which there are lesions from which tubercle bacilli are being discharged out of the body. 2. tuberculosis of the lungs with cavitation.

skin t. is characterized by chronic indurated lesions on the skin of the lower limbs of cattle. There are nodules on the path of corded lymphatics. Nonpathogenic acid-fast bacteria are present in the lesions and affected cattle are positive to the tuberculin test. Also occurs uncommonly in dogs and cats as single or multiple nodules, ulcers, abscesses or plaques in the skin. See also **mycobacteriosis**.

t. testing tuberculin testing.

tuberculostatic [too-ber"ku-lo-stat'ik] 1. inhibiting the growth of *Mycobacterium tuberculosis*. 2. a tuberculostatic agent.

tuberculotic [too-ber"ku-lot'ik] pertaining to or affected with tuberculosis.

tuberculous [too-ber'ku-ləs] pertaining to or affected with tuberculosis; caused by *Mycobacterium tuberculosis*, e.g. tuberculous adenitis.

t. mastitis chronic mastitis but with fibrosis commencing at the base of the udder, not around the milk cistern; abnormality of the milk is in the form of fine floccules in watery liquid, settling out on standing, and appearing at the end of milking instead of in the first few streams.

tuberculum [too-ber'ku-ləm] pl. *tubercula* [L.] see **tubercle**.

tuberosis [too"bər-o'sis] a condition characterized by the presence of nodules.

tuberositas [too"bə-ros'i-təs] pl. *tuberositates* [L.] tuberosity; elevations on bones to which muscles are attached.

tuberosity [too"bə-ros'i-te] an elevation or protuberance.

deltoid t. a prominence on the lateral aspect of the humerus; the point of attachment of the deltoid muscle.

facial t. a discrete elevation on the maxilla of cows which serves as an attachment for the rostral part of the masseter muscle.

ischial t. the pin bone; the most caudal process of the ischium.

olecranon t. the free end of the ulna; point of attachment of the triceps brachii muscle; the point of the elbow.

radial t. a rough patch on the cranial aspect of the proximal end of the radius; for insertion of the biceps brachii.

tibial t. prominent tuberosity protruding from the cranial aspect of the proximal end of the tibia onto which the patellar ligament inserts.

tuberous [too'bər-əs] covered with tubers; knobby.

tub(o)- word element. [L.] *tube*.

tubocurarine [too"bo-ku-rah'rēn] an alkaloid from the bark and stems of *Chondrodendron tomentosum*. *d*-tubocurarine chloride is used as a skeletal muscle relaxant.

tuboligamentous [too"bo-lig"ə-men'təs] pertaining to the uterine tube and broad ligament.

tubo-ovarian [too"bo-o-var'e-ən] pertaining to the uterine tube and ovary.

tuboperitoneal [too"bo-per"i-to-ne'əl] pertaining to the uterine tube and the peritoneum.

tuboplasty [too'bo-plas"te] 1. salpingoplasty. 2. plastic repair of a tube, such as the eustachian tube.

tubouterine [too"bo-u'tər-in] pertaining to the uterine tube and uterus.

tubular [too'bu-lər] 1. pertaining to renal tubules. 2. pertaining to fallopian tube.

t. backleak leakage of tubular fluid into the interstitium of the kidney is one of the factors in the pathogenesis of acute renal failure.

t. maximum (T_m) the highest rate in milligrams per minute at which the renal tubules can transfer artificially administered test substances; the maximal tubular excretory capacity.

t. necrosis acute necrosis of the tubular epithelium caused usually by ischemia or exposure to a nephrotoxin; in most cases the patient succumbs to uremia in a few days. See also **nephrosis**.

t. proteinuria failure of the tubules to resorb small molecule proteins excreted by the glomerulus.

t. reabsorption reabsorption of solutes from the glomerular filtrate by the tubules, the conservation of protein, glucose and

T-48: Single intradermal comparative cervical tuberculin (SICCT) test. Positive tuberculosis test. Swelling at 72 hours following intradermal injection of tuberculin. Reaction is greater at site of bovine tuberculin injection (red arrow) than avian tuberculin (white arrow).

T

bicarbonate, and the conservation of the water that accompanies them.

t. transport refers to all processes which occur with renal tubular fluid during its transport from glomerular space to renal pelvis.

t. transport maximum when the tubular transport maximum for a renal tubular solute is exceeded the solute appears in the urine.

tubulation the mechanism and principle of development in the form of tubes such as the neural tube, and the visceral tube.

tubule [*too'būl*] a small tube; a minute canal found in various structures or organs of the body.

collecting t's the terminal channels of the nephrons which open on the summits of the renal papillae or renal crests.

convoluted t's channels which follow a tortuous course. See also renal tubules (below) and **tubuli** contorti.

dentinal t's minute wavy, branching channels in the dentin of a tooth that contain the long cytoplasmic processes of odontoblasts and which extend radially from the pulp cavity to the cement or the enamel. Called also dentinal canaliculi.

galactophorous t's small channels for the passage of milk from the secreting cells in the mammary gland. Called also lactiferous ducts.

Henle's t's see **Henle's tubules**.

lactiferous t's see **lactiferous** ducts.

mesonephric t's the tubules comprising the mesonephros, or temporary kidney, of amniotes.

metanephric t's the tubules comprising the permanent kidney of amniotes.

proximal t. intrarenal site for the reabsorption of most of the protein in the tubular fluid.

proximal convoluted t. the portion of the nephron immediately succeeding the glomerulus; susceptible to disease because of its early exposure to toxins in the glomerular filtrate.

renal t's the minute canals made up of basement membrane and lined with epithelium, composing the substance of the kidney and secreting, reabsorbing, collecting and conducting the urine. Include proximal convoluted, the nephron loop (containing the proximal straight tubule, descending and ascending thin, and the distal straight tubules) and the distal convoluted tubules.

seminiferous t's the tubules of the testis, in which spermatozoa develop and through which they leave the gland.

transverse t's structures in myofibers which run transversely to the long axis of the myofibrils in skeletal and cardiac muscle. They are filled with basal lamina material and are part of the communication system of muscle fibers and provide a means for the passage of action potentials into the depths of the fibers. The tubules are invaginations of the sarcolemma. Called also T tubules.

uriniferous t's renal tubules; channels for the passage of urine.

tubuli [*too'bu-li*] [L.] plural of *tubulus*.

t. contorti convoluted seminiferous tubules.

t. recti straight seminiferous tubules.

tubulin [*too'bu-lin*] the constituent protein of microtubules of cells which provide a skeleton for maintaining cell shape and is thought to be involved in cell motility.

α-t. with β-tubulins contributes to the heterodimer tubulin, the building blocks of the electron microscopically visible cell components, the microtubules.

β-t. one of the monomeric globular proteins which associate to form the dimer, α,β-tubulin, the basis of microfilaments.

tubuloalveolar glands [*too"bu-lo-al-ve'ə-lər*] glands that secrete from both alveoli (acini) and tubules as those secreting mucous onto the tracheal mucosa.

tubuloglomerular feedback [*too"bu-lo-glo-mer'u-lər*] an essential ingredient of the juxtaglomerular theory of renal autoregulation; TGF is the proposed mechanisms whereby the glomerular flow rate is modified by changes in the tubular flow rate.

tubulorrhexis [*too"bu-lo-rek'sis*] rupture of the tubules of the kidney.

tubulus [*too'bu-ləs*] pl. *tubuli* [L.] tubule.

tubus [*too'bəs*] tube.

tucked-up describes an abdomen of small circumference as compared to the thorax or to the normal outline for the individual animal. Normally seen in some breeds of dogs, e.g. Whippet, Greyhound.

tuco-tuco (*Ctenomys talarum*) an arid-zone, South American rodent; it has been used as an animal model for the study of type 2 diabetes.

tuft [*tuft*] a small clump or cluster; a coil.

t. cell see **caveolated cell**.

malpighian t. renal glomerulus.

tuftsin [*tuft'sin*] a basic tetrapeptide produced in the spleen by enzymatic degradation of IgG heavy chains that stimulates phagocytosis in polymorphonuclear leukocytes and in macrophages.

TUGA transvaginal ultrasound guided aspiration.

tugs stout leather loops, connected to the backband or saddle, into which vehicle shafts fit.

tui weaned or yearling alpaca.

tui nar finger acupuncture.

Tukidale a specialized, New Zealand carpetwool sheep, a mutant **Romney Marsh** with a large percentage of medullated fibers in its high yielding fleece; the fiber diameter is 35–45 microns. It has a white face and dark skin.

Tula ixtle see ***Agave lecheguilla***.

tularemia [*too"lə-re'me-ə*] a highly contagious disease of rodents caused by *Francisella* (*Pasteurella*) *tularensis* which may infect animals and humans. Biotype A, *F. tularensis* biovar *tularensis,* is prevalent in North America associated with tick-borne tularemia in rabbits and is more virulent than biotype B, *F. tularensis* biovar *holarctica* (*palaearctica*), which is found in Asia, Europe, and North America associated with mosquitoes and with water-borne disease in aquatic rodents and rarely causes disease in higher mammals. Disease in livestock occurs associated with heavy tick infestations and sheep and pigs are the most susceptible. The clinical disease is very variable, depending on where the infection localizes. Cats may be infected by ticks and from hunting or the ingestion of infected rabbits. They develop a generalized lymphadenopathy, splenomegaly and hepatomegaly. Dogs appear to be more resistent to infection. Called also rabbit fever. A disease notifiable to the OIE (see Table 22).

tularin an extract of the organism *Francisella tularensis* used as an antigen in an intradermal test for tularemia in pigs.

tulathromycin an antimicrocial in the triamilide class of macrolide antibiotics, active against gram-negative bacteria; used in the prevention and treatment of respiratory disease in cattle and pigs.

tulip the horticultural tulip (***Tulipa***); the name is used for other plants in the genus ***Moraea***. Includes Cape tulip (*M. collina*), Natal yellow tulip (*M. glauca (Homeria natalensis)*), native or one-leafed cape tulip (*M. flaccida*), two-leaf cape tulip (*M. miniata*), yellow tulip (*M. pallida*). In South Africa, called also tulp.

Tulipa the commercial tulip; member of the family Liliaceae; its bulbs have caused poisoning in cattle.

tullidora see ***Karwinskia humboldtiana***.

tulp [Af.] tulip; ***Moraea***.

tumbleweed ***Salsola australe***.

tumefacient [*too"mə-fa'shənt*] producing tumefaction.

tumefaction [*too"mə-fak'shən*] a swelling; the state of being swollen, or the act of swelling; puffiness; edema.

tumescence [*too-mes'əns*] 1. the condition of being swollen. 2. a swelling.

tumid [*too'mid*] swollen; edematous.

tumor [*too'mər*] 1. swelling, one of the cardinal signs of inflammation; morbid enlargement. 2. neoplasm; a new growth of tissue in which cell multiplication is uncontrolled and progressive. A cancer. Tumors are called also cancers or neoplasms and may be benign or malignant. See also **neoplasia**.

ACTH secreting t. see **corticotroph adenoma**.

benign t. grows slowly, pushing aside normal tissue but not invading it. They are usually encapsulated, well-demarcated growths. They are not metastatic; that is, they do not form secondary tumors in other organs. Benign tumors usually respond favorably to surgical treatment and some forms of **radiation** therapy.

t. blush in cerebral arteriography, the pooling of contrast material where the blood–brain barrier has been interrupted.

Burkitt's t. see **Burkitt's lymphoma**.

button t. histiocytoma.

carotid body t. see **carotid** body tumors.

β cell t. see **insulinoma**.

t. clinical staging see **staging** (2).

connective tissue t. any tumor arising from a connective tissue structure, e.g. a fibroma or fibrosarcoma.

desmoid t. see **desmoid** (2).

t. enhancement see tumor **enhancement**.

erectile t. cavernous hemangioma.

false t. structural enlargement due to extravasation, exudation, echinococcus or retained sebaceous matter.
gastrin-secreting t. see **gastrinoma**, **Zollinger–Ellison syndrome**.
giant cell t. see **giant cell tumor**.
granulosa t., granulosa cell t. a sex chord-stromal tumor, often referred to as granulosa–theca cell tumor, of the ovary originating in the cells of the cumulus oophorus. See also **granulosa cell tumor**.
granulosa–theca cell t. an ovarian tumor composed of granulosa (follicular) cells and theca cells; either form may predominate.
heterologous t. one made up of tissue differing from that in which it grows.
homoiotypic t., homologous t. one made up of tissue resembling that in which it grows.
Hürthle cell t. a new growth of the thyroid gland composed wholly or predominantly of Hürthle cells. See also **Hürthle cell** tumor.
t. immunology see tumor-specific **antigen**.
t. immunotherapy see **immunotherapy**.
islet cell t. a tumor of the islets of Langerhans, which may result in hyperinsulinism. See also **insulinoma**.
t. lysis syndrome a possible sequel to chemotherapy in which very rapid destruction of highly sensitive tumor cells results in release of large amounts of nucleic acid purines, lactate and uric acid which exceed renal and hepatic excretory mechanisms. Characterized by hyperkalemia, hyperphosphatemia, hypocalcemia, hyperuricemia and renal failure.
malignant t. malignant **neoplasm**.
mast cell t. see **mast cell** tumor.
mixed t. see **mixed** tumor.
t. necrosis factor (TNF) two related cytokines produced by macrophages (TNF-α) and some T cells (TNF-β) that are cytotoxic for tumor cells but not for normal cells and which exert a variety of other inflammatory effects. See also **lymphotoxin**.
t.–node–metastases (TNM) classification see TNM **staging**.
non-neoplastic t. tumor (1).
organoid t. teratoma.
phantom t. abdominal or other swelling not due to structural change.
sand t. psammoma.
t.-specific antigen (TSA) see tumor-specific **antigen**.
true t. neoplasm.
tumoral calcinosis see **calcinosis** circumscripta.
tumoricidal [*too″mər-ĭ-si′dal*] destructive to cancer cells.
tumorigenesis [*too″mər-ĭ-jen′ə-sis*] the production of tumors.
tumultus [*too-mul′təs*] excessive organic action or motility.
tung oil tree *Aleurites fordii*.
Tunga a genus of fleas native to tropical and subtropical America and Africa.
T. penetrans the chigoe or jigger flea, which attacks humans, dogs, pigs and other animals, as well as poultry, and causes intense skin irritation. See also **chigoe**.
tungiasis [*təng-gi′ə-sis*] infestation with ***Tunga*** fleas.
tungsten (W) [*tung′stən*] a chemical element, atomic number 74, atomic weight 183.85. See Table 4.
tunic [*too′nik*] a covering or coat. See also **tunica**.
abdominal t. see **tunica** flava abdominis.
Bichat's t. tunica intima of blood vessels.
tunica [*too′nĭ-kə*] pl. *tunicae* [L.] a covering or coat; a membranous covering of an organ or a distinct layer of the wall of a hollow structure, as a blood vessel. See also **tunic**.
t. adventitia the outer coat of various organs, blood vessels and other structures, usually made up of loose connective tissue.
t. albuginea a dense, white, fibrous sheath enclosing a part or organ, such as is present on the testis and penis.
t. albuginea ovarii see tunica ovarii (below).
t. conjunctiva the conjunctiva.
t. dartos dartos.
t. externa an outer coat, especially the fibroelastic coat of a blood vessel.
t. flava abdominis an extensive sheet of elastic tissue that helps to support the abdomen. It is conspicuous in large animals as a yellow corset over the ventral abdomen and is a modified part of the deep fascia and aponeurosis of the external abdominal oblique muscle. It contributes to the deep fascia for the mammary gland or the scrotum.
t. intima the innermost coat of blood vessels; called also Bichat's tunic.
t. media the middle coat of blood vessels.
t. mucosa the mucous membrane lining of various tubular structures.
t. muscularis the muscular coat or layer surrounding the tela submucosa in most portions of the digestive, respiratory, urinary and genital tracts.
t. ovarii capsule of dense collagenous tissue, underlying the covering epithelium, covers each ovary. Called also tunica albuginea ovarii.
t. propria the proper coat or layer of a part, as distinguished from an investing membrane.
t. serosa the membrane lining the external walls of the body cavities (the parietal layer) and coating the surfaces of intruding organs (the visceral layer); it secretes a serous or watery exudate.
t. vaginalis the double-layered sleeve of peritoneum, one layer of which lines the scrotum and inguinal canal (the parietal layer) and the other which invests the testis, epididymis and spermatic cord (the visceral layer).
t. vasculosa a vascular coat, or a layer well supplied with blood vessels, e.g. of the eye.
t. vasculosa lentis vascular envelope of the lens in the developing fetus.
tunicaminyluracils glycolipid mycotoxins and bacterial toxins, some used as antibiotics, e.g. tunicamycins, streptovirudins; include the corynetoxins produced by *Rathayibacter toxicus* that cause corynetoxicosis.
tunicamycin an antibiotic produced by *Streptomyces* spp. fungi which inhibits the synthesis of all *N*-linked glycoproteins by blocking the transfer of acetylgalactosamine from UDP-*N*-acetylgalactosamine to dolicholphosphate.
tuning fork auscultation see tuning fork **auscultation**.
Tunisian Barbary sheep white or red-brown head, carpetwool and meat sheep; males are horned, females polled.
tunnel [*tun′əl*] a passageway of varying length through a solid body, completely enclosed except for the open ends, permitting entrance and exit.
carpal t. see **carpal** tunnel, **carpal** tunnel syndrome.
t. of Corti spiral passage in the organ of Corti.
t. graft see rope **flap**.
tarsal t. see **tarsal** tunnel.
tup ram.
tupping mating with a ram.
t. crayon a marking crayon worn on the brisket in a harness by a ram running with ewes. Ewes that are mated are marked with the crayon. See also **crayon**-marking.
turacin crimson pigment in the feathers of turacos.
turacoverdin the green pigment in the feathers of turacos.
turbid [*tur′bid*] cloudy.
turbidimeter [*tur″bĭ-dim′ə-tər*] an apparatus for measuring turbidity of a solution.
turbidimetry [*tur″bĭ-dim′ə-tre*] the measurement of the turbidity of a liquid.
turbidity [*tər-bid′ĭ-te*] cloudiness; disturbance of solids (sediment) in a solution, so that it is not clear.
turbidometric emanating from or pertaining to turbidimetry.
turbinal, turbinate [*tur′bĭ-nəl*] 1. shaped like a top. 2. turbinate bone (concha nasalis ossea).
turbinate atrophy [*tur′bĭ-nāt*] see **atrophic** rhinitis.
turbinate bones see Table 10.
turbinectomy [*tur″bĭ-nek′tə-me*] excision of a turbinate bone (nasal concha).
turbinotomy [*tur″bĭ-not′ə-me*] incision of a turbinate bone.
turbot a flatfish in the family Scophthalmidae; an important aquaculture species in the UK, Europe and Scandinavia.
turbulence filter the effect of the structure of the turbinates, trachea and bronchi in directing air flow against mucous membranes, serving to remove particulate matter from inspired air.
turbulent flow occurs in blood vessels where there is a stenosis or aneurysm or where there is a sudden increase in velocity; the laminar flow of normal tubes is disrupted and the fluid is randomly and completely mixed; turbulent flows have a greater apparent viscosity than laminar flows.

VetBooks.ir

T-49: Abscesses in the mucous membranes of the turbinate (nasal concha). Postmortem dissection of a sheep with actinobacillosis.

turgescence [*tər-jes'əns*] turgor.
turgescent [*tər-jes'ənt*] becoming swollen.
turgid [*tur'jid*] swollen and congested.
turgor [*tur'gər*] the condition of being turgid; normal or other fullness.
Turino cattle Portuguese and Brazilian dairy cattle originated from Dutch Black Pied.
Türk cell [*tērk*] a lymphocyte with increased basophilia.
turkey a bird in the family Meleagridae. The common turkey is *Meleagris gallopavo*. There are two breeds, the American **Bronzewing** and the **White Holland**. Bred entirely for meat mostly for human consumption on festive occasions.
t. berry see ***Rivina humilis***.
t. bluecomb disease see turkey coronaviral enteritis (below).
t. bordetellosis see turkey **coryza**.
t. bush ***Eremophila*** *deserti*.
t. coronaviral enteritis acute, highly infectious disease of turkeys of all ages characterized by inappetence, wet droppings, weight loss and heavy mortality is caused by a coronavirus. Called also bluecomb disease.
t. coryza see turkey **coryza**.
t. hemorrhagic enteritis an acute, infectious disease of turkeys 4 weeks old and older caused by a Group II avian adenovirus. Clinically there is illness for only 24 hours, bloody droppings and a mortality rate of up to 60%.
t. hepatitis a highly contagious disease of turkeys caused by an enterovirus. The disease is characterized by a high level of subclinical infection and sudden death in stressed birds. There is focal necrosis in the liver and pancreas.
t. herpesvirus antigenically related to Marek's disease virus (MDV) but not pathogenic in any species. Used to vaccinate chickens against Marek's disease. The infection is universal in domestic and wild turkey populations and is now widespread in chicken populations.
t. leg edema see leg **edema**.
t. meningoencephalitis see Israeli turkey **encephalomyelitis**.
t. mullein see ***Eremocarpus setigerus***.
t. rhinotracheitis a catarrhal infection of the upper respiratory tract in young poults. In chickens, a similar disease is called swollen head syndrome. It is caused by a pneumovirus, genus *Metapneumovirus*. A disease notifiable to the OIE (see Table 22).
t. syndrome a common accompaniment of infection in 6-week-old turkey poults infected with *Mycoplasma meleagridis* and with airsacculitis as a result. The syndrome is characterized by deformity and shortening of the tarsometatarsal bone, hock joint swelling and deformity of cervical vertebrae. There may also be stunting of growth and abnormal feathering.
t. X disease the original name given to **aflatoxicosis**.
Turkish Angora a small- to medium-sized cat originating in Turkey. It has a long, slender body with a flat, silky, wavy coat most commonly in white, but other colors are recognized. The eyes may be blue, green or amber and sometimes with eyes of different colors ('odd-eyed').
Turkish Van an uncommon breed of domestic cats with a medium-length haircoat that is chalk white except where it is colored on the tail and in a few spots on the head. The breed is characterized by its attraction to water. Called also the swimming cat.
turned-in ears a defect in which the top part of the pinna is bent at an angle of 90° towards the animal's midline. A sporadic defect but also accompanies baldy calf disease. See also inherited **epidermal** dysplasia of calves.
turned-in toes a conformation defect in horses. May cause the gait to be abnormal and the horse to be subject to brushing or similar injury.
turned-out toes a conformation defect in horses because it may cause the gait to be very wide in front and therefore marginally inefficient.
Turner's (XO) syndrome [*tur'nər*] see Turner's **syndrome**.
turning an obstetrical term for alteration of the presentation of a fetus in a dystocia. Called also version.
turning sickness an aberrant form of theileriosis in which parasitized lymphocytes cause emboli and hemorrhagic infarcts in central nervous tissue. *Theileria parva* is credited with causing the disease which is characterized by convulsive attacks of spinning followed by collapse and unconsciousness, or by a more chronic syndrome of circling, head pressing, incoordination and blindness.
turnip familiar root vegetable ***Brassica*** *rapa*, but also used as a common name for plants in other genera. Includes Indian turnip (*Arisaema triphyllum*), St. Anthony's turnip (*Ranunculus bulbosus*), swede turnip (*B. napobrassica*), turnip weed or wild turnip (*Rapistrum rugosum*).
t. stubble green top regrowth after the roots have been harvested. Used for grazing by ruminants but has potential for toxicity (nitrate–nitrite, hemolytic agent, goitrogen, polioencephalomalacia).
turnover [*tərn'o-vər*] the rate at which a substance is replaced in tissues or cells; alternatively, the rate at which the entire pool of a substance is replaced in the tissue.
iron t. much of the body's iron store is fixed in intracellular sites and is not available metabolically. The portion of the iron store that is available for mobilization into new sites is called the labile iron pool and may undergo a good deal of turnover via metabolic activity.
t. number see **catalytic constant**.
turnsick [*tərn'sik*] see **coenurosis**.
turpentine a sticky oleoresin which exudes from *Pinus* spp. trees.
t. oil commercial extract from turpentine used as a solvent for waxes and varnishes. The active constituents are terpenes, α-pinene being the important one. In veterinary medicine has been used as a treatment for bloat in cattle and tympanitic colic in horses and as a constituent of general tonic drenches for cattle. Also has some use in stimulant ointments and liniments. Absorbed readily from the gut and the skin and is a significant poison for the kidney and intestine. Clinical signs of acute poisoning include colic, vomiting, diarrhea, incoordination and excitement followed by coma.
t. weed see ***Gutierrezia*** *microcephala*.
Turraea robusta an African tree in the plant family Meliaceae; the juice of the leaves is used as a treatment for diarrhea and as an anthelmintic, but the effective agent has not been identified. Overdosing causes dyspnea, ruminal stasis, diarrhea and apathy.
turtle reptiles in the order Testudines; includes the turtles and pond turtles (family Emydidae) , sea turtles (family Cheloniidae) and tortoises (family Testudinidae). They have webbed feet or flippers and their body is covered by a horny shell from which only the legs, head and neck, and tal protrude when needed. The upper shell is called the **carapace** and the undershell the **plastron**. Common terminology is not consistent in the USA, UK and Australia. Generally, terrestrial (land) turtles are called 'tortoises', except in the USA where they are known as box turtles. Freshwater turtles are commonly called 'terrapins', especially in the commercial pet trade where they may actually be the young of many different species, but in the USA it may be reserved for the diamondback terrapin (*Malaclemys terrapin*). Also, the freshwater pond sliders are distinguished separately. 'Sea turtles' usually refers to the marine species, which have feet resembling flippers. Some choose to avoid confusion by just calling them all chelonians.
green t. (*Chelonia mydas*), a large sea turtle; an endangered species, but they are being farmed commercially in some countries.
tush canine tooth in a horse.
tusk the well-developed canine tooth in the male pig and similar large projecting teeth in some wild species. They are open-rooted so that they continue to grow. The upper and lower ones in the pig have growth directions that bring them together in such a way that they sharpen each other as the jaws close. Elephant tusks are modified first incisor teeth that are largest in the African

VetBooks.ir

species (up to 10 feet), with the ivory being dentin. They bear a thin enamel cap which wears away soon after eruption. Incisor tusks are also found in dugongs and the canine tooth forms the conspicuous tusk of walruses.

tussigenic [*tus″ĭ-jen′ik*] causing cough.

Tussilago farfara plant in the family Asteraceae; contains hepatotoxic pyrrolizidine alkaloids. Called also colt's-foot.

tussis [*tus′is*] [L.] *cough*.

tussive [*tus′iv*] pertaining to or due to a cough.

tutamen [*tu-ta′mən*] pl. *tutamina* [L.] a protective covering or structure.

tutamina oculi the protecting appendages of the eye, as the eyelids, eyelashes, etc.

tutin toxic sesquiterpenoid lactone in ***Coriaria*** spp.

Tuttle forceps thumb-type tissue forceps with the tips of the blades formed as loops lying at right angles to the line of closure.

tutu ***Coriaria*** spp.

TV tidal volume.

TVO tractor vaporizing oil.

TVT transmissible venereal tumor.

Tween-80 [*twēn*] a proprietary name for a non-ionic surfactant use as an emusifier.

T.-80 hydrolysis a test used to differentiate *Corynebacterium cystitidis* from other corynebacteria.

twiggy midge bush see ***Zieria laevigata***.

twin-lamb disease see **pregnancy** toxemia.

twin leaf see ***Zygophyllum***.

twinning [*twin′ing*] 1. the production of symmetrical structures or parts by division. 2. the simultaneous intrauterine production of two or more embryos. Twinning is a desirable feature in animals that depend for their profitability on the production of young, e.g. lambs of the meat-producing breeds, and selection for the characteristic is a standard husbandry strategy. In animals that are essentially uniparous, e.g. mares, twins represent a danger to the foals and to the mare. Twins in which one is a female and one a male have the added risk of the female being a **freemartin**.

twins [*twin*] one of the two same-age fetuses in the one pregnancy. See also **twinning**.

binovular t's. dizygotic twins.

conjoined t's fused, symmetrical twins formed by incomplete division of one embryo into two components. See also **Siamese twins**.

discordant t's a particular trait is present in only one of the twins.

dissimilar t. dizygotic twins.

dizygotic t's those that develop from two separate ova fertilized at the same time. They may be of the same sex or of opposite sexes, and are no more similar than any other two offspring of the same parents. Called also fraternal, binovular, dichorial, dissimilar and unlike twins.

fraternal t's dizygotic twins.

free symmetrical monozygotic t's see identical twins (below).

identical t's derived initially from a single zygote; placentas may be shared or separate.

impacted t's twins so situated during delivery that pressure of one against the other produces simultaneous engagement in the birth canal of both.

induced t. produced experimentally in ruminants using PMSG or FSH, or by immunization against androstenedione.

monovular t. monozygotic twins.

monozygotic t's those which develop from a single ovum that divides after fertilization. Because they share the same set of chromosomes, they are always of the same sex, and are remarkably similar in haircoat color and pattern, teeth, and other respects. Monozygotic twins have exactly the same blood type and can accept tissue or organ transplants from each other. May be free and symmetrical, free and asymmetrical, cojoined and symmetrical or cojoined and asymmetrical. Called also identical, enzygotic, monochorial, monovular, similar, or true twins.

Siamese t's conjoined twins. Called also Siamese twins.

similar t. monozygotic twins.

symmetrical t's twins of equal size, age and stage of development.

true t. monozygotic twins.

unequal t's twins of which one is incompletely developed, called also asymmetric twins.

unlike t. dizygotic twins.

twist disease see **whirling disease**.

twist knot cerclage wire secured by twisting the two ends.

twisted leg a sporadic disease of fowls and turkeys of unknown etiology and low incidence in many flocks. There is deformity of the small tarsal bones and a resulting inward bending and twisting usually of only one leg.

Twisty cats see **radial** agenesis.

twitch [*twich*] 1. a brief, contractile response of a skeletal muscle elicited by a single maximal volley of impulses in the neurons supplying it. 2. a device used in the restraint of horses; there are a great many designs. The standard twitch consists of a loop of cord or chain at the end of a short, 2 ft (0.6 m), wooden handle. A fold of muzzle is enclosed in the loop which is then screwed tight. The handle may be held by an assistant or tied to the halter.

bulldog t. consists of two bars, usually metal, hinged at one end. The jaw is clamped shut with a piece of muzzle in it. The other end is then fixed, usually with a ratchet device.

ear t. a rope twitch is twisted onto an ear instead of the muzzle.

Fletcher t. a compact nose twitch for horses. Consists of a cord loop attached to a hollow metal cap that can be screwed to the end of any wooden handle.

Galvayne's t. a loop of soft rope is passed over the poll and through the mouth, below the upper lip but in front of and above the incisor teeth.

halter t. the shank of the halter is passed over the poll and back to the near side through the mouth and then through the halter again.

humane t. for restraining horses, it consists of a hinged metal device which is placed over the upper lip and clipped to the halter.

leg t. a tourniquet applied above the carpal joint.

loop t. a loop in a soft rope is passed over the poll and through the mouth above the tongue and pulled tight.

Martingale t. see **humane** twitch.

Pratt t. a twitch which combines the loop twitch and Galvayne's twitch.

screw t. has the same effect as the standard twitch but the loop is of rigid metal and it is closed by screwing a bar up to clamp the fold of muzzle skin.

snout t. see **hog**[1] holder.

twitching [*twich′ing*] the occurrence of a single contraction or a series of contractions of a muscle.

two-stage prothrombin test see **prothrombin** time test.

two-tailed test a test in which both 'large' and 'small' values of the test statistic indicate that the null hypothesis is not correct.

two tooth sheep with only the two central incisors erupted; average just over one year old.

two-way cross the male parent-to-be comes from one population, the female from another.

two-year-old a horse aged between 2 and 3 years, the age dating from the horse's date of birth. In racehorses the birth date of the horse is as determined by the local racing authority as the birthday of all horses. In the Northern hemisphere, it is January 1st; in the Southern hemisphere, it is August 1st.

Tx treatment.

TXA_2 thromboxane.

tying-up syndrome [*ti′ing up*] see exertional **rhabdomyolysis**.

Tylecodon southern African genus in plant family Crassulaceae; contains cumulative bufadienolide cardiac glycosides; causes ***Krimpsiekte*** (cotyledonosis); includes *T. cacalioides*, *T. grandiflorus*, *T. paniculatus*, *T. ventricosus*, *T. wallichii*. Previously in genus ***Cotyledon***. Called also plakkies, nenta.

tyloma [*ti-lo′mə*] a callus or callosity.

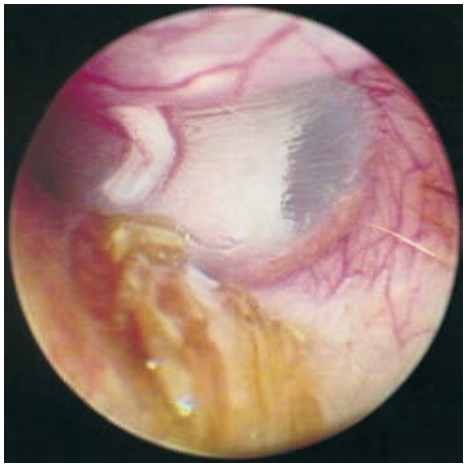
interdigital t. see **interdigital** fibroma.

tylosin [*ti′lo-sin*] an antibiotic produced by cultures of *Streptomyces fradiae*, with a structure similar to erythromycin. It is effective against gram-positive bacteria generally and especially those susceptible to members of the macrolide group. Used in dogs for the treatment of chronic enteropathies.

T-50: Chain twitch. From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide, 2nd Edition. Mosby, 2011.

VetBooks.ir

T-51: Humane twitch. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.



T-52: Normal canine left tympanic membrane. From Gotthelf LN, Small Animal Ear Diseases, 2nd Edition. Saunders, 2005.

tylosis [*ti-lo'sis*] formation of callosities.
tyloxapol [*ti-lok'sə-pol*] a nonionic liquid polymer used as a surfactant to aid liquefaction and removal of mucopurulent bronchopulmonary secretions; administered by inhalation.
tympanal [*tim'pə-nəl*] pertaining to the tympanum or to the tympanic membrane.
tympanectomy [*tim"pə-nek'tə-me*] excision of the tympanic membrane.
tympanic [*tim-pan'ik*] 1. of or pertaining to the tympanum. 2. bell-like; resonant.
t. cavity the air chamber of the middle ear that lies medial to the tympanic membrane and contains the ear ossicles.
t. membrane a thin, semitransparent membrane, nearly oval in shape, that stretches across the ear canal separating the middle ear from the external acoustic meatus (outer ear). It is composed of fibrous tissue, covered with skin on the outside and mucous membrane on the inside. It is constructed so that it can vibrate freely with audible sound waves that travel inward from outside. The manubrium (handle) of the malleus (hammer) of the middle ear is attached to the center of the tympanic membrane and receives the vibrations collected by the membrane, transmitting them to other bones of the middle ear (the incus and stapes) and eventually to the fluid of the inner ear. Called also the eardrum.
t. membrane (secondary) the membrane enclosing the fenestra cochlearis; called also Scarpa's membrane.
t. nerve see Table 14.
t. plexus see tympanic **plexus**.
t. ossicles see auditory **ossicles**.
tympanism [*tim'pə-niz-əm*] drumlike distention of the abdomen due to air or gas in the intestine or peritoneal cavity.
tympanites [*tim"pə-ni'tēz*] tympanism.
tympanitic [*tim"pə-nit'ik*] 1. pertaining to or affected with tympanites. 2. bell-like; tympanic.
tympanitis otitis media.
tympanocentesis [*tim"pə-no-sen-te'sis*] surgical puncture of the tympanic membrane or tympanum.
tympanogenic [*tim"pə-no-jen'ik*] arising from the tympanum or middle ear.
tympanogram [*tim-pan'o-gram"*] a graphic representation of the relative compliance and impedance of the tympanic membrane and ossicles of the middle ear obtained by tympanometry.
tympanohyoid one of the paired, short, proximal terminal segments in the chain of skeletal elements of the hyoid apparatus that connects the stylohyoid bone to the styloid process of the petrous part of the temporal bone.
tympanometry [*tim"pə-nom'ə-tre*] indirect measurement of the compliance (mobility) and impedance of the tympanic membrane and ossicles of the middle ear; it is done by subjecting the external acoustic meatus to positive, normal and negative air pressure and monitoring the resultant sound energy flow.
tympanosclerosis [*tim"pə-no-sklə-ro'sis*] a condition characterized by the presence of masses of hard, dense connective tissue around the auditory ossicles in the middle ear.
tympanotomy [*tim"pə-not'ə-me*] myringotomy.
tympanous [*tim'pə-nəs*] distended with gas.
tympanum [*tim'pə-nəm*] 1. the part of the cavity of the middle ear, in the temporal bone, just medial to the tympanic membrane. 2. the tympanic membrane itself.
pyramid of t. the hollow elevation in the inner wall of the middle ear that contains the stapedius muscle. Called also *eminentia pyramidalis*.
tympany [*tim'pə-ne*] 1. tympanitis. 2. a tympanic, or bell-like, percussion note. 3. distention of a hollow viscus with gas.
crop t. see pendulous **crop**.
gastric t. see gastric dilatation **colic**.
intestinal t. see **intestinal** tympany, **intestinal** dilatation.
ruminal t. see **ruminal** tympany.
secondary t. ruminal tympany secondary to some other condition, e.g. traumatic reticulitis, vagus indigestion, esophageal obstruction.
Tyndall effect [*tin'dəl*] the light reflected by particles suspended in a gas or liquid. Called also Tyndall light phenomenon.
Tyndall light phenomenon [*tin'dəl*] see **Tyndall effect**.
type [*tīp*] 1. the general or prevailing character of any particular case of disease, microorganism, person, substance, etc. 2. to determine or assign a character or category.
blood t's see **blood** group.
wild t. the normal or naturally occurring phenotype of an organism.
type 1 error an error which occurs when using data from a sample which demonstrates a statistically significant association when no such association is present in the population.
type 2 error an error which occurs when using data from a sample that fails to demonstrate a specific association when such association is present in the population.
typhlectasis distention of the cecum.
typhlectomy [*tif-lek'tə-me*] ablation of the cecum.
typhlitis [*tif-li'tis*] inflammation of the cecum; common causes are *Trichuris vulpis* in dogs and swine dysentery in pigs. Called also cecitis.
typhl(o)- 1. word element. [Gr.] *cecum, blindness*. 2. pertaining to the cecum.
Typhlocoelium see ***Tracheophilus***.
typhlocolitis inflammation of the cecum and colon.
typhlodicliditis inflammation of the ileocecal valve.
typhlolithiasis the presence of calculi in the cecum.
typhlopid a member of the Typhlopidae family of blind snakes; see worm **snake**.
typhloproctostomy a fistula between the rectum and the cecum.
typhlotomy [*tif-lot'ə-me*] incision of the cecum.
typhoid [*ti'foid*] 1. resembling typhus. 2. typhoid fever, an infectious disease of humans caused by *Salmonella typhi*.
mouse t. salmonellosis.

VetBooks.ir

typhus [*ti'fəs*] acute infectious diseases caused by *Rickettsia* which are usually transmitted from infected rats and other rodents to humans by lice, fleas, ticks and mites.
Abyssinian tick t. see **boutonneuse fever**.
canine t., canine tick t. see canine **ehrlichiosis**.
cat t. see ***Rickettsia*** felis.
epidemic t. see ***Rickettsia*** *prowazekii*.
Kenya t. see **boutonneuse fever**.
murine t. a disease of rats caused by *Rickettsia typhi*, transmitted by the rat flea *Xenopsylla cheopis* and the rat louse *Polyplax spinulosa*. It is an important disease of humans.
Queensland tick t. a tickborne fever of humans, similar to Rocky Mountain spotted fever, caused by *Rickettsia australis* and transmitted by ixodid ticks. Dogs and cats may be unusual hosts.
Sao Paulo t. see **Rocky Mountain spotted fever**.
scrub t. caused by *Orientia tsutsugamushi*. Wild rodents and occasionally dogs may be hosts.
scrub t. a disease of humans transmitted by *Trombicula akamushi* and resident in rodents which serve as reservoirs. Called also Japanese river fever, tsutsugamushi disease.
Siberian tick t. a disease of humans and many species of feral mammals, especially rodents, caused by *Rickettsia siberica* and transmitted by the ticks *Dermacentor* and *Haemaphysalis*.
typing [*tīp'ing*] in transplantation and transfusion immunology, a method of measuring the degree of organ, solid tissue, or blood compatibility between two individuals, in which specific histocompatibility antigens (e.g. those present on leukocytes) or other cell surface antigens, e.g. red blood cell antigens, are detected by means of suitable immune serum.
blood t. determining the antigenic determinants present on the surface of red blood cells by using specific antibodies (typing serums). See also **blood** group.
phage t. see **phage** typing.
tissue t. see **tissue** typing.
typology [*ti-pol'ə-je*] the study of types; the science of classifying, as bacteria according to type.
Tyr tyrosine.
tyramine [*ti'rə-mēn*] 1. a decarboxylation product of tyrosine, which may be converted to cresol and phenol, found in decayed animal tissue, ripe cheese, and ergot. Closely related structurally to epinephrine and norepinephrine, it has a similar but weaker action. 2. *N*-methyl-β-phenylethylamine, a toxic amine found in *Acacia berlandieri* and mistletoes.
tyrocidine [*ti"ro-si'din*] a bactericidal polypeptide antibiotic used in topical preparations.
tyrogenous [*ti-roj'ə-nəs*] originating in cheese.
Tyroglyphus a genus of mites in the family Acaridae. Parasites of grain and other vegetable matter and only parasitize animals accidentally. They cause itching and occasionally a mild dermatitis. The infestation is usually self-limiting.
***T. farinae* (syn. *Acarus farinae*).** lives in cheeses and grain.
***T. siro* (syn. *Acarus siro*)** the cheese mite; also infests grain and may cause diarrhea.
tyroid of cheesy consistency; caseous.
Tyrol grey cattle silver-gray, multiple purpose cattle, from Austrian Tyrol.
tyromatosis [*ti"ro-mə-to'sis*] a condition characterized by caseous degeneration.
tyropanoate a radiopaque contrast medium for use in oral cholecystography.
Tyrophagus a genus of mites in the family Acaridae.
T. farinae housedust mites; common in stored cereal; thought to be associated with allergic dermatitis.
T. longior found in grains and copra. The cause of copra itch in humans.
T. palmarum a pasture mite found in the nostrils of cattle, especially those with nasal granuloma.
tyrosinase [*ti-ro'sin-ās*] an enzyme which oxidizes phenols such as tyrosine and dopamine to form benzoquinone and water; important in the production of melanin from tyrosine. Deficiency has been reported in Chow Chows where it is transient and is associated with hypopigmentation of the oral mucosa and hair.

T-53: Tyrol dual-purpose cow.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

tyrosine (Tyr) [*ti'ro-sēn*] a naturally occurring amino acid present in most proteins; it is a product of phenylalanine metabolism and a precursor of melanin, catecholamines and thyroid hormones; an acceptor of phosphate groups in protein phosphorylation mechanisms for the regulation of enzyme activity.
t. hydroxylase an oxidase which converts tyrosine to **dopa**.
t. tolerance test used as a test of liver function but about 85% of liver parenchyma must be lost before the test gives a positive reaction.
t. deficiency diets deficient in tyrosine have been associated with a coat color change from black to reddish brown in cats. Restoring normal dietary concentrations reversed the color change.
tyrosine-specific kinases [*ti'ro-sēn spə-sif'ik ki'nās*] enzymes that phosphorylate specific tyrosine residues in proteins resulting in modulation of their activity. Part of the insulin–receptor complex as well as several other growth factor receptors. Binding of the hormones leads to stimulation of the kinase activity. Associated with certain oncogene and proto-oncogene products.
tyrosinemia [*ti"ro-sī-ne'me-ə*] an excess of tyrosine in the blood. Several different types with varying clinical features occur in humans. A syndrome of dermatitis and keratoconjunctivitis resembling tyrosinemia type II of humans (Richner–Hanhart syndrome) occurs in rats fed a diet high in tyrosine, in mink as an inherited disorder (called also pseudodistemper) and it has been reported in a dog.
tyrosinosis [*ti"ro-sī-no'sis*] a condition characterized by a faulty metabolism of tyrosine in which an intermediate product, parahydroxyphenyl pyruvic acid, appears in the urine and gives it an abnormal reducing power.
tyrosinuria [*ti"ro-sī-nu're-ə*] the presence of tyrosine in the urine; seen in liver disease.
tyrosis [*ti-ro'sis*] **caseation** (2).
tyrosyluria [*v*] increased urinary secretion of para-hydroxyphenyl compounds derived from tyrosine, as in tyrosinuria.
tyrothricin [*ti"ro-thri'sin*] a mixture of tyrocidins and gramicidins used for topical or intramammary application.
tyrotoxism poisoning from a toxin present in milk or cheese.
Tyzzeria a genus of protozoa in the family Eimeriidae. They are intracellular parasites in the intestinal epithelium. Includes *T. alleni* (teal), *T. anseris* (geese), *T. pellerdyi* (wild birds), *T. perniciosa* (domestic ducks).
Tyzzer's disease a fatal necrotizing hepatitis caused by *Clostridium piliforme* (*Bacillus piliformis*). The host range is broad and includes all laboratory rodents and rabbits, several wild rodents, domestic animals, and several exotic non-rodent hosts. Signs are severe diarrhea, jaundice and high serum concentrations of liver enzymes. Probably the commonest disease of gerbils, in which it is usually subclinical, but it can cause an acute disease characterized by death in young or stressed individuals.
tzaneen disease [*tsah-nēn'*] a mild disease of cattle without apparent clinical signs, caused by *Theileria mutans*.
tzetze [*tset'se*] tsetse.

VetBooks.ir

U

VetBooks.ir

U chemical symbol, *uranium*; unit; uracil.
U-suture interrupted horizontal mattress suture.
UA urinalysis.
UAA ochre **codon**, one of the three stop codons.
UAG amber **codon**, one of the three stop codons.
uakari (*Cacajao* spp.) small, bald-faced New World monkey with a short, stumpy tail.
Uasin gishu disease a viral disease of horses in Kenya. Highly contagious, large lesions and a generalized cutaneous eruption with a pathology similar to that of molluscum contagiosum of humans. There is a poxvirus similar to vaccinia associated with the disease.
Uberreiter's syndrome see chronic superficial **keratitis**.
ubiquinol [*u"bĭ-kwĭ-nol'*] the form of ubiquinone when reduced by two electrons.
ubiquinone [*u"bĭ-kwĭ-nōn'*] coenzyme Q; component of the electron transport chain of oxidative phosphorylation.
ubiquitin heat shock (cell stress) protein present in mammalian cytosol; attaches to other cytosolic proteins and marks them for degradation either by specific proteases or by lysosomal enzymes.
UD Utility Dog; the third level title, after CD and CDX, awarded in obedience trial competition.
udder [*ud'ər*] mammary gland of farm animals. The cow has four quarters and four teats. The rest of the ruminants and the mare have two. The sow may have as many as 18. See also **mammary** gland, **mastitis**, **teat**.
u. abscesses these form at the base of the teat and are usually associated with summer mastitis.
u. acne see udder impetigo (below).
u. amputation done in cows with severe mastitis or rupture of the suspensory apparatus (below).
u. caking a plaque of hard tissue in the floor of the udder in a cow just calved. Makes milking difficult but frequent handmilking and hot water fomentation reduces the swelling. See also **blue breast**.
u. dermatitis see **intertrigo**; **flexural** seborrhea, ulcerative **mammary** dermatitis.
u. development failure congenital defect of no mammary development in a female.
u. edema late and recent calving are often accompanied by edema of the udder and the subcutaneous tissue immediately in front of the udder. The swelling may be great enough to prevent the cow being milked or suckled and it may interfere with the cow moving about. Compression of the vascular drainage from the area probably contributes to the condition but there are obviously other unidentified factors which cause a very serious disability in only a few cows in a herd, all of which are being treated in exactly the same way.
u. impetigo staphylococcal dermatitis of the skin of the teats and lower udder. Transmissible between cows and to human attendants at milking.
u. inflation useful but no longer used farmer treatment for parturient hypocalcemia (milk fever) in cows; air, filtered through a layer of sterile gauze, was pumped into each of the four quarters of the patient by a hand-operated pump through a rubber tube attached to a teat siphon. Pumping ceased when air began to leak out past the teat siphon. If the teats were tied off with tape the ties were removed after 20 minutes. The back pressure of the air stopped further loss of calcium from the patient's blood which then regained a safe concentration of calcium.
u. infusion antibiotic or other antibacterial in water or, almost exclusively, an ointment base used to convey the medication, from the individual container, via the teat canal into the mammary tissue.
u. infusion tube see **teat** tube.
u. kinch a form of restraint by twitch. A loop of rope is made around the cow's abdomen just in front of the udder but the belly of the rope is passed around the udder base before the noose is tightened.
u. suspensory apparatus in the cow consists of two median sheets of yellow elastic tissue attached to the pelvic symphysis by its symphysial tendon and two less substantial lateral sheets of white fibrous tissue; all four sheets serve to suspend the udder from the pelvic skeleton. A full udder causes the elastic tissue in the middle of the gland to stretch more than the lateral ligaments causing the teats to project sideways.
u. symmetry the front pair and the mammary glands in the two hind quarters are very similar in shape and size; asymmetry usually indicates mastitis in an early hypertrophic stage, or a later atrophic stage.
u.-thigh dermatitis see **flexural** seborrhea, ulcerative **mammary** dermatitis.
u. washing see **teat** sanitization.
UDP uridine diphosphate.
UDP-G-pyrophosphorylase an enzyme that synthesizes uridine diphosphoglucose as part of glycogenesis.
UDP-galactose uridine diphosphate-galactose; intermediate in the formation of galactose from glucose for the synthesis of glycolipids, proteoglycans, glycoproteins and of lactose in the mammary gland.
UDP-galactose 4-epimerase enzyme which converts UDP-glucose to UDP-galactose by an epimerase reaction in the synthesis of galactose from glucose.
UDP-glucose activated form of glucose required for glycosyltransferase reactions in the synthesis of glycogen and other polysaccharides.
UDX Utility Dog Excellent; the highest level title earned in obedience trial competition.
UFAW Universities Federation for Animal Welfare.
UGA opal **codon**, one of the three stop codons.
Uhl's anomaly [*yōōl*] congenital hypoplasia of the myocardium of the right ventricle.
uitpeuloog a contagious disease of the eyes in ruminants and horses caused by the larvae of the fly **Gedoelstia**.
Ukrainian whiteheaded cattle red or black dairy cattle with white head, feet and belly; originated from Dutch Groningen whitehead plus local Ukrainian cattle.
ulcer [*ul'sər*] a full-thickness defect of cutaneous, mucosal or corneal epithelium. The exposed supporting tissue is inevitably damaged and inflamed, often infected, and may produce a covering layer of fibrinous inflammatory exudate (**diphtheritic** membrane). Occurs in many organs and can found under those headings, e.g. **abomasal**, **corneal**, **gastric**.
Boxer u. see refractory ulcer (below).
button u. see **button** ulcer.
callous u. see **set-fast** (2).
collagenase u. a rapidly expanding, malacic ('melting') corneal ulcer due to collagenase production by (typically gram-negative) bacteria or by host cells; seen particularly in brachycephalic breeds of dogs.
decubitus u. see **decubital ulcer**.
dendritic u. linear, branching pattern of ulceration of the cornea; characteristic of herpesvirus infections. See also herpetic **keratitis**.
eosinophilic u. see **eosinophilic** ulcer.
gastroduodenal u. common in foals 1–3 months old. Many are asymptomatic. Clinical cases manifest by mild, intermittent colic. See also **gastric** ulcer, **duodenal** ulcer.

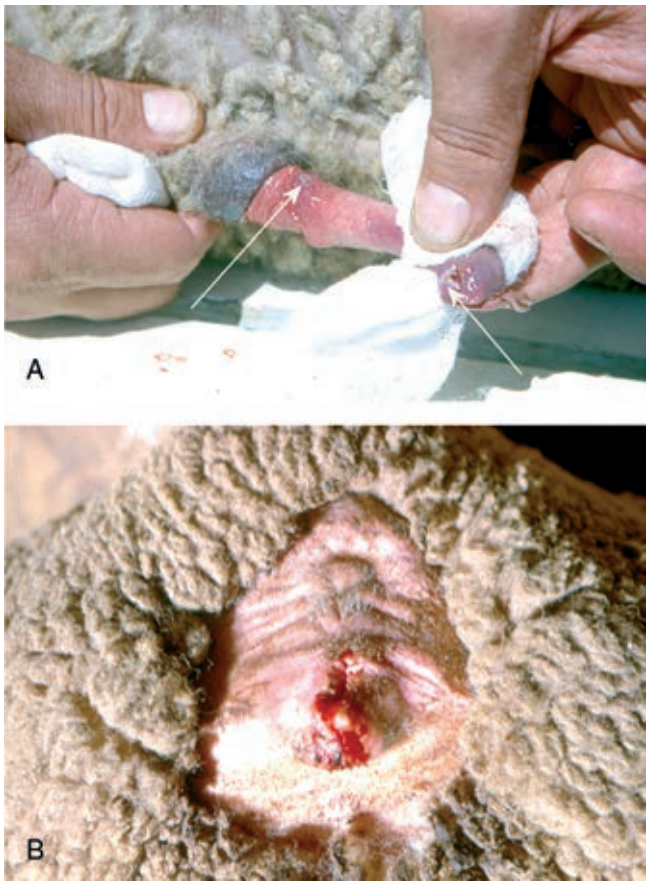
geographic u. a superficial, irregularly shaped corneal ulcer.
indolent u. see **eosinophilic** ulcer, refractory ulcer (below).
intestinal u. is rare in all species. When they do occur, intestinal ulcers usually cause signs of chronic enteritis. It is a common lesion in adenocarcinoma of the intestine. See also **peptic** ulcer.
lip u. see **eosinophilic** ulcer.
lip and leg u. see **ulcerative** dermatosis.
melting u. see collagenase ulcer (above).
u. mound a gastric ulcer viewed tangentially radiographically creates a mound in the otherwise smooth outline of radiopaque material in the stomach.
necrotic u. of swine see **ulcerative** granuloma of swine.
u. of pars esophagea of swine see **gastric** ulcer of swine.
perforating u. one that involves the entire thickness of an organ, creating an opening on both surfaces. See also ulcer **perforation**.
phagedenic u. a necrotizing lesion in which tissue destruction is prominent.
refractory u. a chronic, superficial corneal ulceration in dogs, particularly common in Boxers, that fails to heal due to dysfunctional adhesion between the epithelium and superficial corneal stroma leading to an undermined, non-adherent epithelial lip at the edges. Response to the usual methods of treatment for corneal ulceration is characteristically very slow or completely absent; anterior stromal puncture techniques (grid and punctate keratotomy) and sometimes superficial keratectomy are the treatments of choice. Called also superficial corneal erosion syndrome, indolent ulcer, Boxer ulcer, spontaneous chronic corneal epithelial defects (SCCED).
rodent u. see **eosinophilic** ulcer.
stress u. superficial ulcerations or erosions of mucosa in the stomach, duodenum or colon. The possible predisposing factors include changes in the microcirculation of the gastric mucosa, increased permeability of the gastric mucosa barrier to H+, and impaired cell proliferation.
stromal u. a corneal ulcer involving the stroma.
trophic u. one due to imperfect nutrition of the part. In dogs, may develop in digital and metatarsal pads in association with tibial nerve injury.

ulcerate [*ul'sər-āt*] to undergo ulceration.

ulceration [*ul"sər-a'shən*] 1. formation or development of an ulcer. 2. an ulcer.

ulcerative [*ul'sə-ra"tiv, ul'sər-ə-tiv*] pertaining to or characterized by ulceration.
u. balanitis see **enzootic** balanoposthitis.
u. cellulitis see ulcerative **lymphangitis**.
u. colitis see eosinophilic ulcerative **colitis**, histiocytic ulcerative **colitis**.
u. dermal necrosis a skin disease of the head of Atlantic salmon and sea trout as they enter fresh water from the sea. The cause is unknown.
u. dermatitis disease of Belgian Landrace sows; lesions occur on the ear margins, anterior aspects of the limbs and around the teats; the cause is unknown.
u. dermatosis an infectious ulceration of the skin of the lips, feet, legs and external genitalia of sheep, of uncertain etiology, caused possibly by a paravaccinia virus. The lesions are ulcerative and destructive but the disease is not fatal and the morbidity rate is not high.
u. enteritis see ulcerative **enteritis**.
u. gingivitis see necrotizing ulcerative **gingivitis**.
u. glossitis, u. stomatitis in cats, a proliferative inflammation and ulceration of the oral cavity, particularly gum margins and mucosa at the fauces, a common disease of old cats characterized by painful ulcers at the fauces and surrounding tissues including the tongue. The cause is not known.
u. granuloma of swine an infectious disease of pigs caused by *Borrelia suilla* (unofficial nomenclature), and manifested by large, deep, ulcerative lesions on any part of the body. On the face they may cause destruction of the cheeks. The portal of infection is skin wounds and spread of the disease is enhanced by fighting in the group. Called also necrotic ulcer.
infectious bovine u. stomatitis an innocuous stomatitis of calves of unknown cause occurring in outbreak form but recorded rarely and not in recent years.
u. keratitis see **corneal** ulcer.
u. lymphangitis see ulcerative **lymphangitis**.
u. mammillitis see bovine herpes **mammillitis**.
u. pododermatosis see ulcerative **pododermatitis**.
u. posthitis occurs sporadically in rams and bulls and as part of ulcerative dermatosis in rams.
u. shell disease see **shell rot**.
u. stomatitis 1. several virus infections cause oral ulcers in calves without any other clinical illness unless the calves are stressed,

U-1: Dendritic ulcers stained with fluorescein in a cat with herpesvirus infection. From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.



U-2: (A) Ulcerative dermatosis of the penis in a ram. (B) Ulcerative dermatosis on the vulva of a ewe.

especially with hyperkeratosis caused by secondary nutritional deficiency of vitamin A. 2. outbreaks in horses are caused by grass with bristly seedheads and pasture infested with bristly caterpillars.

u. vulvitis of ewes, see ulcerative dermatosis (above).

ulcerogangrenous [*ul"sər-o-gang'rə-nəs*] characterized by both ulceration and gangrene.

ulcerogenic [*ul"sər-o-jen'ik*] causing ulceration; leading to the production of ulcers.

ulcerous [*ul'sər-əs*] 1. of the nature of an ulcer. 2. affected with ulceration.

ulcus [*ul'kəs*] pl. *ulcera* [L.] ulcer.

-ule suffix meaning a small.

ulectomy [*u-lek'tə-me*] 1. excision of scar tissue. 2. excision of the gingiva; gingivectomy.

Ulex europaeus a weedy shrub; member of the family Fabaceae; sometimes used as feed in times of shortage; contains cytisine as the main quinolizidine alkaloid and ulexine, a nerve and muscle poison, but seldom causes poisoning. Called also furze, gorse.

ulitis inflammation of the gums.

ulna [*ul'nə*] together with the radius, forms the skeleton of the forearm. See Table 10.

ulnad [*ul'nad*] toward the ulna.

ulnar [*ul'nər*] pertaining to the ulna; the medial aspect of the upper forelimb, as opposed to the radial or lateral aspect.

congenital lateral rotation of the u. seen in puppies from one to five months of age; they stand with the elbow flexed and the forearm markedly pronated.

cutaneous u. vein in birds, a venipuncture site.

u. nerve block see ulnar **block**.

u. nerve injury results in extension of the carpus, a 'dropped' carpus.

ulnaris [*əl-na'ris*] [L.] *ulnar*.

ulnocarpal [*ul"no-kahr'pəl*] pertaining to the ulna and carpus.

ulnoradial [*ul"no-ra'de-əl*] pertaining to the ulna and radius.

ulocace ulceration of the gums.

uloglossitis inflammation of the gums and tongue; gingivoglossitis.

uloncus swelling of the gums.

ulorrhagia a sudden discharge of blood from the gums.

ulotomy [*u-lot'ə-me*] 1. incision of scar tissue. 2. incision of the gums.

ultimobranchial [*ul"ti-mo-brang'ke-əl*] pertaining to the tissue originating from the fifth pharyngeal pouch of the embryo.

u. body the glandular tissue originating from the fifth branchial pouch which combines with the buccal cavity outgrowth to form the thyroid and contributes calcitonin-secreting cells to the gland.

u. duct cysts derived from remnants of the ultimobranchial body and found in the thyroid gland.

u. tumor a neoplasm containing thyroid C cells.

ultra- word element. [L.] *beyond, excess*.

ultracentrifugation [*ul"trə-sən-trif"u-ga'shən*] subjection of material to a very high centrifugal force (up to 200 000 times the force of gravity), which will separate and sediment the molecules of a substance or subcellular components.

ultracentrifuge [*ul"trə-sen'trĭ-fūj*] the centrifuge used in ultracentrifugation.

ultradian [*ul"trə-de'ən*] pertaining to a period of less than 24 hours; applied to the rhythmic repetition of certain phenomena in living organisms occurring in cycles of less than a day (ultradian rhythm).

ultrafilter [*ul"trə-fil'tər*] the filter used in ultrafiltration.

ultrafiltrate [*ul"trə-fil'trāt*] substances which pass through an ultrafilter, i.e. a semipermeable membrane through which the filtrate passes under pressure.

ultrafiltration [*ul"trə-fil-tra'shən*] filtration through a filter capable of removing colloidal particles from a dispersion medium, as in the filtration of plasma at the capillary membrane.

ultraheat heating to a very high temperature for a very brief period.

u. treated milk milk heated at 175–200°F (79–93°C) for a few seconds.

ultramicroscopic [*ul"trə-mi"kro-skop'ik*] too small to be seen with the ordinary light microscope.

ultrasonic [*ul"trə-son'ik*] beyond the audible range; relating to sound waves having a frequency of more than 20 000 cycles per second.

u. cleaning surgical instruments can be thoroughly cleaned by the use of ultrasonic waves which cause the formation of minute gas bubbles which, when they collapse, form shock waves.

u. heating the use of ultrasound for producing localized hyperthermia.

u. pregnancy diagnosis see **ultrasonography**.

u. tooth scaling the use of vibrations to remove supragingival calculus. See also ultrasonic **scaler**.

ultrasonics that part of the science of acoustics dealing with the frequency range beyond the upper limit of perception by the human ear (above 20 000 cycles per second), but usually restricted to frequencies above 50 000 hz. Ultrasonic radiation is injurious to tissues because of its thermal effects when absorbed by living matter, but in controlled doses it is used therapeutically to selectively break down pathological tissues, as in treatment of arthritis and lesions of the nervous system, and also as a diagnostic aid by visually displaying echoes received from irradiated tissues, as in **echocardiography** and echoencephalography. See also **ultrasonography**.

ultrasonogram [*ul"trə-son'o-gram*] the record obtained by ultrasonography.

ultrasonography [*ul"trə-sə-nog'rə-fe*] an imaging technique in which deep structures of the body are visualized by recording the reflections (echoes) of ultrasonic waves directed into the tissues. Frequencies in the range of 1 000 000–10 000 000 hz are used in diagnostic ultrasonography. The lower frequencies provide a greater depth of penetration and are used to examine abdominal organs; those in the upper range provide less penetration and are used predominantly to examine more superficial structures such as the eye. The basic principle of ultrasonography is the same as that of depth-sounding in oceanographic studies of the ocean floor. The ultrasonic waves are confined to a narrow beam that may be transmitted through, refracted, absorbed, or reflected by the medium toward which they are directed, depending on the nature of the surface they strike. In diagnostic ultrasonography the ultrasonic waves are produced by electrically stimulating a piezoelectric crystal called a *transducer*. As the beam strikes an interface or boundary between tissues of varying acoustic impedance (e.g. muscle and blood) some of the sound waves are reflected back to the transducer as echoes. The echoes are then converted into electrical impulses that are displayed on an oscilloscope, presenting a 'picture' of the tissues under examination. Ultrasonography can be utilized in examination of the heart (echocardiography) and in identifying size and structural changes in organs in the abdominopelvic cavity. It is, therefore, of value in identifying and distinguishing cancers and benign cysts. The technique also may be used to evaluate tumors and foreign bodies of the eye, and to demonstrate retinal detachment. Ultrasonography is not, however, of much value in examination of the lungs because ultrasound waves do not pass through structures that contain air. A particularly important use of ultrasonography is in the field of obstetrics and gynecology. It is a fast, relatively safe, and reliable technique for diagnosing pregnancy, and for detecting some typical fetal anomalies.

A-mode u. (amplitude modulation) that in which on the cathode-ray tube (CRT) display one axis represents the time required for the return of the echo and the other corresponds to the strength of the echo, as in echoencephalography.

B-mode u. (brightness modulation) that in which the position of a spot on the CRT display corresponds to the time elapsed (and thus to the position of the echogenic surface) and the brightness of the spot to the strength of the echo; movement of the transducer produces a sweep of the ultrasound beam and a tomographic scan of a cross-section of the body.

Doppler u. see **Doppler ultrasound**.

endoscopic u. a high resolution ultrasound transducer, mounted on a flexible endoscope, can be used to gain images from within a hollow organ, such as the gastrointestinal tract. This overcomes some of the problems ingesta and fecal material cause in other methods of ultrasound examination.

gray-scale u. B-mode ultrasonography in which the strength of echoes is indicated by a proportional brightness of the displayed dots.

VetBooks.ir

U-3: Parasagittal ultrasound image of the caudal abdomen of a dog with pyometra. Note the enlarged, fluid-filled uterus (arrows).
From Fossum TW, Small Animal Surgery, 3rd Edition. Mosby, 2007.

U-4: Umbilical hernia in a foal.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

harmonic mode u. sonograms are generated from an ultrasound frequency that is twice the megahertz of the transmitted frequency of the transducer.
M-mode u. (motion mode) a type of B-mode ultrasonography in which spots on the CRT display produce a tracing of the motion of echogenic objects. Used in echocardiography.
real-time u. B-mode ultrasonography using an array of detectors so that scans can be made electronically at a rate of 30 frames a second, thus giving a true display of motion, such as that of the heart.

ultrasound [*ul'trə-sound*] mechanical radiant energy of a frequency greater than 20 000 cycles per second; used in veterinary medicine in the technique of **ultrasonography**. See also **Doppler ultrasound**.
u. artifacts see **artifact**.
therapeutic u. absorption of ultrasound waves produces thermal effects in soft tissue, primarily connective tissue, and stimulate cell membranes to enhance repair from the effects of inflammation; used in physical therapy. Also used in extracorporeal **lithotripsy**.

ultrastructure [*ul'trə-struk"chər*] the structure visible under the electron microscope.

ultraviolet [*ul"trə-vi'ə-lət*] denoting electromagnetic radiation of wavelength shorter than that of the violet end of the spectrum, having wavelengths of 4–400 nm.
u. antisepsis because ultraviolet rays are capable of killing bacteria and other microorganisms, they are sometimes utilized in specially designed cabinets to sterilize objects, and may also be used to sterilize the air in operating rooms and other areas where destruction of bacteria is necessary.
u. irradiation the projection of ultraviolet light from a generator is used for the treatment of skin disease and for sterilization of materials.
u. rays electromagnetic radiation beyond the violet end of the visible spectrum (at 0.39–0.18 μm wavelength) and therefore not visible to humans. They are produced by the sun but are absorbed to a large extent by particles of dust and smoke in the earth's atmosphere. They are also produced by the so-called sun lamps. Ultraviolet rays can produce sun-burning and affect skin pigmentation. When they strike the skin surface, these rays transform provitamin D, secreted by the glands of the skin, into vitamin D, which is then absorbed into the body.
u. therapy the employment of ultraviolet radiation in the treatment of various diseases, particularly those affecting the skin, is used in humans, but not commonly employed in veterinary medicine.

umbilical [*əm-bil'ĭ-kəl*] pertaining to the umbilicus.
u. abscess see **urachal** abscess.
u. clamp 1. used in calves and foals for the closed method of herniorrhaphy. Consists of two lightweight bars that can be screwed together very tightly. The herniated gut is evacuated from the hernia and the clamp applied to as much of the hernial pouch as can be included. The tissue beyond the clamp sloughs and the clamp can be removed. 2. a plastic clamp used to seal the umbilicus that may be prone to hemorrhage due to premature cutting or tearing of the umbilical cord.
u. cord the structure connecting the fetus and placenta, and containing the channels through which fetal blood passes to and from the placenta. It typically contains two umbilical arteries and one or two umbilical veins (that is always reduced to a single vein within the fetus) and an allantoic stalk, all embedded in a jelly rich in hyaluronan (Wharton's jelly). The cord also contains the urachus, the tubular structure connecting the fetal bladder with the allantois. In pigs and ruminants the cord is coated with amniotic epithelium; in horses, the proximal two thirds is also covered in amniotic epithelium whereas the distal third is coated in allantoic endoderm. During early fetal life the cord also contains remnants of the yolk sac.
u. cord inflammation see **omphalitis**, **funisitis**.
u. diverticulum an evagination of the bowel wall at the vestigial point of attachment of the yolk sac. Called also Meckel's diverticulum.
u. gas gangrene umbilicus infected with *Clostridium septicum*, *C. oedematiens*.
u. hemorrhage a specific syndrome in newborn piglets. Bleeding from fleshy navel, also from ear notching, causes fatal anemia. The cause is unknown.
u. hernia protrusion of abdominal contents through the abdominal wall at the umbilicus, the defect in the abdominal wall and protruding contents covered with normal skin and subcutaneous tissue. The soft swelling at the umbilicus may be reducible into the abdomen through a palpable ring. Small hernias can contain only a small amount of fat and not be reducible. Occurs sporadically in all species and is inherited in cattle and some dogs. May accompany omphalitis.
u. hernia strangulation the intestinal loop in the hernia becomes incarcerated with its lumen occluded and its blood supply compromised.
u. inflammation see **omphalitis**.
u. occlusion as when the umbilical cord is trapped between the fetus and the wall of the birth canal, causing loss of the fetal blood supply.
u. sinus created by persistence of only the distal end of the intraembryonic allantoic stalk at the umbilicus.
u. tape cotton tape, about 0.5 inch, with two selvedge edges. Used to tie off an umbilicus in calves and foals.
u. twisting twisting of the umbilical cord is normal but long cords in foals may have excessive and sufficient twisting, more than 12 twists of different size with vascular constriction, hemorrhage and edema of the cord, to result in fetal anoxia and death. Called also umbilical cord torsion. Excessively long umbilical cords may entrap the fetal extremities or fetal trunk.
u. vein one of a pair of veins which return oxygenated blood from the placenta through the umbilical cord to the fetus usually via the ductus venosus and thence to the heart. In some species the right umbilical vein is lost and in all species only one vein persists within the fetus. After birth the intra-abdominal part of the vessel shrivels to form the round ligament of the liver. The vessel is unusual for a vein in its ability to continue to contract rhythmically for a short period after birth, thereby pumping precious blood back from the placenta to the fetus.
u. vein infection see **omphalophlebitis**.
u. vein abscess residual after subsidence of acute omphalophlebitis.

umbilicated [*əm-bil'ĭ-kāt"əd*] marked by depressed spots resembling the umbilicus.

umbilication [*əm-bil"ĭ-ka'shən*] a depression, usually central. In nodular neoplasms is an indication of malignancy, since these tend to undergo central necrosis.

umbilicus [*əm-bil'ĭ-kəs*] the scar marking the site of entry of the umbilical cord in the fetus; called also navel. It is usually only

VetBooks.ir

U-5: Fresh abortion with twisting, edema and hemorrhage of the umbilical cord in a foal. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

depressed in the human abdomen and is inconspicuous in most domestic species. In dogs it is a palpable knot advertised by a convergent whorl of hair.

feather u. see **feather** (1).

Umbilicus rupestris ***Cotyledon*** *umbilicus*.

umbo [*um'bo*] pl. *umbones* [L.] a round projection.

u. membrana tympanae the slight projection at the center of the outer surface of the tympanic membrane.

umbrella tree ***Jatropha*** *multifida*, ***Schefflera actinophylla***.

umbu ***Phytolacca*** *dioica*.

UMN upper motor neuron.

UMP uridine 5′-monophosphate, a pyrimidine nucleotide.

UMP synthase deficiency see **DUMPS**.

unbound said of electrolytes, e.g. iron and calcium, and other substances which are circulating in the bloodstream and are not bound to plasma proteins so that they are available immediately for metabolic processes. See also **calcium**, **iron**.

unciform [*un'sĭ-form*] hooked or shaped like a hook.

Uncinaria a genus of canine hookworms in the order Strongylida, suborder Ancylostomatoidea.

U. criniformis occurs in the badger and fox.

U. hamiltoni, U. lucasi found in the fur seal.

U. stenocephala the common species in the dog, cat and fox.

U. yukonensis found in all ursids.

uncinariasis [*un"sin-ə-ri'ə-sis*] the disease caused by ***Uncinaria*** in cats and dogs. Similar to, but less severe than **ancylostomiasis**, with only mild blood loss and enteritis. Larval migration causes pedal dermatitis.

uncinate [*un'sĭ-nāt*] 1. unciform. 2. relating to or affecting the uncinate gyrus.

uncipressure [*un'sĭ-presh"ər*] pressure with a hook to stop hemorrhage.

unclassified viruses a diminishingly small number of viruses remain unclassified.

uncoating the removal of protein coat or envelope from a virus, one of the first steps in replication which releases the viral genome and enables viral genes to become available for transcription.

uncompetitive inhibition type of enzyme inhibition in which the inhibitor binds to the enzyme-substrate complex, but not the free enzyme; characterized by decreases in both K_M and V_{max}.

unconscious [*ən-kon'shəs*] insensible; incapable of responding to sensory stimuli and of having subjective experiences.

unconsciousness an abnormal state of lack of response to sensory stimuli, resulting from injury, illness, shock or some other bodily disorder. A brief loss of unconsciousness from which the animal recovers spontaneously or with slight aid is called fainting. Deep, prolonged unconsciousness is known as **coma**. See also levels of **consciousness**.

uncoupler an agent that dissociates oxidation via the electron transport chain from the formation of ATP by oxidative phosphorylation by collapsing the proton gradient across the inner mitochondrial membrane.

uncoupling protein-1 uncoupling protein found in mitochondria in brown adipose tissue; generates heat by non-shivering thermogenesis, the main mechanism by which heat is produced in hibernation and in human infants. Called also thermogenin.

uncovertebral [*ung"ko-ver'tə-brəl*] pertaining to the uncinate processes of a vertebra.

u. joints small synovial joints between the cranial surfaces of cervical vertebrae 3-7 and the corresponding caudal surfaces of the preceding vertebra. Well developed in the human neck, in kangaroos and in animals with clavicles. Called also Luschka's joints.

unction [*ungk'shən*] 1. an ointment. 2. application of an ointment or salve; inunction.

unctuous [*ungk'choo-əs*] greasy or oily.

uncus [*ung'kəs*] the medially curved anterior part of the hippocampal gyrus.

undecylenate see **undecylenic acid**.

undecylenic acid [*un"des-əl-en'ik*] an unsaturated fatty acid, used topically, in ointment or powder form, as an antifungal agent; toxic reactions are rare.

Under 30 months rule referred to the ability to market cattle aged under 30 months-of-age from herds at-risk for bovine spongiform encephalopathy (BSE). Rule based on studies where experimental challenge with bovine BSE- infected brain showed no infectivity in edible tissues (non SBO/SRM) of calves prior to 30 months.

undercoat the fine hairs of an animal's coat which are usually shorter and more numerous than the coarse guard hairs. In some breeds of dogs and cats, however, these may predominate.

undercut [*un'dər-kət*] in the preparation of a tooth cavity for restoration, a cavity under the edges of the opening which is intended to aid in retention of a filling.

underdevelopment [*un'dər-de-vel'əp-mənt*] an error in X-ray film developing procedure. Causes the production of a flat film with poor contrast; the unexposed background is gray instead of black.

underfeeding see **malnutrition**, **starvation**.

underflue the soft, fluffy part of a feather, next to the skin. Called also flue.

underline an animal's ventral profile; the shape of the belly when viewed from the side, e.g. pendulous, pot-belly, tucked up, gaunt.

undermilking removal of the teat cups before all the milk has been taken from an udder. In a dairy cow which is milked twice daily no more than approximately 500 mL or 1 pint of milk should be left in the udder at the end of milking. Undermilking predisposes to mastitis.

undernutrition [*un"dər-noo-trish'ən*] see **malnutrition**, **starvation**.

underreach a gait defect at the trot; the toe of the foreshoe strikes and wears away the front of the hind hoof on the same side.

undershot the mandible is longer than the maxilla so that the lower incisors are forward of the upper incisors and there is no contact between them when the mouth is closed. A common abnormality in dogs and regarded as a normal feature in some breeds such as the Bulldog.

undersized see **dwarfism**, **runt**.

underwater treadmill used in rehabilitation or physical therapy to expedite return to full function of joint or limb; provides reduced weight bearing which enables greater functional use while improving muscle strength.

undescended testis see **cryptorchidism**.

undifferentiated [*ən-dif"ər-en'she-āt-əd*] not differentiated; primitive. 1. in neoplasia refers to a primitive cell type and likely to be malignant. 2. In clinical medicine refers to a group diagnosis in which there is no differentiation from the pathoanatomical diagnosis, e.g. failure to take the additional step of differentiating between a diagnosis of diarrhea and the etiologically specific diagnosis,

VetBooks.ir

U-6: Undershot jaw.

e.g. *Escherichia coli*. See also undifferentiated **diarrhea** of the newborn.

u. chronic diarrhea chronic diarrhea in horses which does not satisfy the diagnostic criteria for any of the known causes of that condition; most cases are irreversible and euthanasia is a common outcome.

u. chronic pneumonia see **enzootic** pneumonia.

undulant fever [*un'dyə-lənt*] brucellosis of humans.

undulating membrane a fold of the protozoa's cell membrane formed when the flagellum of the protozoa beats and pulls up the membrane along the full length of the parasite's cell body.

undulation [*un"dyə-la'shən*] a wavelike motion in any medium; a vibration.

unethical said of conduct not conforming with professional **ethics**.

uneviscerated a term used to describe poultry and small game which are sold or hung without having the viscera removed, e.g. New York dressed poultry. The movement of bacteria and enzymes from the gut aids in the tenderizing of the meat and adds a new dimension to the flavor. Not suited to tropical climates nor uneducated palates.

unfavorable therapeutic response see **adverse** response.

unfit not properly prepared, e.g. physically incapable of performing hard work as in racing, because of lack of training. Said also of food prepared unhygienically.

u. for human consumption meat or other food considered by a qualified food inspector to be unsuited for entry into the human food chain because of the presence of disease, immaturity, physical damage, emaciation, edema, contamination by gut contents or unauthorized additives or being meat of another, unauthorized species, or meat that has not undergone approved inspection by health authorities.

ung. [L.] *unguentum* (ointment).

ungual [*ung'gwəl*] pertaining to the nails, claws or hooves.

u. crest a crescent-shaped process on the distal phalanx, encircling the corium of the nail or claw, best developed in cats, especially the big cats where it protects the growing matrix..

unguent [*ung'gwənt*] an ointment.

unguentum [*əng-gwen'təm*] pl. *unguenta* [L.] ointment.

unguicula claw or nail.

unguiculate [*əng-gwik'u-lāt*] having claws; clawlike.

unguilysis necrosis and dissolution of the claw or hoof as in equine **canker**.

unguinal pertaining to a nail.

unguis [*ung'gwis*] pl. *ungues* [L.] a nail. See also **claw**, **nail**.

ungula [*ung'gu-lə*] hoof.

ungulates, ungulata [*ung'gu-lāt*] the hooved mammals. They comprise primarily 1. the *odd-toed* ungulates, the Perissodactyla (Equidae, 10 species of horses, asses and zebras; the Rhinocerotidae, 5 species of rhino; and the Tapiridae, 5 species of tapir, and 2. the larger group of *even-toed* ungulates or Artiodactyla made up of 16 species of Suids (pigs and warthogs) and the large sub-order of Ruminantia, made up of 49 species of deer (Cervidae), 135 species of Bovidae (cattle, sheep and goats) and several others (hippos, giraffes, camels, etc.

unguligrade [*ung'gu-lī-grād"*] the stance of an ungulate; the disposition of standing on hooves. The ultimate running gait. See also **digitigrade**.

uni- word element. [L.] *one*.

uniaxial [*u"ne-ak'se-əl*] 1. having only one axis. 2. developed in an axial direction only.

unicameral [*u"nĭ-kam'ər-əl*] having only one cavity or compartment, e.g. unicameral cyst.

unicellular [*u"nĭ-sel'u-lər*] made up of a single cell, as the bacteria or protozoa.

uniform basic data set see **minimum** data set.

uniglandular [*u"nĭ-glan'du-lər*] affecting only one gland.

unigravida [*u"nĭ-grav'ĭ-də*] a female pregnant for the first time; primigravida; gravida I.

unilocular [*u"nĭ-lok'u-lər*] having only one loculus or compartment; monolocular.

uninucleated [*u"nĭ-noo'kle-āt"əd*] mononuclear.

uniocular [*u"ne-ok'u-lər*] monocular.

union [*ūn'yən*] the growing together of tissues separated by injury, as of the ends of a fractured bone, or of the edges of a wound.

uniovular [*u"ne-ov'u-lər*] monovular, monozygotic.

unipara [*u-nip'ə-rə*] a female which has had one pregnancy that resulted in a viable infant; primipara; para I.

uniparous [*u-nip'ə-rəs*] 1. producing only one ovum or offspring at a time. 2. primiparous.

unipolar [*u"nĭ-po'lər*] having a single pole or process, as a nerve cell.

unipotent, unipotential [*u-nip'ə-tənt, u"nĭ-po-ten'shəl*] having only one power, as giving rise to cells of one order only.

unit [*u'nit*] 1. a single thing; one segment of a whole that is made up of identical or similar segments. 2. a specifically defined amount of anything subject to measurement, as of activity, dimension, velocity, volume, or the like.

atomic mass u. see **dalton**.

International u. 1. see **SI units**. 2. a unit of enzyme activity equal to the amount of enzyme that catalyzes the conversion of one micromole of substrate or coenzyme per minute under specified conditions (temperature, pH and substrate concentration) of the assay method. Abbreviated U. 3. any of several arbitrary units that have been adopted by international bodies to express the quantities of certain vitamins (A, C, D and thiamine hydrochloride), hormones (androgen, chorionic gonadotropin, estradiol benzoate, estrone, insulin, progesterone and prolactin), and drugs (digitalis and penicillin).

SI u. any unit of the International System of units (the metric system). See **SI units**.

unitary [*u'nĭ-tar"e*] pertaining to a single object or individual.

United States Adopted Name (USAN) the nonproprietary name assigned to pharmaceuticals in the USA by the USAN Council

United States Dispensatory an unofficial publication providing an international listing of existing and discontinued drugs.

United States National Formulary (USNF) a book of standards for certain pharmaceuticals and preparations not included in the *United States Pharmacopeia*; revised every 5 years and recognized as a book of official standards by the United States Pure Food and Drug Act of 1906. Also abbreviated NF.

United States Pharmacopeia (USP) a legally recognized compendium of standards for drugs, published by the United States Pharmacopeial Convention, Inc., and revised periodically. It also includes assays and tests for determination of strength, quality and purity.

unitocous giving birth to a single young at one time.

univalent [*u"nĭ-va'lənt*] having a valence of one.

Universities Federation for Animal Welfare (UFAW) a scientific and technical animal welfare organization, established originally as the University of London Animal Welfare Society. It aims to improve the welfare of animals kept as pets, in zoos, laboratories, on farms and of wild animals. It funds research, advises governments and produces publications on animal welfare, in particular the *UFAW Handbook on the Care and Management of Laboratory Animals*.

University of Illinois needle a rugged needle assembly for aspiration of a sample of bone marrow. The needle is advanced into the sternum by a screw device into which the needle and its lock-in stylus is fitted. The needle hub has a syringe fitting to which a syringe can be fitted to aspirate the marrow.

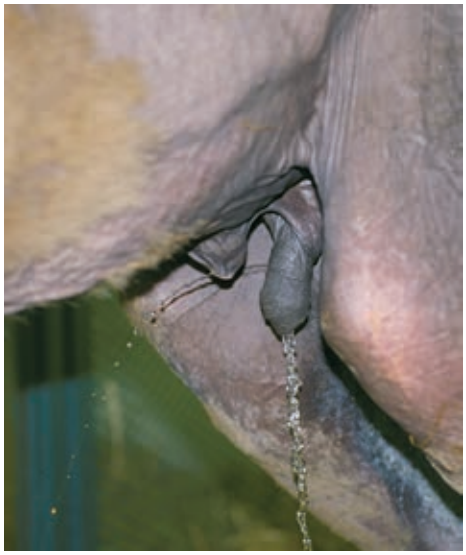
unmyelinated [*ən-mi'ə-lĭ-nāt"əd*] not having a myelin sheath.

Unopette system a commercial method for diluting blood in preparation for counting blood cells. It utilizes a premeasured volume of diluent in a chamber into which a specified amount of blood is drawn.

unpacking lay term for parturition in camelids.

VetBooks.ir

unphysiological not in harmony with the laws of physiology.
unsaturated [*ən-sach'ə-rāt"əd*] 1. not having all affinities of its elements satisfied (unsaturated compound). 2. not holding all of a solute which can be held in solution by the solvent (unsaturated solution). 3. denoting compounds in which two or more atoms are united by double or triple bonds.
u. fatty acids see **fatty acid**.
unsex to deprive of the gonads.
unsharpness [*ən-shahrp'nis*] lack of detail in an X-ray picture.
unslaked lime see **quicklime**.
unsound said of an animal, usually a horse, which has been examined for **soundness** and found to be unsatisfactory.
unstriated [*ən-stri'āt-əd*] having no striations, as smooth muscle.
unthriftiness [*ən-thrif'te-nis*] failure to grow or to put on weight as well as expected in the presence of adequate quantity and quality of feed, and in the absence of overt clinical signs of illness. Called also illthrift. See also **weaner** illthrift.
post-weaning u. occurs in young animals that are weaned at too young an age or without being weaned onto a suitable transitional diet.
selenium-responsive u. a condition seen in marginally deficient areas; affected ewes respond well in terms of body weight and milk yield to supplemental selenium although their clinicopathological indicants are in the normal range.
unthrifty weaner sheep see **weaner** illthrift.
ununbium (Uub) a temporary name for a chemical element, atomic number 112, atomic weight 285. See Table 4.
ununhexium (Uuh) a temporary name for a chemical element, atomic number 116, atomic weight 293. See Table 4.
ununited a failure of union or closure, said of the union that occurs between an epiphysis and diaphysis.
u. medial coronoid process see fragmented **coronoid process**.
ununoctium (Uuo) a temporary name for a chemical element, atomic number 118, atomic weight 294. See Table 4.
ununpentium (Uup) a temporary name for a synthetic chemical element, atomic number 115, atomic weight 288. See Table 4.
ununquadium (Uuq) a temporary name of a radioactive chemical element, atomic number 114, atomic weight 289. See Table 4.
ununseptium (Uus) a temporary name of an undiscovered chemical element, atomic number 117, atomic weight is 294. See Table 4.
ununtrium (Uut) a temporary name for a synthetic chemical element, atomic number 113, atomic weight 284. See Table 4.
UPC urine protein:creatinine ratio.
upper a term to avoid because of its ambiguity when transcribed from human anatomy; it usually means either cranial, oral, or rostral, but it can simply mean 'dorsal'..
upper burner in traditional Chinese medicine, the thoracic cavity; associated with respiration.
u. b. syndrome in acupuncture terminology a chronic lung condition caused by an attack by a pathogen.
upright said of limb joints and bones, especially in the horse. Indicates a lack of angulation in the joint, e.g. upright hock, or slope in a bone, e.g. upright pastern. In horses, often associated with a bumpy ride and a tendency to joint injury and lameness.
upsilon [*up'si-lon*] twentieth letter in the Greek alphabet, Υ or υ.
upstream [*up'strēm*] a term used in molecular biology to describe nucleotides of a nucleic acid molecule which lie in the 5′ direction from a particular reference point such as the site of initiation of transcription. See also **downstream**.
u. activating site DNA sequences that are upstream from the promoter and have a regulatory role in transcription.
Ura uracil.
urachal [*u'rə-kəl*] pertaining to **urachus**.
u. abscess a mass palpable in the abdomen dorsal to the umbilicus to which it is usually connected by a fistula that drips pus continually.
u. cyst symptomless fluid-filled cavities in the urachal remnant.
u. diverticulum visible with contrast radiography as an extension of the bladder at the vertex. See also **vesicourachal** diverticulum.
u. inflammation usually results from an extensive infection of the umbilicus. The urachus may or may not be pervious. Cystitis or urachal abscess may follow.
persistent u. ligament maintains tension on the bladder leading to incomplete filling and emptying. The elongated bladder with a pointed vertex is readily visible radiologically.



U-7: Patent urachus in colt foal. Urine can be seen flowing from both the penis and the urachus simultaneously. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

urachitis inflammation of the urachus; often complicated by extension of the inflammation to the bladder.
urachus [*u'rə-kəs*] a fetal canal connecting the bladder with the allantois via the navel. It mostly disappears in the neonatal period although a nipple-like projection may remain on the bladder and in some species a cord may persist along the cranial border of the median ligament of the bladder.
patent u. failure of the urachus to obliterate at birth so that urine dribbles from it continuously. The urine may also be passed from the urethra. Retrograde infection from an omphalitis is common, resulting in cystitis. Called also pervious urachus, persistent urachus.
pervious urachus patent urachus.
uracil [*ūr'ə-sil*] U; Ura; a pyrimidine base found in nucleic acids.
uracrasia [*u"rə-kra'zhə*] disordered composition of urine.
uraemia see **uremia**.
uragogue diuretic.
uraniscus [*u"rə-nis'kəs*] the palate.
uranium (U) [*u-ra'ne-əm*] a chemical element, atomic number 92, atomic weight 238.03. See Table 4.
uran(o)- word element. [Gr.] *palate*.
uranoplasty [*u'rə-no-plas"te*] plastic repair of the palate; palatoplasty.
uranorrhaphy [*u"rə-nor'ə-fe*] suture of the palate; staphylorrhaphy.
uranoschisis [*u"rə-nos'kĭ-sis*] cleft palate.
uranostaphyloschisis [*u"rə-no-staf"ə-los'kĭ-sis*] fissure of the soft and hard palates.
uranyl [*u'rə-nəl*] pertaining to uranium; the UO_2^{2+} ion, as in uranyl sulfate.
u. nitrate causes depression, anorexia, hyperuricemia, nephrosis and visceral deposits of urates.
urate [*ūr'āt*] a salt of uric acid. Accumulates in tissues in large quantities in chickens fed excessive amounts of protein. See also visceral **gout**.
u. calculi see urate **uroliths**.
uratemia [*u"rə-te'me-ə*] urates in the blood.
uratic [*u-rat'ik*] pertaining to urates or to gout.
uratoma [*u"rə-to'mə*] a concretion made up of urates; tophus.
uratosis [*u"rə-to'sis*] the deposit of urate crystals in the tissues.
uraturia [*u"rə-tu're-ə*] hyperuricosuria.
urceiform [*ər-se'ĭ-form*] pitcher-shaped.
urea [*u-re'ə*] 1. the diamide of carbonic acid found in urine, blood and lymph, the chief nitrogenous constituent of urine, and the chief nitrogenous end product of protein metabolism; it is formed in the liver from amino acids and from ammonia compounds. 2. a pharmaceutical preparation of urea occasionally used to lower intracranial pressure. 3. industrial urea is used as a fertilizer and feed additive for ruminants. Overfeeding or accidental access to large amounts can cause fatal poisoning.
u. cycle a cyclic series of reactions that produce urea, a major route for removal of the ammonia produced in the metabolism of amino acids in the liver and kidney. See also **urea**.

VetBooks.ir

u. cycle enzyme deficiency see **arginosuccinate synthetase, citrullinemia**.
u. hydrogen peroxide see **carbamide** peroxide.
u. nitrogen the urea concentration of serum or plasma, conventionally specified in terms of nitrogen content and called *blood urea nitrogen* (BUN), an important indicator of renal function.
u. poisoning causes tremor, dyspnea, abdominal pain, incoordination, bellowing, convulsions and death in 2–4 hours. Due to hyperammonemia.
urealytic bacteria those producing urease.
Ureaplasma a genus in the family *Mycoplasmataceae*. See also **ureaplasmosis**. Previously called t-strain mycoplasmas (for tiny colonies).
U. canigenitalium found in the urogenital tract of dogs.
U. diversum associated with genital disease in cattle.
U. felinum, U. cati found in the oral cavity of cats.
U. gallorale from the oral cavity of chickens.
U. parvum found in thye urogenital tract of humans.
U. urealyticum found in humans.
ureaplasmosis infection with *Ureaplasma* spp.; occurs in the vagina and vulva of cows and ewes and there is speculation that they are causally associated with granular vaginitis and possibly with transitory endometritis. They are also mentioned in discussions about seminal vesiculitis in bulls, and in pneumonia in calves.
ureapoiesis [*u-re"ə-poi-e'sis*] formation of urea.
urease [*u're-ās*] an enzyme that catalyzes the decomposition of urea to ammonia and carbon dioxide, present in high activity in ruminal microflora and some urogenital tract pathogens.
u. inhibitors compounds that inhibit or block the activity of urease, most commonly used in the management of struvite urolithiasis. See also **acetohydroxamic acid**.
u. tests a biochemical test used in the identification of some bacteria such as *Proteus* spp. Using urea agar or broth, bacteria producing urease will cause the formation of ammonia, which is detected by phenophthalein in the medium.
urecchysis an effusion of urine into cellular tissue.
Urechites lutea see ***Pentalinon luteum***.
uredema [*u"rə-de'mə*] swelling from extravasated urine.
uredofos a broad-spectrum anthelmintic introduced for the treatment of canine and feline hookworms, ascarids, tapeworms and whipworms but withdrawn because of a large number of adverse reactions with many deaths.
ureidopenicillins a group of penicillins, susceptible to gastric acidity and β-lactamase, but with a greater range of activity against gram-negative bacteria, especially *Pseudomonas aeruginosa*. Includes **azlocillin**, **mezlocillin** and **piperacillin**.
urelcosis ulceration in the urinary tract.
uremia [*u-re'me-ə*] 1. an excess in the blood of urea, creatinine, and other nitrogenous end products of protein and amino acid metabolism; more correctly referred to as *azotemia*. 2. in current usage, the syndrome of chronic **renal** failure. As the glomerular filtration rate falls in either acute tubular necrosis or chronic renal failure, serum urea (usually expressed as blood urea nitrogen content, BUN) and creatinine rise to very high concentrations. However, BUN and creatinine measurements are only roughly correlated with the clinical signs of uremia. Other nitrogenous compounds present in small amounts may produce most of the toxic effects. Some uremic signs are due to losses of kidney function that do not involve azotemia. Uremia is a syndrome that occurs as the end-stage in renal insufficiency. The pathology includes stomatitis, pneumonopathy, endocarditis and gastritis, often associated with mineralization of affected tissues. In the dog and cat there is vomiting, diarrhea, anemia and sometimes ulcerative stomatitis. In horses there is depression and chronic diarrhea. Cattle show somnolence, depression and recumbency. Chickens develop visceral gout. Called also kidney failure.
prerenal u. see **azotemia**.
uremic [*u-re'mik*] pertaining to or emanating from **uremia**.
u. poisoning see **uremia**, visceral **gout**.
u. toxins a name given to the many products of metabolism that accumulate in the body with renal failure, and in association with uremia, because of impaired renal degradation and/or excretory capacity.
uremigenic [*u-re"mĭ-jen'ik*] 1. caused by uremia. 2. causing uremia.
ureogenesis hepatic synthesis of urea.
ureotelic [*u"re-o-tel'ik*] having urea as the chief excretory product of nitrogen metabolism.
u. mammals humans, dogs, rat, sheep, cattle and pigs. All mammals are ureotelic, but these animals have high liver concentrations of arginase.
uresis [*u-re'sis*] the passage of urine; urination.
ureter [*u-re'tar, u'rə-tər*] the fibromuscular tube through which the urine passes from the kidney to the bladder.
ectopic u. an abnormally placed opening of the ureter, either into the urinary bladder distal to the trigone or at another site in the lower urinary or genital tract. May be associated with other anomalies of the urogenital tract. There is usually constant dribbling of urine from a young age and commonly an associated pyuria.
ureteral [*u-re'tər-əl*] pertaining to or emanating from the **ureter**.
u. calculus ureterolith.
u. distention ureterectasis.
u. duplication a rare anomaly in animals in which there is more than one ureter from a kidney.
u. ectopia see ectopic **ureter**.
u. hypoplasia usually segmental underdevelopment of the ureter causing stenosis and hydronephrosis.
u. obstruction may be caused by intraluminal lesions, e.g. urolithiasis, or as part of pyelonephritis or by external compression of the ureter or as a congenital defect. Sudden blockage may cause acute abdominal pain that lasts for several hours, but unilateral obstruction can occur without clinical signs if the contralateral kidney is functioning normally. Subsequently, if obstruction is sustained or develops slowly the kidney on the affected side becomes hydronephrotic; if bilateral, renal failure follows (see **big kidney, little kidney syndrome**).
u. reflux see vesicoureteral **reflux**.
u. rupture rupture usually results from trauma; leads to urinoma or peritoneal accumulation of urine.
u. stasis synonymous with obstruction.
u. valves a rare anomaly that may be a cause of urinary incontinence.
ureterectasis [*u-re"tər-ek'tə-sis*] distention of the ureter.
ureterectomy [*u-re"tər-ek'tə-me*] excision of a ureter.
ureteritis [*u-re"tər-i'tis*] inflammation of a ureter. The epithelial reaction may be cystic, if the reaction is liquefaction, or glandular, if the epithelial reaction is by metaplasia.
ureter(o)- word element. [Gr.] *ureter*.
ureterocele [*u-re'tər-o-sēl"*] ballooning of the submucosal segment of the ureter into the bladder. May be a cause of urinary incontinence, dysuria,stranguria, pollakiuria and recurrrent urinary tract infections.
ureterocelectomy [*u-re"tər-o-se-lek'tə-me*] excision of a ureterocele.
ureterocolostomy [*u-re"tər-o-kə-los'tə-me*] anastomosis of a ureter to the colon. May be carried out for permanent urinary diversion when cystectomy is required.
ureterocystoscope a cystoscope with a catheter for insertion into the ureter.
ureterocystostomy [*u-re"tər-o-sis-tos'tə-me*] ureteroneocystostomy.
ureterodialysis [*u-re"tər-o-di-al'ə-sis*] rupture of a ureter; ureterolysis.
ureteroectasis megaureter.
ureteroenterostomy [*u-re"tər-o-en"tər-os'tə-me*] anastomosis of one or both ureters to the wall of the intestine.
ureterography [*u-re"tər-og'rə-fe*] radiography of the ureter, after injection of a contrast medium.
antegrade u. the contrast medium is injected through a catheter placed percutaneously into renal parenchyma and into the pelvis or ureter.
ureteroheminephrectomy excision of the diseased portion of a reduplicated kidney and its ureter.
ureteroileostomy [*u-re"tər-o-il"e-os'tə-me*] anastomosis of the ureters to an isolated loop of the ileum, drained through a stoma on the abdominal wall.
ureterolith [*u-re'tər-o-lith*] a calculus in the ureter.
ureterolithiasis [*u-re"tər-o-lĭ-thi'ə-sis*] formation of a calculus in the ureter. A cause of acute and chronic renal disease in cats. Clinical signs are related to the developing renal dysfunction.
ureterolithotomy [*u-re"tər-o-lĭ-thot'ə-me*] incision of a ureter for removal of calculus.
ureterolysis [*u-re"tər-ol'ĭ-sis*] 1. rupture of the ureter; ureterodialysis. 2. paralysis of the ureter. 3. the operation of freeing the ureter from adhesions.

ureteroneocystostomy [*u-re"tər-o-ne"o-sis-tos'tə-me*] surgical transplantation of a ureter to a different site in the bladder; ureterocystostomy.
ureteroneopyelostomy [*u-re"tər-o-ne"o-pi"ə-los'tə-me*] ureteropyeloneostomy.
ureteronephrectomy [*u-re"tər-o-nə-frek'tə-me*] excision of a kidney and ureter.
ureteropathy [*u-re"tər-op'ə-the*] any disease of the ureter.
ureteropelvic [*u-re"tər-o-pel'vik*] pertaining to the ureter and the renal pelvis.
u. junction junction of the renal pelvis and the ureter; strictly speaking the renal pelvis is the dilated proximal portion of the ureter.
ureteropelvioplasty [*u-re"tər-o-pel've-o-plas"te*] surgical reconstruction of the junction of the ureter and renal pelvis; ureteropyelostomy.
ureteroplasty [*u-re'tər-o-plas"te*] plastic repair of a ureter.
ureteropyelitis [*u-re"tər-o-pi-ə-li'tis*] inflammation of a ureter and renal pelvis.
ureteropyelography [*u-re"tər-o-pi-ə-log'rə-fe*] radiography of the ureter and renal pelvis.
ureteropyeloneostomy [*u-re"tər-o-pi"ə-lo-ne-os'tə-me*] surgical creation of a new communication between a ureter and the renal pelvis; ureteroneopyelostomy; ureteropyelostomy.
ureteropyelonephritis [*u-re"tər-o-pi"ə-lo-nə-fri'tis*] inflammation of the ureter, renal pelvis and kidney.
ureteropyeloplasty [*u-re"tər-o-pi'ə-lo-plas"te*] plastic repair of the ureter and renal pelvis.
ureteropyelostomy [*u-re"tər-o-pi"ə-los'tə-me*] ureteropelvioplasty.
ureteropyosis [*u-re"tər-o-pi-o'sis*] suppurative inflammation of the ureter.
ureterorenoscope [*u-re"tər-o-re'no-skōp*] a fiberoptic endoscope used in ureterorenoscopy.
ureterorenoscopy [*u-re"tər-o-re-nos'kə-pe*] visual inspection of the interior of the ureter and kidney by means of a fiberoptic endoscope for such purposes as biopsy, removal or crushing of stones, or other procedures.
ureterorrhagia [*u-re"tər-o-ra'jə*] discharge of blood from the ureter.
ureterorrhaphy [*u-re"tər-or'ə-fe*] suture of the ureter.
ureterostomy [*u-re"tər-os'tə-me*] creation of a new outlet for a ureter.
ureterotomy [*u-re"tər-ot'ə-me*] incision of a ureter.
uterotubal pertaining to the uterus and uterine tubes (oviducts).
u. junction where the oviduct (uterine tube) enters the uterus. It forms a papilla that is important for sperm and embryo transport.
ureteroureterostomy [*u-re"tər-o-u-re"tər-os'tə-me*] end-to-end anastomosis of the two portions of a transected ureter.
ureterovaginal [*u-re"tər-o-vaj'ĭ-nəl*] pertaining to or communicating with a ureter and the vagina.
u. fistula a complication of ovariohysterectomy in bitches and queens; causes urinary incontinence.
ureterovesical [*u-re"tər-o-ves'ĭ-kəl*] pertaining to a ureter and the bladder.
u. junction junction of the ureter with the urinary bladder; the ureter runs for a short distance in the wall of the bladder (the intramural part), providing a valvular action preventing reflux of urine up the ureter.
urethane a compound with limited use as an anesthetic in nonrecovery experiments with laboratory animals because it causes pulmonary edema and is carcinogenic.
urethra [*u-re'thrə*] the tubular passage through which urine is discharged from the bladder to the exterior via the external urinary meatus. In males the urethra also conveys the secretions of the reproductive organs.
female u. runs ventrally to the reproductive tract, opening in its ventral wall at the junction of the vagina and the vestibule; at this termination it may be joined with a diverticulum (cow, sow) or a hummock (bitch).
incomplete u. see **urethral** atresia.
u. imperforate see **urethral** agenesis.
male u. consists of several parts beginning at the internal urethral orifice from the bladder that leads firstly into a pelvic urethra, made up of a preprostatic part, a prostatic part, and an intermediate or membranous part; this is followed by a penile or spongy part that terminates at the external urethral orifice; the deferent and vesicular ducts enter the pelvic urethra soon after it leaves the bladder.
penile u. that part of the male urethra which passes through the penis; called also spongy urethra.
prosthetic u. limited use in male cats with urethral obstruction or stricture; some serious disadvantages and surgical perineal urethrostomy the preferred treatment.
spongy u. that part of the urethra surrounded by erectile tissue; called also penile urethra. The erectile tissue enables the urethra to expand in harmony with the corpora cavernosa penis as it erects during intumescence.
urethral [*u-re'thrəl*] pertaining to or emanating from **urethra**.
u. agenesis, u. atresia failure of development of all or part of the urethra: characterized by complete urine retention. A rare cause of neonatal uremia.
u. calculus causes a syndrome of acute urethral obstruction (below).
u. diverticulum a small dorsal evagination of the urethra of male ruminants and pigs closely associated with the openings of the bulbourethral glands. Because of its location near the ischiatic arch, it makes cannulation of the bladder via the penis almost impossible in these species. Compare with suburethral **diverticulum**.
u. extension see Brown **urethroplasty** technique.
u. fistula due to trauma; occurs in bulls in which the urethra lies superficially near its end. A fistula may affect the discharge of semen from the normal meatus sufficiently to cause infertility.
u. groove a median groove along the ventral surface of the genital tubercle providing an eventual location for the penile urethra in the male.
u. hypoplasia a cause of urinary incontinence in female dogs and rarely cats.
u. muscle striated muscle in the wall of the male pelvic urethra.
u. obstruction causes acute abdominal pain with grunting and straining to urinate, tail switching, distention of the bladder, dripping of blood-stained urine, protrusion of the penis. Eventually the bladder ruptures or the urethra perforates. Caused usually by calculus. See also **urolithiasis**.
u. perforation occurs usually at the site of urethral obstruction by a calculus. Causes urinary infiltration of the ventral abdominal wall and terminal uremia. Called also waterbelly. Rarely the accumulation occurs retroperitoneally and is palpable rectally. See also **hypospadia**.
u. plate a solid cord of endodermal cells which arise from the floor of the urogenital sinus, contributing to the formation of the urethral groove.
u. plug occurs in male cats causing urethral obstruction; associated with feline lower urinary tract disease. The plug is composed of proteinaceous material with cellular debris and struvite crystals.
u. pressure profile a study of the intraurethral pressure; used in the investigation of urinary incontinence and urethral dysfunction in dogs and cats.
u. pressure profilometry a measure of intraurethral pressures; used in the investigation of urinary incompetence in dogs and cats. Usually carried out with a pressure-measuring device in the tip of a catheter placed in the urethra and bladder.
u. process the extension of the urethra beyond the end of the glans penis. In the horse it is mostly concealed in the urethral fossa. In small ruminants it is in the form of a 1–2 inch long filiform appendage and is easily injured during shearing, interfering with the animal's subsequent fertility.

U-8: Subcutaneous swelling containing urine due to urolithiasis and urethral perforation. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

VetBooks.ir

u. prosthesis a synthetic conduit used in the treatment of urethral stricture or obstruction in cats, particularly following an unsuccessful urethrostomy.
proximal u. ulceration causes hematuria at the end of urination in horses.
u. rupture see urethral perforation (above).
u. sling see **colposuspension**.
u. sphincter mechanism incompetence a cause of **urinary** incontinence in female dogs and occasionally cats.
u. stricture caused by trauma, particularly injury associated with urethral calculi or urethral surgery. Clinically similar to obstruction except that the condition is subacute or chronic and characterized by a persistently distended bladder, dribbling of urine and the passage of a thin stream, usually accompanied by straining.
urethratresia [*u-re"thrə-tre'zhə*] imperforation of the urethra.
urethrectomy [*u"rə-threk'tə-me*] excision of the urethra.
urethremphraxis [*u"rə-thrəm-frak'sis*] obstruction of the urethra.
urethrism [*u'rə-thriz-əm*] irritability or chronic spasm of the urethra.
urethritis [*u"rə-thri'tis*] inflammation of the urethra due to injury or infection. The urethra swells and narrows, and the flow of urine is impeded. Both urination and the urgency to urinate increase. There may be a purulent discharge.
granulomatous u. occurs in female dogs, often complicated by bacterial infection. May cause partial obstruction and stranguria. Called also proliferative urethritis.
urethr(o)- word element. [Gr.] *urethra*.
urethrobulbar [*u-re"thro-bul'bər*] pertaining to the urethra and the bulb of the penis.
urethrocele [*u-re'thro-sēl*] prolapse of the female urethra through the urinary meatus.
urethrocolostomy [*u-re'thro-kə-los'tə-me*] anastomosis of the urethra to the colon.
urethrocystitis [*u-re"thro-sis-ti'tis*] inflammation of the urethra and bladder.
urethrocystograph radiographic visualization of the urethra and urinary bladder utilizing contrast techniques.
urethrocystoscope an instrument for viewing the interior of the urethra and urinary bladder.
urethrocystoscopy [*u-re"thro-sis-tos'kə-pe*] visual inspection of the lumen of the urethra and urinary bladder using a rigid or flexible urethrocystoscope.
urethrography [*u"rə-throg'rə-fe*] radiography of the urethra.
prostatic u. the contrast material is delivered by catheter to the area of the prostate.
retrograde u. the contrast medium is injected into the terminal part of the urethra which has been occluded by a Foley catheter.
voiding u. contrast medium is injected into the urinary bladder and radiographs are taken as it is forced into the urethra.
urethrolith uroliths that become lodged in the urethra.
urethrometry [*u"rə-throm'ə-tre*] 1. determination of the resistance of various segments of the urethra to retrograde flow of fluid. 2. measurement of the urethra.
urethropenile [*u-re"thro-pe'nīl*] pertaining to the urethra and penis.
urethroperineal [*u-re"thro-per"ĭ-ne'əl*] pertaining to the urethra and perineum.
urethroperineoscrotal [*u-re"thro-per"ĭ-ne"o-skro'təl*] pertaining to the urethra, perineum and scrotum.
urethrophraxis obstruction of the urethra.
urethrophyma a tumor or growth in the urethra.
urethroplasty [*u-re'thro-plas"te*] plastic repair of the urethra.
Brown u. technique a surgical treatment for urine reflux and accompanying chronic urogenital disease in mares. By using layers of the vestibular floor, the urethral lumen is extended caudally to open at the vulvar cleft. Called also urethral extension.
sling u. a surgical technique for increasing proximal urethral resistance in the management of urinary incontinence. Seromuscular flaps, dissected from the midtrigone area, are reflected around the bladder neck and proximal urethra and sutured together, creating a constricting band.
urethroprostatic [*u-re"thro-pros-tat'ik*] pertaining to the urethra and prostate.
urethrorectal [*u-re"thro-rek'təl*] pertaining to the urethra and rectum.
u. fistula may be a congenital defect. The male dog urinates into the rectum. Females usually have an opening into the vagina and sometimes an associated imperforate anus. Cystitis and urethritis are common sequels.
urethrorrhagia [*u-re"thro-ra'jə*] a flow of blood from the urethra.
urethrorrhaphy [*u"rə-thror'ə-fe*] suture of a urethral fistula.
urethrorrhea [*u-re"thro-re'ə*] abnormal discharge from the urethra.
urethroscope [*u-re'thro-skōp*] an instrument for viewing the interior of the urethra.
urethroscopy visual inspection of the urethra.
urethrospasm [*u-re'thro-spaz"əm*] spasm of the urethral muscular tissue.
urethrostaxis [*u-re"thro-stak'sis*] oozing of blood from the urethra.
urethrostenosis [*u-re"thro-stə-no'sis*] constriction of the urethra.
urethrostomy [*u"rə-thros'tə-me*] creation of a permanent opening for the urethra in the perineum.
antepubic u. anastomosis of the urethra to skin of the abdominal wall. May be performed in the male or female, usually because of trauma to the urethra.
ischial u. see perineal urethrostomy (below).
perineal u. one performed in male cats in the perineal region, between the anus and scrotum. Called also ischial urethrostomy, Wilson–Harrison technique.
prepubic u. the opening is created on the ventral surface of the abdomen, cranial to the pubis.
scrotal u. one performed in dogs at the level of the scrotum, usually for chronic cystic calculi, penile amputation or traumatic strictures. After removal of the scrotum and testicles, the urethra is opened and sutured to the skin, creating a permanent opening.
Wilson–Harrison u. see perineal urethrostomy (above).
urethrotome [*u-re'thro-tōm*] an instrument for cutting a urethral stricture.
urethrotomy [*u"rə-throt'ə-me*] incision of the urethra.
ischial u. see perineal **urethrostomy**.
urethrotrigonitis [*u-re"thro-tri"go-ni'tis*] inflammation of the urethra and trigone of the bladder (vesical trigone).
urethrovaginal [*u-re"thro-vaj'ĭ-nəl*] pertaining to the urethra and vagina.
urethrovesical [*u-re"thro-ves'ĭ-kəl*] pertaining to the urethra and bladder.
Urginea see ***Drimia*** spp., **slangkop**.
urhidrosis [*u"rĭ-dro'sis*] the presence in the sweat of urinous materials, chiefly uric acid and urea.
-uria word element. [Gr.] condition of the urine.
uric [*u'rik*] pertaining to the urine.
u. acid the end product of purine metabolism or oxidation in the body in species other than dogs which metabolize uric acid to allantoin. In Dalmatians, mutation in the SLC2A9 gene is responsible for elevated uric acid and formation of uroliths in some. In birds excess amounts of uric acid and urates in tissue occur in visceral **gout**.
u. acid calculi see urate **urolith**.
uricacidemia [*u"rik-as"ĭ-de'me-ə*] hyperuricemia.
uricaciduria [*u"rik-as"ĭ-du're-ə*] hyperuricosuria.
uricase [*u'rĭ-kās*] an enzyme that catalyzes the conversion of uric acid to allantoin, the end product of purine breakdown in vertebrates.
uricemia [*u"rĭ-se'me-ə*] hyperuricemia.
uricolysis [*u"rĭ-kol'ĭ-sis*] the cleavage of uric acid or urates.
uricosuria [*u"rĭ-ko-su're-ə*] hyperuricosuria.
uricosuric [*u"rĭ-ko-su'rik*] 1. pertaining to, characterized by, or promoting uricosuria. 2. an agent that promotes uricosuria.
uridine [*ūr'ĭ-dēn*] a ribonucleoside containing uracil.
u. diphosphate (UDP) a nucleotide that participates in glycogen and glycoprotein metabolism and in some processes of nucleic acid synthesis.
u. diphosphoglucuronic acid one of the incidental products in the glucuronate pathway and an important participant in detoxication processes in the body.
u. 5′-triphosphate (UTP) activated pyrimidine nucleotide, involved in the activation of sugars for synthesis and polymerization.
urina [L.] *urine*.
urinalysis (UA) [*u"rĭ-nal'ĭ-sis*] physical (color, clarity, specific gravity), chemical (bilirubin, blood, glucose, ketones, pH and rotein) and microscopic (cells, casts, crystals, bacteria) analysis of the urine as an aid in the diagnosis of disease in the urinary tract and other organ systems.
urinary [*u'rĭ-nar"e*] pertaining to the urine; containing or secreting urine.
u. bile pigment bilirubin and urobilinogen are found in the urine of normal animals.

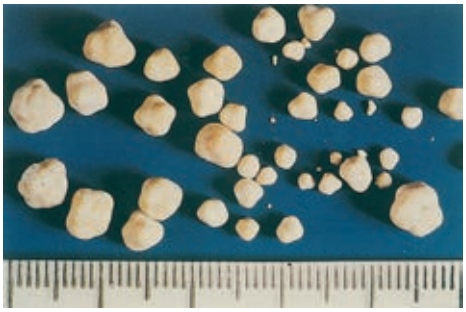
U

u. calculi see **urolith**, **urolithiasis**.
u. diversion various surgical procedures involving the ureters, bladder or urethra may be used to alter the usual route of urine flow, thereby bypassing portions of the urinary tract, usually the bladder and/or urethra. Ureters, bladder or urethra are transplanted or anastomosed to the bowel or placed so urine exits at an orifice created through the skin. See also **ureteroileostomy**, **trigonal–colonic anastomosis**, **ureterocolostomy**, **transureteroureterostomy**.
u. flow monitor periodic measurement of the amount of urine secreted. In an anesthetized animal a catheter draining into a calibrated container is used. In a conscious animal a clamped-off, self-retaining catheter is inserted and drained at intervals. A metabolism cage is an alternative.
u. flowmetry the measure of urinary flow rates.
u. incontinence an inability to control urination with the involuntary passage of urine. Most commonly occurs in dogs due to congenital abnormalities of the ureters or urethra. Other causes include congenital or acquired defects in nervous control of micturition, neoplastic or inflammatory disease of the lower urinary tract, and prostate gland and endocrine abnormalities. See also **incontinence**.
u. obstruction urethral or ureteral obstruction often caused by lodgement of a urinary calculus in the narrow lumen. Constriction of urethra due to hyperplastic prostate in male dogs.
u. pole the point on the glomerulus where the proximal convoluted tubule exits.
u. pooling see **urovagina**.
u. system, u. tract the system formed in the body by the kidneys and the lower urinary tract, comprising the ureters, **urinary bladder** and **urethra**; the organs concerned in the production and excretion of urine.
u. territorial marking see **spraying**.
u. tract urinary system.
urinary bladder [*u'rĭ-nar"e blad'ər*] a distensible reservoir with muscular walls and a lining mucous membrane that lies in the ventral part of the pelvic cavity or abdomen (especially far forwards in the cat). It receives urine from the kidneys via the ureters and discharges urine to the exterior of the body via the urethra. Urine trickles into the bladder from the kidneys every few seconds, where it remains until voided. There is no anatomical sphincter of circular muscle at the bladder neck, urine retention being maintained by the elastic tissues of the urethra—a physiological sphincter. Voiding occurs when the detrusor muscle contracts forcing the urine out. In the housetrained companion animal urination is resisted even when the bladder is uncomfortably full. Formal name is *vesica urinaria*.
atonic u. b. a condition marked by a dilated, poorly contracting urinary bladder without evidence of a lesion of the central nervous system.
atonic neurogenic u. b. neurogenic bladder caused by destruction of the sensory nerve fibers from the bladder to the spinal cord (lateral spinal tracts), marked by the absence of awareness of bladder filling and of the desire to void. This leads to overdistension of the bladder, and an abnormal amount of residual urine with a tendency toward overflow incontinence. Seen in degenerative and traumatic injury to the spinal cord, especially intervertebral disk herniation, in dogs and cats. Called also retention and overflow incontinence, paralytic bladder and sensory paralytic bladder.
automatic u. b. neurogenic bladder due to complete resection of the spinal cord above the sacral segments, marked by complete loss of micturition reflexes and bladder sensation, violent involuntary voiding, and an abnormal amount of residual urine. Called also reflex neurogenic bladder.
autonomous u. b. neurogenic bladder due to a lesion in the sacral portion of the spinal cord that interrupts the reflex arc that controls the bladder. The lesion may be in the cauda equina, conus medullaris, sacral roots or pelvic nerve. It is marked by loss of normal bladder sensation and reflex activity, inability to initiate urination normally, and stress incontinence.
u. b. calculi can cause cystitis arising from the traumatic injury to the bladder epithelium. The initial stage may be hematuria and greatly increased frequency of urination. Dysuria may also be evident. Secondary bacterial infection is a common sequel. See also **urolithiasis**.
congenital u. b. rupture there is gradually increasing abdominal distention soon after birth in the affected foal, which is almost always a male. Paracentesis reveals free urine in the peritoneal cavity. The tear is usually in the dorsal wall of the bladder.
u. b. duplication observed in dogs; the second bladder originates between the uterus and the urinary tract, or between the urinary tract and the rectum.
u. b. ectropion see urinary bladder eversion (below).
u. b. eversion turning inside out of the bladder; occurs in the mare, usually during labor.
u. b. hypertrophy due usually to long-standing partial obstruction of urinary flow.
u. b. inflammation see **cystitis**.
irritable u. b. a state of the bladder marked by increased frequency of contraction with associated desire to urinate.
u. b. motility degree of motor activity of the bladder muscle as determined by the spinal sympathetic nerve supplies.
motor paralytic u. b. neurogenic bladder due to impairment of the motor neurons or nerves controlling the bladder. The *acute* form is marked by painful distention and inability to initiate micturition; the *chronic* form is marked by difficulty in initiating micturition, straining, a decrease in the size and force of the stream, interrupted stream, and recurrent infection of the urinary tract.
u. b. neck sling a surgical procedure that increases proximal urethral pressure; used to treat some forms of urinary incontinence.
u. b. neoplasia see urinary bladder tumors (below).
neurogenic u. b. any condition of dysfunction of the urinary bladder caused by a lesion of the central or peripheral nervous system.
u. b. papillary hyperplasia resembles papillomatosis in cattle bladders; may cause obstruction.
u. b. papilloma warts attached to the inner wall of the urinary bladder.
u. b. paralysis is caused by a lesion, usually a space-occupying one or due to trauma, in the lumbosacral region of the cord. In the early stages the bladder remains distended and urine dribbles from it. A good flow of urine can be obtained by firm pressure on the bladder. There may be some return to an emptying function later, but the evacuation is seldom complete. Cystitis is the almost certain outcome.
u. b. reconstruction a surgical procedure performed to correct urinary incontinence caused by urethral hypoplasia in female dogs and cats. The caudal bladder is reshaped to form ventral bladder tubal flaps as a cranial extension of the urethra.
reflex neurogenic u. b. automatic bladder.
u. b. reflux see vesicoureteral **reflux**.
u. b. retroflexion seen in male dogs with tenesmus, due usually to prostatic hyperplasia or constipation; resumes normal position after voiding unless retained in a perineal hernia with a kinked urethra.
u. b. rupture failure to relieve an obstruction of the urethra may result in distention of the bladder to the point that its circulation is impaired and rupture of the organ follows. The pain of distention disappears, to be followed by a gradual distention of the abdomen, and somnolence and depression of developing uremia. In dogs and cats, trauma is also a common cause. See also **urethral perforation**.
sensory paralytic u. b. atonic neurogenic bladder.
u. b. torsion a rare cause of complete anuria, bladder distention and eventual rupture.
u. b. trigone area of the bladder wall defined by imaginary lines joining the urethral orifice with the orifices of the ureters.
u. b. tumors rare in food animals except in cattle grazing bracken (see also **enzootic** hematuria). In dogs and cats they are usually transitional cell carcinomas, or rarely adenomas, papillomas, leiomyomas or fibromas. Botryoid rhabdomyosarcomas characteristically occur in young Saint Bernards and may arise from mesenchymal cells.
u. b. uroliths see **urolithiasis**.
u. b. warts see urinary bladder papilloma (above).
urinary casts see urinary **casts**.
urinate [*u'rĭ-nāt*] to void urine.
urination [*u"rĭ-na'shən*] the discharge of urine from the bladder; called also voiding of urine and micturition. Urine from the kidneys is passed every few seconds along the ureters to the bladder, where it collects until voided. During the act of urination the urine passes from the bladder to the outside via the urethra.

VetBooks.ir

difficult u. the bladder is continually full; the animal is straining to urinate, often grunting, but producing only a thin stream, often under great pressure. Called also dysuria, strangury, stranguria.
dribbling u. a steady, intermittent passage of small volumes of urine, sometimes precipitated by a change in posture or increase in intra-abdominal pressure, reflecting inadequate or lack of sphincter control. Seen with ectopic ureters and in paralysis of bladder. See also **dribblers**.
inappropriate u. see inappropriate **micturition**.
increased u. frequency if output of urine per urination is reduced the increased frequency is probably related to irritation in the tract due to cystitis or urethritis.
painful u. dysuria; frequent passage of small amounts of urine with grunting and maintaining posture for some time afterwards.
submissive u. an expression of behavioral submission by dogs.
urine [*u'rin*] the fluid containing water and waste products which are secreted by the **kidneys**, stored in the bladder and discharged by way of the urethra. See also **urinary**, **urinalysis**.
u. albumin see **albuminuria**.
u. alkalinization increasing the pH of urine by the administration of alkalinizing agents such as sodium bicarbonate; used to increase the solubility of cystine in the management of cystine urolithiasis in dogs.
u. bilirubin see **bilirubinuria**.
blood in u. see **hematuria**.
u. burn see urine scald (below).
u. calculi see **urolith**, **urolithiasis**.
u. casts see urinary **casts**.
u. cells see urine sediment (below).
u. chromogens see **chromogen**.
u. concentration test see **water** deprivation test.
u. creatine see **creatinuria**.
u. crystals see **crystalluria**.
u. drinking in farm animals is observed in nutritional deficiency of sodium chloride.
u. flow the rate of flow may be reduced—**oliguria**, absent—**anuria**, or increased—**polyuria**.
u. flowmetry measure of urine flow rates.
u. glucose see **glucosuria**.
u. heme heme-containing substances that may occur in the urine include erythrocytes, hemoglobin and myoglobin.
u. hemoglobin see **hemoglobinuria**.
u. immunoglobulins may be found in small amounts in normal animals. Increased amounts occur in renal disease due to disruption of glomeruli and defects in tubular reabsorption.
u. indican see **indicanuria**.
u. ketones see **ketonuria**.
u. marking a form of territorial behavior in dogs and cats; may be related to stress or anxiety. Particularly common in multi-cat households. See **spraying**.
metastable u. calcium oxalate crystals are maintained and can enlarge in urine oversaturated with these minerals.
u. methemoglobin see **methemoglobinuria**.
u. myoglobin see **myoglobinuria**.
u. osmolality a measure of the number of dissolved particles per unit of water in urine. See also **osmolality**.
oversaturated u. calcium and oxalate crystals will spontaneously precipitate, grow and aggregate.
u. peritonitis caused by the presence of urine in the peritoneal cavity as in rupture of the bladder.
u. pH the normal range varies with the animal species. Herbivores have a higher pH than carnivores because of differences in the diet. Alterations occur with changes in acid–base balance and infection in the urinary tract.
u. pooling in the vagina because of an abnormal conformation of the perineum and vestibule-vaginal vault; common in older mares. See also **urovagina**.
u. protein see **proteinuria**.
pus in u. see **pyuria**.
red u. see **hematuria**, **hemoglobinuria**.
residual u. urine remaining in the bladder after urination; seen in bladder outlet obstruction (as by prostatic hypertrophy) and disorders affecting nerves controlling bladder function.
u. sample collection midstream collection is standard; for culture the sample should be collected by catheter or cystocentesis.
u. scald scalding of the perineal area, and sometimes the hindlegs, by urine. It may be the result of urinary incontinence or the animal's inability to assume normal posture when urinating, i.e. paresis or paralysis of the hindlimbs. In rabbits it is caused by poor cage accommodation and frequent wetting of the area with urine. Secondary infection of the dermatitis is common.
u. sediment a centrifuged deposit suitable for microscopic examination for the presence of cells, casts, bacteria, crystals, etc.
u. specific gravity (USG) a measure of solute concentration, usually by refractometry; an indication of renal function by the kidney's ability to concentrate urine. Also an indicator of hydration. See also **specific** gravity.
subcutaneous u. aggregation urine leaking from a damaged urethra collects in a subcutaneous site.
urinemia uremia.
uriniferous [*u"ri-nif'ər-əs*] transporting or conveying urine.
uriniparous [*u"ri-nip'ə-rəs*] excreting urine.
urin(o)- word element. [Gr., L.] *urine*.
urinogenital [*u"ri-no-jen'i-təl*] urogenital.
urinogenous [*u"ri-noj'ə-nəs*] of urinary origin.
urinology [*u"ri-nol'ə-je*] urology.
urinoma [*u"ri-no'mə*] a subperitoneal accumulation or a cyst containing urine.
urinometer [*u"ri-nom'ə-tər*] an instrument for determining the specific gravity of urine.
urinous [*u'ri-nəs*] pertaining to or of the nature of urine.
uriposia [*u"ri-po'ze-ə*] the drinking of urine.
uro- word element. [Gr.] *urine* (urinary tract, urination).
uroabdomen [*u"ro-ab'də-mən*] urine in the peritoneal cavity.
urobilin [*u"ro-bi'lin*] a yellow pigment formed by oxidation of urobilinogen; a breakdown product of heme; the yellow color in urine and also found in feces; gives urine its dark appearance in biliary obstruction. Called also urochrome.
urobilinemia [*u"ro-bil"i-ne'me-ə*] urobilin in the blood.
urobilinogen [*u"ro-bi-lin'o-jən*] a colorless compound formed in the intestines by the reduction of **bilirubin**. Small amounts of the bilirubin produced in the body by the breakdown of hemoglobin are excreted in the urine as urobilinogen. Increased amounts of urobilinogen in the urine indicate an excessive amount of bilirubin in the blood. Determination of the amount of urobilinogen excreted in a given period makes it possible to evaluate certain types of hemolytic anemia and also is of help in diagnosing liver dysfunction such as hepatocellular damage.
fecal u. a group of urobilinoid substances which react with Ehrlich's reagent. Presence indicates an open bile duct and a functional enterohepatic circulation of bile pigments. Called also stercobilinogen.
urobilinoid [*u"ro-bil'i-noid*] resembling bilirubin.
urobilinuria [*u"ro-bil"i-nu're-ə*] excess quantities of bilirubin in the urine.
urocele [*u'ro-sēl*] distention of the scrotum with extravasated urine.
urochezia [*u"ro-ke'zhə*] discharge of urine in the feces.
Urochloa genus of grasses in the family Poaceae; can cause nitrate–nitrite or oxalate poisoning; includes *U. mozambicensis* (perennial urochloa grass), *U. panicoides* (liverseed grass).
urochrome [*u'ro-krōm*] see **urobilin**.
uroclepsia [*u"ro-klep'se-ə*] the involuntary escape of urine.
urocrisia diagnosis by examining the urine.
urocyst the urinary bladder.
urocystitis [*u"ro-sis-ti'tis*] inflammation of the urinary bladder.
urodeum the part of a cloaca that contains the openings of the ureters and the reproductive tracts..
urodilatin [*u"ro-dil'ə-tin*] a **natriuretic** peptide, secreted in response to increased arterial blood pressure, that increases renal blood flow
urodynamics [*u"ro-di-nam'ik*] the dynamics of the propulsion and flow of urine in the urinary tract.
urogastrone [*u"ro-gas'trōn*] a polypeptide secreted by the salivary glands and by Brunner's glands, which is a potent inhibitor of gastric acid secretion.
urogenital [*u"ro-jen'i-təl*] pertaining to the urinary system and genitalia; urinogenital; genitourinary.
u. folds elongated, ventral portion of the cloacal folds; contribute to the formation of the urethral groove on the ventral aspect of the genital tubercle.
u. membrane ventral part of the cloacal membrane separating the gut from the fetus's external environment.

u. orifice opening between the fetal urogenital sinus and the amniotic cavity.
u. sinus see urogenital **sinus**.
u. system **genitourinary** system.
u. tract **genitourinary** system.
urogenous [*u-roj'ə-nəs*] 1. producing urine. 2. produced from or in the urine.
urogram [*u'ro-gram*] a radiograph obtained by urography.
urography [*u-rog'rə-fe*] radiography of any part of the urinary tract.
ascending u., cystoscopic u. retrograde urography.
descending u., excretion u., excretory u., intravenous u. urography after intravenous injection of an opaque medium which is rapidly excreted in the urine.
retrograde u. urography after injection of contrast medium into the bladder through the urethra.
urohydropropulsion see **hydropropulsion**.
urokinase [*u"ro-ki'nās*] an enzyme found in the urine of humans and other mammals which is secreted by kidney parenchymal cells and converts plasminogen to plasmin and activates the fibrinolytic system; used as a fibrinolytic agent.
urolith [*u'ro-lith*] a urinary calculus, called also stone. Composed of aggregated crystals and an organic matrix, it can form in any part of the urinary tract. Occurs most commonly in dogs. Analysis of the chemical composition of uroliths, either voided or surgically removed, assists in identifying the cause of formation and in formulating treatment plans that will reduce the risk of recurrence. See also **urolithiasis**.
apatite u's consist of calcium phosphate in several forms, the most common being hydroxyapatite and carbonate-apatite. They may be only a component of uroliths of other mineral composition or occur in association with primary hyperparathyroidism, excessive intake of calcium and phosphorus or renal tubular acidosis. They are smooth and radiopaque.
ammonium acid urate u's the common form of urate uroliths in dogs; less common than struvite and oxalate uroliths in cats. Occur particularly in Dalmation dogs because of their unique urate metabolism which results in high urinary concentrations of uric acid. In other instances, they may be the result of urinary tract infection or associated with portovascular shunts.
barium u's rare, iatrogenic curiosities.
brushite u. calcium hydrogen phosphate dihydrate.
calcium phosphate u's apatite uroliths.
carbonate u's found in ruminants with alkaline urine that ingest high-oxalate plants or pasture that is dominated by clover.
clover u's occurs in wethers grazing estrogen-rich clover pasture. May be a soft yellow body composed of benzocoumarin, a metabolite of estrogens in the subterranean clover, and desquamated epithelial cells or a pasty white material consisting largely of calcium carbonate and organic matter derived from isoflavones. Called also clover stone.
compound u. has one kind of mineral in the nidus and another in the shell; most often, one type of urolith forms, predisposing to infection, altering conditions and serving as a nidus for secondary formation, commonly struvite.
cystine u's occur in dogs or cats excreting high concentrations of cystine in their urine (**cystinuria**) due to an inherited transport defect in the proximal renal tubules.
u. dissolution may be part of the management of struvite and cystine uroliths in dogs. It involves increasing the solubility and reducing the quantity of crystalloids in the urine and increasing the volume of urine by the use of urinary acidifiers, dietary changes and promoting diuresis. See also calculolytic **diet**, **acetohydroxamic acid**.
jackstone u's see silica uroliths (below).
magnesium ammonium phosphate u's see struvite uroliths (below).
oxalate u. hard, dense, white or yellow calculi with rough surfaces which may originate from ingested oxalate but in many cases is the endogenous product of liver metabolism. For unknown reasons, cats are particularly at risk, but the widespread use of magnesium-restricted, acidifying diets aimed at preventing struvite uroliths have been implicated.
preputial u. top-shaped calculi found rarely in the prepuce of steers. They have a valve-like effect and cause obstruction of the orifice, distention and sometimes local infiltration of subcutaneous tissues with urine.
purine u's includes ammonium acid urate, sodium acid urate and xanthine uroliths.
renal u. one formed in the renal pelvis and often of corresponding shape.
silica u's consist largely of silica. Are white to brown in color, may be laminated and measure up to 0.5 inch in diameter. They may reach a high level of prevalence in groups of wethers from particular areas and from particular farms where the silicon concentration in the pasture is high. In dogs, they occur with low frequency except in certain areas, particularly Kenya. They often have a characteristic appearance with numerous spiked projections from the surface. In dogs, called also 'jackstones'.
struvite u's white, crumbly, smooth bodies composed of magnesium ammonium phosphate hexahydrate (triple phosphate). The most common type of urolith in dogs and occasionally cats, and in ruminants fed high grain diets with a low calcium to phosphorus ratio. In dogs, they are commonly associated with infection of the urinary tract, but less often in cats. Obstruction of the urethra by crystals of struvite with mucoid material is common in cats (see **feline** lower urinary tract disease). Called also triple phosphate uroliths.
urate u's small, yellow or brown calculi seen in dogs, especially Dalmatians, Bulldogs and pigs. Also found in dogs with portosystemic shunts or heptic insufficiency.
urease u's see struvite uroliths (above).
whitlockite u. tricalcium phosphate.
xanthine u's yellow to red, friable, irregularly shaped calculi in sheep and young cattle. Occur rarely in dogs or cats, possibly due to an inborn error of metabolism or associated with the administration of allopurinol.
urolithiasis [*u"ro-lĭ-thi'ə-sis*] formation of calculi in the urinary tract, or the condition associated with urinary calculi. In many food animals the condition goes unnoticed and common in ruminants fed high grain diets with a low calcium to phosphorus ratio. Males, particularly castrates, are especially at risk of urethral obstruction. In dogs, males are also at risk of urethral obstruction at the entrance to their os penis. There is a high prevalence of urolithiasis in male cats. Recorded also in marine fish larvae. See also **feline** lower urinary tract disease, **urolith**.
obstructive u. one or more uroliths obstructs the passage of urine. The common site in cattle is the sigmoid flexure, in sheep the urethral process and in male dogs at the os penis. Obstruction of a ureter causes a period of acute abdominal pain followed by dilatation of the obstructed ureter and renal pelvis and later by **hydronephrosis**. Obstruction of the urethra occurs almost exclusively in males and at a much higher prevalence in castrated males. It causes a syndrome of acute abdominal pain manifested by restlessness, swishing of the tail, groaning and grunting while straining to urinate but passing only a few drops of blood-stained urine. The penis is often protruded. There is pain on palpation of the urethra per rectum and distention of the bladder is also apparent during this examination or by palpation through the abdominal wall in small animals. Rupture of the bladder is inevitable unless the obstruction is relieved. No significant amount of urine is passed, an observation that may require that the animal be confined.
preputial u. in steers can cause obstruction of the preputial orifice and infiltration of the belly wall with urine. Called also postholithiasis.
urometra accumulation of urine in the uterine cavity. Called also urometrium.
urological syndrome [*u"ro-loj'ĭ-kəl*] see **feline** lower urinary tract disease.



U-9: Cystine uroliths (stones).
From Nelson RW, Couto CG, Small Animal Internal Medicine, 3rd Edition. Mosby, 2003.

VetBooks.ir

U-10: Abdominal distension associated with a ruptured bladder and uroperitoneum. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

urologist [*u-rol'ə-jist*] a specialist in urology.
urology [*u-rol'ə-je*] the branch of veterinary medicine dealing with the urinary system.
uromelus [*u-rom'ə-ləs*] a fetus with fused hindlimbs and a single foot.
urometry [*u-rom'ə-tre*] the measurement and recording of pressure changes caused by contraction of the ureter during ureteral peristalsis.
uronate pathway [*u'ro-nāt*] see **glucuronate pathway**.
uroncus a swelling caused by retention or extravasation of urine.
Uronema ciliated protozoa within the order Scuticociliatida. These or closely related genera cause severe losses in marine aquacultured finfish and in ornamental species.
uronephrosis distention of the renal pelvis and tubules with urine.
uronic acid one of the monosaccharide unit in the repeating disaccharide units involved in the formation of glycosaminoglycans.
uropathogen [*u"ro-path'o-jən*] pathogenic organisms in the urinary tract.
uropathy [*u-rop'ə-the*] any disease in the urinary tract.
feline obstructive u. see **feline** obstructive uropathy.
uroperitoneum urine free in the peritoneal cavity. Common in foals due to rupture of the bladder during parturition and in dogs and cats due to abdominal trauma, which may or may not be associated with pelvic fractures.
urophanic [*u"ro-fan'ik*] appearing in the urine.
uroplania the presence of urine in, or its discharge from, organs not of the genitourinary system.
Uropodidae a family of scavenger mites which frequent poultry litter but do not infest birds.
uropoiesis [*u"ro-poi-e'sis*] the formation of urine.
uroporphyria [*u"ro-por-fir'e-ə*] porphyria with excessive excretion of uroporphyrin.
uroporphyrin [*u"ro-por'fə-rin*] one of a group of porphyrins produced during biosynthesis of natural porphyrins and excreted in urine. There are two isomers I and III.
uroporphyrinogen [*u"ro-por"fə-rin'ə-jən*] a precursor of uroporphyrin and coproporphyrinogen.
u. III first tetrapyrrole compound in the pathway of porphyrin synthesis from combination of four porphobilinogen compounds via the action of uroporphyrinogen I synthetase and uroporphyrinogen III cosynthetase.
u. III cosynthetase an enzyme involved in the synthesis of uroporphyrinogen; congenital deficiency is the cause of inherited **porphyria** in cattle, sheep and cats.
u. isomerase see uroporphyrinogen III cosynthetase (above).
u. I synthetase an enzyme involved in the synthesis of uroporphyrinogen.
uropsammus urinary gravel.
uropygial glands bilobed oil glands on either side of the pygostyle of many birds which whose secretion aids in waterproofing feathers. Some species, e.g pigeons, dovwa and Amazon parrots, lack them. Subject to impaction, abscessation and neoplasia.
uroradiology [*u"ro-ra"de-ol'ə-je*] radiology of the urinary tract.
urorectal [*u"ro-rek'təl*] pertaining to or arising from the rectum and the urogenital sinus of the embryo.
u. fistula congenital defect in the urorectal septum resulting in passage of urine through the rectum.
u. septal defects principally urorectal fistula.
u. septum divides the primitive fetal cloaca into dorsal rectum and ventral urogenital sinus.
urorrhagia excessive secretion of urine.
urorrhea involuntary flow of urine.
uroscheocele urocele.
uroschesis [*u-ros'kə-sis*] retention or suppression of the urine.
uroscopy [*u-ros'kə-pe*] diagnostic examination of the urine.
urosepsis [*u"ro-sep'sis*] bacteremia resulting from urinary tract infection.
urothelium [*u"ro-the'le-əm*] the special epithelium of the urinary bladder.
urotoxia 1. the toxicity of the urine. 2. the toxic substances of the urine.
urotropine methenamine.
uroureter distention of the ureter with urine.
urovagina [*u"ro-və-ji'nə*] pooling of urine in the anterior vagina due to upward tipping of the pelvis in old cows and mares, caused by forward and downward tension on the vagina and vestibule. Leads to vaginitis and infertility and may also lead to urometra. See also tipped **pelvis**.
Ursicoptes americanus American sarcoptiform mange mite which causes pruritus and alopecia in bears.
ursicoptic emanating from or pertaining to *Ursicoptes americanus*.
ursid a member of the family Ursidae, including the polar, brown, American brown, black, grizzly and Kodiak bears, the Himalayan black, Malayan and sloth bears. They are all very large, plantigrade carnivores.
Ursidae the family of bears, in the order Carnivora.
ursodeoxycholate [*ur"so-de-ok"se-ko'lāt*] a hydrophilic secondary bile acid, used in the treatment of chronic hepatic disease.
ursodeoxycholic acid [*ur"so-de-ok"se-ko'lik*] a natural secondary bile acid formed from chenodeoxycholic acid by the action of intestinal bacteria, used therapeutically in the treatment of cholestatic liver disease. Called also ursodiol.
ursodiol [*ur"so-di'ol*] see **ursodeoxycholic acid**.
Ursus a genus of bears in the family Ursidae. Includes black, brown, and polar bears.
U. theodorus see ***Brunus edwardii***.
URT upper respiratory tract.
URTI upper respiratory tract infection.
Urtica plant genus in the family Urticaceae; called also stinging nettle. They have stinging hairs on leaves and stems which plague humans but appear to be harmless to animals; can cause nitrate–nitrite poisoning; includes *U. dioica*, *U. ferox*, *U. incisa*, *U. procera*, *U. urens*.
urticant [*ur'ti-kənt*] producing urticaria.
urticaria [*ur"ti-kar'e-ə*] a vascular reaction of the skin that is commonly immunologically based or may be due to direct exposure to a chemical. Marked by transient appearance of slightly elevated patches (wheals) which are redder or paler than the surrounding skin and often attended by severe itching; called also hives. The wheals may be in very large numbers, mostly over the body, 0.5–2 inches in diameter and there is no discontinuity of the epithelium. Called also nettle rash.
giant u., u. gigantea angioneurotic edema.
heat reflex u. see cholinergic **pruritus**.
u. hemorrhagica purpura with urticaria.
u. medicamentosa that due to use of a drug.
nasolacrimal u. conjunctivitis and rhinitis caused by hypersensitivity to inhaled allergens (atopy).
papular u., u. papulosa an allergic reaction to the bite of various insects, with appearance of lesions that evolve into inflammatory, increasingly hard, red or brownish, persistent papules. See also **lichen**.

U-11: Urticarial lesions ('hives') in a dog.

U

u. pigmentosa a proliferative disorder of mast cells in humans; a similar disease has been reported in young cats. There is erythema and hyperpigmentation of the mouth, chin, neck and eyes.

urticarium hives.

urtication [*ur"ti-ka'shən*] the development or formation of urticaria.

urushiols [*u-roo'she-ol*] oily resinous substances, alkyl and alkenyl phenols, the toxic irritant principles of poison ivy and various related plants in families Anacardiaceae (including *Toxcodendron*) and of certain plants with irritant resins in Proteaceae (including *Grevillea*).

US Army a term applied to surgical instruments designed by members of the United States Army.

US Army chisel a heavyweight bone chisel with a bevel on one side of the cutting edge.

US Army osteotome like a chisel (above), but with a bevel on both sides.

US Army retractor handheld retractors, in pairs, flat metal with a right angle bend at both ends, both in the same direction. one long return, one short. Designed for short-term retraction of wound edges so as to view abdominal or thoracic contents.

USAN United States Adopted Name.

USG urine specific gravity.

USNF United States National Formulary.

USP United States Pharmacopeia.

USP unit one used in the United States Pharmacopeia in expressing potency of drugs and other preparations.

***Ustilago maydis* (syn. *zeae*)** a mold which grows commonly on the foliage and ears of the corn plant. Possibly related to **cornstalk poisoning** of cattle. The related smut on barley (*Ustilago hordei*) is suspected to cause abortion in ruminants.

uta [*oo'tah*] see **leishmaniasis**.

uterine [*u'tər-in*] pertaining to the **uterus**; see also **endometrium**, **endometrial**.

u. abscess most common in cattle and in dorsal wall due to injury during insemination or intrauterine therapy for infertility or instrumental obstetric manipulation.

u. accommodation limited may contribute to flexural deformities of limbs especially in foals; obesity of the dam may contribute to the limitation.

u. artery rupture occurs during parturition, and often accompanies uterine prolapse in cows. There is marked mucosal pallor and death occurs quickly due to hemorrhagic anemia. In mares, rupture of the middle uterine artery causes hemorrhage, colic, and often, death.

u. caruncle see uterine **caruncle**.

u. cervix see **cervix** uteri.

u. cyst cystic formation due to dilation of the lymphatic vessels in the uterus. Commonly seen in aged broodmares.

u. discharge copious, foul-smelling discharge in postpartum septic metritis in cows; thick, white, small volume discharge in endometritis.

u. displacement includes torsion, downward deviation in sows, inguinal and ventral hernia, prolapse.

u. distention palpable per rectum in cows, mares, through the abdominal wall in cats and dogs; pregnancy the common cause, pyometra, accumulation of secretions in imperforate hymen rarely. Pregnancy distinguishable in cows and mares by presence of membranes, or cotyledons in cows or fetus or fremitus in middle uterine artery.

u. downward displacement occurs in deep-bodied, pregnant sows with large litters and dystocia results.

u. expulsive deficiency see uterine inertia (below).

u. glands simple or branched, tubular glands extending into the lamina propria–submucosa; secrete mucus, lipids, glycogen, protein.

u. horn one of the pair of tubular extensions from the uterine body. Amongst the domestic species the horns are largest in those that bear many young (polytocous), e.g. sows, bitches, and shorter in those that bear single young (unitocous). Birds have two but only the left one is well developed or functional.

u. inertia sluggishness or lack of uterine contractions in labor. May be *primary*, e.g. hypocalcemia, or *secondary*, due to fatigue.

u. infection see **metritis**.

u. involution return to normal size after the delivery of the fetus.

u. involution failure common sequel to normal parturition in aged, high-producing cows, especially those suffering from parturient hypocalcemia (milk fever) or ketosis; metritis is a common sequel.

u. lochia see **lochia**.

u. malformation includes uterus didelphys, uterus unicornis and segmental aplasia of any part of the tubular organ.

u. milk secretions of the uterine endometrium in the early part of pregnancy; sustains the fetus until placental attachments are fully functional.

u. mucosa endometrium.

u. neoplasm uncommon but fibroleiomyoma occurs in bitches, leiomyoma and lymphosarcoma in cows.

u. rupture occurs usually during parturition and due to human intervention. Repairable if recognized but may lead to peritonitis.

u. sand dry, inspissated granules, yellow in color, found occasionally on the exterior of the bovine placenta. Probably derived from blood leaked into the lumen of the uterus in early pregnancy.

u. stump granuloma chronic inflammation due to infection or nonabsorbable sutures used in closing the stump after ovariohysterectomy.

u. swab swab of the uterus for bacteriological and virological examination for pathogens likely to adversely affect fertility. Used in fertility maintenance of mares. Called also endometrial swab.

u. torsion torsion of the body of the uterus in cows and mares and of a horn of the uterus in the sow. Common in alpacas and llamas. In cattle, causes dystocia characterized by the nonappearance of any part of the fetus in the vulva. In mares, occurs late in gestation (7 months to term) but not usually at parturition and the clinical presentation is that of colic. Occurs rarely in dogs and cats.

u. tube a slender tube extending from the uterus to the ovary on the same side, conveying ova to the cavity of the uterus and permitting passage of spermatozoa in the opposite direction. It is mostly suspended in a fold of peritoneum (mesosalpinx) that may enclose a cavity (ovarian bursa). It terminates at the ovarian end in a dilated funnel (infundibulum). Called also fallopian tube and oviduct. When the mature ovum leaves the ovary it enters the fringed opening of the uterine tube, through which it travels slowly to the uterus. When conception takes place, the tube is usually the site of fertilization.

u. tube occlusion may be congenital, or constricted by scar tissue in chronic peritonitis; a rare cause of infertility.

uter(o)- word element. [L.] *uterus*.

uteroabdominal [*u"tər-o-ab-dom'i-nəl*] pertaining to the uterus and abdomen.

uterocervical [*u"tər-o-ser'vi-kəl*] pertaining to the uterus and cervix uteri.

uterofixation [*u"tər-o-fik-sa'shən*] hysteropexy; surgical fixation of the uterus.

uterogenic [*u"tər-o-jen'ik*] formed in the uterus.

uterogestation [*u"tər-o-jəs-ta'shən*] uterine gestation; normal pregnancy.

uterography [*u"tər-og'rə-fe*] radiographic examination of the uterus; hysterography.

uterolith [*u'tər-o-lith"*] a uterine calculus; hysterolith.

uterometer [*u"tər-om'ə-tər*] an instrument for measuring the uterus; hysterometer.

uteroneocystostomy implantation of a ureter into the bladder, usually the repositioning of one that was ectopic.

utero-ovarian [*u"tər-o-o-var'e-ən*] pertaining to the uterus and ovary.

uteropexy [*u'tər-o-pek"se*] hysteropexy.

uteroplacental [*u"tər-o-plə-sen'təl*] pertaining to the placenta and uterus.

uteroplasty [*u'tər-o-plas"te*] plastic repair of the uterus.

uterorectal [*u"tər-o-rek'təl*] pertaining to or communicating with the uterus and rectum.

uterosacral [*u"tər-o-sa'krəl*] pertaining to the uterus and sacrum.

uterosalpingography [*u"tər-o-sal"ping-gog'rə-fe*] radiography of the uterus and uterine tubes, usually done with contrast in the nongravid uterus. Called also hysterosalpingography.

uteroscope [*u'tər-o-skōp"*] an instrument for viewing the interior of the uterus; hysteroscope.

uterotomy [*u"tər-ot'ə-me*] hysterotomy; incision of the uterus, as in cesarean section.

uterotonic [*u"tər-o-ton'ik*] 1. increasing the tone of uterine muscle. 2. a uterotonic agent.

VetBooks.ir

uterotubal [*u"tər-o-too'bəl*] pertaining to the uterus and uterine tubes.
uterovaginal [*u"tər-o-vaj'ĭ-nəl*] pertaining to the uterus and vagina.
uteroverdin the green lochia seen in postparturient bitches.
uterovesical [*u"tər-o-ves'ĭ-kəl*] pertaining to the uterus and bladder.
uterus [*u'tər-əs*] the hollow muscular organ in female mammals in which the fertilized ovum normally becomes embedded and in which the developing embryo and fetus is nourished. It is typically composed of two horns, a body and a cervix; the cervix opens caudally into the vagina. Two **uterine** tubes enter the uterus at the cranial end, one on each side. The walls of the uterus are composed of muscle, the myometrium; its lining is mucous membrane (endometrium). The uterus is coated in a sheet of serosa which is continuous with a pair of lateral supporting folds of peritoneum (the mesometrium) called the broad ligament.
u. didelphys, duplex u. complete duplication of the cervix and uterus.
u. masculinus small uterus; remnant of the mullerian duct in males (stallions); see **müllerian duct**.
simplex u. a uterus with a single large body, two small horns, and a single cervix as found in primates.
u. unicornis one horn, except usually for its apex, is completely missing because of a developmental defect.
UTI urinary tract infection.
utility dogs those used for some tasks that are helpful to people; sometimes called **working dogs**. In some classification systems used for competitions, this is a separate group that includes the Alaskan malamute, Bull mastiff, Doberman pinscher, Newfoundland, Rottweiler and Saint Bernard.
utilization coefficient [*u"til-ĭ-za'shən*] in terms of oxygen transport in the blood this coefficient expresses the proportion of oxygen in the blood which diffuses into tissues as it passes through the capillaries.
UTP uridine triphosphate.
Utrecht technique see **omentofixation**.
utricle [*u'trĭ-kəl*] 1. any small sac. 2. the larger of the two divisions of the membranous labyrinth of the inner ear. Called also utriculus.
prostatic u., urethral u. a small blind pouch in the substance of the prostate that is the male analog to the female genital tract; called also *uterus masculinus, utriculus prostaticus*.
utricular [*u-trik'u-lər*] 1. bladder-like. 2. pertaining to the utricle.
utriculitis [*u-trik"u-li'tis*] inflammation of the prostatic utricle or of the utricle of the ear.
utriculosaccular [*u-trik"u-lo-sak'u-lər*] pertaining to the utricle and saccule of the membranous labyrinth of the inner ear.
u. duct a short connection that leads from the utricle of the internal ear to the endolymphatic duct.
utriculus [*u-trik'u-ləs*] see **utricle** (2).
Utstein reporting scheme a system used in human medicine for uniform reporting of cardiac arrest and resuscitation data.
Uub chemical symbol, *ununbium*.
Uuh chemical symbol, *ununhexium*.
Uukuvirus a genus of viruses in the family ***Bunyaviridae***.
Uuo chemical symbol, *ununoctium*.
Uup chemical symbol, *ununpentium*.
Uuq chemical symbol, *ununquadium*.
Uus chemical symbol, *ununseptium*.
Uut chemical symbol, *ununtrium*.
U/V rays see **ultraviolet** rays.
uvea [*u've-ə*] [L.] the middle vascular tunic of the globe composed of the iris and ciliary body anteriorly and the choroid posteriorly.
anterior u. see anterior **uveal** tract.
posterior u. see posterior **uveal** tract.
uveal pertaining to or emanating from the **uvea**.
anterior u. tract the iris and ciliary body.
posterior u. tract the choroid.
u. tract the vascular tunic of the eye, comprising choroid, ciliary body and iris.
uveitis [*u"ve-i'tis*] inflammation of the uvea.
anterior u. inflammation of the anterior uveal tract, i.e. iridocyclitis. Signs include blepharospasm, increased tearing, episcleral and/or conjunctival hyperemia, miosis, reduced intraocular pressure, aqueous flare, and sometimes keratic precipitates, hyphema or hypopyon.
endogenous u. arising from causes within the body.

U-12: Foal with uveitis with green hue of the iris and fibrin in the anterior chamber.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

equine recurrent u. (ERU) a disease of horses characterized by recurrent episodes of anterior uveitis, posterior uveitis, or both without well established cause although infection with *Leptospira* spp. has been suggested. Manifested by waxing and waning recurrent blepharospasm, epiphora, ocular redness, and sometimes corneal edema; often misdiagnosed as conjunctivitis. Frequent sequelae include glaucoma, cataract, and retinal detachment, resulting in blindness. Previously called periodic ophthalmia or moon blindness.
exogenous u. arising from causes external to the body, typically blunt or penetrating trauma.
granulomatous u. uveitis in which the inflammatory response is granulomatous, especially notable with (but not pathognomonic for) the systemic mycoses, such as cryptococcosis, blastomycosis, histoplasmosis, and coccidioidomycosis.
heterochromic u. see heterochromic **iridocyclitis**.
lens-induced u. caused by escape of lens proteins into the aqueous, initiating an autoimmune response; subdivided into *phacoclastic* or *phacolytic* uveitis based upon the reason for and extent of leakage.
phacolytic u. due to leakage of lens proteins across an intact lens capsule. Usually due to solubilization of lens proteins as seen in cataracts, especially with intumescent diabetic cataracts or resorption of hypermature cataracts.
phacoclastic u. caused by disruption of the anterior lens capsule with realtively rapid and major leakage of lens proteins and therefore typically a more acute and fulminate uveitis than seen with phacolytic uveitis.
posterior u. inflammation of the choroid.
sympathetic u. see sympathetic **ophthalmia**.
uve(o)- word element. [L.] *uvea*.
uveodermatologic syndrome see **Vogt–Koyanagi–Harada-like syndrome**.
uveoneuraxitis uveitis associated with involvement of the optic nerve.
uveoscleral drainage a secondary route of aqueous humor egress from the anterior chamber, through the stroma of the uvea and then, within blood vessels, across the sclera.
uveoscleritis [*u"ve-o-sklə-ri'tis*] inflammation of the uvea and sclera.
uviform [*u'vĭ-form*] shaped like a grape.
uvula [*u'vu-lə*] pl. *uvulae* [L.] a small median prolongation of the soft palate occurring in humans and pigs.
u. of bladder a rounded elevation at the neck of the bladder, formed by convergence of muscle fibers terminating in the urethra. Called also uvula vesicae.
u. cerebelli a lobule that is the posterior limit of the fourth ventricle of the brain. Called also uvula vermis.
palatine u., u. palatina the small, fleshy mass hanging from the soft palate above the root of the tongue.
u. vermis the part of the vermis of the cerebellum between the pyramid and nodule.
u. vesicae uvula of bladder.
uvulectomy [*u"vu-lek'tə-me*] excision of the uvula.
UW-M (University of Wisconsin-Madison) protocol a combination cancer chemotherapy protocol that incorporates vincristine, L-asparaginase, cyclophosphamide, doxorubicin, methotrexate and chlorambucil.

VetBooks.ir

V

VetBooks.ir

V chemical symbol, *vanadium;* symbol, *volt;* vision; visual acuity.
V_d volume of distribution.
V_T tidal volume.
v. [L.] *vena* (vein); pl. *venae* (vv.) [L.].
V–D–J joining see **antibody**.
V domain the variable region or **domain** of immunoglobulins.
V factor see **diphosphopyridine nucleotide**.
V–J joining see **antibody**.
V region variable region of immunoglobulins.
v tach ventricular tachycardia.
V to Y plasty a tension-relieving technique for closure of a skin incision in which a V-shaped incision is made alongside the primary incision and then closed in a Y shape.
vaalstorm ***Thesium*** *lineatum*.
VAC vincristine, doxorubicin and cyclophosphamide; a cancer chemotherapy regime.
vaccigenous producing a vaccine.
vaccina [*vak-sī'nə*] vaccinia virus.
vaccinable susceptible of being successfully vaccinated.
vaccinal [*vak'sī-nəl*] 1. pertaining to vaccinia, to vaccine, or to vaccination. 2. having protective qualities when used by way of inoculation.
vaccinate [*vak'sī-nāt*] to inoculate with vaccine to produce immunity.
vaccination [*vak"sī-na'shən*] the introduction of vaccine into the body to produce immunity to a specific disease. The vaccine may be administered by subcutaneous or intradermal injection, by infusion into the mammary gland, by mouth, by inhalation of an aerosol or administration in food or drinking water. The term vaccination comes from the Latin *vacca*, cow, and was coined when the first inoculations were given with organisms that caused the mild disease cowpox to produce immunity against smallpox. Today the word has the same meaning as **immunization**.
v. failure following administration of a vaccine, the animal develops the disease. The cause is often related to faulty inactivation of the vaccine due to improper handling or inappropriate administration, or the animal was incubating the disease at the time of vaccination.
v. schedules specified ages and intervals for administration of vaccines to ensure the best immunological response.
simultaneous serum-virus v. simultaneous administration of live virus and hyperimmune serum. Used at one time in the control of several diseases, including canine distemper and classical swine fever (hog cholera).
vaccine [*vak-sēn'*] a suspension of attenuated or killed microorganisms (viruses, bacteria, fungi or nematodes), or products of them, administered for prevention, amelioration or treatment of infectious diseases.
anti-idiotype v. antibody made to antigenic determinants located in the variable domains of immunoglobulin molecules.
v.-associated sarcoma see **sarcoma**.
attenuated v. a vaccine prepared from live microorganisms that have lost their virulence but retained their ability to induce protective immunity. Attenuated microorganisms including particularly bacteria and viruses may be found naturally or they may be produced in the laboratory, for example by adaptation to a new medium or cell culture or they may be produced by recombinant DNA technology.
autogenous v. a vaccine prepared from cultures of material derived from a lesion of the animal to be vaccinated, e.g. wart vaccine.
bacterial v. a preparation of attenuated or killed bacteria, used to immunize against organisms, or sometimes for pyrogenetic effects in treatment of certain noninfectious diseases.
biosynthetic v. a formulation containing a protective, noninfectious, immunogenic subunit produced in or by a biological system.
caprinized v. a vaccine, usually a virus, attenuated by serial passage through goats, e.g. caprinized rinderpest vaccine. In highly susceptible cattle this vaccine may cause significant reactions and lapinized vaccines are preferred.
core v. one that should always be included in the basic immunization program for the species.
dead v. inactivated vaccine; one with organisms that have been killed.
DNA v. DNA sequences that code for immunogenic proteins located in appropriately constructed plasmids which include strong promoters, which when injected into an animal are taken up by cells and the immunogenic proteins are expressed and elicit an immune response. No vaccines of this type are licensed and concerns about safety have not been resolved.
heterotypic v. one developed from a virus that is antigenically distinct but related to that causing the disease for which the animal is being immunized, e.g. measles vaccine used to protect dogs from canine distemper.
homotypic v. one developed from the same virus as that causing the disease the animal is being immunized against.
human diploid cell v. an inactivated rabies vaccine made from rabies virus grown on human embryo lung fibroblast cells.
inactivated v. see dead vaccine (above).
killed virus (KV) v. see dead vaccine (above).
live v. a vaccine prepared from live, usually attenuated, microorganisms.
v. lymph material containing vaccinia virus collected from vaccinial vesicles of inoculated calves; used for active immunization against smallpox.
mixed v. see **mixed** bacterial vaccine.
modified live virus (MLV) v. see attenuated vaccine (above).
polyvalent v. one prepared from more than one strain or species of microorganisms.
recombinant v. one created by recombinant DNA technology.
subunit v. one containing only specific antigenic proteins of the infectious agent.
synthetic peptide v. using synthetic short peptides which correspond with major epitopes of viral proteins to elicit a protective antibody response.
vectored v. use of viruses or bacteria as vectors to carry selected genes from another pathogen for immunization.
vaccinia [*vak-sin'e-ə*] the vaccinia virus; a laboratory generated virus, antigenically related to the cowpox virus, that causes a lesion on the teat skin of affected cows. It is indistinguishable from cowpox lesions and used to be used to vaccinate humans against smallpox.
vaccinial [*vak-sin'e-əl*] pertaining to or characteristic of vaccinia.
vacciniform [*vak-sin'ĭ-form*] resembling vaccinia.
vacciniola generalized vaccinia.
vaccinology the study of vaccines and the technology associated with vaccine development. Includes the preparation and testing of vaccines, testing the animal's immune response to the vaccine and the study of outcome against challenge. Advances in immunology, molecular biology, microbiology and biochemistry allow new directions for vaccine development strategies including the application of genetic engineering and proteomics.
reverse v. whole genome sequencing of pathogenic microorganisms to identify potential vaccine candidates without the need to cultivate the pathogens.
vaccinotherapy [*vak"sĭ-no-ther'ə-pe*] therapeutic use of vaccines.
Vacor a single dose rodenticide that acts as an antagonist of B vitamins, particularly nicotinamide; useful against warfarin-resistant rodents. Poisoning causes vomiting, abdominal pain and weakness. Called also pyriminil.
vacuolar [*ak"u-o'lər*] containing, or of the nature of, vacuoles.

vacuolated [*vak'u-o-lāt"əd*] containing vacuoles.
vacuolation [*vak"u-o-la'shən*] the process of forming vacuoles; the condition of being vacuolated.
vacuole [*vak'u-ōl*] a space or cavity in the cytoplasm of a cell.
contractile v. a small fluid-filled cavity in the cytoplasm of certain unicellular organisms; it gradually increases in size and then collapses; its function is thought to be respiratory and excretory.
vacuolization [*vak"u-o-lĭ-za'shən*] vacuolation.
Vacutainer® a registered brand of evacuated tubes for collection of venous blood. The tubes are designed to fill with a predetermined volume of blood by vacuum and the stoppers are color coded according to the coagulant or anticoagulant they contain and the analyses to be conducted. See **blood collection tubes**.
vacuum [*vak'ūm*] a space devoid of air or other gas.
v. collection use of a handheld vacuum to recover ectoparasites from the coat of animals.
v.-dehydrated freed of moisture while in a vacuum. Used in the packaging of food.
v. gauge pressure gauge in a milking machine which indicates the level of vacuum in the system.
v. pack meat or other perishable food is packed in a tightly sealed bag made of copolymers with polyvinyldene chloride and a low vacuum created. A bag made of nylon–polythene laminate is used for bags that are heat-sealed and a high vacuum created. The pack is then frozen for storage or shipment.
v. pressure used as the basis of the modern milking machine; the negative pressure is generated by a vacuum pump and transmitted through metal and rubber pipes to the teat cups and then to the teats; the continuous basic pressure is what keeps the teat cups on the teats; the periodic fluctuations is what causes the squeezing of the teat walls and the expulsion of the milk from the teats.
vagal [*va'gəl*] pertaining to the vagus nerve.
v. attack see **vasovagal** attack.
v. maneuver pressure on the carotid sinus or eye to terminate supraventricular tachycardia. Used both diagnostically and therapeutically. Slowing a tachycardia may permit more details to become apparent on an electrocardiogram.
vagina [*və-ji'nə*] 1. any sheath or sheathlike structure. 2. the canal in the female that runs from the vestibule in the external genitalia (vulva) to the cervix uteri.
v. bulbi (1) see **Tenon's capsule**.
artificial v. a device used in the collection of semen from male animals. The usual construction is of a rigid external tube lined by a flexible, thin rubber sleeve. Water at body temperature is introduced between the tube and the sleeve so as to achieve a spongy warm cavity which is lubricated with inert material. A rubber cone, terminating in a graduated plastic or glass collecting tube, is placed over the distal end of the device which is then ready to use.
v. carotica (1) the fascial sheath surrounding the common carotid artery and also containing the internal jugular vein and vagus nerves. Called also carotid sheath.
double v. a congenital anomaly in which the embryogenesis of the vagina is associated with incomplete fusion of the caudal parts of the paired müllerian ducts. It is a normal feature of most marsupials. Called also septate vagina, *vagina duplex*.
external v. (1) of the optic nerve fascial sheath around the optic nerve and an extension of the dura mater. Called formally *vagina externa n. optici*.
pneumo-v. see **pneumovagina**.
sunken v. a condition seen in older mares in which the vagina falls forward, resulting in pooling of urine and vaginal secretions and pneumovagina.
vaginal pertaining to the vagina, the tunica vaginalis testis, or to any sheath.
v. anulus see **anulus** vaginalis.
v. aplasia manifested by imperforate hymen or residual strands of hymen. See imperforate **hymen**.
v. aspiration use of a suction apparatus to collect a sample of vaginal fluid for culture, cytological or immunological examination.
v. biopsy collection of a sample of mucosa by a pinch biopsy instrument for histopathological examination.
v. constriction inherited defect in Jersey cows combined with anal constriction, sometimes with rectovaginal fistula.
v. cyclic changes see vaginal cytology (below).
v. cysts see **Gartner's ducts, Bartholin's glands**.
v. cystocele the urinary bladder is lying on the floor of the vagina; the displacement has been via the urethra by eversion or via a tear in the floor of the vagina.
v. cytology cyclic changes in the exfoliated epithelial cells of the vaginal mucosa occurring synchronously with the stages of the estrous cycle; collection of samples by the use of a swab and laboratory examination of a smear is a useful aid in determining the most appropriate time to mate a bitch.
v. fornix see vaginal **fornix**.
v. hypertrophy see vaginal **prolapse**.
v. hypoplasia segmental see **müllerian duct** aplasia.
v. inflammation see **vaginitis** (1).
v. neoplasm include papilloma, sarcoma, leiomyoma.
v. process an outpocketing of the peritoneum into the gubernaculum at the site of the future inguinal canal in the male fetus; becomes the tunica vagina of the adult.
v. prolapse see vaginal **prolapse**.
v. retainer see **bearing** retainer.
v. ring see **anulus** vaginalis.
v. rupture occurs during mating, dystocia, insemination, or by sadistic or malicious trauma. Results in peritonitis or cellulitis of the pelvic fascia.
v. smear examination of the cells in a smear is used as an aid in predicting the time of ovulation, which may be useful in selecting the optimal date for breeding.
v. stricture cicatricial contraction after traumatic injury.
v. tunic the double peritoneal fold which encloses the spermatic cord and the testis; made up of a visceral layer which is adherent to the testis and cord, and a parietal layer which lines the scrotum and the inguinal canal.
v. vestibule entrance to the vagina enclosed between the lips of the vulva, the labia minor. Connects the vagina at the external urethral orifice to the external genital opening; develops from the embryonic urogenital sinus.
v. wash irrigation of the vagina with sterile saline can be used to recover cells, which are stained and examined microscopically to monitor estrus.
vaginalectomy vaginectomy.
vaginalitis [*vaj"ĭ-nə-li'tis*] inflammation of the tunica vaginalis testis; periorchitis.
vaginate [*vaj'ĭ-nāt*] enclosed in a sheath.
vaginectomy [*vaj"ĭ-nek'tə-me*] 1. resection of the tunica vaginalis testis. 2. excision of the vagina.
vaginismus [*vaj"ĭ-niz'məs*] painful spasms of the muscles of the vagina.
vaginitis [*vaj"ĭ-ni'tis*] 1. inflammation of the vagina; colpitis. 2. inflammation of a sheath.
adhesive v. that in which ulceration and exfoliation of the mucosa result in adhesions of the membranes.
contagious v. see infectious pustular **vulvovaginitis**, **epivag**.
granular v. spherical, 1 mm diameter nodules on the vulvar mucosa of the cow and the penile skin of the bull. Appears to be a nonspecific hyperplasia of lymphoid tissue, but linked anecdotally with *Mycoplasma* spp. Called also granular vulvovaginitis.
pustular v. see infectious pustular **vulvovaginitis**.
vaginoabdominal [*vaj"ĭ-no-ab-dom'ĭ-nəl*] pertaining to the vagina and abdomen.
vaginocele [*vaj'ĭ-no-sēl"*] colpocele; vaginal hernia.
vaginofixation [*vaj"ĭ-no-fik-sa'shən*] vaginopexy; colpopexy.
vaginography [*vaj"ĭ-nog'rə-fe*] radiography of the vagina using a contrast agent. Retrograde passage of the contrast agent can be used to demonstrate ectopic ureters in bitches.
vaginolabial [*vaj"ĭ-no-la'be-əl*] pertaining to the vagina and labia.
vaginomycosis [*vaj"ĭ-no-mi-ko'sis*] any fungal disease of the vagina.
vaginopathy [*vaj"ĭ-nop'ə-the*] any disease of the vagina.
vaginoperineal [*vaj"ĭ-no-per"ĭ-ne'əl*] pertaining to the vagina and perineum.
vaginoperineorrhaphy [*vaj"ĭ-no-per"ĭ-ne-or'ə-fe*] suture of the vagina and perineum; colpoperineorrhaphy.
vaginoperineotomy [*vaj'ĭ-no-per"ĭ-ne-ot'ə-me*] incision of the vagina and perineum.
vaginoperitoneal [*vaj"ĭ-no-per"ĭ-to-ne'əl*] pertaining to the vagina and peritoneum.
vaginopexy [*vaj'ĭ-no-pek"se*] colpopexy; vaginofixation; suturing of the vagina to the abdominal wall in cases of vaginal relaxation.

V

VetBooks.ir

vaginoplasty [*vaj″ĭ-no-plas″te*] colpoplasty; plastic repair of the vagina.
vaginoscope [*vaj″ĭ-no-skōp*] illuminated tubular instrument designed for examining the interior of the vagina. A common alternative is to use a vaginal speculum and a flashlight.
vaginoscopy [*vaj″ĭ-nos′kə-pe*] viewing of the vaginal lining with a vaginoscope.
vaginotomy [*vaj″ĭ-not′ə-me*] colpotomy; incision of the vagina.
vaginourethrocystogram a contrast enhanced retrograde radiological study in which the vagina, urethra and urinary bladder are highlighted by the injection of a water-soluble iodine-based contrast agent into the vagina via a Foley catheter.
vaginourethrography radiography of the vagina and urethra. Contrast medium is introduced through a catheter into the vagina until it overflows into the urethra. Used in the diagnosis of lower urinary tract disease in bitches.
vaginovesical [*vaj″ĭ-no-ves′ĭ-kəl*] pertaining to the vagina and bladder.
vagolysis [*va-gol′ĭ-sis*] surgical destruction of the vagus nerve.
vagolytic [*va″go-lit′ik*] having an effect resembling that produced by interruption of impulses transmitted by the vagus nerve; parasympatholytic.
v. agents includes atropine sulfate, glycopyrrolate, propantheline, isopropamide.
vagomimetic [*va″go-mĭ-met′ik*] having an effect resembling that produced by stimulation of the vagus nerve.
vagosympathetic trunk [*va″go-sim″pə-thet′ik*] the combined vagus nerve and the sympathetic trunk, invested in a common fascial sheath in the neck. In cats the two nerves remain separate.
vagotomy [*va-got′ə-me*] interruption of the impulses carried by the vagus nerve or nerves.
vagotonia [*va″go-to′ne-ə*] irritability of the vagus nerve.
vagotonin a preparation of hormone from the pancreas that increases vagal tone, slows the heart, and increases the store of glycogen in the liver.
vagotropic [*va″go-tro′pik*] having an effect on the vagus nerve.
vagovagal [*va″go-va′gəl*] arising as a result of afferent and efferent impulses mediated through the vagus nerve.
vagus [*va′gəs*] the tenth cranial nerve. For vagus nerve, see Table 14.
v. indigestion of cattle is the result of damage to branches of the vagus nerve which supply the rumenoreticulum, or to tension receptors in the wall of the reticulum. The two identified malfunctions are pyloric achalasia and reticulo-omasal achalasia (omasal transport failure). The clinical picture includes distention of the rumen or abomasum causing visible distention of the abdomen, emaciation and the passage of small amounts of pasty feces. Ruminal motility may be increased or decreased.
v. nerve signs dysfunction manifested by paralysis of pharynx, larynx, causing dysphagia, regurgitation through the nose, dyspnea, hypomotility of gastrointestinal tract.
Val valine.
valacyclovir [*val″a-si′klo-vir*] a prodrug of acyclovir with similar antiviral activity; toxic in cats because of fatal hepatic and renal necrosis.
valency, valence [*va′lən-se, va′lens*] 1. the numerical measure of the capacity to combine; in chemistry, an expression of the number of atoms of hydrogen (or its equivalent) that one atom of a chemical element can hold in combination, if negative, or displace in a reaction, if positive. 2. in immunology, an expression of the number of antigenic determinants with which one molecule of a given antibody can combine.
valerian [*və-lēr′e-ən*] see ***Valeriana***.
Valeriana a genus of herbaceous plants providing second class forage for livestock. Has a fleshy root containing valeric acid. *V. officinalis* is used for extraction of commercial valeric acid.
valgus [*val′gəs*] [L.] bent outward; twisted; denoting a deformity in which the angulation is away from the midline of the body, as in coxa valga.
valine (Val) [*va′lēn, val′ēn*] a naturally occurring amino acid.
valinemia [*val″in-e′me-ə*] hypervalinemia; elevated concentration of valine in the blood and urine.
valinomycin ionophore consisting of a cyclic trimer of tetrapeptides. Specifically transports potassium ions across cell membranes. Inhibitor of oxidative phosphorylation due to its action in antagonizing the proton motive force.
vallate [*val′āt*] having a wall or rim; rim-shaped. See also vallate **papilla**.

V-1: Bilateral carpal valgus deformity in a foal.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

vallecula [*və-lek′u-lə*] pl. *valleculae* [L.] a depression or furrow.
v. cerebelli a large groove on the ventral cerebellum, in which the medulla oblongata is lodged.
v. epiglottica the depressions on either side of the median glossoepiglottic fold.
v. sylvii a depression made by the fissure of Sylvius at the base of the brain. Called also lateral cerebral fossa and (formally) *vallecula lateralis cerebri*.
v. unguis the sulcus of the matrix of the nail.
Vallée's vaccine an historical vaccine composed of living **Mycobacterium** *avium* subspecies *paratuberculosis* organisms in a paraffin oil–pumice stone vehicle; once used as a prophylactic against Johne's disease in cattle.
valley fever coccidioidomycosis.
valnemulin an antibiotic in the pleuromutilin class, used in the treatment of enteric infections, especially swine dysentery, and enzootic pneumonia of pigs.
valone [*val′ōn*] an anticoagulant rodenticide. One of the indandione compounds with actions similar to that of warfarin.
valor a rodenticide no longer marketed because of toxicity in horses causing dehydration, abdominal pain, hindlimb weakness, inappetence, fishy smell in urine. Called also N-3-pyridyl methyl N^1-*p*-nitrophenyl urea.
valproic acid [*val-pro′ik*] an anticonvulsant drug.
Valsalva maneuver [*vahl-sahl′və*] a forcible expiratory effort in combination with a closed glottis as occurs in coughing.
valsiekte [Af.] 'falling disease', characterized by myelomalacia, ataxia caused by *Chrysocoma ciliata*.
value [*val′u*] a measure of worth or efficiency; a quantitative measurement of the activity, concentration, etc., of specific substances.
absolute v. the size of an observation or measurement regardless of its sign.
expected v. an estimate of the value of a population parameter, which would be achieved by sampling an infinite number of times.
normal v's the range in concentration of specific substances found in normal healthy tissues, secretions, etc. Called also reference interval.

VetBooks.ir

valva [val'və] pl. *valvae* [L.] a valve.
valve [valv] 1. a membranous fold in a canal or passage that prevents backward flow of material passing through it. 2. a mechanical device to regulate the flow of liquid or gas from an area of higher pressure to one of lower pressure. 3. automatic valve which maintains a steady vacuum in the system of a mechanical milking machine.
Adam's pressure reducing v. see reducing valve (below).
aortic v. see **aortic** valve.
atrioventricular v's the valves between the right atrium and right ventricle (tricuspid valve) and the left atrium and left ventricle (mitral valve).
bicuspid v. mitral valve.
cardiac v's valves that control flow of blood through and from the heart. See also **aortic** valve, **mitral** valve, **pulmonary** valve, **tricuspid** valve.
coronary v. a valve at entrance of the coronary sinus into right atrium.
flair v. a cardiac valve having a cusp that has lost its normal support (as in ruptured chordae tendineae) and flutters in the bloodstream.
ileocecal v., ileocolic v. see **ileocecal** valve.
nonreturn v. in anesthetic circuits, it prevents exhaled gas from returning to the patient.
portal v. regulates the amount of venous blood entering the avian kidney.
pressure reducing v. see reducing valve (below).
pyloric v. the exit from the stomach guarded by a sphincter muscle that supports a prominent fold of mucous membrane at the pyloric orifice.
reducing v. a special valve used on anesthetic machines and which reduces the pressure of the gas reaching the exit valve so that control of the flow is made easier. Called also regulator.
semilunar v's valves made up of semilunar segments or cusps (valvulae semilunares), guarding the entrances into the aorta and pulmonary artery.
thebesian v. coronary valve.
valvotomy [val-vot'ə-mē] incision of a valve.
valvula [val'vu-lə] pl. *valvulae* [L.] a small valve; a single cusp of one of the semilunar valves of the heart.
valvular [val'vu-lər] pertaining to, affecting or of the nature of a valve.
v. disease interferes with the normal rate and smoothness of blood flow through the cardiac orifices. The creation of turbulence results in the appearance of palpable thrills and audible murmurs, stenosis and insufficiency causing congestive heart failure. See also chronic valvular heart disease (below) and names of cardiac valves.
chronic v. heart disease the most common heart disease in dogs, known also as *endocardiosis* and *myxomatous valve degeneration*. It affects most commonly the left atrioventricular (mitral) valve and the prevalence is higher in small breeds with an early age of onset in Cavalier King Charles spaniels. There is progressive myxomatous degeneration with thickening and nodular changes in the free edge and base of the valve(s); cordae tendinae are also affected. Usually slowly progressive deformation results in valvular incompetence with regurgitation, left ventricular volume overload and ventricular failure. Mitral valve prolapse is a common complication. The cause is unknown, but there appears to be an inherited component.
v. incompetence the valves do not close completely and when pressure is exerted on them blood leaks back through causing inefficient forward movement of the blood and turbulent flow leading to the development of cardiac murmurs.
v. stenosis narrowing of the lumen of the aperture through which the blood passes causing back pressure in the venous or pulmonary circuits. The clinical manifestations include cardiac murmurs and thrills and congestive heart failure. See also **stenosis**.
valvulitis [val"vu-li'tis] inflammation of a valve, especially of a valve of the heart.
valvuloplasty [val'vu-lo-plas"te] plastic repair of a valve, especially a valve of the heart.
balloon v. use of an intracardiac catheter with an inflatable balloon to dilate stenotic cardiac valves. Used in the correction of pulmonic stenosis, and less often aortic stenosis, in dogs.
valvulotome [val'vu-lo-tōm"] an instrument for cutting a valve.
valvulotomy [val"vu-lot'ə-me] valvotomy.
balloon v. see balloon **valvuloplasty**.
van den Bergh test, reaction a test which differentiates between conjugated and unconjugated bilirubin in serum and assists in the differentiation between biliary or regurgitation hyperbilirubinemia, retention or hemolytic hyperbilirubinemia, or combined hyperbilirubinemia or jaundice. There are many variants of the basic test and the interpretation of them differs markedly between the species.
Van der Waals forces the relatively weak, short-range forces of attraction existing between atoms and molecules, which results in the attraction of nonpolar organic compounds to each other (hydrophobic bonding).
vanadium (V) [və-na'de-əm] a chemical element, atomic number 23, atomic weight 50.942. See Table 4. Its salts have been used in treating various diseases.
v. poisoning in humans poisoning is usually by inhalation causing respiratory irritation and pneumonia. In livestock, poisoning is by ingestion of contaminated pasture, usually from mining pollution, and manifested by stunted growth, pot belly, submandibular edema, diarrhea, incoordination and oliguria.
vanadiumism [və-na'de-əm-iz-əm] poisoning by vanadium.
vancomycin [van"ko-mi'sin] a narrow-spectrum antibiotic produced by *Streptomyces orientalis*, highly effective against gram-positive bacteria; it is commonly reserved for use against serious infections caused by penicillinase-resistant staphylococci and enterococci. The toxic effects are quite severe and include damage to the eighth cranial (vestibulocochlear) nerve and renal disorders.
v. resistant enterococcus (VRE) a group of multi-drug resistant bacteria associated with high mortality in humans.
vane [vān] the membranous or main part of the contour **feather** in birds as distinct from the shaft. It consists of the barbs held together by the interlocking barbules. Called also vexillum.
Vangueira pygmaea ***Pachystigma*** *pygmaeum*.
vanillylmandelic acid [və-nil'əl-man-del'ik] an excretory product of the catecholamines found in the urine; used as a test in the diagnosis of phaeochromocytoma.
van't Hoff's law the velocity of chemical reactions is increased twofold or more for each rise of 10°C in temperature.
vapor [va'pər] steam, gas or exhalation.
Vapor vaporizer a type of temperature- and flow-compensating precision vaporizer for specific inhalation anesthetic agents.
vaporization [va"pər-ĭ-za'shən] 1. the conversion of a solid or liquid into a vapor without chemical change; distillation. 2. treatment by vapors; vapotherapy.
vaporize [va'pər-īz] to convert into vapor or to be transformed into vapor.
vaporizer [va"por-īz'ər] part of the apparatus used to deliver volatile anesthetic agents to patients. It is the vessel that vaporizes the liquid anesthetic and adds it to the flow of gas to the patient. The objective of them all is to deliver a suitable, accurately calibrated, quantity of anesthetic at all times and under all conditions. See also **EMO vaporizer**, **Dräger vaporizer**, **Goldman vaporizer**, **Vapor vaporizer**.
bubble v., bubble through v. the carrier gas is dispersed through the anesthetic agent, usually through a diffuser, to form the anesthetic mixture to be inhaled. An example is the copper kettle vaporizer.
calibrated v. one with graduations to measure accurately the concentration of anesthetic vapor delivered.
wick v. carrier gas moves over the surface of the liquid anesthetic. Sheets of pliable material are used as wicks to increase the surface area. Examples are Vapor and 'tec' (Fluotec, Fortec) vaporizers.
vapotherapy therapeutic use of steam, vapor or spray.
VA/Q see **ventilation**:perfusion ratio.
Vaqueta see ***Thiloa glaucocarpa***.
Vaquez–Osler disease [vah-ka'- ōs'lər] primary polycythemia.
var. variety.
Varess needle used for the initial insufflation of the abdominal cavity with gas (carbon dioxide) for laparoscopy, prior to placement of any other equipment into the abdominal cavity. The needle consists of a sharp outer cannula and blunt hollow stylet through which the gas may pass.
Varestrongylus see ***Bicaulus***.
variability [var"e-ə-bil'ĭ-te] the state of being variable.

variable [*var'e-ə-bəl*] 1. any type of measurement, quantitative or qualitative, of which a series of individual observations is made so that it has, as a principal characteristic, the potential for variability. 2. has the quality of variability.
v. agent an agent in the cause of a disease which is capable of variation in intensity, e.g. weather, as contrasted to one that is not variable, e.g. *Salmonella dublin*.
concomitant v's in experimental design these refer to factors that affect the dependent variable, but are not themselves influenced by the treatment (e.g. age of animal). The effect of concomitant variables can be removed by suitable experimental design or by including them in the model.
continuous v. one in which all values within a given range are possible, e.g. birth weights of calves.
v. costs costs which vary with the dimensions of the activity. Includes seed, fertilizer, teat dip, worm drench. Called also direct costs. See also **fixed costs**.
dependent v. 1. in statistics the variable predicted by a regression equation. 2. a variable which depends on other variables for its value.
discontinuous v. see discrete variable (below).
discrete v. one in which the possible values are not on a continuous scale, e.g. the number of sheep in a flock.
endogenous v. dependent variable.
exogenous v. independent or predetermined variable.
independent v. one not dependent on other variables but capable of affecting dependent variables, thus an input variable.
spatial v. a measurement relating to area or location.
temporal v. one relating to chronological time.
variable region the *N*-terminal portion of heavy and light chains of immunoglobulin molecules in which the amino acid sequence varies as a consequence of somatic mutation and recombination during ontogeny of B lymphocytes and also occurring after antigen exposure. The variable amino acid sequence which provides more than 10^7 different antibody molecules is responsible for the antigen-binding specificity.
variance [*var'e-ənz*] one of the measures of the dispersion of data; the mean squared deviation of a set of values from the mean.
additive genetic v. that portion of phenotypic variance which is due to the additive effect of genes (V_A).
analysis of v. a statistical method for comparing values, expressed in terms of means or variance, of one or more variables in several subgroups of a population. Called also anova.
environmental v. that portion of the phenotypic variance caused by differences in the environment to which the individuals have been exposed.
non-additive genetic v. that portion of phenotypic variance which is due to epistatic interactions (V_I) and dominance deviations (V_D).
non-genetic v. that portion of phenotypic variance which is due to non-genetic effects such as environment (V_E).
phenotypic v. a measure of the extent to which individuals vary in their phenotype (V_P). $V_P = V_A + V_D + V_I + V_E$.
v. ratio distribution see **f distribution**.
variant [*var'e-ənt*] an organism or tissue that is different from the majority of the population but is still sufficiently similar to the common mode to be considered to be one of them, e.g. a variant strain of classical swine fever (hog cholera) virus.
variation [*var"e-a'shən*] divergence among individual animals of a group. The differences in the morphology or function of an organ or organism, are small enough to stay within the variability of the type organism or organ.
varicella-zoster virus [*var"ĭ-sel'ə*] a member of the family *Herpesviridae*, genus *Varicellovirus* that causes chicken pox in humans early in life and herpes zoster (shingles), as a reactivation of latent virus, in later life; also infects gorillas, orangutans and chimpanzees.
Varicellovirus a genus in the subfamily *Alphaherpesvirinae*.
varices [*vār'ĭ-sēz*] [L.] plural of *varix*.
variciform [*var-is'ĭ-form*] resembling a varix; varicose.
varicoblepharon [*var"ĭ-ko-blef'ə-ron*] a varicose swelling of the eyelid.
varicocele [*var'ĭ-ko-sēl"*] varicosity of the pampiniform plexus of the spermatic cord, forming a swelling in the scrotal neck that feels like a 'bag of worms'.
varicocelectomy [*var"ĭ-ko-sə-lek'tə-me*] excision of a varicocele.
varicomphalos [*var"ĭ-kom'fə-ləs*] a varicose tumor of the umbilicus.
varicose [*var'ĭ-kōs*] of the nature of or pertaining to a varix; unnaturally and permanently distended (said of a vein); variciform.
v. scrotal tumor benign vascular proliferation in dogs; resembles cavernous hemangioma.
v. veins are uncommonly found in animals except on the scrotum of old bulls, in the dorsal wall of the vagina in mares and on the prepuce in stallions. May also be associated with arteriovenous fistulae.
varicosity [*var"ĭ-kos'ĭ-te*] 1. a varicose condition; the quality or fact of being varicose. 2. a varix, or varicose vein.
varicotomy [*var"ĭ-kot'ə-me*] excision of a varix or of a varicose vein.
varicula [*və-rik'u-lə*] a varix of the conjunctiva.
variety [*və-ri'ə-te*] a taxonomic subcategory of a species.
variegated tick see ***Amblyomma variegatum***.
variola [*və-ri'o-lə*] a viral disease of humans and primates characterized by fever, rash and scab formation. Called also smallpox.
varix [*var'iks*] pl. *varices* [L.] an enlarged, tortuous vein, artery or lymphatic vessel.
aneurysmal v. a markedly dilated tortuous vessel; sometimes used to denote a form of arteriovenous aneurysm in which the blood flows directly into a neighboring vein without the intervention of a connecting sac.
arterial v. a racemose aneurysm or varicose artery.
lymph v., v. lymphaticus a soft, lobulated swelling of a lymph node, due to obstruction of lymphatic vessels.
varization a surgical procedure that decreases the angle of inclination of a part.
v. femoral osteotomy a surgical procedure involving an intertrochanteric osteotomy and removal of a bone wedge to create a varus deviation of the femoral head and neck. Used to increase hip stability in dogs with hip dysplasia.
varkoor see ***Zantedeschia aethiopica***.
Varnell gag a gag similar to the **Hitching gag**, except that the crossbars are rounded, and usually covered with leather or rubber, and fit into the interdental space.
varnish tree ***Aleurites moluccana***.
varolian [*və-ro'le-ən*] pertaining to the pons varolii.
varroosis a disease of the honey bee (*Apis mellifera*) caused by the mite *Varroa destructor*, which parasitizes bee larvae and adults causing developmental deformities, reduced life span and ultimately destruction of the colony or hive. A disease notifiable to the OIE (see Table 22).
varus [*var'əs*] [L.] bent inward; denoting a deformity in which the angulation of the part is toward the midline of the body, as in coxa vara, genu varum.

V-2: Carpal varus deformity.
From Floyd AE, Mansmann, RA, Equine Podiatry. Saunders, 2008.

v. stress test adduction of the tibia while the femur is in a fixed position tests the integrity of the lateral collateral ligaments of the stifle.

vas [vas] pl. *vasa* [L.] a vessel.

v. aberrans 1. a blind tube sometimes connected with the epididymis; a vestigial mesonephric tube. 2. any anomalous or unusual vessel.

v. afferentia vessels that convey fluid to a structure or part.

v. brevia short vessels such as the gastric arteries.

v. deferens the excretory duct of the testis which conveys spermatozoa from the tail of the epididymis to the pelvic urethra and which sometimes unites with the excretory duct of the seminal vesicle to form the ejaculatory duct; called also ductus deferens.

v. efferentia vessels that convey fluid away from a structure or part.

v. lymphatica lymphatic vessels.

v. recta straight vessels, such as the long U-shaped vessels arising from the efferent glomerular arterioles of juxtamedullary nephrons and which then supply the renal medulla.

v. vasorum the small nutrient arteries and veins in the walls of the larger blood vessels.

vasa [vā'sə] [L.] plural of *vas*.

vascular [vas'ku-lər] pertaining to blood vessels or indicative of a copious blood supply.

v. clamps see hemostatic **forceps**.

v. clip see **clip** (1).

v. disease see **arteritis**, **phlebitis**, **lymphangitis**, **thrombosis**, **aneurysm**, capillary **fragility**.

v. grafts see vascular **conduit**.

v. hemophilia von Willebrand disease.

v. malformation includes **hamartoma**, arteriovenous **fistula**, **telangiectasia**.

v. neoplasm listed elsewhere; these include **hemangioma**, **hemangiosarcoma**, **hemangioendothelioma**, **hamartoma**, **telangiectasia**, **angiokeratoma**, juvenile bovine **angiomatosis**, bovine cutaneous **angiomatosis**, **varicose** scrotal tumor, **meningioangioma**, lymphomatoid **granulomatosis**, **lymphangioma**, **lymphangiosarcoma**, **glomangioma**.

v. nevus irregular shaped, cutaneous mass, congenital, hair-covered initially, subsequently hairless, usually 1–2 inches diameter in foals, may be inflamed, ulcerated; composed of densely packed blood vessels and bleed easily: most located on lower limbs; see also **nevus**.

v. occlusive syndrome complete occlusion of the vessel supplying blood to a part of the body causes temporary loss of function or death of the part, fall in temperature and change in color.

v. plaque a minor lesion in animals; manifested by slight thickening and wrinkling of the intima of the vessel over oval or elongated elevations.

v. pole the point on the renal glomerulus where the blood vessels enter and exit.

v. prosthesis see vascular **conduit**.

v. ring anomaly see vascular **ring**.

v. sinus transformation marked dilation of sinuses in lymph nodes because of blockage of drainage from the node.

v. stasis serious slowing, or complete cessation, of blood or lymph flow through vessels.

v. system the vessels of the body including aorta, arteries, arterioles, capillaries, venules, sinusoids, sinuses, veins, lymphatics.

v. tone the state of contractile tension in the vessel walls.

v. tumor see vascular neoplasm (above).

v. tunic of the eye; the uvea. Consists of the choroid, the ciliary body and iris.

vascularity [vas"ku-lar'ĭ-te] the condition of being vascular.

vascularization [vas"ku-lər-ĭ-za'shən] the formation of new blood vessels in tissues.

vascularize [vas'ku-lə-rīz] to supply with vessels.

vasculature [vas'ku-lə-chər] 1. the vascular system of the body, or any part of it. 2. the supply of vessels to a specific region.

vasculitis [vas"ku-lī'tis] inflammation of a vessel; common causes include allergic, immune-mediated. Histopathologically differentiable types include eosinophilic, lymphocytic. Called also angiitis.

leukocytoclastic v. see **hypersensitivity** angiitis.

V-3: Cutaneous vasculitis. Peripheral edema caused by vascular leakage associated with vasculitis.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

necrotizing v. important feature of the Arthus reaction; damage to the endothelium results from deposition of immune complexes in the vessel wall, usually on the basement membrane of the endothelium. A form of necrotizing vasculitis is described in young adult Beagles, Bernese mountain dogs and German shorthaired pointers, associated with neurological signs. A genetic predispositon is suspected.

vasculopathy [vas"ku-lop'ə-the] any disorder of blood vessels.

familial cutaneous v. of German shepherd dogs an autosomal recessive genodermatosis characterized by swellings on the nose, ulcers and crusting on the ears, nasal planum and tail tip. The footpads are swollen, hypopigmented and sometimes ulcerated. There is joint swelling, fever and lymphadenopathy. The condition may follow vaccination in pups.

v. of Greyhounds see idiopathic **cutaneous** and renal glomerular disease.

vasectomized [və-sek'tə-mīzd] subjected to **vasectomy**.

vasectomy [və-sek'tə-me] excision of the vas (ductus) deferens, or a portion of it; bilateral vasectomy results in sterility.

Vaseline trademark for white petrolatum (USP), petroleum jelly.

vasey grass ***Paspalum*** *urvillei*.

Vasgotaspets see **Swedish Vallhund**.

vasiform [vas'ĭ-form] resembling a vessel.

vasitis [və-sī'tis] inflammation of the vas (ductus) deferens.

vas(o)- word element. [L.] *vessel, duct*.

vasoactive [vas"o-ak'tiv] exerting an effect on the caliber of blood vessels.

v. intestinal peptide (VIP), v. intestinal polypeptide a peptide hormone that, in addition to its vasoactive properties, stimulates intestinal secretion of water and electrolytes, inhibits gastric secretion, promotes glycogenesis, causes hyperglycemia and stimulates secretion of pancreatic juice.

v. substances substances which cause constriction of blood vessels; substances which actively dilate vessels, rather than relax an existing vasoconstriction, should be included. See **vasoconstrictor** agents and **vasodilator** agents.

v. substances, endothelium-derived includes nitrous oxide, prostacyclin and other prostanoids, unnamed relaxing or constricting factors released as a result of a tissue insult, e.g. hypoxia or excessive stretch.

vasoconstriction [vas"o-kən-strik'shən] decrease in the caliber of blood vessels; may be general or local, e.g. pulmonary, peripheral.

vasoconstrictor [vas"o-kən-strik'tər] 1. causing constriction of the blood vessels. 2. a vasoconstrictive agent.

v. agents includes some prostaglandins, thromboxane A_2, leukotriene D_4, angiotensin II, vasopressin, neuropeptide Y, endothelin.

v. fibers adrenergic nerve fibers in the walls of all blood vessels except capillaries.

vasodepression [vas"o-de-presh'ən] decrease in vascular resistance with hypotension.

vasodepressor [vas"o-de-pres'ər] 1. having the effect of lowering the blood pressure through reduction in peripheral resistance. 2. an agent that causes vasodepression.

vasodilatation [vas"o-dĭ-lə-ta'shən] vasodilation.

vasodilation [vas"o-di-la'shən] a state of increased caliber of blood vessels.

vasodilator [vas"o-di'la-tər] 1. causing dilatation of blood vessels. 2. a nerve or agent that causes dilatation of blood vessels.

v. agents include prostaglandin E_2, prostacyclin, bradykinin, histamine, serotonin, vasoactive intestinal peptide, substance P, adenosine triphosphate, endothelium-derived relaxing factor.

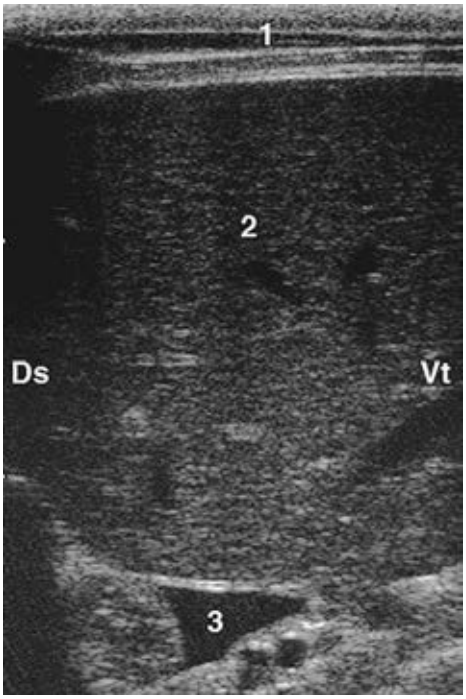
V

vasoepididymography [vas"o-ep"ĭ-did"ĭ-mog'rə-fe] radiography of the vas deferens and epididymis after injection of a contrast medium.
vasoepididymostomy [vas"o-ep"ĭ-did-ĭ-mos'tə-me] anastomosis of the vas (ductus) deferens and the epididymis.
vasoformative [vas"o-for'mə-tiv] pertaining to or promoting the formation of blood vessels.
vasoganglion [vas"o-gang'gle-on] a vascular ganglion or rete.
vasogenic [va"zo-jen'ik] emanating from or pertaining to blood vessels.
v. circulatory failure see vasogenic **shock**.
vasography [va-zog'rə-fe] radiography of the blood vessels.
vasohypertonic [vas"o-hi"pər-ton'ik] vasoconstrictor.
vasohypotonic vasodilator.
vasoinhibitor [vas"o-in-hib'ĭ-tər] an agent that inhibits vasomotor nerves.
vasoligation [vas"o-li-ga'shən] ligation of the vas (ductus) deferens.
vasomotion [vas"o-mo'shən] change in caliber of blood vessels.
vasomotor [vas"o-mo'tər] 1. having an effect on the caliber of blood vessels. 2. a vasomotor agent or nerve.
v. system the part of the nervous system that controls the caliber of the blood vessels.
vasoneuropathy [vas"o-nŏŏ-rop'ə-the] a condition caused by combined vascular and neurological defect, resulting from simultaneous action or interaction of the vascular and nervous systems.
vasoneurosis [vas"o-nŏŏ-ro'sis] angioneurosis.
vaso-orchidostomy anastomosis of the epididymis to the severed end of the vas (ductus) deferens.
vasoparesis [vas"o-pə-re'sis] paralysis of vasomotor nerves.
vasopermeability [vas"o-pur"me-ə-bil'ĭ-te] the permeability of a blood vessel; the extent to which a blood vessel is permeable.
vasopressin [vas"o-pres'in] a hormone secreted by cells of the hypothalamic nuclei and stored in the posterior pituitary for release as necessary; it stimulates contraction of the muscular tissues of the capillaries and arterioles, raising the blood pressure, and increases peristalsis, exerts some influence on the uterus, and influences resorption of water by the kidney tubules, resulting in concentration of urine. Its rate of secretion is regulated chiefly by the osmolarity of the plasma. Also prepared synthetically or obtained from the posterior pituitary of domestic animals; used as an antidiuretic. Called also antidiuretic hormone (ADH).
v. test see **antidiuretic** hormone response test.
vasopressor [vas"o-pres'ər] 1. stimulating contraction of the muscular tissue of the capillaries and arteries. 2. a vasopressor agent.
vasopuncture [vas"o-punk'chər] surgical puncture of the vas (ductus) deferens.
vasoreflex [vas"o-re'fleks] a reflex of blood vessels.
vasorelaxation [vas"o-re-lak-sa'shən] decrease of vascular pressure.
vasorrhaphy suture of the vas (ductus) deferens.
vasosection [vas"o-sek'shən] the severing of a vessel or vessels, especially of the vasa deferentia (ductus deferentes).
vasosensory [vas"o-sen'sər-e] supplying sensory filaments to the vessels.
vasospasm [vas'o-spaz"əm] spasm of blood vessels, decreasing their caliber.
vasostimulant [vas"o-stim'u-lənt] stimulating vasomotor action.
vasostomy [vas-os'tə-me] surgical formation of an opening into the ductus (vas) deferens.
vasotocin [vas"o-to'sin] the normal antidiuretic hormone in birds. One of the hormones released by the avian posterior pituitary gland. Called also arginine vasotocin (AVT). Is also active in stimulating uterine contraction.
vasotomy [va-zot'ə-me] incision of the vas (ductus) deferens.
vasotonia [vas"o-to'ne-ə] tone or tension of the vessels.
vasotonic [vas"o-ton'ik] pertaining to, characterized by, or increasing vasotonia.
vasotrophic [vas"o-tro'fik] affecting nutrition through alterations of the caliber of the blood vessels.
vasotropic [vas"o-tro'pik] exerting an influence on the blood vessels, causing either constriction or dilatation.
vasovagal [vas"o-va'gəl] vascular and vagal.
v. attack, v. syncope a transient vascular and neurogenic reaction in humans marked by pallor, nausea, sweating, bradycardia, and rapid fall in arterial blood pressure which, when below a critical level, results in loss of consciousness and characteristic electroencephalographic changes.
vasovasostomy [vas"o-va-zos'tə-me] anastomosis of the ends of the severed vas (ductus) deferens.
vasovesiculectomy [vas"o-və-sik"u-lek'tə-me] excision of the vas (ductus) deferens and seminal vesicle.
vastus [vas'təs] [L.] *great*.
VC vital capacity.
VCG vectorcardiogram.
VCI Veterinary Council of Ireland.
vCJD variant Creutzfeld-Jakob disease caused by the agent of bovine spongiform encephalopathy.
VCNZ Veterinary Council of New Zealand.
VCPR veterinarian-client-patient relationship.
VDH valvular disease of the heart.
veal in general terms means meat from young calves but there is no internationally acceptable definition of veal. The commonest starting point is 2 weeks of age. Any calves younger than that are considered to be too tasteless and uneconomical. White veal is from calves fed only on milk which necessarily limits their oldest permissible age. Most veal calves marketed at older than 12 weeks are fattened on grain. No roughage is fed and the calves are muzzled if they are allowed onto pasture. This kind of veal calf is grown out to produce a dressed carcass of 250–300 lb. In some countries veal carcasses are allowed to cool down with their skins still on to prevent dehydration. It also causes a distinct and desirable souring of the meat. Some methods of housing and feeding veal calves raise concerns for animal welfare.
heavy v. calves fed on hard feed, weigh >400 lb (182 kg), aged >3 weeks. Called also Western veal calves.
Western v. calves see heavy veal calves (above).
vealer young calf destined to be marketed as veal.
v. feedlot calves are confined for a short period and fed intensively in a lot, usually under shelter.
vection [vek'shən] the carrying of disease germs from an infected animal to a well animal.
vectis short metal rod with a loop at each end used in canine and feline obstetrics. The loops are of a size that they will engage the cranium or the front of the head in long-nosed breeds and permit traction or rotation of the fetus.
vector [vek'tər] 1. a carrier, especially the animal (usually an arthropod) which transfers an infective agent from one host to another, e.g. the tsetse fly, which carries trypanosomes from animals to humans, dogs, bats and other animals that transmit the rabies virus. In molecular biology, a DNA molecule which serves to transfer DNA into a host cell. 2. a quantity possessing magnitude, direction and sense (positivity or negativity).
biological v. an arthropod vector in whose body the infecting organism must develop or multiply before becoming infective to the recipient individual.
cloning v. a DNA molecule used to transfer an inserted DNA segment into a host cell. Includes other viruses, phages and bacterial plasmids. Called also cloning vehicle.
v. data representation see vector **data** representation.
mechanical v. an arthropod vector that physically transmits the infective organisms from one host to another but is not essential to the life cycle of the parasite.
shuttle v's vectors which contain both prokaryotic and eukaryotic replication signals, thus allowing replication of the vector in both kinds of cells.
targeting v. a vector carrying a DNA sequence that is able to take part in a specified chromosomal crossover in the host.
vectorcardiogram [vek"tər-kahr'de-o-gram"] the record, usually a photograph, of the loop formed on the oscilloscope in vectorcardiography.
vectorcardiography [vek"tər-kahr"de-og'rə-fe] the registration, usually by formation of a loop on an oscilloscope, of the direction and magnitude (vector) of the moment-to-moment electromotive forces of the heart during one complete cycle.
vecuronium [vek"u-ro'ne-əm] a derivative of pancuronium, used as a short-acting neuromuscular blocking agent.
vedaprofen a propionic acid nonsteroidal anti-inflammatory agent used in horses and dogs.
VEE Venezuelan equine encephalomyelitis.
vegan [ve'gən] a person who advocates and consumes a purely vegetarian diet and does not use animal products in clothing or use any other animal-derived product.

VetBooks.ir

vegetable [vej'ə-tə-bəl] 1. pertaining to or derived from plants. 2. any plant or species of plant, especially one cultivated as a source of food.
v. drugs derived from plants; includes alkaloids, glycosides, resins, gums and oils.
v. matter base residue after dissolving wool in a sample; a measure of the contamination of the wool.
v. oil oil derived from plants. Commercially used oils include peanut, linseed, sesame, cottonseed and castor. A separate group is the volatile oils including oil of turpentine, eucalyptus, peppermint and oil of cloves (eugenol). Animal oils are irritating to tissue and their accidental inhalation almost always causes a serious aspiration pneumonia. Vegetable oils are virtually nonpathogenic.
vegetal [vej'ə-təl] 1. pertaining to plants or a plant. 2. vegetative.
vegetarian [vej"ə-tar'e-ən] a person who eats no meat, eggs or dairy food.
lacto-ovo v. a person who eats no meat, but does consume dairy products and eggs.
vegetation [vej"ə-ta'shən] 1. any plant-like fungoid neoplasm or growth; a luxuriant fungus-like growth of pathological tissue. 2. plant growth.
vegetative [vej'ə-ta"tiv] 1. concerned with growth and nutrition. 2. functioning involuntarily or unconsciously. 3. resting; denoting the portion of a cell cycle during which the cell is not replicating. 4. pertaining to plants. 5. asexual reproduction.
inherited v. dermatosis see **dermatosis** vegetans.
v. nervous system autonomic nervous system.
v. state in neurological assessment, the animal is in a coma, but can be aroused. There is brainstem activity but cortical responses are absent.
vehicle [ve'ĭ-kəl] 1. a transporting agent, especially the component of a medication (prescription) serving as a solvent or to increase the bulk or decrease the concentration of the mixture. 2. any medium through which an impulse is propagated.
cloning v. see cloning **vector**.
veil [vāl] 1. a covering structure. 2. a caul or piece of amniotic sac occasionally covering the face of a newborn animal.
v. cell fibroblast-like cells which surround small vessels in the dermis.
Veillonella small, gram-negative anaerobic cocci that are part of the normal microflora in the mouth, intestine, respiratory system of animals.
vein [vān] a vessel through which blood passes from various organs or parts back towards the heart, in the systemic circulation carrying blood that has given up most of its oxygen. Veins, like arteries, have three coats, an inner, middle and outer, but the coats are not so thick and they collapse when the vessel is cut. Many veins, especially the superficial, have valves formed of reduplication of their lining membrane. For a complete list of the named veins of the body, see Table 15.
afferent v's veins that carry blood to an organ.
allantoic v's paired vessels that accompany the allantois, growing out from the primitive hindgut and entering the body stalk of the early embryo.
cardinal v's the major veins within the early embryo that include the pre- and postcardinal veins and the ducts of Cuvier (common cardinal veins).
emissary v. a vein escaping from a chamber or organ such as one passing through a foramen of the skull and draining blood from a cerebral sinus into a vessel outside the skull.
postcardinal v's paired vessels in the early embryo that return blood from regions caudal to the heart.
precardinal v's paired venous trunks in the embryo cranial to the heart.
pulp v's vessels draining the venous sinuses of the spleen.
subcardinal v's paired vessels in the embryo, replacing the postcardinal veins and persisting to some degree as definitive vessels.
sublobular v's tributaries of the hepatic veins that receive the central veins of hepatic lobules.
supracardinal v's paired vessels in the embryo developing later than the subcardinal veins and persisting chiefly as the lower segment of the inferior vena cava.
thebesian v's smallest cardiac veins: numerous small veins arising in the muscular walls and draining independently into the cavities of the heart, and most readily seen in the atria.
trabecular v's vessels coursing in splenic trabeculae, formed by tributary pulp veins.
varicose v's permanently dilated, tortuous veins. The milk vein of a lactating cow is a normal varicose vein. See **varicose** veins.
vitelline v's veins that return the blood from the yolk sac to the primitive heart of the early embryo.
vela [ve'lə] plural of velum.
velamen [ve-la'mən] pl. *velamina* [L.] a membrane, meninx or velum.
velamentous [vel"ə-men'təs] membranous and pendent; like a veil.
veldt sickness see **heartwater**.
vell abattoir term for abomasum of milk-fed calf used for the preparation of rennet for junket tablets.
Velleia Australian plant genus in the family Goodeniaceae; contains an unidentified toxin; causes dyspnea, depression in sheep. Includes *V. connata*, *V. discophora* (cabbage poison), *V. panduriformis* (pindan poison), *V. paradoxa*.
vellein coumarin glycoside of uncertain toxicity in *Velleia discora*.
vellus [vel'əs] 1. fine hairs that appear on human skin after the lanugo hairs are cast off. 2. any fine, downy hair.
velogenic [ve"lo jen'ik] 1. a host–parasite relationship in which the parasite dominates and the host frequently dies. 2. highly virulent, e.g. velogenic Newcastle disease virus, as opposed to lentigenic and mesogenic which are low and intermediate virulence strains, respectively.
velometer an instrument that measures air movement velocity in meat storage facilities. A variation on the anemometer.
velopharyngeal [ve"lo-fə-rin'je-əl] pertaining to the velum palatinum (soft palate) and pharynx.
Velpeau sling see Velpeau **sling**.
velum [ve'ləm] pl. *vela* [L.] a covering structure or veil.
v. abomasicum two folds on either side of the omasoabomasal orifice.
v. interpositum the membranous roof of the third ventricle of the brain.
medullary v. one of the two portions (rostral medullary velum and caudal medullary velum) of the white matter of the hindbrain that form the roof of the fourth ventricle.
palatine v., v. palatinum soft palate.
v. uteri see **intracornual** frenulum.
velvet see **antler**.
v. disease a disease of aquarium fish caused by the flagellate protozoan *Oodinium limnecicum*. Affected fish develop a varnished look caused by a very heavy infestation of the protozoa on the skin and die within a few days. Called also freshwater velvet, gold dust disease and rust disease.
v. grass see ***Holcus lanatus***.
vena [ve'nə] pl. *venae* [L.] vein. See also Table 15.
caudal v. caval syndrome vena caval thrombosis (below).
cranial v. caval thrombosis syndrome in which pulmonary abscesses cause cough, hyperpnea and poor exercise tolerance. Commonly results from jugular vein thrombosis following intravenous therapy using this site. Jugular vein engorgement and local edema may also occur. See also **caval syndrome**.
cranial v. caval venipuncture a technique for blood sample collection in pigs; a needle is inserted into the cranial vena cava near the thoracic inlet.
v. cava one of the large vessels emptying venous blood into the right atrium; includes cranial and caudal venae cavae.
v. cava spontaneous rupture recorded as a cause of sudden death in horses.
v. caval hiatus see vena cava **foramen**.
v. caval syndrome see **caval syndrome**.
v. caval thrombosis thrombosis of the caudal vena cava arises from a hepatic abscess. The commonest result is the subsequent shedding of emboli and the development of a chronic pulmonary disease often terminated by massive pulmonary hemorrhage and bleeding to death through the mouth and nostrils. Others suffer a chronic course with anemia, dyspnea and persistent cough and are euthanized because of cachexia and prolonged distress.
persistent left cranial v. cava an uncommon anomaly in dogs, often associated with other vascular anomalies such as persistent right aortic arch and tetralogy of Fallot.
posterior v. cava caudal vena cava.
venectasia [ve"nək-ta'zhə] phlebectasia.
venectomy [ve-nek'tə-me] phlebectomy.

VetBooks.ir



V-4: Ultrasonogram of liver and normal caudal vena cava imaged from the 11th intercostal space using a 3.5-MHz linear transducer. The caudal vena cava has a triangular shape on cross section. 1, abdominal wall; 2, liver; 3, caudal vena cava; Ds, dorsal, Vt, ventral.
From Braun U: Clinical findings and diagnosis of thrombosis of the caudal vena cava in cattle. Vet J 175:118-125, 2008. Elsevier.

venenation [*ven"ə-na'shən*] poisoning; a poisoned condition.
venenous [*ven'ə-nəs*] venomous.
venepuncture [*ven'ə-punk"chər*] venipuncture.
venereal [*və-nēr'e-əl*] due to or propagated by sexual intercourse. In human medicine now called sexually transmitted disease (STD).
v. balanoposthitis and vulvitis of sheep, see **ulcerative** dermatosis.
canine transmissible v. tumor (TVT) occurs mainly on the genitalia, but sometimes other cutaneous sites, of dogs and bitches. The tumor, which is most common in certain geographic areas, especially where dogs roam freely, is transmitted by coitus and may regress spontaneously. The tumor cells contain only 59 chromosomes, compared with the normal complement of 78 in dogs. Called by a variety of names including Sticker's tumor or sarcoma, contagious venereal tumor, venereal granuloma, transmissible lymphosarcoma, transmissible reticulum cell tumor, and infectious sarcoma.
v. disease a contagious disease usually acquired by sexual intercourse or other genital contact. See also **ulcerative** dermatosis.
v. epididymitis and vaginitis of cattle, see **epivag**.
nodular v. disease see **granular** vaginitis.
v. spirochetosis see **spirochetosis** (2).
v. vulvitis/balanitis of horses, see equine **coital exanthema**.

V-5: Caudal vena caval thrombosis in a cow causing pulmonary hemorrhage with epistaxis and bleeding from the mouth.
From Braun U: Clinical findings and diagnosis of thrombosis of the caudal vena cava in cattle. Vet J 175:118-125, 2008. Elsevier.

V-6: Canine transmissible venereal tumor on the penis.
From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989.

Venerupis farmed bivalve mollusc in family Veneridae; includes *V. japonica* (Japanese or Manila clam).
venipuncture [*ven'ĭ-punk"chər*] needle puncture of a vein.
venisection, venesection [*ven"ĭ-sek'shən*] a vein is opened and a large volume of blood collected and discarded. Called also phlebotomy.
venison meat of the deer.
venisuture, venesuture [*ven"ĭ-soo'chər, ven"ə-soo'chər*] phleborrhaphy.
ven(o)- word element. [L.] *vein*.
venoclysis [*ve-nok'lĭ-sis*] injection of fluid into a vein; phleboclysis. See also **intravenous** infusion.
venoconstriction [*ve-no kən-strik'shən*] a venoconstrictive response can be elicited in the small and large cutaneous veins in cats and dogs.
venodilator an agent acting to increase the caliber of veins. See also **vasodilator**.
venogram [*ve'no-gram*] 1. phlebogram. 2. venous-pulse tracing.
venography [*ve-nog'rə-fe*] phlebography.
cavernous sinus v. injection of a contrast medium into the angularis oculi vein while the jugular vein is compressed permits radiographic visualization of the ophthalmic plexus and the cavernous sinus and may outline space-occupying lesions in the vicinity of the pituitary gland and cranial nerves II, III, IV and VI.
orbital v. radiopaque media can be used to outline veins around the orbit and retrobulbar veins.
vertebral v. injection of radiocontrast medium into the saphenous vein while the caudal vena cava is compressed causes the vertebral veins to be outlined; used to demonstrate cord compression.

V-7: Dog positioned for venipuncture of the jugular vein.
From Sheldon CC, et al, Animal Restraint for Veterinary Professionals. Mosby, 2006.

venom [*ven'əm*] poison, especially a toxic substance normally secreted by a serpent, insect or other animal. See also **Russell's viper venom**.

venomotor [*ve"no-mo'tər*] controlling dilatation or constriction of the veins.

venomous [*ven'ə-məs*] secreting poison; poisonous.

veno-occlusive [*ve"no-ə-kloo'siv*] pertaining to or characterized by obstruction of the veins.

v. disease of liver acute or chronic, partial or complete, occlusion of the branches of the hepatic veins by endophlebitis and thrombosis, leading to centrilobular (periacinar) necrosis, fibrosis and ascites; occurs at a curiously high prevalence in cheetahs and snow leopards.

venoperitoneostomy [*ve"no-per"ĭ-to"ne-os'tə-me*] anastomosis of the saphenous vein with the peritoneum for drainage of ascites.

venosclerosis [*ve"no-sklə-ro'sis*] sclerosis of veins; phlebosclerosis.

venosity [*ve-nos'ĭ-te*] 1. excess of venous blood in a part. 2. a plentiful supply of blood vessels or of venous blood.

venostasis [*ve"no-sta'sis*] retardation of the venous outflow in a part. See also **phlebostasis**.

venotomy [*ve-not'ə-me*] phlebotomy.

venous [*ve'nəs*] pertaining to the veins.

v. dilatation persistent dilatation of the vein but without necessarily any weakening of the wall or varicosity.

hepatic portal v. system in the restricted sense, it includes just the portal vessels themselves, i.e. the veins from the alimentary tract and spleen draining into the portal vein, but in the broader sense it also includes the sinusoids in the liver, the hepatic veins and then the entry into the caudal vena cava, i.e. all veins associated with the liver.

v. infarct see venous **infarct**.

obstructed v. drainage may be generalized or local; manifested by dilation, congestion and local edema.

orbital v. plexus a plexus for venous drainage from the ophthalmic veins at the apex of the orbit; drains into the cavernous venous sinus within the cranium.

v. return the flow of blood into the heart from the peripheral vessels.

v. return curves relate venous return to atrial pressure; the inverse of the Starling relationship; an increase in atrial pressure decreases the venous return.

scleral v. plexus a ring of small vessels around the corneal limbus which forms a link in the chain of vessels which drain the aqueous humor. Called also canal of Schlemm in primates.

v. sinuses see dural venous **sinus**.

v. system the bodily system of veins commencing at the capillaries, venules and sinuses, thence through tributaries to the large veins and concluding with the venae cavae.

v. thrombosis the presence of a thrombus in a vein. Originates in phlebitis in most cases. It is a major problem in horses because of the high incidence of jugular phlebitis and periphlebitis as a result of injection of irritating materials. See also **vena** caval thrombosis.

venovenostomy [*ve"no-ve-nos'tə-me*] phlebophlebostomy.

vent [*vent*] an opening or outlet, such as an opening that discharges pus, or the anus. In dogs, used to describe the area around the anus and in bitches also the vulva. Most appropriate use is the cloaca of birds.

cloacal v. the external opening to the cloaca. Comparable to the anus in mammals.

v. disease see **spirochetosis** (2).

v. gleet a chronic disease of the cloaca of domestic birds. Characterized by fouling of the feathers around the vent with exudate, and the presence of a diphtheritic membrane on the cloacal mucosa at the external orifice and a copious evil-smelling discharge.

v. picking the commonest and most severe of the cannibalistic vices of housed birds; most common in high producing pullet flocks probably related to the passage of large eggs causing some tearing of tissues at the vent. Other birds may cause fatal injury by picking at the part.

venter [*ven'tər*] pl. *ventres* [L.] 1. any belly-shaped part; a fleshy contractible part of a muscle. 2. the abdomen. 3. a hollowed part or cavity.

Ventilago viminalis Australian plant in the family Rhamnaceae; a tree used as a fodder for sheep but contains hydrolysable tannins and causes poisoning if it is fed for a long period. Brown urine, stiff gait and convulsions are the prominent signs. The poison in the plant is tannin. Called also supple jack.

ventilation [*ven"tĭ-la'shən*] renewal or exchange of gas in an enclosed space. 1. the process or act of supplying a building or part of it continuously with fresh air. 2. in respiratory physiology, the process of exchange of air between the lungs and the ambient air. *Pulmonary ventilation* (usually measured in liters per minute) refers to the total exchange, whereas *alveolar ventilation* refers to the effective ventilation of the alveoli, where gas exchange with the blood takes place. See also **air** movement.

alveolar v. the amount of gas expelled from the alveoli to the outside of the body per minute.

artificial v. see artificial **respiration**.

assisted v. the depth of spontaneous ventilation is augmented by the anesthetist, as by squeezing the rebreathing bag.

controlled v. breathing is done entirely by a mechanical device or the anesthetist squeezing the rebreathing bag such that inspiration is not initiated by the patient.

dead space v. see dead **space**.

high frequency v. mechanical ventilation that delivers gas at more than four times the normal rate of breathing.

intermittent mandatory v. (IMV) a type of mechanical ventilation in which the **ventilator** is set to deliver a prescribed tidal volume at specified intervals and a high-flow gas system permits the patient to breathe spontaneously between cycles. The ventilator rate is set to maintain the patient's $P_a\mathbf{CO_2}$ at normal levels and is reduced gradually to zero as the patient's condition improves.

intermittent positive-pressure v. (IPPV) the provision of mechanical ventilation by a machine designed to deliver breathing gas until equilibrium is established between the patient's lungs and the **ventilator**. IPPV machines are positive-pressure, pressure-cycled, assister-controller (pneumatic) devices. Because of their compact size with some designs capable of operating independently of an electrical current, the IPPV machines have the most widespread applicability in the employment of a form of treatment called **intermittent** positive-pressure breathing.

maximal voluntary v. (MVV) the maximal volume that can be exhaled per minute by the patient breathing as rapidly and deeply as possible.

mechanical v. that accomplished by extrinsic means.

minute v. the total amount of gas (in liters) expelled from the lungs per minute.

v. mismatch mismatches of ventilation and blood flow, as in chronic obstructive lung disease, are a common cause of hypoxemia. Called also ventilation-perfusion mismatch or V/Q mismatch.

natural v. ventilation without the use of artificially induced energy and the machines which it drives; the forces used are wind and the exchange of heat from within the barn and the external air, controlled by ventilation devices in the walls and the ceiling.

v.:perfusion ratio the ratio of air ventilation to the blood perfused. Called also V_A/Q. The degree of oxygenation of the blood and the proportional excretion of CO_2 are both dependent on both variables being optimal.

positive pressure v. administration of oxygen under pressure, usually by use of an anesthetic bag or mechanical ventilator. See also **continuous positive airway pressure**, **positive** end-expiratory pressure.

spontaneous v. breathing without the assistance of any ventilator or mechanical device.

total v. the amount of air moved out of (or into) the airways and alveoli over a specified time period.

ventilator [*ven"tĭ-la'tər*] an apparatus designed to control air or oxygen enriched mixtures that is/are breathed through it or to either intermittently or continuously assist or control pulmonary ventilation; called also respirator. Use of a mechanical ventilator is indicated as a supportive measure in patients suffering from respiratory paralysis and in those with ventilatory failure manifested by either alveolar hypoventilation or distributive **hypoxia**, or both. It is a major activity in human nursing but of almost no importance in animals except for anesthetic purposes. See also **Bird ventilator**, **Cambridge ventilator**, **Flomasta ventilator**, **Manley ventilator**, **Minivent ventilator**, North American **Dräger**.

automatic v. a small, simple machine used for small animal anesthesia; fits any continuous flow anesthetic apparatus.

ventilatory [*ven'tĭ-lə-tor"e*] pertaining to or emanating from pulmonary ventilation.

VetBooks.ir

v. failure respiratory acidosis.

ventilometry measurement of the volume of tidal volume; used in critical care.

ventplasty surgical treatment for chronically prolapsed cloaca where the vent sphincter has become atonic.

ventrad [*ven'trad*] toward a belly, venter or ventral aspect.

ventral [*ven'trəl*] 1. pertaining to the abdomen or to any venter. 2. directed toward or situated on the belly surface; opposite of dorsal.

v. coccygeal myotomy tail setting operation in horses. See also **nicking** (2).

v. cord syndrome localized injury to the ventral portion of the spinal cord, characterized by complete paralysis and hypalgesia and hypesthesia up to the level of the lesion, but with relative preservation of dorsal column sensations of touch, position and vibration.

v. edema obvious swelling along ventral belly wall, may reach from brisket to pelvic brim, pits on pressure, so does urine from a leaking urethra. Manifestation of general edema due to congestive heart failure, hypoproteinemia, or to late pregnancy with compression on venous return by uterus and fetus.

v. funiculus nervous tissue white matter lying between the ventral columns of gray matter in the spinal cord.

v. respiratory group that part of the respiratory center which is located in the ventral medulla oblongata.

ventralis [*vən-tra'lis*] [L.] *ventral*.

ventr(i)- see **ventr(o)-**.

ventricle [*ven'trĭ-kəl*] a small cavity or chamber, as in the brain or heart.

cardiac v. the single fetal cardiac ventricle, formed by the looping of the bulboventricle; divided later by the growth of the interventricular septum as a projection from the wall of the bulboventricle.

fifth v. the median cleft between the two laminae of the brain's septum lucidum.

fourth v. a median, horizontally disposed, rhomboid cavity in the hindbrain, between the cerebellum and medulla, containing cerebrospinal fluid.

laryngeal v. a variably developed cavity of the larynx that opens into the laryngeal vestibule by a cleft between the vestibular and vocal folds; well developed in dogs and horses and especially certain apes.

lateral v. one of two cavities, one in each cerebral hemisphere, derived from the cavity of the embryonic neural tube, containing cerebrospinal fluid and communicating with the third ventricle.

left v. the ventral chamber of the left side of the heart, which pumps oxygenated blood out through the aorta to most tissues of the body.

pineal v. an extension of the third ventricle into the stalk of the pineal body. More properly called the pineal recess, *recessus pinealis*. In addition there is a suprapineal recess, a larger extension of the third ventricle that is located caudodorsal to the pineal gland.

right v. the ventral chamber of the right side of the heart, which pumps venous blood through the pulmonary trunk and arteries to the capillaries of the lung.

third v. a vertically disposed, ring-shaped space within the diencephalon between the two thalami that contains cerebrospinal fluid and which communicates anteriorly with the two lateral ventricles and caudally with the fourth ventricle via the cerebral aqueduct.

ventricornu the ventral horn of gray matter in the spinal cord.

ventricular [*ven-trik'u-lər*] pertaining to a ventricle.

v. assist device a circulatory support device consisting of a pump with afferent and efferent conduits attached to the left ventricular apex and the ascending aorta, respectively, each conduit containing a porcine valve to ensure unidirectional blood flow; the pump rests on the external chest wall and is connected to an external pneumatic power source and control circuit.

v. bands folds of mucosa, parallel and craniolateral to the vocal cords. Called also false vocal cords, vestibular folds.

double right v. outlet a cardiac anomaly rarely seen in animals in which both the aorta and pulmonary artery arise from the right ventricle and there is a defect in the ventricular septum.

excessive v. moderator bands a rare syndrome of cardiomyopathy in cats caused by an excessive number of moderator bands in the left ventricle, extending from the papillary muscles to the ventricular septum.

v. extrasystoles see ventricular **extrasystole**.

v. fibrillation see ventricular **fibrillation**.

v. function curve see **Starling curves**.

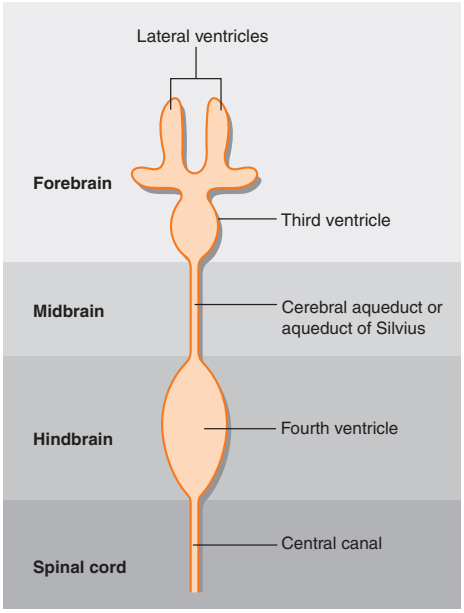
v. hypertrophy see ventricular **hypertrophy**.

v. outflow obstruction flow of blood from the ventricles is impaired by lesions or congenital abnormalities in the outflow tract. This is usually associated with hypertrophy of the ventricle and can be demonstrated with echocardiography or contract radiography. *Left outflow obstruction* occurs with stenosis and other anomalies of the aorta; *right outflow obstruction* occurs with pulmonic stenosis, pulmonic insufficiency, tetralogy of Fallot, and double-chambered right ventricle.

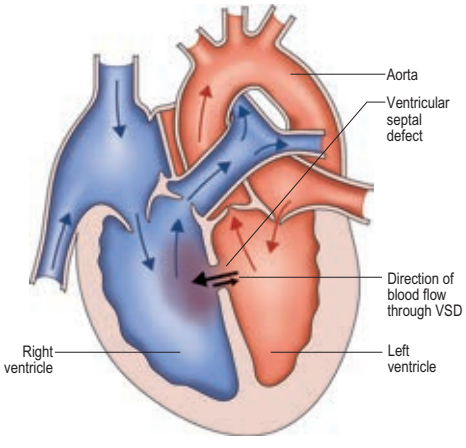
v. premature contraction (VPC) see **premature** heartbeats.

v. rupture due to focal weakness causes sudden death due to cardiac tamponade.

v. septal defect (VSD) a congenital heart defect in which there is persistent patency of the ventricular septum in either the muscular or fibrous portion most often due to failure of the bulbar septum to completely close the interventricular foramen. The defect permits flow of blood directly from one ventricle to the other. There is a systolic murmur with a palpable thrill on the right or both sides of the chest, dyspnea and poor exercise tolerance. Some forms are inherited in goats and cattle. One of the most common congenital defects in cats. A predisposition has been described in English springer spaniels, Keeshounds and English bulldogs.



V-8: Ventricular system of the brain.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.



V-9: Schematic representation of a ventricular septal defect (VSD).
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

v. septum the muscular wall between the ventricles. A small section, between the aortic vestibule and the right atrium, is membranous. Failure of the septum to close completely during fetal growth causes a septal or subaortic defect.
v. shortening fraction in echocardiography, the percentage change in diameter from diastole to systole. Calculated from the internal systolic and diastolic dimensions. It is a measure of mycocardial function.
v. slice method a method for examination of fixed heart by cutting it into 0.5 inch thick slices, perpendicular to the plane of the ventricular septum, from apex to base. Useful in examination of myocardial lesions and cardiomyopathy.
v. tachycardia is manifested by a high heart rate with or without arrhythmia. In both cases there is severe cardiac disease and often acute heart failure.
ventriculectomy removal of the mucosa lining the lateral ventricles of the larynx for the relief of laryngeal hemiplegia in horses. The operation is performed through a laryngotomy incision in the cricothyroid membrane. It may be supplemented by the insertion of a laryngeal prosthesis.
ventriculitis [*ven-trik"u-li'tis*] inflammation of a ventricle, especially a cerebral ventricle.
ventriculoatriostomy [*ven-trik"u-lo-a"tre-os'tə-me*] introduction of a catheter with a one-way valve to drain cerebrospinal fluid from a cerebral ventricle to the right atrium via the jugular vein, for relief of hydrocephalus.
ventriculocisternostomy [*ven-trik"u-lo-sis"tər-nos'tə-me*] surgical creation of a communication between the third ventricle and the interpeduncular cistern, for drainage of cerebrospinal fluid.
ventriculocordectomy punch resection of the vocal cords. See also **debarking**, **devocalization**.
ventriculogram [*ven-trik'u-lo-gram*] a radiograph of the cerebral ventricles.
ventriculography [*ven-trik"u-log'rə-fe*] 1. radiography of the cerebral ventricles after introduction of air or other contrast medium. Called also pneumoventriculogram. 2. radiography of a ventricle of the heart after injection of a contrast medium.
ventriculomegaly [*ven-trik"u-lo-meg'ə-le*] enlargement of the ventricles of the brain which may or may not be pathological in nature. See also **hydrocephalus**.
ventriculometry [*ven-trik"u-lom'ə-tre*] measurement of intracranial pressure.
ventriculonector the bundle of His.
ventriculopuncture [*ven-trik'u-lo-pungk"chər*] surgical puncture of a lateral ventricle of the brain.
ventriculoscopy [*ven-trik"u-los'kə-pe*] endoscopic examination of the cerebral ventricles.
ventriculostomy [*ven-trik"u-los'tə-me*] surgical creation of a free communication between the third ventricle and the interpeduncular cistern for relief of hydrocephalus.
ventriculosubarachnoid [*ven-trik"u-lo-sub"ə-rak'noid*] pertaining to the cerebral ventricles and subarachnoid space.
ventriculotomy [*ven-trik"u-lot'ə-me*] incision of a ventricle of the heart or the ventriculus of a bird.
ventriculus [*ven-trik'u-ləs*] pl. *ventriculi* [L.] 1. the avian stomach; the **gizzard**; otherwise, a rarely used synonym for the stomach. 2. a ventricle.
ventricumbent [*ven"trĭ-kum'bənt*] prone; lying on the belly.
ventriduct [*ven'trĭ-dukt*] to bring or carry ventrad.
ventriflexion [*ven"trĭ-flek'shən*] ventral flexion of the neck so that the head is carried near the knees.
ventrimeson [*vən-trim'ə-son*] the median line on the ventral surface.
ventr(o)- word element. [L.] *belly, front (anterior) aspect of the body, ventral aspect.*
ventrodorsal view [*ven"tro-dor'səl*] the X-ray beam enters the animal ventrally and exits dorsally; usually taken with the animal lying on its back.
ventrofixation [*ven"tro-fik-sa'shən*] fixation of a viscus, e.g. the uterus, to the abdominal wall; ventrosuspension.
ventroflexion flexion of the cervical spine with movement of the head towards the ventrum; a clinical feature of **thiamine** nutritional deficiency and other causes of muscle weakness, particularly in cats.
ventrohysteropexy [*ven"tro-his'tər-o-pek"se*] ventral fixation of the uterus.
ventrolateral [*ven"tro-lat'ər-əl*] both ventral and lateral.
ventromedial [*ven"tro-me'de-əl*] pertaining to the ventral aspect and the midline.
ventroscopy [*ven-tros'kə-pe*] illumination of the abdominal cavity for purposes of examination.
ventrose [*ven'trōs*] having a belly-like expansion.
ventrosuspension [*ven"tro-səs-pen'shən*] ventrofixation.
ventrotomy [*ven-trot'ə-me*] celiotomy.
venturi [*ven-too're*] a tube with a decrease in the inside diameter that is used to increase the flow velocity of the fluid and thereby cause a pressure drop; used to measure the flow velocity (a *venturimeter*) or to draw another fluid into the stream.
v. mask a type of disposable mask used to deliver a controlled oxygen concentration to a patient. The flow of 100% oxygen through the venturi draws in a controlled amount of room air (21% oxygen). Commonly available masks deliver 24, 28, 31, 35 or 40% oxygen.
v. nebulizer a type of nebulizer used in **aerosol** therapy. The pressure drop of gas flowing through the venturi draws liquid from a capillary tube. As the liquid enters the gas stream it breaks up into a spray of small droplets.
venula [*ven'u-lə*] pl. *venulae* [L.] venule.
venule [*ven'ūl*] any of the small vessels that collect blood from the capillary plexuses and join to form veins.
VEP visual evoked potential.
verapamil [*və-rap'ə-mil*] a calcium channel blocking agent used as a vasodilator and in the treatment of cardiac arrhythmias.
veratralbine a poisonous substance in plants of the genus *Veratrum*.
veratramine a potentially teratogenic alkaloid in the plant *Veratrum californicum*.
veratridine an alkaloid from plants in the Liliaceae family that acts as a neurotoxin by activating sodium ion channels; used topically for relief of pain.
veratroidine one of the poisonous substances in the plant *Veratrum album*.
veratrosine teratogenic steroidal alkaloid found in *Veratrum* spp.
Veratrum a genus of the Liliaceae family of plants.
V. album contain alkaloids including protoveratrine, jervine, rubijervine, pseudojervine, veratroidine, veratralbine. Several alkaloids are extracted and used in therapeutic preparations. Poisoning by these plants causes salivation, purgation, vomiting, diuresis, excitability followed by paralysis and recumbency, then convulsions and death. Called also white hellebore, white veratrum, European veratrum.
V. californicum a poisonous weed which causes a number of congenital abnormalities especially congenital cyclopean deformity, prolonged gestation and absence of the pituitary gland in ruminants. The teratogen is cyclopamine. Called also skunk cabbage, western hellebore, false hellebore, corn-lily.
V. viride several alkaloid extracts are combined in the preparation alkavir, used as a rumenatoric and a hypotensive agent. Called also green veratrum, green hellebore, American hellebore.
veratrum common name applied to plants in the genus ***Veratrum***. Includes green veratrum (*V. viride*), white veratrum (*V. album*).
Verbascum a potentially poisonous genus of plants in the family Scrophulariaceae. The plants contain cardiac glycosides similar to digitalis but poisoning is not recorded. Called also mullein.
Verbena a genus of plants in the family Verbenaceae.
V. bonariensis called also purple top; suspected of causing sickness and abortion in cattle.
V. officinalis contains a glycoside verbenalin reputed to cause contraction of the uterus and photosensitization. Called also common vervain.
V. rigida thought to cause photosensitization. Called also *Verbena venosa*, wild verbena.
V. tenuisecta see ***Glandularia aristigera***
verbena plants in the genus *Verbena*; includes veined or wild verbena (*V. rigida*). Called also vervains.
verbenalin toxic glycoside found in *Verbena officinalis*.
Verbesina encelioides a plant of North American origin in the family Asteraceae known to contain toxic amounts of galegine. Death is sudden, often without clinical signs, but there may be a brief period of dyspnea, bloat, mouth-breathing, frothing at the mouth and cyanosis. Necropsy lesions include pulmonary edema and hydrothorax. Called also crown beard.
Verbrugge clamp a strongly built, scissortype bone clamp with ratcheted handles and sideways curving blades that have

horizontal, semicircular, deeply ridged attachments to the end suited to grasping a long bone.

vercuronim an intermediate-acting nondepolarizing muscle relaxant.

verge [vərj] an edge, circumference or ring.

anal v. the opening of the anus on the surface of the body.

vergence [vur'jəns] disjunctive movement of the eyes in opposite directions in adjusting to near or far vision; further defined as convergence or divergence.

vermeerbos [Af.] see ***Geigeria***.

vermeeric acid the poisonous substance in the plant *Geigeria* spp.

vermeersiekte [Af.] poisoning by *Geigeria* spp. Called also vomiting sickness.

vermicide [vur'mĭ-sīd] an agent lethal to worms or intestinal animal parasites.

vermicular [vər-mik'u-lər] wormlike in shape or appearance.

vermiculation [vər-mik"u-la'shən] peristaltic motion; peristalsis.

vermiculous [vər-mik'u-ləs] 1. wormlike. 2. infected with worms.

vermiform [vur'mĭ-form] worm-shaped.

vermifugal [vər-mif'u-gəl] expelling worms or intestinal animal parasites.

vermifuge [vur'mĭ-fūj] any agent that expels the worms or intestinal animal parasites; an anthelmintic.

vermin [vur'min] any vertebrate or invertebrate animals of an objectionable kind.

vermination [vur"mĭ-na'shən] infestation with vermin or infection with worms.

verminous [vur'mĭ-nəs] pertaining to, due to, or abounding in worms or in vermin.

v. aneurysm see verminous mesenteric arteritis (below).

v. bronchitis see **lungworm**.

v. encephalitis is caused by migration of *Strongylus vulgaris* or larvae. The effect is one of paralysis due to destruction of nervous tissue. See also **brain** trauma, **neurofilariasis**.

v. mesenteric arteritis is caused by migrating *Strongylus vulgaris* larvae. There is arteritis, sometimes with substantial thrombosis, at the root of the mesenteric artery. Defective blood supply to the intestine results and causes intermittent colic, sometimes terminal infarction. See also thromboembolic **colic**.

v. pneumonia see **lungworm**.

Vermipsylla a genus of fleas in the order Siphonaptera.

V. alacurt, V. dorcadia, V. ioffi, V. perplexa found on sheep, goats, other ruminants and horses.

vermis [vur'mis] [L.] a worm, or wormlike structure.

v. cerebelli the median part of the cerebellum, between the two hemispheres.

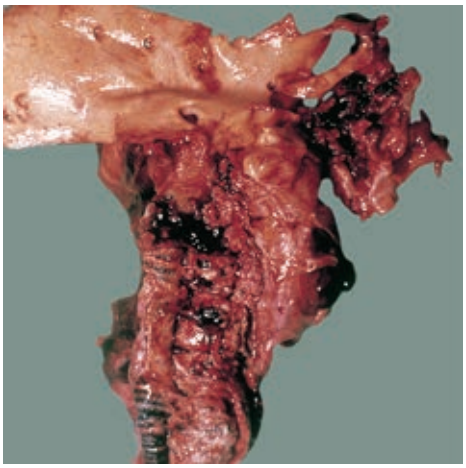
nodule of v. the part of the vermis of the cerebellum, on the ventral surface, where the inferior medullary velum attaches.

pyramid of v. the part of the vermis cerebelli between the tuber vermis and the uvula.

Vermont strain of Merino sheep with deep skin folding developed in the US.

Vernicia see ***Aleurites***.

vernix [vur'niks] [L.] *varnish*.



V-10: Verminous arteritis of teh anterior mesenteric artery of a horse.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

v. caseosa the unctuous substance composed of sebum and desquamated epithelial cells, covering the skin of the fetus.

Vero cell a continuous cell line used in tissue cultures, particularly in virology; orginally isolated from the kidneys of an African green monkey.

vernolate a thiocarbamate herbicide which may cause poisoning if there is accidental access to it. Causes anorexia, weight loss, muscle weakness and hairlessness.

Vernonia plant genus of the Asteraceae family; probably contains a toxic sesquiterpene; causes liver damage, incoordination, recumbency, convulsions. Includes *V. mollisima*, *V. myriantha (V. ampla)*, *V. nudiflora*, *V. rubricaulis*, *V. squarrosa*.

Verocay body [ver'o-ka] a group of uniform, fusiform cells arranged in whorls, herringbones or palisades. Found in Schwann-cell tumors.

verocytotoxin [ver"o-si'to-tok"sin] see **shiga-like toxins**.

verotoxin [ver'o-tok"sin] see **shiga-like toxins**.

verruca [və-roo'kə] pl. *verrucae* [L.] 1. a wart. See also **papilloma**, **fibropapilloma**. 2. one of the wart-like elevations on the endocardium in various types of endocarditis.

v. plana flat warts.

verrucarin [və-roo'kə-rin] a toxic metabolite produced by the fungus ***Stachybotrys atra***.

verruciform [və-roo'sĭ-form] wart-like.

verrucose, verrucous [və-roo'kōs, və-roo'kəs] rough, warty.

v. dermatitis a proliferative inflammatory lesion on the back of the pastern from the bulb of the heel to fetlock of cattle. Caused by *Fusobacterium necrophorum*. Occurs in muddy overcrowded conditions. See also strawberry **footrot**.

v. pododermatitis verrucose dermatitis extending onto the bulbs of the heel.

verruculogen tremorgenic mycotoxin produced by *Penicillium* spp. fungus.

verruga [və-roo'gə] wart. Called also verruca.

Versa clip see Versa **clip**.

version [vur'zhən] the act of turning; especially the manual turning of the fetus in delivery.

vertebra [vur'tə-brə] pl. *vertebrae* [L.] any of the separate segments comprising the spine (vertebral column). See also **spine**, **vertebral**. The vertebrae support the body and provide the protective bony corridor through which the spinal cord passes. The number of bones in the vertebral column varies with the animal species and even within each species. Average numbers are given in Table 10. The compression-resisting portion of a typical vertebra is the vertebral body, the most ventral portion. This is a cylindrical structure that is separated from the vertebral bodies in front and behind by disks of cartilage and fibrous tissue. These intervertebral disks act as cushions to spread and absorb the mechanical shock during body movements. See also slipped **disk**. A semicircular arch of bone protrudes from the dorsum of each vertebral body, surrounding the spinal cord. Directly in its midline a bony projection, the spinous process, grows upward from the arch. Three pairs of outgrowths project from the arch. One of these (the transverse processes) protrudes horizontally on each side and in the thorax connects with the ribs. The remaining two (the cranial and caudal articular processes) form joints with the vertebrae in front and behind. The joints permit the spine to bend flexibly. The vertebrae are held firmly in place by a series of strong ligaments.

anticlinal v. 1. the vertebra whose spinous process is directed vertically at which point the backward slope of the cranial vertebrae changes to a forward inclination. Is usually the sixteenth thoracic vertebra in the horse. 2. (improperly) the diaphragmatic vertebra.

block v. anomalous development in which two or more vertebrae are fused.

butterfly v. anomalous development of a vertebra that is nearly divided in half by a longitudinal defect; caused by the persistence of the sagittal membrane remnant of the notochord. The vertebral body resembles a butterfly on ventrodorsal radiographs.

caudal v. coccygeal vertebrae.

cranial v. the segments of the skull and facial bones, regarded by some as modified vertebrae.

v. dentata the second cervical vertebra, or axis.

diaphragmatic v. the vertebra which marks the transition between those located cranially with a thoracic type of articular

VetBooks.ir

facet and those located caudally with a lumbar type. It is often the same vertebra as the anticlinal vertebra (above).
false v. those vertebrae which normally fuse with adjoining segments such as the sacral vertebrae or the human coccygeal vertebrae.
v. magnum the sacrum.
odontoid v. the second cervical vertebra, or axis.
opisthocoelus v. a vertebra with a concave caudal surface to the body, such as the cervical vertebrae of horses and cattle.
v. plana a condition of spondylitis in which the body of the vertebra is reduced to a sclerotic disk.
transitional v. a vertebra at the junction of two regions, e.g. lumbar and sacral, which partially take on the characteristics of the arch and articular processes of the adjacent section.
true v. those segments of the vertebral column that normally remain unfused throughout life: the cervical, thoracic, lumbar and coccygeal vertebrae.
wedge v. hemivertebra.

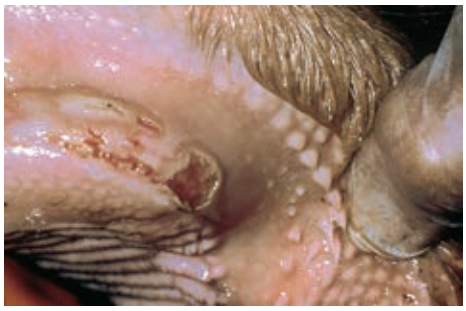
vertebral [*ver'tə-brəl*] of or pertaining to a vertebra.
v. abscess commonly associated with navel infection in the young. Usually infection delivered by the hematogenous route to the cervical or lumbar vertebral bodies or to meninges. Compression of the spinal cord by the abscess or a pathological fracture causes paraplegia or quadriplegia depending on location. See also vertebral osteomyelitis (below).
v. asymmetry a contributing factor in **enzootic** equine incoordination.
v. body see **vertebra**.
v. body osteosclerosis occurs together with vertebral osteophyte development in old bulls with thyroid C-cell tumors.
v. canal see spinal **canal**.
v. column see spinal **column**.
complex v. malformation (CVM) a recently recognized autosomal recessive lethal defect in Holstein cattle. Produces early embryonic death, late term abortions, premature birth and neonatal mortality in liveborn calves. The morphological expression of CVM is wide but vertebral (cervical and thoracic) malformation and arthrogryposis (carpal and tarsal joints) are almost always present. Vertebral malformations may be clinically apparent in some calves and can be detected by radiography. A wide spectrum of other congenital defects may be present. Defects are the result of a point mutation in the SLC35A3 gene. An elite Holstein-Friesian bull born in 1974 was the main ancestor of cattle carrying this mutation and was extensively used for two decades. The defect is widespread in the Holstein breed.
v. curves the cervical, thoracic and lumbar curves.
v. exostosis may be the result of fractures, and in pigs, hypovitaminosis A. May cause compression of spinal cord and paralysis.
v. fracture often due to minor trauma in bone weakened by osteoporosis or osteomyelitis. In neonates may be dystocia-related. Usually causes acute onset of flaccid paralysis.
v. heart scale (VHS) see vertebral **heart** scale.
v. instability see **cervical** spondylomyelopathy (wobbler syndrome).
v. joints are of two types, symphyseal between the vertebral bodies, and synovial between the facets of the neural arch.
v. malformation includes block vertebra and defective alignment such as scoliosis, kyphosis, torticollis. See also complex vertebral malformation (above).
v. osteomyelitis usually results from hematogenous bacterial spread from omphalophlebitis in young animals. Causes pathological fracture causing acute paralysis, or spinal cord abscess causing slower onset paralysis.
v. osteophytes see **spondylosis** deformans.
v. stenosis compression of the spinal cord by a vertebral canal which has too small a diameter.
v. subluxation largely restricted to the cervical vertebrae where looser ligaments permit more intervertebral movement.

vertebrarium the spine, or vertebral column.
Vertebrata [*vur"tə-bra'tə*] a subphylum of the Chordata, comprising all animals having a vertebral column, including mammals, birds, reptiles, amphibians and fish.
vertebrate [*vur'tə-brāt*] 1. having a vertebral column. 2. an animal with a vertebral column; any member of the subphylum Vertebrata.
vertebrectomy [*ver"tə-brek'tə-me*] excision of a vertebra.
vertebr(o)- word element. [L.] *vertebra, spine.*
vertebrobasilar [*vur"tə-bro-bas'ĭ-lər*] pertaining to or affecting the vertebral and basilar arteries.
vertebrochondral [*vur"tə-bro-kon'drəl*] pertaining to a vertebra and a costal cartilage.
vertebrocostal [*vur"tə-bro-kos'təl*] pertaining to a vertebra and a rib.
vertebrogenic [*vur"tə-bro-jen'ik*] arising in a vertebra or in the vertebral column.
vertebrosternal [*vur"tə-bro-stur'nəl*] pertaining to a vertebra and the sternum.
vertex [*vur'teks*] the summit or top, especially the top of the head.
v. corneae central part of the cornea.
vertical [*vur'tĭ-kəl*] 1. perpendicular to the plane of the horizon. 2. relating to the vertex.
v. beam the radiographic technique in which the X-ray beam enters the surface of the recumbent animal at right angles.
verticalis [*vur"tĭ-ka'lis*] [L.] *vertical.*
verticillate [*vər-tis'ĭ-lāt*] arranged in whorls.
Verticillium a genus of fungi which are normally plant, insect, nematode or arachnid pathogens. Opportunistic infection in mammals have been reported.
vertigraphy [*vər-tig'rə-fe*] body-section radiography.
verumontanitis [*ver"u-mon"tə-ni'tis*] inflammation of the verumontanum.
verumontanum [*ver"u-mon-ta'nəm*] see seminal **colliculus**.
vervain any member of the family Verbenaceae, e.g. ***Verbena officinalis***.
very low density lipoprotein see **lipoprotein**.
vesica [*və-si'kə*] pl. *vesicae* [L.] bladder.
v. fellea see **gallbladder**.
v. urinaria see **urinary bladder**.
vesical [*ves'ĭ-kəl*] pertaining to or emanating from the urinary bladder.
vesicant [*ves'ĭ-kənt*] 1. producing blisters. 2. an agent that produces blisters.
vesication [*ves"ĭ-ka'shən*] 1. the process of blistering. 2. a blistered spot or surface.
vesicle [*ves'ĭ-kəl*] 1. a small bladder or sac containing liquid. 2. a small circumscribed elevation of the epidermis containing a serous fluid; a small blister. See also **vesicular** disease.
auditory v. a detached ovoid sac formed by closure of the auditory pit in the early embryo, from which the percipient parts of the inner ear develop.
brain v's the five divisions of the closed neural tube in the developing embryo, including the telencephalon, diencephalon, mesencephalon, metencephalon and myelencephalon.
chorionic v. see **chorionic** vesicle.
clear v. neuronal vesicles which occur in neuronal terminals in which acetylcholine is the transmitter.
coated v. see **coated pits**.
compound v. multilocular vesicle.
dense core v. neuronal vesicles which occur in neuronal terminals in which norepinephrine or other catecholamine is the transmitter. Called also granular vesicle.
encephalic v's brain vesicles.
germinal v. the fluid-filled nucleus of an oocyte toward the end of prophase of its meiotic division.
granular v. see dense core vesicle (above).
lens v. a vesicle formed from the lens pit of the embryo, developing into the crystalline lens.
matrix v's vesicles found in hyaline cartilage; are starting points for growth plate mineralization.
multilocular v. a vesicle with multiple chambers or compartments.
olfactory v. 1. the vesicle in the embryo which later develops into the olfactory bulb and tract. 2. a bulbous expansion at the distal end of an olfactory cell, from which the olfactory hairs project.
otic v. auditory vesicle.
pinocytotic v's vesicles which appear in vascular endothelium; may participate in transcapillary movement of macromolecules.
primary brain v's the three earlier subdivisions of the embryonic neural tube, including the forebrain, midbrain and hindbrain.
secondary brain v's the four brain vesicles formed by specialization of the forebrain and of the hindbrain in later embryonic development.
secretory v's vesicles found in rough excretory endoplasm of cells.

V

seminal v's paired sacculated pouches that overlie the urinary bladder in the males of all domestic species except the dog; in some, the pouch is a simple sac, in others a compound acinous gland, and in some the duct of each joins the ipsilateral ductus deferens to form the ejaculatory duct. In the boar and stallion it produces a bulky ejaculate. Called also **vesicular** gland and *glandula vesicularis*.
transfer v's vesicles found in rough endoplasmic reticulum of cells.
transport v. membrane bound vesicle, pinched off from endoplasmic reticulum, containing macromolecules to be transported to other parts of the cell.
umbilical v. the pear-shaped expansion of the yolk sac growing out into the cavity of the chorion, joined to the midgut by the yolk stalk.

vesic(o)- word element. [L.] *blister, bladder*.
vesicocele [*ves"ĭ-ko-sēl"*] hernia of the bladder.
vesicocervical [*ves"ĭ-ko-sur'vĭ-kəl*] pertaining to the bladder and cervix uteri.
vesicoclysis [*ves"ĭ-kok'lĭ-sis*] introduction of fluid into the bladder.
vesicoenteric, vesicointestinal [*ves"ĭ-ko-en-ter'ik, ves"ĭ-ko-in-tes'tĭ-nəl*] pertaining to or communicating with the urinary bladder and intestine.
vesicoprostatic [*ves"ĭ-ko-pros-tat'ik*] pertaining to the bladder and prostate.
vesicopubic [*ves"ĭ-ko-pu'bik*] pertaining to the bladder and the pubic area.
vesicopuncture cystocentesis.
vesicopustular [*ves"ĭ-ko-pus'choo-lər*] involving vesicles and pustules.
vesicopustule [*ves"ĭ-ko-pus'tūl*] a lesion of the epidermis consisting of a vesicle containing inflammatory cells.
vesicospinal [*ves"ĭ-ko-spi'nəl*] pertaining to the bladder and spine.
vesicostomy [*ves"ĭ-kos'tə-me*] the formation of an opening into the bladder; cystostomy.
cutaneous v. surgical anastomosis of the bladder mucosa to an opening in the abdominal skin, creating a stoma for bladder drainage.
vesicotomy [*ves"ĭ-kot'ə-me*] incision into the bladder. In most cases the procedure is done to divert the flow of urine when the bladder can no longer function as a reservoir. After incising the bladder the surgeon moves it forward and sutures the bladder opening to the skin, forming a **stoma**.
vesicourachal [*ves"ĭ-ko-u'rə-kəl*] pertaining to the urinary bladder and the urachus.
v. diverticulum persistence of a segment of the urachal canal between the apex of the bladder and the umbilicus; present as a protrusion at the vertex of the bladder. It may predispose to recurrent urinary tract infection and urolith formation.
vesicoureteral, vesicoureteric pertaining to the bladder and ureter.
v. valve in the wall of the bladder where the ureter enters; prevents reflux of the urine from bladder to ureter.
vesicouterine [*ves"ĭ-ko-u'tər-in*] pertaining to the bladder and uterus.
vesicovaginal [*ves"ĭ-ko-u"tər-o-vaj'ĭ-nəl*] pertaining to the bladder and vagina.
vesicula [*və-sik'u-lə*] pl. *vesiculae* [L.] vesicle.
vesicular [*və-sik'u-lər*] 1. composed of or relating to small, saclike bodies. 2. pertaining to or made up of vesicles on the skin.
avian v. dermatitis vesicles on the skin of the feet and toes and occasionally on the head, on all birds; caused usually by photosensitization.
v. disease a group of diseases of cloven-footed animals of major importance because of their high infectivity. See **foot-and-mouth disease**, vesicular stomatitis and vesicular exanthema of swine (below), **swine** vesicular disease, poisoning by the mushroom **Amanita** and **furocoumarin**.
v. emphysema see **alveolar emphysema**.
v. exanthema of swine an acute febrile disease caused by a calicivirus, genus *Vesivirus*. The clinical syndrome is one of vesicular stomatitis, with lesions occurring also on the coronets. The disease only ever appeared periodically in the USA, probably originating from feeding meat from marine animals, and was eradicated in 1959.
v. gland an accessory sex gland of all male domestic animals, except the dog. It mostly consists of a much-coiled tube that exits at the seminal colliculus in the urethra.



V-11: Ruptured vesicles on the oral mucosa of a calf with vesicular stomatitis infection. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

v. murmur, v. sounds the soft, sibilant sounds heard by stethoscopic auscultation over the lung parenchyma. They are caused by air moving in and out of the terminal bronchioles and are an expression of normality of the lung tissue. Called also vesicular murmur.
v. stomatitis (VS) an arthropod-borne viral disease principally of cattle, horses and swine, caused by a vesiculovirus, and characterized by vesiculation and ulceration of the oral cavity, but lesions can also occur on the feet and teats. Endemic in southern Mexico, Central America, northern South America, and eastern Brazil with periodic incursion and epidemic disease in the southwestern states of the USA The two prevalent serotypes in the Americas are New Jersey (VSV-NJ), the important agricultural animal pathogen, and Indiana (VSV-Ind). A disease notifiable to the OIE (see Table 22).
swine v. disease see **swine** vesicular disease.
v. vaginitis see infectious pustular **vulvovaginitis**.
v. venereal disease see infectious pustular **vulvovaginitis**.
vesiculation [*və-sik"u-la'shən*] formation of vesicles.
vesiculectomy [*və-sik"u-lek'tə-me*] excision of a vesicle, especially the seminal vesicle.
vesiculiform shaped like a vesicle.
vesiculitis [*və-sik"u-li'tis*] inflammation of a vesicle, especially a seminal vesicle. See **seminal** vesiculitis.
vesiculocavernous [*və-sik"u-lo-kav'ər-nəs*] both vesicular and cavernous.
vesiculogram [*və-sik'u-lo-gram"*] a radiograph of the seminal vesicles.
vesiculography [*və-sik"u-log'rə-fe*] radiography of the seminal vesicles.
vesiculopapular [*və-sik"u-lo-pap'u-lər*] marked by or having the characteristics of vesicles and papules.
vesiculopustular [*və-sik"u-lo-pus'tu-lər*] marked by or having the characteristics of vesicles and pustules.
vesiculotomy [*və-sik"u-lot'ə-me*] incision into a vesicle, especially the seminal vesicles.
vesiculotympanic [*və-sik"u-lo-tim-pan'ik*] having both a vesicular and tympanic quality; said of percussion sounds.
Vesiculovirus a genus in the family ***Rhabdoviridae***; includes the vesicular stomatitis virus.
Vesivirus a genus in the family *Caliciviridae*; includes feline calicivirus, vesicular exanthema of swine virus, and San Miguel sea lion virus.
vessel [*ves'əl*] any channel for carrying a fluid, such as blood or lymph. See also **vas**.
absorbent v's lymphatic vessels.
blood v. any of the vessels conveying the blood; an artery, arteriole, vein, venule or capillary.
collateral v. 1. a vessel that complements that provided by another vessel, a nerve, or other structure. 2. a vessel important in establishing and maintaining a collateral circulation.
great v's the large vessels entering the heart, including the aorta, the pulmonary arteries and veins, and the venae cavae.
lacteal v's those that take up chyle from the intestinal wall during digestion.
lymphatic v's the capillaries, collecting vessels, and trunks that collect lymph from the tissues and carry it to lymph nodes or the bloodstream.
nutrient v's vessels supplying nutritive elements to special organs and tissues, e.g. arteries entering the substance of bone or the walls of large blood vessels.
vest-over-pants suture pattern an interrupted horizontal mattress pattern. Tissues to be sutured are overlapped instead of meeting

VetBooks.ir

end to end. Interrupted sutures pass through both layers at both edges.

Vestia foetida plant in the family Solanaceae cultivated in gardens; has poisoned cattle in South America and goats in New Zealand. Called also *V. lycioides*, huevil.

vestibular [*ves-tib'u-lər*] 1. pertaining to any vestibule. 2. pertaining to the vestibular organ.

v. apparatus includes the vestibular organ and the vestibular branch of the vestibulocochlear nerve.

canine idiopathic v. syndrome seen in aged dogs, characterized by the sudden onset of head tilt, nystagmus, rolling, falling and circling, often with considerable distress. The cause is unknown, but a peripheral vestibular lesion is suspected. Signs usually regress within a few days. Called also geriatric vestibular syndrome, 'stroke'.

feline v. syndrome an acute onset of head tilt, rolling and nystagmus in cats of all ages. There is usually rapid improvement over a few days. The cause is unknown. Has been called lizard poisoning.

geriatric v. syndrome see canine idiopathic vestibular syndrome (above).

v. gland glands found in the wall of the female vaginal vestibule, made up of the minor vestibular glands, branched, microscopic tubular glands that are abundant in the bitch, and the major vesitbular glands of cats, cattle and sheep. Called also *glandulae vestibulares minores* and *glandula vestibularis major*. See **Bartholin's glands**.

v. membrane one of the membranes subdividing the osseous labyrinth into three compartments.

v. organ the part of the membranous labyrinth of the inner ear concerned with the sense of balance. It consists of the membranous saccule and utricle and the semicircular canals. The semicircular canals contain balance end organs called cristae and the saccule and utricle contain similar end organs called maculae. Called also vestibular labyrinth.

paradoxical v. syndrome vestibular signs of head tilt and ataxia to the side opposite the lesion. Occurs as a result of lesions in either the caudal cerebellar peduncles or flocculonodular lobe of the cerebellum.

v. syndrome signs of head tilt, nystagmus and falling or rolling to one side as a result of lesions of the peripheral nervous system, the central nervous system or occasionally cerebellum. See also vestibular **ataxia**, canine idiopathic vestibular syndrome (above), feline vestibular syndrome (above).

v. system see vestibular apparatus (above).

v. window see oval **window**.

vestibule [*ves'tĭ-būl*] a space or cavity at the entrance to another structure.

aortic v. the portion of the left ventricle just below the aortic valve.

buccal v. see oral vestibule (below).

ear v. see **vestibular** apparatus.

labial v. see oral vestibule (below).

laryngeal v. the part of the larynx between the entrance (aditus laryngis) and the vocal folds (rima glottidis).

mouth v. see oral vestibule (below).

nasal v. the anterior part of the nasal cavity where the nasolacrimal duct opens.

oral v. the portion of the oral cavity bounded on the one side by teeth and gingivae, or the residual alveolar ridges, and on the other by the lips (labial vestibule) and cheeks (buccal vestibule).

pharyngeal v. 1. the fauces. 2. oropharynx.

vaginal v. see **vaginal** vestibule.

vestibulocerebellar tract one of the afferent sets of fibers passing to the cerebellum.

vestibulocochlear [*ves-tib"u-lo-kok'le-ər*] pertaining to the eighth cranial nerve. See also Table 14. The vestibular division serves the vestibule of the ear and the semicircular canals, carrying impulses for equilibrium. The cochlear division serves the cochlea and carries impulses for the sense of hearing. Called also acoustic nerve and auditory nerve.

v. nerve see Table 14.

v. nerve paralysis manifested by defective hearing if the cochlear nerve is damaged, or rotation, loss of balance and falling to one side if the cochlear branch is the affected one.

v. nerve root granuloma in calves a chronic inflammatory lesion causing facial paralysis and loss of balance.

v. nucleus a series of at least five nuclei on each side of the brainstem, three vestibular and two cochlear.

vestibulogenic [*vəs-tib"u-lo-jen'ik*] arising in a vestibule, as that of the ear.

vestibulo-ocular [*vəs-tib"u-lo-ok'u-lər*] pertaining to the vestibular and oculomotor nerves; or to the maintenance of visual stability during head movements.

vestibuloplasty [*vəs-tib'u-lo-plas"te*] surgical modification of gingiva–mucous membrane relationships in the vestibule of the mouth.

vestibulospinal tract [*vəs-tib'u-lo-spi'nəl*] a system of descending nerve fibers in the ventral funiculus of the spinal cord.

vestibulotomy [*vəs-tib"u-lot'ə-me*] incision into the vestibule of the inner ear.

vestibulourethral [*vəs-tib"u-lo-u-re'thrəl*] pertaining to vestibule of the vagina and the urethra.

vestibulovaginitis inflammation of the vaginal vestibule.

vestibulovaginoplasty plastic surgery of the vaginal vestibule. Used to correct hypoplasia of the vagina.

vestibulum [*vəs-tib'u-ləm*] pl. *vestibula* [L.] vestibule.

vestige [*ves'tij*] the remnant of a structure that functioned in a previous stage of species or individual development.

vestigial reproductive tissue [*vəs-tij'e-əl*] includes in the male—paradidymis, epididymal appendage, appendix testis, prostatic utricle, uterus masculinus; in the female—epoophoron, aberrant ductules, paroophoron, vesicular appendage, Gartner's duct.

vestigium [*vəs-tĭ'je-əm*] pl. *vestigia* [L.] vestige.

vet [*vet"*] common idiomatic version of veterinarian.

Vetafil trade name for polymerized caprolactam, a synthetic, white, plastic-coated, nonabsorbable suture material which is very popular in veterinary surgery. Designed for external use but is also used as a buried nonabsorbable suture.

vetch [*vech*] legumes in the genera *Lathyrus*, *Vicia*, *Astragalus*. Includes alkali milk vetch (*A. racemosus*), bitter vetch (*V. emilia*), broadleaf or hairy vetch (*V. villosa*), chickling or green vetch (*L. sativus*), crown vetch (*Coronilla varia*), kelsey milk vetch (*A. atropubescens*), milk vetch (*A.* spp.), narrow-leafed vetch (*V. sativa* var. *angustifolia*), poison vetch (*A.* spp., *Oxytropis* spp.), popany vetch (*V. benghalensis*), Spanish vetch (*V. benghalensis*), timber milk vetch (*A. miser*), two-grooved milk vetch (*A. bisulcatus*), Wasatch milk vetch (*A. miser* var. *oblongifolius*), winter vetch (*V. villosa*), woolly-pod vetch (*V. dasycarpa*).

vetchling legumes in the genus *Lathyrus*. Includes grass vetchling (*L. nissolia*), yellow vetchling (*L. aphaca*).

veterinarian [*vet"ər-ĭ-nar'e-ən*] a person trained and licensed to practice veterinary medicine and surgery; a doctor of veterinary medicine.

Veterinarian-Client-Patient Relationship (VCPR) a relationship that must be met by a veterinarian in the USA prior to any therapy being administered to the animal(s). Similar requirements exist in other countries. A valid VCPR requires: that the veterinarian takes responsibility for medical and treatment judgments for the animal(s) and that the client agrees to follow the veterinarian's instructions; that the veterinarian has close knowledge of the animal(s) and their medical condition obtained by examination and premise visit; that the veterinarian be available for follow up visits or has emergency coverage in the event of adverse reactions or failure of the treatment regimen.

veterinary [*vet'ər-ĭ-nar"e*] 1. pertaining to domestic animals and their diseases. 2. vernacular for veterinarian.

v. academy an association of veterinarians with a common interest that may be species, discipline, therapy or otherwise oriented (examples are beef cattle, nutrition, pharmacology, homeopathy, etc.). With most, there is no post-graduate education required for membership, other than experience and an interest in the academy's purpose. Most offer meetings, newsletters and continuing education as a major reason for the existence of the academy and for membership. Some publish professional journals.

v. assistant 1. a veterinarian employed in a practice on a salary or on performance pay. 2. paraveterinary personnel with a variety of trainings including veterinary nurses, laboratory technicians, laboratory animal technicians, animal attendants. There are often no formal educational requirements for veterinary assistants. They receive on-the-job training only.

v. certificate a certificate by a veterinarian relating to matters within the scope of veterinary medicine. Include certificates of soundness, more commonly these days a presale certificate, of

VetBooks.ir

freedom of products from diseased tissue, of vaccination or surgical alteration.

v. clinic 1. the title indicates that the establishment has the necessary facilities for the examination and treatment of animals but not necessarily ward accommodation and 24 hour surveillance. 2. the study of disease by direct examination of the living patient.

v. degree awarded by a university at the completion of a degree course in veterinary medicine and accepted in many countries as sufficient evidence of competence to practice, in others as sufficient to entitle the person to sit for the qualifying or board examination. The important degree, and the one on which registration to practice is based, is the first or primary degree. A postgraduate degree has no relevance to the registration procedure.

v. dermatology the study of the diseases of the skin of animals.

v. drugs medicines used in the treatment of animals. It is an important point in law that medicines used to treat animals should be registered by the relevant local authority, e.g. the Food and Drug Administration, for use in animals. The use of unregistered medicines could disadvantage the veterinarian if the outcome of the particular case was unfavorable and the client resorted to law to recoup any losses and is illegal in animals intended for food. See also **Veterinary Medicines Act**.

v. emergency clinic a facility specifically operated, staffed and equipped to provide emergency service, with at least one veterinarian, usually several, and support staff on the premises during hours of operation which are usually outside the normal business hours of general veterinary practices. Patients are normally transferred to the primary care veterinarian the next working day or as soon as the patient's condition permits. Used by veterinary practices as referral practices for emergency and out-of-hours surgical cases, and for critical care which cannot be provided at the primary veterinary practice.

v. emergency service veterinary services provided at the patient's domicile or the veterinarian's premises for sick and injured patients when the emergency arises; the traditional and preponderant form of service provided by veterinarians everywhere.

v. farm visits veterinary services provided to patients on their home farm, the traditional form of veterinary service to farm livestock.

v. hospital the title indicates that the establishment has all of the facilities available including surgery, radiology, clinical pathology, dispensary and ward accommodation and provision for 24 hour surveillance of patients. In some jurisdictions, the minimum standards are set by the Veterinary Board. On a larger scale, there are also accreditation schemes for hospitals of a superior standard, such as that of the American Animal Hospital Association .

v. internal medicine the study of the diseases of the internal organs of animals.

v. investigation centers the system in the UK of regional veterinary laboratories dedicated to the study and diagnosis of the diseases of animals in the region. See **Veterinary Laboratories Agency**.

v. license the license to practice awarded by the registering authority of the country, state or province on the basis of the applicant's university degree and, in some regions, requiring the applicant to pass a state or provincial board examination as a requirement for practice. Usually awarded annually to provide an opportunity for a periodic review of the candidate's capability. Most licensing authorities require a certain number of hours of accredited professional continuing education for the continuation of a license.

v. medical education includes undergraduate courses at universities, postgraduate courses either degree or diploma courses at universities or continuing professional education courses run by professional organizations such as associations and colleges.

v. nurse (VN) see veterinary technicians (below) and **animal** nurses.

v. pharmacology the study of medicines used in the treatment of animals.

v. pharmacology industry the private companies and corporations which operate for the purpose of developing, manufacturing and selling medicines for use in animals. In some countries all of this work is done by government corporations and commissions rather than privately owned organizations.

v. physician a veterinarian who practices medicine as distinct from surgery; one who deals with medical diseases and not surgical diseases. This is not a common form of practice amongst veterinarians.

v. practice defined by the American Veterinary Medical Association as the act to diagnose, treat, correct, change, alleviate, or prevent animal disease, illness, pain, deformity, defect, injury, or other physical, dental, or mental conditions by any method or mode; including: the prescription, dispensing, administration, or application of any drug, medicine, biologic, apparatus, anesthetic, or other therapeutic or diagnostic substance or medical or surgical technique, or the use of complementary, alternative, and integrative therapies, or the use of any manual or mechanical procedure for reproductive management, or the rendering of advice or recommendation by any means including telephonic and other electronic communications with regard to any of the above. To represent, directly or indirectly, publicly or privately, an ability and willingness to do an act described above. To use any title, words, abbreviation, or letters in a manner or under circumstances that induce the belief that the person using them is qualified to do any act above.

v. practice act the codes or laws of an individual state or province responsible for regulating the practice of veterinary medicine.

v. practitioner a registered veterinarian in practice on his/her own account and earning income as fees for service rendered, or a veterinarian employed by another veterinarian who is so employed.

v. profession all of the veterinarians. Usually qualified in terms of area, e.g. country or international. See also **profession** (2).

v. science the study of the diseases and health maintenance of animals. This can only be a generalization because veterinary science is really what veterinarians do and are trained to do. In some countries this includes what in other countries is classified as animal husbandry, especially the nutrition and breeding of farm animals and in the context of production efficiency unrelated to the health of the animals.

v. services includes veterinary practice, further subdivided into primary accession, consultant or specialist, advisory, contract, species specialist, government veterinary services in a preventive veterinary context, trouble-shooting services to back up services such as artificial insemination, drug and feed sales and domiciliary or house-call practice.

v. specialists veterinarians who provide services to other veterinarians in special areas, e.g. surgery, ophthalmology, radiology, anesthesiology, pathology, theriogenology and internal medicine, and at a higher level of expertise than the general practitioner could attempt to provide. In North America, designation as a specialist is limited to Diplomates of the specialty colleges recognized by the American Veterinary Medical Association. In other countries, recognition may require specific, qualifications-based registration as a specialist in order to use the title.

V. State Board set up under the registering Act to administer it. The constitution varies from elected veterinarians to veterinarians appointed by government, to a mixture of appointed and elected veterinarians and nonveterinarians. The function of the Board is to ensure that the level of veterinary professional service to the community is at the level that the public desires and the government authorizes.

v. surgeon 1. any qualified veterinarian. 2. a veterinarian providing specialist surgical services to other veterinarians.

V. Surgeons Act legislation to empower a Veterinary Board to regulate the provision of veterinary services to the community. Called also veterinary practice act.

v. surgery the study of the surgical diseases (those dealt with principally by surgical means) of animals.

v. technician veterinary paraprofessionals; in the USA veterinary technicians have a two- or three-year associate degree from an American Veterinary Medical Association (AVMA)- or Canadian Veterinary Medical Association (CVMA)-accredited community college program in veterinary technology in which courses are taught in clinical and laboratory settings using live animals. In general, this training will allow them to sit for an accrediting examination in the state where this training was taken. All veterinary technicians work under the supervision of a licensed veterinarian. In many other countries, called veterinary nurses and the training and qualifications can be tiered with two or three year certificate or diploma programs.

VetBooks.ir

v. technologist used in the USA where veterinary technologist programs are longer than those for a veterinary technician and culminates in a 4-year bachelor's degree in veterinary technology. Graduation from an American Veterinary Medical Association (AVMA)- or Canadian Veterinary Medical Association (CVMA)-accredited veterinary technology program allows students to take the credentialing examination in any state in the USA. In other countries, terminology and requirements may vary, but many are similar to those in North America.
v. technology science and art of providing all aspects of professional medical care and treatment for animals with the exception of diagnosis, prognosis, surgery and prescription.
v. toxicology the study of the poisons and poisonings affecting animals.
Veterinary Board where the practice of veterinary medicine is regulated by law, an authority comprised of veterinarians and lay members, responsible for the registration and licensing of a veterinarian to practice in that jurisdiction, for the requirements for continuing licensure, and for adjudicating complaints against veterinarians brought to the Board by the general public.
Veterinary Council of Ireland (VCI) a statutory body that regulates and manages the practice of veterinary medicine and veterinary nursing in Ireland.
Veterinary Council of New Zealand (VCNZ) the government body responsible for regulating the practice of veterinary medicine in New Zealand. It manages the registration of veterinarians, promotes standards of professional education and professional conduct, and hears and determines complaints against veterinarians.
Veterinary Feed Directive (VFD) Drug a drug that requires a lawful VFD issued by a licensed veterinarian before it can be incorporated in animal feed and fed to animals.
Veterinary Information Network (VIN) an electronic resource for veterinarians with reference material and continuing professional education. (www.vin.com)
Veterinary Internship and Residency Matching Program (VIRMP) program of the American Association of Veterinary Clinicians that matches applicants for internship and residency training programs with institutions or private practices based on their previously declared mutual level of interest. Commonly abbreviated to 'matching program'.
Veterinary Laboratories Agency (VLA) an executive agency of the Department for Environment, Food and Rural Affairs (Defra) in the UK consisting of a central laboratory, which is primarily research and developmental, and a network of regional diagnostic laboratories for animal disease surveillance and diagnosis. Produces summary reports for publication in the Veterinary Record of major diseases encountered in the 16 veterinary diagnostic laboratories in England and Wales.
Veterinary Medical Assistance Team disaster response teams consisting of veterinarians, technicians and support personnel supported by the American Veterinary Medical Foundation.
veterinary medicine [*vet'ər-ĭ-nar"e med'ĭ-sin*] the study of the diseases of animals including their diagnosis, prevention and treatment. Nowadays this is supplemented by the study of the medicine of herds and flocks as units.
clinical v. m. the study of disease by direct examination of the living patient.
emergency v. m. that specialty which deals with the acutely ill or injured animal which requires immediate veterinary treatment.
experimental v. m. study of the science of healing diseases based on experimentation in animals.
forensic v. m. the application of veterinary knowledge to questions of law; in human medicine this is an important subject, called also medical jurisprudence, legal medicine. There is no real counterpart in veterinary science or veterinary medical education, except that most veterinary colleges teach a small segment on the subject.
group v. m. the practice of veterinary medicine by a group of veterinarians, usually representing various specialties, who are associated together for the cooperative diagnosis, treatment and prevention of disease.
internal v. m. that dealing especially with diagnosis and medical treatment of diseases and disorders of internal structures of the body.
legal v. m. see forensic veterinary medicine (above).
nuclear v. m. that branch of veterinary medicine concerned with the use of radionuclides in the diagnosis and treatment of disease.
patent v. m. a drug or remedy protected by a trademark, available without a prescription.
physical v. m. that branch of veterinary medicine using physical agents in the diagnosis and treatment of disease. It includes the use of heat, cold, light, water, electricity, manipulation, massage, exercise and mechanical devices.
preclinical v. m. the subjects studied in veterinary medicine before the student observes actual diseases in patients.
preventive v. m. science aimed at preventing disease.
proprietary v. m. any chemical, drug, or similar preparation used in the treatment of diseases, if such article is protected against free competition as to name, product, composition or process of manufacture by secrecy, patent, trademark, or copyright or by other means.
space v. m. that branch of aviation medicine concerned with conditions to be encountered by animals in space.
sports v. m. the field of veterinary medicine concerned with injuries sustained in athletic endeavors, including their prevention, diagnosis and treatment.
state v. m. veterinary medical services supplied by the government.
tropical v. m. veterinary medical science as applied to diseases occurring primarily in the tropics and subtropics.
Veterinary Medicines Act regulates how veterinary medicines are authorized, manufactured, supplied and used in the UK. The Veterinary Medicines Directorate (VMD) is the regulatory authority that looks at responsible, safe and effective use of veterinary medicines. The organization defines a medicine as 'a substance or combination of substances presented as having properties for treating or preventing disease in animals'. All products that make a claim to do this must be licensed by the VMD who must be satisfied with the portfolio of information provided to support the safety, quality and efficacy of the product and these medicines can be identified by a 'Vm' or marketing authorization number on the pack.
Veterinary Record the journal of the British Veterinary Association.
vexillum see **vane**.
v-fib ventricular fibrillation.
VFA volatile fatty acids.
VHS vertebral **heart** scale.
via pl. *viae* [L.] way; channel.
viability [*vi"ə-bil'ĭ-te*] the state or quality of being viable.
viable [*vi'ə-bəl*] able to maintain an independent existence; able to live after birth.
vial [*vi'əl*] a small bottle.
vibesate a modified polyvinyl plastic applied topically as a spray to form an occlusive dressing for surgical wounds and other surface lesions.
vibex [*vi'beks*] pl. *vibices* [L.] a narrow linear mark or streak; a linear subcutaneous effusion of blood.
Viborg's triangle an area bounded rostrally by the vertical border of the mandibular ramus, dorsally by the tendinous insertion of the sternomandibularis muscle and ventrally by the linguofacial vein. One of the approaches to the guttural pouch for surgical intervention.
vibratile [*vi'brə-til*] swaying or moving to and fro; vibratory.
vibration [*vi-bra'shən*] 1. a rapid movement to and fro; oscillation. 2. the shaking of the body as a therapeutic measure. 3. a form of massage.
vibrator [*vi'bra-tər*] an apparatus used in vibratory treatment.
vibratory [*vi'brə-tor"e*] vibrating or causing vibration; vibritile.
Vibrio a genus of gram-negative, short, motile, curved or straight rods in the family *Vibrionaceae* of bacteria. Microaerophilic species are now classified as *Campylobacter* spp.
V. aestuarianus* subsp. *francensis a pathogen of oysters.
V. anguillarum causes disease in freshwater and marine fish and eels. Now classified as *Listonella anguillarum*.
V. cholerae the cause of cholera in humans.
V. coli, V. fetus see ***Campylobacter***.
V. ichthyoenteri causes intestinal necrosis in Japanese flounder larvae.
V. meleagridis isolated from sinuses of turkeys with sinusitis. Not a recognized bacterial species.

V

VetBooks.ir

V. metchnikovii found in the intestine of humans and birds; causes a cholera-like enteritis.
V. ordalii a cause of vibriosis in fish.
V. parahaemolyticus found in sea foods; causes enteritis in humans.
V. pectenicida a pathogen of scallop larvae.
V. penaeicida a pathogen of kuruma prawns (*Penaeus japonicus*).
V. salmonicida the cause of cold-water vibriosis in farmed marine fish species.
V. tubiashii a pathogen of bivalve molluscs.

vibrio an organism of the genus *Vibrio*, or other spiral motile organism.

vibriocidal [*vib"re-o-si'dəl*] destructive to organisms of the genus *Vibrio*.

vibrion septique [Fr.] see **malignant edema**.

vibrionic an etiological qualification used in disease names and relating to bacteria which were at one time classified as *Vibrio* spp. but are now classified as ***Campylobacter***.
v. abortion an historic name for abortion in sheep now recognized as being caused by *Campylobacter fetus* subsp. *fetus* or *C. jejuni* and abortion in cattle caused by *C. fetus* subsp. *fetus* and *C. fetus* subsp. *venerealis* and several other *Campylobacter* spp. (including *C. sputorum, C. hyointestinalis, C. jejuni* and *C. coli*). See campylobacter **abortion**.
v. dysentery an historic name; see **swine** dysentery, **winter dysentery**.

vibriosis [*vib"re-o'sis*] disease caused by infection with *Vibrio* or *Campylobacter* spp.
bovine v. see bovine genital **campylobacteriosis**.
canine v. see canine **campylobacteriosis**.
fish v. a variety of infections in fish, of especial importance in the aquaculture industry. Includes infections by *Vibrio anguillarum*, *V. damsel, V. ordalii*, *V. salmonicida* (cold-water vibriosis). See also **Hitra disease**, **shell disease**.

vibrissa [*vi-bris'ə*] pl. *vibrissae* [L.] 1. one of the hairs growing on the skin that extends into nostrils and on the skin about the nose (muzzle) of an animal. 2. any large tactile hair, but especially the regular array of sinus hairs born on the upper lip of many mammals that can be waved or 'whiskered'. See 'whisking'.

vibrocardiogram [*vi"bro kahr'de-o-gram"*] the record produced by vibrocardiography.

vibrocardiography [*vi"bro kahr"de-og'rə-fe*] graphic recording of vibrations of the chest wall of relatively high frequency that are produced by the action of the heart.

vibrotherapeutics [*vi"bro ther"ə-pu'tiks*] the therapeutic use of vibrating appliances.

vice habitual abnormal behavior of a destructive kind. It is most common in horses, pigs and chickens but may occur in any species if the animals are kept in confined spaces. See **crib**-biting, **weaving**, **pica**, **tail** biting, **ear** sucking, **toe** picking.

Vicia plant genus of the legume family Fabaceae; contains fodder plants that can be poisonous in a variety of ways. Called also vetch.
V. benghalensis unidentified toxin causes diarrhea, dermatitis, dyspnea and widespread eosinophilic granulomas; called also popany vetch.
V. dasycarpa see *V. villosa* (below).
V. ervilia contains an unidentified toxin, possibly a lathyrogen, which causes depression, vomiting, incoordination, and coma in pigs. Causes lathyrism in humans. Called also *Ervum ervilia, Ervilia sativa*, bastard lentil, bitter vetch.
V. faba reports of illness are confined to humans and are characterized by a toxic hepatitis. Called also broad bean.
V. nigricans reported to cause liver damage and photosensitization in horses.
V. sativa contains a cyanogenetic glycoside and also causes liver damage and photosensitization.
V. sativa* var. *angustifolia contains the lathyrogenic agent β-cyano-L-alanine; also causes cyanide poisoning manifested by incoordination, recumbency, tremor and convulsions.
V. villosa reported to cause a syndrome of dermatitis, conjunctivitis and diarrhea, with widespread eosinophilic granulomas in cattle. Includes *V. villosa* subsp. *dasycarpa*. Called also hairy vetch, woolly pod vetch.

viciousness a vice in animals, most commonly mentioned about stallions; **aggression** directed at people.

vick ***Palicourea marcgravii***.

vicryl [*vi'krəl*] synthetic, slowly absorbed surgical suture material made of copolymer of lactide and glycolide, available as a braided suture.

Victoria blue stain a stain to demonstrate ***Brachyspira*** *hyodysenteriae*.

Vicugna vicugna see **vicuña**.

vicuña a wild South American camelid (*Vicugna vigugna*), believed the ancestor of the domesticated alpaca. Smallest member of the camelid family with a very fine fleece fiber. Endangered species fast disappearing because of uncontrolled hunting. Their fiber is much in demand for heavy fabrics.
paco v. crossbred between vicuña and alpaca.

vidarabine [*vi-dar'ə-bēn*] a purine analog, adenine arabinoside (ara-A), that inhibits DNA synthesis; used as an antiviral agent to treat herpesvirus infection.

video auction an auction in which the livestock remain on the farm. The buyers and auctioneer are in one place and bid on the basis of a display on a video tape and screen.

videoendoscope [*vid"e-o-en'do-skōp*] a flexible endoscope in which the visual image is collected and transmitted as an electrical signal from a sensor at the tip of the endoscope directly to a video processor.

videognosis [*vid"e-og-no'sis*] diagnosis based on the interpretation of radiograms transmitted by television techniques to a radiological center.

videoradiography an X-ray system in which the image obtained by intensification fluoroscopy is displayed on a television screen or recorded on videotape.

vidian canal [*vid'e-ən*] see pterygoid **canal**.

Vietnamese pot-bellied pig originated from the small Chinese pigs with swayed backs and pendulous abdomens and have similar physical characteristics. See also miniature **pig**.

viewing box, viewer the appliance used for examining radiographs; consists of a box and two fluorescent tubes under a sheet of white glass.

Vigna unguiculata plant in the legume family Fabaceae; high-protein legume; used as hay or the seed is used as a concentrate feed. Can cause nitrate–nitrite poisoning. Called also *V. catjang*, *V. sesquipedalis*, *V. sinensis*, cowpea, black-eyed pea.

vignetting a grid fault in X-ray technology causing areas of peripheral underexposure.

Viguiera North American plant genus in the family Asteraceae; can cause nitrate-nitrite poisoning of ruminants; includes *V. annua* (annual goldeneye), *V. multiflora* (showy goldeneye).

villi [*vil'i*] [L.] plural of *villus*.

villin [*vil'in*] a protein binding the actin filaments of microvillar cores.

villitis [*vĭ-li'tis*] coronitis.

villonodular [*vil"o-nod'u-lər*] characterized by a villous and nodular thickening.
v. synovitis see villonodular **synovitis**.

villose [*vil'ōs*] shaggy with soft hairs; covered with villi.

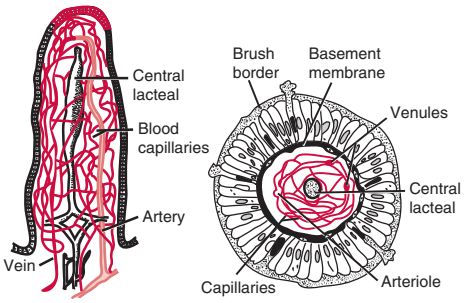
villositis [*vil"o-si'tis*] a bacterial disease with alterations in the villi of the placenta.

villosity [*vĭ-los'ĭ-te*] 1. condition of being covered with villi. 2. a villus.

villous [*vil'əs*] pertaining to or emanating from villi.
v. atrophy reduction in size of the villi of the intestinal mucosa due to loss of the epithelial cells. Occurs as a primary lesion in gluten-sensitive enteropathy of Irish setters and idioathic canine villous atrophy of German shepherds, and secondary to enteric virus infections (rotavirus and coronavirus) and diffuse intestinal diseases. Intestinal malabsorption, small bowel diarrhea and weight loss occur.

villus [*vil'əs*] pl. *villi* [L.] a small process or protrusion, as from the free surface of a membrane.
arachnoid v. microscopic projections of the arachnoid into some of the dural venous sinuses. Called also arachnoid granulations, *granulationes arachnoideales*, Pachioni's granulations.
chorionic v. threadlike projections originally occurring uniformly over the external surface of the chorion.
intestinal v. multitudinous threadlike projections covering the surface of the mucous membrane lining the small intestine, serving as the sites of absorption of fluids and nutrients.
synovial v. slender projections from the surface of the synovial membrane into the cavity of a joint; called also haversian glands.

VetBooks.ir



V-12: Organization of an intestinal villus. From Guyton AC, Hall JE, Textbook of Medical Physiology, 10th Edition. Saunders, 2000.

villusectomy [*vil"əs-ek'tə-me*] synovectomy; excision of a synovial villus.

vimentin [*vi-men'tin*] one of the Type II 1F proteins in the cytoskeleton; enmeshes the cell nucleus.

VIN Veterinary Information Network.

vinblastine [*vin-blas'tēn*] a vinca alkaloid used as an antineoplastic usually in combination with other, similar agents.

Vinca [*vin'kə*] plant genus in the family Apocynaceae family; contain indole and other alkaloids and may cause diarrhea; includes *V. major* (blue periwinkle), *V. minor* (common periwinkle, running myrtle).

V. rosea see ***Cantharanthus roseus***.

vinca alkaloids a group of alkaloids, including vinblastine and vincristine, extracted from the periwinkle plant (*Vinca rosea*), which arrest cell division in metaphase by disrupting the microtubules that form the spindle apparatus; used as antineoplastic agents.

vincamine [*vin'kə-mēn*] an alkaloid found in *Vinca* spp.

Vincent's angina, V's disease gingivostomatitis caused by extension to the oral mucosa of necrotizing ulcerative gingivitis (**trench mouth**), characterized by ulceration, pseudomembrane formation and odor, with lesions involving the palate or pharynx as well as the oral mucosa. Called also Vincent's disease, Vincent's gingivitis, necrotizing ulcerative gingivostomatitis, chronic ulcerative paradental stomatitis.

vincristine [*vin-kris'tēn*] a vinca alkaloid used as an antineoplastic in the treatment of lymphomas in dogs and cats and for other neoplasms, often in combination with other antineoplastic agents.

vinculum [*ving'ku-ləm*] pl. *vincula* [L.] a band or bandlike structure.

v. lingulae one of the lobules of the rostral lobe of the cerebellum.

v. tendinum filaments that connect the outer and inner sleeves of a synovial sheath that sometimes contain nutrient vessels for the sheath or the tendon itself.

vine tree see ***Ventilago viminalis***.

vinyl [*vi'nəl*] the univalent group, CH_2CH, from vinyl alcohol. A common radical in the production of plastic materials such as polyvinyl chloride (PVC).

1,5-vinyl-2-thioxazolidone an antithyroid substance found in the seeds of rape, kale, cabbage, turnips and other members of the *Brassica* spp.

violet [*vi'o-lət*] the reddish blue color produced by the shortest rays of the visible spectrum.

crystal v., gentian v., methyl v. see **gentian** violet.

viomellin nephrotoxin produced by several strains of *Penicillium* spp. fungus.

VIP vasoactive intestinal peptide.

viper [*vi'pər*] venomous snake in the family Viperidae; characterized by long, hinged fangs that are very efficient in injecting venom.

pit v. venomous snakes in the subfamily Crotalinae; they have a heat-sensing organs (pits) between the eyes and nostrils that assists in locating prey. Includes rattlesnake, copperhead, cottonmouth, adderand moccasin.

viperine [*vi'pər-in*] a snake of the family Viperidae. Their venom is mainly hemotoxic, causing intense local damage as well as general effects of paralysis. Includes the pit vipers (rattlesnake, moccasin) and the true vipers (puff adder, Russell's viper, English adder).

viper's bugloss ***Echium vulgare***.

purple v. b. ***Echium plantagineum***.

viral [*vi'rəl*] pertaining to or caused by a virus.

v. abortion see equine viral abortion (below). See also **equine** viral rhinopneumonitis, **equine** viral arteritis, **infectious** bovine rhinotracheitis.

v. arteritis see **equine** viral arteritis.

v. arthritis a contagious disease of chickens and turkeys caused by a reovirus and characterized by a high incidence of inapparent infection and some cases of joint swelling and lameness.

v. assembly final steps in the replication of viruses in which virions are assembled from their separately synthesized components. The final steps of viral maturation prior to release from the cell.

v. cultivation viruses grow only in living cells which in the laboratory are provided by embryonated hen eggs, cell culture, or laboratory animals (rabbits, mice, etc.).

v. diarrhea occurs in most species, especially in the newborn. In cattle, rotavirus and coronavirus are the common agents but bovine herpesvirus 1 and others may also be the cause in this age group. In older cattle **bovine** virus diarrhea (mucosal disease) is the major cause. Some other virus diseases may have diarrhea as an incidental sign, e.g. bovine malignant catarrhal fever. Coronaviruses and parvoviruses are common causes in dogs and cats. Noroviruses have been associated with diarrhea in animals, including pigs.

equine v. abortion caused by equine herpesvirus 1, sometimes equine herpesvirus 4. Abortion occurs in the last trimester and often involves a majority of mares in a group (abortion storm). See also **equine** viral rhinopneumonitis, **equine** viral arteritis.

v. hemorrhagic septicemia important rhabdoviral infection of rainbow trout. Also causes infection, and sometimes disease, in other salmonids, pike, turbot, Pacific cod and Pacific herring. Acute infection is characterized by hemorrhages and a high mortality. Chronic infection may be inapparent. A disease notifiable to the OIE (see Table 22).

v. hepatitis see **duck** hepatitis.

v. interstitial pneumonia caused by bovine syncytial virus (genus *Pneumovirus* in the *Paramyxoviridae* family), a common cause of interstitial pneumonia in all age cattle, especially calves.

v. ligand a receptor binding molecule on the surface of a virus. See also **ligand**.

v. papular dermatitis see **equine** papular dermatitis.

v. pneumonia see **enzootic** pneumonia.

v. pneumonia calf caused by parainfluenza-3 virus, bovine respiratory syncytial virus; infection with *Mycoplasma*, *Ureaplasma*, *Pasteurella* spp. may also accompany the viral infection.

v. recombination see **recombination**.

v. replication see **replication**.

v. teratogen see **Akabane virus** disease, **Aino virus** disease, **bovine** virus diarrhea, **Rift Valley fever**, **Wesselsbron disease**, **bluetongue**, **border disease**, **classical swine fever**, **feline** panleukopenia.

v. transcription see **transcription**.

viral nervous necrosis (VNN) an important disease of larval marine fish caused by nodaviruses; occurs worldwide and often causes mass mortality. Typical pathology is vacuolation of cells of the brain, retina and spinal cord.

-virales suffix denoting an order of viruses.

Virchow [*fēr'ko*] Rudolph Ludlow Karl Virchow, German pathologist (1821–1902).

V.-Robin space the potential perivascular space around the veins and arteries of the central nervous system.

V's. triad three factors leading to thrombosis: stasis, hypercoagulability and intimal change.

viremia [*vi-re'me-ə*] the presence of viruses in the blood either as free virus or a cell associated viremia. In generalized virus infections there may be local invasion, proliferation in regional lymph nodes, followed by primary viremia with dissemination to other tissues. For some infections there may be a secondary viremia followed by increasing tissue damage and severe clinical disease sometimes including spread of virus to the central nervous system or across the placenta to the fetus.

persistent v. virus can be isolated from the blood for periods longer than a few days.

virgin [*vir'jin*] 1. a female who has not had coitus. 2. in immunology, a **naive** lymphocyte.

virgin-soil epidemic one that occurs in a population that is largely susceptible.

Virginia creeper see ***Parthenocissus quinquefolia***.
virginiamycin [*vir-jin'yə-mi'sin*] an antibiotic mixture of virginiamycin M_1 and virginiamycin S_1, produced in cultures of *Streptomyces virginiae*; active against gram-positive cocci. Used mostly as a feed additive for pigs to promote growth.
viridicatum a nephrotoxic mycotoxin produced by *Aspergillus* and *Penicillium* spp.
viridin antibiotic substance obtained from *Gliocladium virens*; used as an antifungal agent.
virile [*vir'il*] 1. peculiar to men or the male sex. 2. possessing masculine traits, especially copulative power.
virilescence [*vir"ĭ-les'əns*] the development of male secondary sex characters in the female.
virilism [*vir'ĭ-liz-əm*] the presence of male characteristics in the female. See also **virilization**.
adrenal v. virilism caused by a tumor of the zona reticularis of the adrenal gland.
virility [*vĭ-ril'ĭ-te*] possession of normal primary sex characters in a male.
virilization [*vir"il-ĭ-za'shən*] induction or development of male secondary sex characters, especially the appearance of such changes in the female. Called also masculinization.
virino hypothesis an early, now obsolete, explanation for the etiopathogenesis of scrapie in which a small, unidentified nucleic acid genome was thought to be associated with a host membrane protein.
virion [*vi're-on*] a complete virus particle, found extracellularly and capable of surviving in metabolically inert form and able to infect other living cells. Minimally viruses are composed of a core of genetic material which may be either RNA or DNA, single- or double-stranded surrounded by a protein coat (capsid) which together constitute a nucleocapsid. Additionally some viruses have a lipoprotein envelope that surrounds the nucleocapsid.
VIRMP Veterinary Internship and Residency Matching Program.
virogene [*vi'ro-jēn*] viral antigen found in tumors from which infective virus cannot be isolated.
viroid [*vi'roid*] the smallest known infectious agent consisting of a small circular RNA molecule of only 300–400 nucleotides that replicates entirely by means of host enzymes since the viroid RNA codes for nothing. It causes a number of important diseases in plants but has not been identified in animals.
virokine a protein encoded by viruses which influence the host's response to infection.
virolactia [*vi"ro-lak'shə*] secretion of viruses in the milk.
virological pertaining to viruses.
virologist [*vi-rol'ə-jist*] microbiologist specializing in virology.
virology [*vi-rol'ə-je*] the study of viruses and viral diseases.
virome the entire set of viruses that are found in an organism; may include transient pathogenic viruses, latent virus infections, some of which are life long infections such as herpesviruses and endogenous retroviruses that as a double stranded DNA copy are integrated into the genome of the host.
virucidal, viricidal [*vi"rə-si'dəl, vi"rĭ-si'dəl*] capable of neutralizing or destroying a virus.
virucide [*vi'rə-sīd*] an agent that neutralizes or destroys a virus.
virulence [*vir'u-ləns*] the degree of pathogenicity of a microorganism as indicated by case fatality rates and/or its ability to invade the tissues of the host; the competence of any infectious agent to produce pathological effects.
v. alteration see **attenuation** (2).
viruliferous [*vir"u-lif'ər-əs*] conveying or producing a virus or other noxious agent.
virulin see **aggressin**.
viruria [*vir-oo're-ə*] the presence of viruses in the urine.
virus [*vi'rəs*] any member of a unique class of infectious agents, which were originally distinguished by their smallness (hence, they were described as 'filtrable' because of their ability to pass through bacteria-retaining filters) and their inability to replicate outside of a living host cell; because these properties are shared by certain bacteria (rickettsiae, chlamydiae), viruses are further characterized by their simple organization and their unique mode of replication. A virus consists of genetic material, which may be either DNA or RNA, and is surrounded by a protein coat and, in some viruses, by a membranous envelope. For a list of animal viruses and their classification see Table 21.1. Unlike cellular organisms, viruses do not contain all the biochemical mechanisms for their own replication; viruses replicate by using the biochemical mechanisms of a host cell to synthesize and assemble their separate components. When a complete virus particle (virion) comes in contact with a host cell, the viral nucleic acid and, in some viruses, a few enzymes are introduced into the host cell. Viruses vary in their stability; some such as poxviruses, parvoviruses, rotaviruses and enteric caliciviruses are very stable and survive well outside the body while others, particularly those viruses that are enveloped, such as herpesvirus, influenza virus, do not survive well and therefore usually require close contact for transmission and are readily destroyed by disinfectants, particularly those with a detergent action. Some viruses produce acute disease while others, sometimes referred to as slow viruses, such as retroviruses and lentiviruses and the non-virus scrapie prion, produce diseases which progress often to death over many years. Viruses in several families are transmitted by arthropod vectors.
v. amplification see **replication**.
arbor v. an incorrect, obsolete term for arbovirus.
attenuated v. one whose pathogenicity has been reduced by serial animal passage or other means. See also **attenuation** (2).
avianized v. see **avianized**.
bacterial v. one that is capable of producing transmissible lysis of bacteria. See also **bacteriophage**.
C-type v. see **C-type virus**.
Coxsackie v. coxsackievirus.
defective v. one that cannot be completely replicated or cannot form a protein coat or envelope; in some cases replication can proceed if missing gene functions are supplied by other viruses, termed helper virus (see below).
ECHO v. see **echovirus**.
enteric v. any virus infection of the gastrointestinal tract; see ***Enterovirus***.
enteric orphan v's orphan viruses isolated from the intestinal tract but not known to cause disease, hence *orphan.*
feline sarcoma v. see **feline** sarcoma virus.
filterable v., filtrable v. a pathogenic agent capable of passing through fine filters able to exclude bacteria; outdated terminology.
fixed v., v. fixé rabies virus whose virulence and incubation period have been stabilized by serial passage and have remained fixed during further transmission; used for inoculating animals from which rabies vaccine is prepared.
foaming v. feline syncytia-forming virus (FeSFV). So called because it causes foamy degeneration in feline cell cultures.
helper v. one that aids in the development of a defective virus by supplying or restoring the activity of the viral gene such as that forming the protein coat.
herpes v. herpesvirus.
human hepatitis v. infection of chimpanzees with some of the human hepatitis viruses can result in infection of human workers.
influenza v. any of a group of orthomyxoviruses that causes influenza. See **influenza**.
latent v. a noninfective state and is demonstrable by indirect methods that activate it.
lytic v. one that is replicated in the host cell and causes death by lysis of the cell.
masked v. latent virus.
v. N a type A influenza virus found in birds.
v. neutralization see **neutralization** tests.
occult v. see **occult** virus.
orphan v. see **orphan** virus.
parainfluenza v. see parainfluenzavirus.
pox v. see **pox**.
rabies v. an RNA virus of the genus *Rhabdovirus* that causes **rabies**.
respiratory syncytial v. see ***Paramyxoviridae***.
slow v. the name given to certain viruses that cause diseases characterized by a long incubation period and a very prolonged clinical course, e.g. the lentiviruses of sheep, maedi and visna.
street v. rabies virus from a naturally infected animal, as opposed to a laboratory-adapted, fixed virus.
vis pl. *vires* [L.] force, energy.
viscera [*vis'ər-ə*] [L.] plural of *viscus.*
viscerad [*vis'ər-ad'*] toward the viscera.
visceral [*vis'ər-əl*] pertaining to a viscus.
v. arch mesenchymal structures in the region of the embryonic pharynx located on the ventrolateral aspect of the head that give

rise to skeletal elements of the larynx and other structures of the head. Called also branchial arches, branchial apparatus, pharyngeal arches.

v. cleft temporary depressions between the visceral arches of the embryo.

v. efferent system that part of the **autonomic** nervous system which provides motor innervation to the viscera.

v. nervous system see autonomic **nervous** system, visceral efferent system (above).

v. patterning the property in tissues of locating themselves in particular sites and with the appropriate three-dimensional shape.

v. receptors receptors in mucosae are sensitive to pH, slight touch, in ruminants there are sensors which recognize distention with or without gas.

visceralgia [*vis"ər-al'jə*] pain in any viscus.

viscer(o)- word element. [L.] *viscera*.

visceroinhibitory [*vis"ər-o-in-hib'ĭ-tor-e*] inhibiting the essential movements of any viscus.

visceromegaly [*vis"ər-o-meg'ə-le*] splanchnomegaly.

visceromotor [*vis"ər-o-mo'tər*] concerned in the essential movements of the viscera.

visceroparietal [*vis"ər-o-pə-ri'ə-təl*] pertaining to the viscera and the abdominal wall.

visceroperitoneal [*vis"ər-o-per"ĭ-to-ne'əl*] pertaining to the viscera and peritoneum.

visceropleural [*vis"ər-o-ploor'əl*] pertaining to the viscera and the pleura.

visceroptosis splanchnoptosis; prolapse or displacement of the viscera.

viscerosensory [*vis"ər-o-sen'sə-re*] pertaining to sensation in the viscera.

visceroskeletal [*vis"ər-o-skel'ə-təl*] pertaining to the visceral skeleton.

viscerosomatic [*vis"ər-o-so-mat'ik*] pertaining to the viscera and the body.

viscerotropic [*vis"ər-o-tro'fik*] acting primarily on the viscera; having a predilection for the abdominal or thoracic viscera.

v. velogenic Newcastle disease see **Newcastle disease**.

viscid [*vis'id*] glutinous or sticky.

viscidity [*vĭ-sid'ĭ-te*] the property of being viscid.

viscoelastic retardation [*vis"ko-e-las'tik re"tahr-da'shən*] a low shear viscometric method for the determination of the molecular weight of large (>10^{10}) DNA molecules based on mildly stretching long DNA molecules by hydrodynamic shear forces and then removing the force so that the molecule relaxes back to its normal conformation; the relaxation time is related to, and can be used to determine with accuracy, the molecular weight of DNA molecules of the size found in eukaryotic chromosomes.

viscoelastic substance [*vis"ko-e-las'tik*] a highly viscous transparent sterile substance is used during intraocular surgery to protect structures, maintain normal ocular shape and pressure, prevent adhesions, provide tamponade, and to gently move intraocular structures.

viscosimeter [*vis"ko-sim'ə-tər*] an apparatus used in measuring viscosity of a substance.

viscosity [*vis-kos'ĭ-te*] resistance to flow; a physical property of a substance that is dependent on the friction of its component molecules as they slide by one another.

viscosum disease see **shigellosis**.

viscotoxin A toxic polypeptide found in *Viscum album*.

viscous [*vis'kəs*] sticky or gummy; having a high degree of viscosity.

v. metamorphosis the swelling and fusion of platelet aggregates that occurs as part of a coagulation reaction and in response to thrombin.

viscousness viscosity.

Viscum album a plant in the family Loranthaceae. Called also European mistletoe. Contains tyramine and causes incoordination, salivation and pupillary dilatation followed by paralysis and death.

viscus [*vis'kəs*] pl. *viscera* [L.] any large interior organ in any of the great body cavities, frequently hollow with multilayered walls and include those organs studied in splanchnology.

hollow v. tubular as distinct from solid, e.g. intestine, as distnct from the spleen that is not a hollow viscus.

vision [*vizh'ən*] the faculty of seeing; sight. The basic components critical for normal vision are the eye itself, optic nerve, optic radiations, optic tracts, and visual (occipital) cortex. Abnormalities of vision in animals can only be inferred by an assessment of the animal's behavioral response to a variety of visual stimuli. The commonly used tests of vision are the **menace response**, the tracking of a moving object and a maze or obstacle test. These can all be performed in reduced light as a test for night blindness.

achromatic v. vision characterized by lack of color perception.

aphakic v. vision after lens removal.

binocular v. the use of both eyes together, without diplopia.

central v. that produced by stimulation of receptors in the central retina, specifically the macula fovea, or area centralis in species in which those exist.

day v. visual perception in the daylight or under conditions of bright illumination.

dichromatic v. visual perception in two colors; the form of vision in most mammals, except most primates, humans, and sea mammals.

double v. diplopia.

half v. hemianopia.

monocular v. vision with one eye.

night v. visual perception in the darkness of night or under conditions of reduced illumination.

panoramic v. increased peripheral vision, particularly evident in species with more laterally placed eyes (such as birds, large herbivores, rodents, etc.).

peripheral v. that produced by stimulation of photoreceptors in regions of the retina outside the specialized area of central vision (see above).

photopic v. vision in bright illumination.

scotopic v. vision in low illumination.

trichromatic v. three color vision; present in most humans.

v. test see **visual** acuity test.

visna [*vis'nə*] a meningoencephalitis of sheep caused by a lentivirus identical with the virus of maedi—hence the commonly used name of maedi–visna. The disease is characterized by a long incubation period, up to 2 years, followed by a prolonged clinical disease in which there is a demyelinating encephalomyelitis resulting in incoordination, tremor and wasting for a period of up to 2 years.

visnaga ***Ammi visnaga***.

visual [*vizh'oo-əl*] pertaining to vision.

v. acuity test see **obstacle test**.

v. cortex the occipital part of the cerebral cortex which deals with images received by the visual apparatus.

v. evoked potentials (VEPs) see visual **evoked response**.

v. following tracking movements of the eyes while watching a moving object.

v. pathway the neurologic pathway responsible for vision: the conversion of light energy to a neural stimulus and the subsequent transmission of that stimulus to the cortex such that it can be interpreted; comprises the retina, optic nerve, optic radiations, optic tracts and visual (occipital) cortex.

v. purple rhodopsin.

v. system all organs and tissues involved in vision; includes the eyes, the optic nerves, optic radiations, optic tracts and visual (occipital) cortex. The oculomotor, trochlear, abducent, trigeminal and facial nerves are all involved in reflexes which are part of the animal's reactions to visual stimuli.

v. yellow all-*trans* retinal; see **retinal** (2).

V-13: Visna, showing weakness of the hindlimbs and abnormal stance. The animal is leaning against the wall and is unable to remain upright.
From Benavides J, García-Pariente C, Ferreras MC, Fuertes M, García-Marín JF, Pérez V: Diagnosis of clinical cases of the nervous form of Maedi-Visna in 4- and 6-month-old lambs. Vet J 174:655-658, 2007. Elsevier.

VetBooks.ir

visualization [vizh"oo-əl-ĭ-za'shən] the act of viewing or of achieving a complete visual impression of an object.
visuoauditory pertaining to sight and hearing.
visuognosis [vizh"oo-og-no'sis] recognition and interpretation of visual impressions; can only be assessed in human (verbal) patients.
visuosensory [vizh"oo-o-sen'sə-re] pertaining to perception of visual impressions.
vital [vi'təl] pertaining to life; necessary to life.
v. red dye injected into the circulation to estimate blood volume by calculating the concentration of the dye in the plasma.
v. signs the signs of life, namely pulse, respiration and temperature.
v. statistics that branch of biometry dealing with the data and laws of animal mortality, morbidity, natality and demography.
v. statistic rate vital statistics presented as a proportion of a population, e.g. fetal deaths as a percentage of total births. Includes case fatality rate, nonreturn rate at 60 days.
Vitallium trademark for a cobalt–chromium alloy used for surgical appliances.
vitamer [vi'tə-mər] a substance or compound that has vitamin activity.
vitamin [vi'tə-min] an organic substance found in foods and essential in small quantities for growth, health and survival. The body needs vitamins as well as other food constituents such as proteins, fats, carbohydrates, minerals and water. The absence of one or more vitamins from the diet, or poor absorption of vitamins, can cause deficiency diseases such as rickets, enzootic muscular dystrophy and polioencephalomalacia. Vitamins serve as coenzymes or cofactors in enzymatic reactions. They are required only in trace quantities because they are not consumed in the reactions.
fat-soluble v. one soluble in and absorbed from the intestine in fat. Includes vitamins A, D, E and K.
water-soluble v. one soluble in water. Includes vitamins B and C.
vitamin A a fat-soluble, organic alcohol formed in animal tissues from carotenoids found in plants. Called also retinol. It is formed from carotenoids, principally carotene, in the intestinal epithelium, except by cats, and stored in the liver. It is essential for the proper growth and maintenance of surface epithelium, for the accurate sculpting and proper growth of bones, and for the maintenance of light-sensitive pigments in the eye. Nutritional deficiency due to lack of carotene in the diet in herbivores and to lack of carotene and preformed vitamin A in the diet in omnivores and carnivores causes hypovitaminosis A. The resulting clinical syndrome varies with species and age. In young animals there is compression of the brain and spinal cord caused by faulty bone growth and characterized by convulsions, blindness and posterior paralysis. In other animals there is night blindness, corneal keratinization, pityriasis, hoof defects, infertility and possibly congenital defects. Hypovitaminosis in birds is manifested by poor egg production, ocular discharge at first watery then thick and caseous, a nasal discharge and pustular lesions and accumulations of caseous material in the mouth, pharynx, esophagus and trachea.
v. A_2 called also dehydroretinol and found in fish livers. Has the same effects and efficiency as retinol; it is absorbed unchanged and is immediately metabolically active.
v. A excess see **hypervitaminosis** A.
v. A poisoning see **hypervitaminosis** A.
teratogenic v. A causes abnormalities in closure of the neural tube in the developing fetus causing defects in the brain, eye and heart.
vitamin B, vitamin B complex a group of water-soluble substances described separately. Includes **biotin**, **choline**, **folic acd**, **niacin**, **pantothenic acid**, **pyridoxine**, **riboflavin**, **thiamine** and vitamin B_{12} (below). Most domestic animals do not require dietary supplementation if they are fed natural feeds. Artificially prepared feeds are usually supplemented because losses may occur during storage and preparation.
v. B_1 thiamine.
v. B_2 riboflavin.
v. B_3 the niacin group of B-vitamins, nicotinic acid and nicotinamide.
v. B_6 a group of methylpyridine derivatives that includes **pyridoxine**, **pyridoxamine**, **pyridoxal**.
v. B_7 an uncharacterized promoter of digestion in pigeons, possibly a mixture of compounds; called also vitamin I.
v. B_{12} a generic term describing all corrinoids with biological activity of cyanocobalamin. Required by all cells for nuclear maturation and cell division but required particularly for erythropoiesis. The vitamin is produced by ruminants who require only cobalt in sufficient quantities in their diet. A nutritional deficiency of the vitamin causes a maturation failure anemia, anorexia and failure to thrive. An inherited defect in absorption of vitamin B_{12} has been described in Miniature schnauzers. Called also cyanocobalamin. See also **hydroxocobalamin**.
v. B_c folic acid.
v. B_T see **carnitine**.
vitamin C see **ascorbic acid**.
v. C-responsive dermatosis scaling and hair loss occur in calves and piglets fed diets low in vitamin C. Serum concentrations of the vitamin are low and recovery follows supplementation.
vitamin D a group of closely related steroids that have antirachitic properties. They commence as provitamins in both plants and animals and are converted by exposure to ultraviolet light. In plants ergosterol is converted to vitamin D_2 (the provitamin ergocalciferol) by exposure to sunlight. In animals the provitamin 7-dehydrocalciferol (formed from cholesterol) is irradiated to form vitamin D_3. Pharmaceutical vitamin D is manufactured by the ultraviolet irradiation of ergosterol. A deficiency of vitamin D, from a nutritional deficiency of vitamin D_2 and a deficiency of exposure to sunlight so that little vitamin D_3 is formed, is characterized by the development of **rickets** in young animals or **osteomalacia** in adults. Poisoning due to overdosing with vitamin D causes demineralization of bones and mineralization of soft tissues. The same effect is achieved by feeding on some plants. See **enzootic** calcinosis.
v. D_2 ergocalciferol.
v. D_3 cholecalciferol.
v. D binding protein see **transcalciferin**.
vitamin E a family of eight antioxidants: four tocopherols (α-, β-, γ-, and δ-) and four tocotrienols (α-, β-, γ-, and δ-). α-tocopherol is the most important and acts as an antioxidant in the prevention of enzootic muscle dystrophy, mulberry heart disease, hepatosis dietetica and exudative diathesis and yellow fat disease. A deficiency of the vitamin is a major cause of these diseases.
v. E-responsive dermatosis goats on selenium-deficient diets develop alopecia and seborrhea which responds to vitamin E supplementation; similar skin changes occurred in calves fed a milk substitute deficient in vitamin E.
vitamin F thiamine.
vitamin G riboflavin.
vitamin H biotin.
vitamin I see **vitamin B_7**.
vitamin K a group of fat-soluble compounds which are required for the formation of prothrombin and therefore play a role in blood clotting. They are present in most green feeds and are not likely to be absent from natural diets. Failure to absorb the vitamin is a real risk in diseases in which fat absorption is defective, such as obstructive jaundice.
v. K deficiency most commonly due to anticoagulant rodenticide poisoning in dogs, and less often cats.
v. K_1 phylloquinone.
v. K_2 menaquinone.
v. K_3 menadione.
vitamin M folic acid.
vitamin PP niacin.
vitellarium [vi"tə-lar'e-əm] a gland which forms yolk.
vitelline [vi-tel'ĭn] resembling or pertaining to the yolk of an egg or ovum.
v. diverticulum small outgrowth from the avian jejunum marking the previous connection to the yolk sac. See also **Meckel's** diverticulum.
persistent v. artery creates an anomaly, a mesodiverticular band, stretching from the cranial mesenteric artery to the site of a Meckel's diverticulum, that may entrap a loop of intestine and cause its strangulation.
persistent v. duct creates an anomalous fibrous attachment between the site of a Meckel's diverticulum and the umbilicus. A partial band, reaching only part way to the intestine, may also be formed. Either development may result in an intestinal strangulation.
v. membrane the external envelope of large-yolked oocytes.

V-14: Vitiligo that developed in an adult Rottweiler.

v. vessel omphalomesenteric arteries and veins through which blood passes to and from the primitive heart, and the yolk sac and midgut of the embryo.

vitellochorion an intermediate stage in the development of a yolk sac type of placentation. The outer chorion of the embryo must be vascularized by an extraembryonic circulatory system in order to establish an organ of interchange between the dam and the fetus. If this is provided by the yolk sac vessels a vitellochorion is established. If the vascularization is by allantoic vessels the placentation is an **allantochorion**.

vitellogenesis [*vi"təl-o-jen'ə-sis*] yolk formation in the liver, transport to ovaries, incorporation into ova.

vitellus [*vi-tel'əs*] the yolk of egg.

vitiligines [*vit"ĭ-lij'ĭ-nēz*] depigmented areas of the skin.

vitiligo [*vit"ĭ-li'go*] a condition of the skin in which destruction of melanocytes in small or large circumscribed areas results in patches of depigmentation, often having a hyperpigmented border, and often enlarging slowly. The condition is common in horses and cattle, often occurring after injury or surgery. Called also 'snowflakes', pinky syndrome. See also **achromotrichia**, Arabian **fading** syndrome, **freeze branding**. In adult dogs, occurs as a distinct syndrome of unknown etiology, particularly in Rottweilers, Doberman pinschers, Belgian Tervurens and German shepherds. Irregular areas of leukoderma and leukotrichia develop with no other changes in the skin. The nose, lips, face, buccal mucosa, and foot pads may be affected.

Vitis vinifera plant in the family Vitaceae; contains an unidentified toxin that causes kidney failure in dogs. Called also grape, raisin, sultana.

vitrectomy [*vĭ-trek'tə-me*] surgical removal of vitreous from the eye.

anterior v. removal of the anterior portions of the vitreous.

pars plana v. removal of vitreous by aspiration through instruments inserted through the pars plana ciliaris.

vitreocentesis see vitreous **paracentesis**, **hyalocentesis**.

vitreodentin an unusually hard and glasslike form of dentin.

vitreophage an automated instrument used in vitrectomy. It combines suction, cutting of vitreous strands with a rotary or guillotine cutting blade within a needle, and delivery of a physiological solution to replace the vitreous removed.

vitreous [*vit're-əs*] 1. glasslike or hyaline. 2. the vitreous body within the eye.

v. body the transparent gel filling the posterior segment of the eye between the lens and retina. Called also vitreous and vitreous humor.

v. flare opacification of the vitreous due to protein and/or cellular egress from inflamed blood vessels within the uvea during uveitis.

v. floater a small opacity in the vitreous which may be visible to the animal and can rarely cause abnormal behavior patterns such as 'fly-biting'.

v. humor the gel-like mixture of collagen, water, glycosaminoglycans and sparse hyalocytes forming the vitreous body and occupying the space between the posterior lens capsule and the retina. It provides nourishment for the lens and inner retina and helps to maintain the intraocular pressure, and hence the optical integrity of the eye.

peripapillary v. that adjacent to the optic disk.

persistent hyperplastic v. a congenital anomaly due to persistence and hyperplasia of embryonic remnants of the vascular tunic of the eye and the hyaloid vascular system. Clinically, there is a wide range of signs that might include cataract, uveal and vascular remnants over the lens capsule, and vitreous hemorrhage; sometimes associated with other ocular defects such as microphthalmia,

v. membrane 1. Descemet's membrane. 2. hyaline membrane (1). 3. Bruch's membrane. 4. membrana vitrea; a delicate condensation of vitreous collagen forming the periphery of the vitreous body; continuous with the retinal internal limiting membrane.

primary v. the first stage in development of the vitreous; consists largely of the hyaloid artery in the embryo and persists in the adult as Cloquet's canal.

v. removal vitrectomy.

secondary v. the secondary stage in development of the vitreous and responsible for the majority of the adult vitreous surrounding the hyaloid artery/Cloquet's canal; secreted by the retinal ectoderm.

tertiary v. the third and final stage of development of the vitreous; it is secreted by the ciliary epithelium and persists in the adult as the suspensory ligament of the lens.

v. veils curtain-like opacities seen in a normal vitreous.

vitrification [*vit"rĭ-fĭ-ka'shən*] processof ultrafast freezing of cells in the presence of a high concentration of cryoprotectant; used for embryo cryopreservation.

vitronectin [*vit"ro-nek'tin*] an adhesive protein in plasma. Called also S-protein.

vitropression exertion of pressure on the skin with a slip of glass, forcing blood from the area.

vitrum [L.] *glass*.

viverrid a member of the family Viverridae.

Viverridae a family in the order Carnivora that includes genets, the binturong, civets and linsangs.

vivi- word element. [L.] *alive, life*.

vividialysis [*viv"ĭ-di-al'ə-sis*] dialysis through a living membrane. See also **peritoneal** dialysis.

vividiffusion [*viv"ĭ-dĭ-fu'zhən*] circulation of the blood through a closed apparatus in which it is passed through a membrane for removal of substances ordinarily removed by the kidneys. See also artificial **kidney**.

viviparity [*viv"ĭ-parĭ-te*] the state of being viviparous.

viviparous [*vi-vip'ə-rəs*] giving birth to living young which develop within the maternal body.

viviperine viviparous.

vivisection [*viv"ĭ-sek'shən*] surgical procedures performed upon a living animal for purpose of physiological or pathological investigation. It is illegal in most countries to perform such experiments without a license, without proper anesthesia or without all measures necessary to prevent cruelty to the experimental animal.

vivisectionist [*viv"ĭ-sek'shən-ist*] one who practices or defends vivisection.

vixen female fox.

Vizsla a medium-sized, lean and muscular hunting dog with pendulous ears, docked tail and short, russett gold coat. Called also Yellow pointer, Hungarian pointer, Hungarian vizsla. The breed is affected by hemophilia A. See also **Wirehaired vizsla**.

VLDL very low-density lipoprotein.

vlei poisoning plant cyanide poisoning caused by *Juncus* spp. in South Africa.

vleibossie ***Hypericum*** *aethiopicum*.

VMC vincristine, methotrexate, and cyclophosphamide; a cancer chemotherapy regime.

VMD Veterinary Medical Doctor.

VN veterinary nurse, see **animal** nurses.

VNO vomeronasal organ.

vocal [*vo'kəl*] pertaining to the voice.

v. cord acute bilateral paralysis manifestation of organophosphate poisoning in foals characterized by irreversible severe inspiratory dyspnea and stridor.

v. cord paralysis due to paralysis of the recurrent laryngeal nerve, e.g. in rabies. See also **laryngeal** hemiplegia.

v. cord resection see **ventriculocordectomy**, **debarking**.

v. cordectomy see **debarking**.

v. cords the folds of mucous membrane in the **larynx**, the superior pair being called the false (vestibular), and the inferior pair the true, vocal cords. These thin, reedlike bands vibrate to make vocal sounds that are capable of producing a vast range of sounds.

VetBooks.ir

The cords are made up of vocal and vestibular ligaments and their adjacent muscles (ventricularis and vocalis mm.) that support a coat of mucous membrane to make up the folds.

false v. cords the vestibular folds.

vocalization to make a vocal sound; a form of communication. Studies of feline vocalization have identified murmur, vowel and strained intensity patterns. Calls of calves have been shown to be individually distinctive, providing a potential basis for recognition of calves by cows.

excessive v. a behavioral problem of dogs and cats, and beef calves immediately following weaning; may be a displacement activity or caused by separation anxiety. Calves have excessive vocalization when hungry, and this vocal response, even in the first days after separation from the cow, can be greatly reduced or eliminated by providing more milk or colostrum.

Vogeloides a genus of nematodes in the family Pneumospiruridae. They are parasites of carnivores and primates.

V. massinoi, V. ramanujacharii found in the lungs of cats.

Voges–Proskauer (VP) test [*fo'ges pros'kou-er*] a biochemical test for the identification of members of the Enterobacteriaceae, as well as some other genera, including *Staphylococcus*. The test detects the production of acetoin.

Vogt–Koyanagi–Harada-like syndrome [*fōkt' ko-yah-nah'ge hah-rah'dah*] a disease occuring in humans that is believed to be immune-mediated; there is meningoencephalitis, uveitis and depigmentation of skin and hair. A similar disorder with uveitis and depigmentation of the nose, lips, eyelids, footpads and anus occurs in dogs.

voice [*vois*] the sound produced by the voice organs of the vocal cords, the soft palate and the nasal cavities. In birds it is the syrinx that plays the major part in what passes for voice.

v. abnormalities the normal voice patterns of barking, yelping, whining, whimpering, howling, baying, purring, meowing, bleating, mooing, bellowing, lowing, neighing, squealing, whinnying, whickering, nickering or grunting may be abnormal in that they are repeated ad nauseam, or are hoarse or altered in some other way. The myriad voices of birds and exotic species may be similarly affected. They may also be absent altogether so that the animal goes through the motions of making a call but no sound ensues.

v. box see **larynx**.

void [*void*] to cast out as waste matter, especially the urine.

voiding euphemism for urination, defecation.

vol. volume.

vola [*vo'lə*] a concave or hollow surface.

v. manus the palm, as in primates.

v. pedis the sole, as in primates.

volar [*vo'lər*] pertaining to the sole or palm of primates, the paw in many species and the hoof in ungulates; indicating the flexor surface of the forearm, wrist or hand or their counterparts in the pelvic limb.

volaris [*vo-lar'is*] volar; palmar.

volatile [*vol'ə-til*] evaporating rapidly.

volatilization [*vol"ə-til"ĭ-za'shən*] conversion into a vapor or gas without chemical change.

volcanic eruptions discharging of fumes, dust and lava from volcanoes. They have damaging potential in addition to those of being physically overpowering by the lava flow or the ash or dust fallout. However, the only recorded poisoning by contamination of water and pasture has been by fluorine.

vole free-living, small rodent in the subfamily *Arvicolinae;* often described as a country rat because of its resemblance to a rat and its disinclination to associate with humans. They are hoarders, live in burrows and eat plant material. Like lemmings, they experience massive surges in population, followed by mass migrations and very heavy mortalities. Used as a laboratory animal in agricultural and veterinary research. Called also meadow mice, field mice.

v. bacillus see ***Mycobacterium*** *microti*.

meadow v. (*Microtus pennsylvanicus*) have been studied as spillover hosts for *Mycobacterium bovis* in some areas.

water v. (*Arvicola amphibius*); in the UK, captive bred European water voles have been reintroduced where native populations have been in decline. Called also water rat.

volition [*vo-lish'ən*] the act or power of willing.

Volkmann's canals [*fōk'mahn*] see Volkmann's **canals**.

Volkmann curette [*fōk'mahn*] has an oval cup at each end.

Volkmann retractor [*fōk'mahn*] a handheld instrument shaped like a kitchen fork except that the prongs are curled back on themselves halfway through their length; two- to six-pronged.

volley [*vol'e*] a rhythmical succession of muscular twitches artificially induced; the aggregate of nerve impulses set up by a single stimulus.

volt [*vōlt*] the unit of electromotive force; 1 ampere of current against 1 ohm of resistance.

electron v. (eV) a unit of energy equal to the energy acquired by an electron in being accelerated through a potential difference of 1 volt; equal to 1.602×10^{-19} joule.

gigaelectron v. (GeV) one thousand million electron volts (10^9 eV).

kiloelectron v. (keV) one thousand electron volts (10^3 eV).

megaelectron v. (MeV) one million electron volts (10^6 eV).

voltage [*vōl'təj*] electromotive force measured in volts. In radiographic equipment it is important that there be no variation in the voltage supplied to the X-ray tube. The voltage supplied to the X-ray tube is controlled by a kilovoltage selector.

voltmeter [*vōlt'me-tər*] an instrument for measuring electromotive force in volts, e.g. the one on the X-ray machine that registers the voltage being supplied to the machine.

volume [*vol'ūm*] the space occupied by a substance or a three-dimensional region; the capacity of such a region or of a container.

closing v. (CV) the volume of gas in the lungs in excess of the residual volume at the time when small airways in the dependent portions close during maximal exhalation. See also **closing volume**.

v. of distribution (V_d) the calculated body space available for distribution of a drug.

minute v. (MV) the volume of air expelled from the lungs per minute.

v. overload see **heart failure**.

packed-cell v. (PCV) the volume of packed red cells in milliliters per 100 mL of centrifuged blood. See also **packed cell volume**.

stroke v. the volume of blood ejected by the left ventricle during a single ejection.

volumetric [*vol"u-met'rik*] pertaining to or accompanied by measurement in volumes.

v. pump a device for administration of intravenous fluids with great accuracy. See also infusion **pump**.

voluntary [*vol'ən-tar"e*] accomplished in accordance with the will.

volute [*vo-lūt'*] rolled up.

volvulus [*vol'vu-ləs*] [L.] torsion of a loop of intestine, causing obstruction with or without compromising the blood supply to the part by strangulation.

gastric v. see **gastric** dilatation–volvulus.

V-15: Vogt–Koyanagi–Harada-like syndrome. From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989.

V-16: Volvulus of the small intestine in a pig. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

intestinal v. a common finding in horses because of the weight of the contents, the power and the duration of the peristaltic movements, and the long mesentery of some parts of the intestines.

vomer [*vo'mər*] a bone forming the floor of the nasal septum. See also Table 10.

vomeronasal organ [*vo"mər-o-na'səl*] an organ thought to supplement the olfactory system by receiving pheromonic communication. The sensory part of the organ resides in two long, thin blind tubes, situated on either side of the nasal septum at its base. The entrances to the tubes are from the incisive ducts which communicate with the nasal cavity and a pit in the roof of the mouth, just behind the dental pad of ruminants or upper incisor teeth of other species. The function of the organ is probably related to the estrus-seeking action of **flehmen**. Called also organ of Jacobson.

vomica pl. *vomicae* [L.] 1. the profuse and sudden expectoration of pus and putrescent matter. 2. an abnormal cavity in an organ, especially in the lung, caused by suppuration and the breaking down of tissue.

vomit [*vom'it*] 1. matter expelled from the stomach by the mouth. In horses the ejection must be via the nostrils and is always a terminal event. 2. to eject stomach contents through the mouth.

coffee-ground v., black v. dark granular material ejected from the stomach, produced by mixture of blood with gastric contents; it is a sign of bleeding in the upper alimentary canal. See also **hematemesis**.

vomiting [*vom'it-ing*] forcible ejection of contents of stomach through the mouth. Called also emesis.

bilious v. the vomit contains bile which has been regurgitated from the duodenum.

v. budgerigar syndrome see neurotic **regurgitation**.

cyclic v. recurring attacks of vomiting.

dry v. attempts at vomiting, with the ejection of nothing but gas.

internal v. any reflux of intestinal contents which does not reach the mouth, e.g. abomasal reflux into the rumenoreticulum.

projectile v. forceful vomiting, usually without preceding retching, in which the vomitus is thrown well forward. In dogs and cats, a feature of gastric retention and particularly pyloric obstruction. Cattle do not vomit easily and when they do it is usually projectile and voluminous.

stercoraceous v. vomiting of fecal matter.

vomiting and feed refusal syndrome a disease of pigs caused by the ingestion of mycotoxins of *Fusarium roseum*, *Gibberella zeae*. Low concentrations cause vomiting and diarrhea, higher concentrations cause feed refusal.

vomiting and wasting disease see hemagglutinating **encephalomyelitis** virus disease of pigs.

vomiting sickness see **vermeersiekte**.

vomition the act of vomiting.

vomitory [*vom'ĭ-tor"e*] an emetic.

vomitoxin [*vom'ĭ-tok"sin*] a trichothecene mycotoxin which causes emesis in pigs eating contaminated grain. Thought to be the cause of food refusal syndrome. Called also deoxynivalenol.

vomiturition [*vom"it-u-rish'ən*] repeated ineffectual attempts to vomit; retching.

vomitus [*vom'ĭ-təs*] 1. vomiting. 2. vomited material.

von Brunn's nests groups of proliferating urinary tract mucosal cells isolated in the urinary tract submucosa.

von Ebner see **Ebner.**

von Gierke's disease [*von Gier'ke*] see **glycogenosis** type I.

von Willebrand antigen [*fŏn vil'ə-brahnt*] factor VIII-related antigen.

von Willebrand disease (vWD) a congenital hemorrhagic diathesis, inherited as an autosomal dominant trait in dogs, pigs and rabbits. It is characterized by a prolonged bleeding time, deficiency of coagulation factor VIII and factor VIII-related antigen, and often impairment of platelet adhesion and usually associated with mild bleeding tendencies. Three classifications (I, II and III) are recognized, based on the concentration and nature of plasma von Willebrand factor and associated with mild to severe bleeding. Called also angiohemophilia, pseudohemophilia and vascular hemophilia.

von Willebrand factor (vWF) the property of factor VIII necessary for normal platelet function. Called also factor $VIII_{vwf}$.

vWF deficiency see **von Willebrand disease**.

vuursiekte [Af.] poisoning by ***Athanasia*** *minuta*.

voorsiektebossie [Af.] see ***Athanasia*** minuta.

voracious said of appetite. See **polyphagia**.

voriconazole [*vor"ĭ-ko'nə-zōl*] a fluconazole derivative with potent activity against fungal pathogens.

vortex [*vor'teks*] pl. *vortices* [L.] a whorled or spiral arrangement or pattern, as of muscle fibers, or of the ridges or hairs of the skin.

v. cordis the spiral pattern of the loops of muscle fibers at the apex of the heart.

v. pilorum the meeting place of hair streams to form whorls.

votheysveiki [Icelandic] *listeriosis*.

voucher specimen a pressed and dried fertile plant specimen placed in the permanent collection of an institutional herbarium as representative of a batch of plants used in experimental feeding experiments or for chemical assay investigations in order that the current scientific name of the plants used may be determined at any future time, thus allowing for any change in their taxonomic status. Without vouchers, the scientific worth of published data can be compromised if the plant names are revised and the precise identity of the original plants reported on is no longer certain. This prinicpal is also applied to zoological and microbiological research; for example, microbes may be preserved in permanent culture collections.

voxel [*vok'sel*] a volume element; the region in a tissue slice that corresponds to a *pixel* (picture element) in an image. See also computed **tomography**.

VPC ventricular premature contraction.

VRE vancomycin-resistant enterococcus.

VS 1. vesicular stomatitis. 2. volumetric solution.

VSD ventricular septal defect.

VST Variable Surface Tracking; the highest level award for dogs in scent tracking competitions. Dogs that earn all three tracking titles, TD, TDX and VST are awarded the CT, Champion Tracker.

v-tach ventricular tachycardia.

VTEC verocytotoxin producing *Escherichia coli*.

vulgaris [*vəl-ga'ris*] [L.] *ordinary, common*.

vulnerary [*vul'nər-ar"e*] 1. pertaining to wounds or the healing of wounds. 2. an agent that promotes the healing of wounds.

vulnus [*vul'nəs*] pl. *vulnera* [L.] a wound.

Vulpes the genus of foxes; in the family Canidae.

vulsella, vulsellum [*vəl-sel'ə, vəl-sel'əm*] a forceps with clawlike hooks at the end of each blade, usually with ratcheted handles.

vulture a large bird of prey in the order Falconiformes. In two major groups, the Old World vultures (family Accipitridae, subfamily Aegypiinae) and the New World vultures (family Cathartidae). The former include the black (*Aegypius monachus*) and griffon (*Gyps fulvus*) vultures. The New World group include the condors and the black (*Coragyps atratus*) and turkey (*Cathartes aura*) vultures.

vulva [*vəl'və*] the external genital organs in the female. In primates two pairs of skin folds protect the vaginal opening, one on each side. The larger outer folds are the labia majora (absent from most domestic mammals), and the inner folds are the labia minora (called the labia pudenda, or simply labia in carnivora and ungulates). The labia flank a vertical pudendal cleft, the rima vulvae that opens into the vaginal vestibule. The vaginal vestibule extends from the hymen to the labia. The hymen, when present (as in humans), is a fold of mucosa just cranial to the transverse plane through the urethral orifice; while there is no hymen in the human sense in most domestic animal species, young fillies may have a thin membrane partially covering the opening of the vagina. Maiden bitches may also have a constriction of the vagina which interferes with intromission. A state of imperforate **hymen** in heifers and unmated bitches may cause accumulation of uterine exudates. The clitoris, a small projection that is composed of erectile tissue like its homolog, the male penis, is concealed just within the vestibule of domestic animals. See also female **reproductive organs**.

rosebud v. small, infantile vulva in an adult. Most common in sows. Usually accompanies infantile uterine horns and nonfunctional ovaries.

skyhooked v. tipped vulva (below).

tipped v. the dorsal commissure is almost as low as the ventral commissure because the whole vulva is tipped forward at the top. Difficulty may be encountered by the boar attempting to mate a sow with this defect.

vulval vestibulitis [*vul'vəl*] name of a disease reported in France in beef cattle due to *Ureaplasma diversum*.
vulvar [*vul'vər*] pertaining to or emanating from the **vulva**.
v. atresia failure of the orifice to open may occur with imperforate anus as a congenital defect.
v. bleeding occurs as part of any hemorrhagic diathesis; chronic local bleeding occurs in mares with varicose veins in the dorsal wall of the vulva; voluminous arterial bleeding can occur in cows after a difficult calving.
v. cyst see **Bartholin's glands, Gartner's ducts**.
v. episioplasty surgery for repair of the vulvar orifice and its sphincter muscles most commonly for the correction of wind-sucking in the mare.
v. fibropapilloma a wart growing on the vulvar mucosa; caused by bovine papilloma virus; most cases recover spontaneously as do similar lesions on the prepuce and penis.
v. fold dermatitis see fold **dermatitis**.
v. inflammation see **vulvitis**.
v. neoplasms includes papilloma, squamous cell carcinoma, melanoma, sarcoma and submucous fibroma.
v. parturient hematoma these can be dramatic in mares because of their size and the speed with which they develop.
v. rupture tears including the musculature are not uncommon in heifers and mares as a result of a difficult parturition.
v. squamous cell carcinoma may occur at a high level of incidence in ewes whose tails have been docked too short as part of a radical Mules operation, exposing the vulva to direct sunlight.
vulvectomy [*vəl-vek'tə-me*] excision of the vulva.
vulvismus [*vəl-viz'məs*] vaginismus.
vulvitis [*vəl-vi'tis*] inflammation of the vulva.
enzootic v. in an outbreak of enzootic balanoposthitis in wethers some of the ewes will be observed to have vulvitis. The lesions are confined to the lips of the vulva and may predispose to blowfly infestation.
granular v. part of a venereal disease caused by *Ureaplasma diversum* in cattle; other signs include embryonic death, abortion, dead or weak calves.
vulvopexy see **Caslick** operation.
vulvouterine [*vul"vo-u'tər-in*] pertaining to the vulva and uterus.
vulvovaginal [*vul"vo-vaj'ĭ-nəl*] pertaining to the vulva and vagina.
vulvovaginitis [*vul"vo-vaj"ĭ-ni'tis*] inflammation of the vulva and vagina. In cows and mares this causes a high carriage and frequent switching of the tail in some species, a sticky discharge from the vulva and soiling of the perineum. It may interfere with breeding plans and can cause infertility.
granular v. see granular **vaginitis**.
infectious pustular v. a disease of cattle caused by bovine herpesvirus 1 and characterized by venereal transmission of multiple pustular eruptions 0.25–0.5 inch diameter on the vaginal mucosa. There is a moderate vaginal discharge. There may be similar lesions on the bull's penis. A disease notifiable to the OIE (see Table 22).
vv. pl. *venae* [L.] veins.
v/v volume (of solute) per volume (of solvent).
vWD von Willebrand disease.
vWf von Willebrand factor.
VX a nerve gas, the escape of which caused the 'Utah Sheep Kill' in Skull Valley, Utah, USA in 1968.
Vx in medical records, the abbreviation for vaccination.
vygies [Af.] *fire sickness*. See also ***Mesembryanthemum***.

W

W chemical symbol, *tungsten* (*wolfram*); tryptophan; watt.
W/ with. Used in medical records.
W-plasty a technique in tension-relieving plastic surgery used mostly for the excision of unsightly scars. The edges of the excised part are left in the form of a zigzag and the triangles are interdigitated for suturing.
Waardenburg's syndrome, Waardenburg–Klein syndrome [*vahr'den-boorg*] a hereditary disorder of humans characterized by pigmentary disturbances, including white forelock, heterochromia iridis, white eyelashes, leukoderma and sometimes cochlear deafness. Blue-eyed, white cats with congenital deafness are considered similar to this syndrome. See also **cochleosaccular** degeneration.
Wachstumsprobe [Ger.] growth-agglutination test used in the identification of bacteria.
Wade-Giles one of the techniques used in romanizing the Chinese spoken word. Used extensively in the preparation of veterinary acupuncture literature.
wafers compressed roughage in flat plates useful for feeding to animals in transit.
wahi dermatitis caused by *Onchocerca gutturosa*.
waivers of responsibility documents signed by clients at the time of admission of their animals to hospital and which set out to absolve the veterinarian from any responsibility for an unfavorable outcome to the case. The documents have little value because they appear to deny the client the natural right to sue for damages.
wakefulness [*wāk'fəl-nis*] believed to occur when the tonic flow of impulses from the reticular activating system exceeds the critical level for sustaining consciousness; reduction of reticular activating system activity is the basis of the pharmacological induction of sedation.
Walchia americana one of the harvest mites that cause **trombiculidiasis** in domestic animals.
Waldenström's macroglobulinemia [*vahl'den-strərm*] see Waldenström's **macroglobulinemia**.
Waler an Australian saddle horse of great endurance, ideal for police horses and army remounts (name derives from New South Wales where the horse originated). Bay, brown, black or chestnut; averaging 16 hands high. Called also Australian Waler.
walk [*wawk*] a slow, four-beat gait of horses in the sequence of near hind, near fore, off hind, off fore.
collected w. the horse is held in but is encouraged to walk vigorously by the rider.
extended w. fast, with long strides and the head carried well out in front. The horse is on a long but not loose rein and must not be hurried nor out of control.
free w. a walk on a loose rein with the head free.
walkabout hepatoencephalopathy in pyrrolizidine alkaloidosis of horses cause by ***Crotalaria*** spp. (term originates from Australia). Called also Kimberley horse disease.
Walker hound see **Treeing Walker coonhound**.
walking [*wawk'ing*] a normal slow gait in all species.
aimless w. a similar but less severe sign to compulsive walking and part of the dummy syndrome characteristic of hepatic encephalopathy or chronic brain disease.
w. backwards a prodromal sign in pigs before opisthotonos and tetanic convulsions; some horses with colonic impaction will walk backwards, before sitting on their haunches, then lapsing into lateral recumbency.
w. in circles see **circling**.
w. disease see **walkabout**.

wall [*wawl*] a structure bounding or limiting a space or a definitive mass of material.
abdominal w. see **abdominal** wall.
cell w. a rigid structure that lies just outside of and is joined to the plasma membrane of plant cells and most prokaryotic cells, which protects the cell and maintains its shape.
w. chart see **calendar charts**, **shed** sheet.
hollow w. **seedy toe**.
intestinal w. composed of serosa, muscular tunic, the submucosa containing intestinal submucosal glands, and the mucosa of lining cells, goblet and enterochromaffin cells.
wall-eyed see **walleye**.
wallaby small macropods, some of them in the same genus (*Macropus*) as the kangaroos, others in related genera. There are many species including the rock (*Petrogale* spp.), swamp (*Wallabia bicolor*), Tammar (*Macropus eugenii*), Parma (*M. parma*), hare (*Lagorchestes* spp.) and nail-tailed (*Onychogalea* spp.) wallabies.
w. tick see ***Haemaphysalis bancrofti***.
wallaroo a small macropod marsupial in the subgenus *Osphranter*, similar to the kangaroo and wallaby but with an untidy appearance due to its sombre, brown-black color, shaggy haircoat and straggly facial hairs.
Wallerian degeneration degeneration of a nerve fiber and its myelin sheath that has been severed from its nutritive source.
walleye, wall eye [*wawl'i*] 1. leukoma; the eye appears white at first glance because of a white opacity of the cornea. Possible causes include inflammation of the cornea and corneal ulcer. 2. **strabismus** in which there is deviation of the visual axis of one eye away from the other eye, resulting in diplopia; called also exotropia and divergent strabismus. 3. heterochromia iridis; called also ring-eyes, watch eye. 4. one of the pike-perch fish; lives in fresh water and is a good source of human food.
wallow mud bath frequented by pigs, elephants, red deer, hippopotami as a cooling aid.
Walpole's solution an acetic acid and acetate buffer solution at pH 4.5, once used widely to dissolve small struvite crystals and break down gritty plugs in the urethra of cats with feline urological syndrome.
walrus (*Odobenus rosmarus*) very large, up to 4000 lb, 15–20 ft long, pinniped characterized by the elongated canine teeth (tusks) and whiskers of males. They have a sparse haircoat but derive much protection from the very thick layer of body fat (blubber).
Walton-Liston forceps bone forceps with sharp-pointed blades which do not meet when the jaws are closed; double-actioned, blades straight or angled.
wamps farmers' name for cattle falling to one side while ataxic. Their explanation is that the cow falls over 'wamp'. Usually refers specifically to *Xanthorrhea* spp. poisoning.
wanderers [*wahn'dər-ər*] see **neonatal** maladjustment syndrome.
wandering [*wahn'dər-ing*] slow, purposeless walking.
w. Jew see ***Tradescantia***.
Wangensteen clamp ratcheted, scissor type forceps with deep longitudinal grooves on the blade faces. Designed for use in closure of ductus arteriosus.
Wangiella dermatitidis a fungus associated with animal diseases, especially phaeohyphomycosis. Some authorities classify these fungi as *Exophiala dermatitidis*.
wannakai see ***Rhodomyrtus macrocarpa***.
waoriki ***Ranunculus rivularis***.
wapiti see **elk**.
war bridle see **Yankee war bridle**, **Magner war bridle**.
warbles [*wor'bəlz*] the disease caused by ***Hypoderma***. Includes damage to the hides where the larvae emerge, some cases of choke caused by periesophagitis, posterior paresis or paralysis in a small percentage of infested cattle due to a reaction to dead *H. bovis* in the spinal canal, and some deaths due to invasion of the brain or to anaphylaxis.
Warburg–Dickens scheme [*vahr'boorg*] see pentose phosphate **pathway**.
warfarin [*wor'fər-in*] a coumarin compound used as an anticoagulant in humans and as a rodenticide, with serious toxicity implications for all species. It is readily absorbed from the intestinal tract and acts to inhibit the reduction of oxidized vitamin K, resulting in a depletion of active vitamin K that is required for carboxylation of coagulation factors VII, IX, X and II. Accidental poisoning in all species causes spontaneous hemorrhage and death due to anemia. Less severe cases often show pulmonary hemorrhage. In pigs it is the legs that are affected preferentially and in dogs hemorrhage into the anterior mediastinum and lungs is common. Vitamin K is the specific antidote.
Waring blender syndrome the shearing of erythrocytes by obstructions of the vascular bed, such as heartworms and disseminated intravascular coagulation, resulting in the formation of schistocytes. See also microangiopathic **anemia**.
warm providing a sensation of approximately body heat.
w. water blanket a device containing circulating warm water; used to apply heat in the prevention or treatment of hypothermia.
w. receptors are not specifically identifiable but a given temperature receptor will respond to warm or cold stimuli but not both.
warm-up pre-race exercise by a horse.
Warmblood thoroughbreds, Arabs and halfbreds (Hanoverian, Holsteiner, etc.) in the German classification of horses. Called also warmblut.
warmblut see **Warmblood**.
warranty certification that particular animals or chattels are of a particular quality or quantity. Includes warranty of freedom from specifically nominated diseases, warranty of pregnancy, of vaccination or surgical procedure having been performed, of death of an animal. The warranty implies that the vendor will refund the purchase price or replace the item with a comparable one if the first falls short of the warranty.
Warren hound see **Portuguese podengo**.
wart [*wort*] see **fibropapilloma**.
flat w. see **auricular** plaque.
wart hog (*Phacochoerus aethiopicus*) a grotesquely ugly member of the family Suidae, or wild pigs. They have large wart-like structures on the face, enormous sickle-shaped tusks, a misshapen head and run with their long tail held rigidly erect.
w. h. disease see **African** swine fever.
wash [*wahsh*] a solution used for cleansing or bathing a part, such as an eye or the mouth. See also **lavage** and specific sites.
washing [*wahsh'ing*] a technique in the preparation of X-ray films to remove fixative; an important part of producing a good film that will keep for a long time without discoloring.
washing machine sound to- and fro- sloshing sound, synchronous with cardiac contractions, produced when there is fluid and gas (produced by bacteria) in the pericardial sac in cases of traumatic **pericarditis**.
washout [*wahsh'out*] to disperse or empty by flooding with water or other solvent.
renal medullary solute w. a syndrome in which the relative hyperosmolarity of the renal medulla is reduced due to an excessive loss of sodium and chloride from the medullary interstitium, usually by diuresis. There is an inability to concentrate urine with polyuria and a compensatory polydipsia.
w. period in drug trials, the period allowed for all of the administered drug to be eliminated from the body.
wasp [*wahsp*] stinging insect of the order Hymenoptera, suborder Apocrita. There is local irritation at the site of the sting. Animals may be seriously affected if they eat fruit that is infested with wasps at the time. Wasp stings contain histamine, serotonin and 'wasp kinin' plus hyaluronidase and phospholipase. Unlike bees, wasps may sting several times.
w. fish venomous fish in the family Tetrarogidae; closely related to the **scorpionfish**.
wastage a loss of product or productivity; in terms of animal production includes losses due to deaths of animals, lowered production from survivors, including reproduction, and lost opportunity income.
waste [*wāst*] 1. gradual loss, decay, or diminution of bulk. 2. useless and effete material, unfit for further use within the organism. 3. to pine away or dwindle.
w. disposal techniques for disposing of a veterinary practice's, or abattoir or feedlot or milking shed wastes. By incineration, deep burial, washed away in a sewer as any other effluent or reclamation for industrial or agricultural use. Disposal of wastes from a veterinary practice or service has additional problems. There is a need for disposal of animal cadavers, kennel and pen wastes, tissue specimens, blood and milk and other samples. Also, there is the risk for the presence of needles and other sharps in the waste. Much of the material is infected, some of it dangerous to humans, and therefore needs to be disposed of legally and systematically.

VetBooks.ir

W-1: Wasting. Ewe showing severe weight loss.

w. management system planned, economic and conservationist program for the recycling and conservation of waste.
recycled w. includes chicken litter, newsprint, sugar cane bagasse, fruit pomace, crude sewage, sewage sludge used as pasture topdressing and feed for farm animals, newsprint used as bedding for horses. See also **recycled animal wastes**.

wasting [*wāst'ing*] used in a general sense to indicate serious loss of body weight, or locally to indicate atrophy.
w. acetonemia see primary **ketosis**.
chronic w. disease (CWD) a fatal transmissible spongiform encephalopathy, prion disease, of free-ranging wild cervids, captive wild cervids, zoological garden cervids and commercial ranch cervids in North America. Characterized by a long incubation period and subsequent changes in behavior, excessive salivation and water consumption, periods of somnolence, loss of body condition and death after a long clinical course. First recognized in the western US in captive cervids (late 1960s) and later in free-ranging cervids (early 1980s), but recently (mid 2000s) has been found in wild cervids in many states east of the Mississippi River. Distribution in North America is largely unknown because adequate surveillance has not been conducted. Also has occurred in ranch elk imported into Western Canada and cervids imported into South Korea. Transmitted laterally, maternally, or through environmental contamination with higher rates of infection in captive cervids probably as a result of high environmental contamination. There is no evidence that CWD prions can be naturally transmitted from infected cervids to humans or to non-cervids, but this is a concern.
postweaning multisystem w. syndrome (PMWS) was first described in 1991 in Western Canada and has since become widespread throughout the world. Produces slow progressive wasting in postweaned pigs with usually a low attack rate but high case fatality. Clinical signs and postmortem findings vary with some pigs jaundiced, some with diarrhea, but most with grossly enlarged inguinal lymph nodes. Respiratory signs are often associated with underlying interstitial pneumonia and pulmonary edema. The cause is uncertain, but caused at least in part by porcine circovirus 2 which is isolated from affected pigs usually in association with porcine reproductive and respiratory syndrome (PRRS). Clinical disease is more common in high health herds, but pigs are often infected without showing clinical disease. Cases of porcine dermatitis and nephropathy syndrome (PDNS) are often seen in herds affected with PMWS. See also **porcine** dermatitis and neuropathy syndrome.
w. syndrome used to describe terminal stages of feline immunodeficiency virus infection; similar to the cachexia associated with neoplasia.

watch eye lay term for heterochromia iridis; walleye.

water [*wah'tər*] 1. a clear, colorless, odorless, tasteless liquid, H_2O. 2. an aqueous solution of a medicinal substance.
w. bag see **waters**.
w. blanket a sheet with water-filled channels through which heated water is circulated by an external pump. This is placed beneath an anesthetized patient to maintain body temperature during surgery and avoid hypothermia.
body w. see **total body water**.
body w. loss is principally through the urine, supplemented by sweating, fecal water and evaporation in expired air.
w.-damaged grain recorded as toxic due to tunicamycin in mixture produced probably by fungi.
w. deprivation the animals are cut off from any source of water. May be by accident or neglect.
w. deprivation syndrome the animals become frenzied and begin to destroy their surroundings in an attempt to find water. There is abdominal gauntness, sunken eyes and weakness, and abortion may occur later.
w. deprivation test an indirect test of the concentrating ability of renal tubules and their responsiveness to endogenous antidiuretic hormone. Urine specific gravity and/or osmolality is measured before water is withheld, at intervals during, and after an average time period of 12–24 hours. The normal animal should produce urine that is progressively more concentrated, with an osmolality becoming greater than that of the plasma. Used in the diagnosis of diabetes insipidus.
distilled w. water that has been purified by distillation.
w. drowning a primitive method of euthanasia, especially for unwanted, newborn animals.
w.-electrolyte balance the concentration of individual electrolytes and of groups of, e.g. monovalent electrolytes, in serum, in tissue fluids and in intracellular fluid is critical to normal bodily function and is maintained by variation in the renal excretory rate of each electrolyte.
w. homeostasis conservation of body water during times of deprivation or excessive loss due to diarrhea or heavy sweating is affected by an increase in the concentration of the urine by the renal tubules.
w. immersion prolonged head-out water immersion has been used in the treatment of skeletal injuries in horses because of the weightlessness induced but there are serious implications of osteoporosis.
w. intoxication can occur if very thirsty animals, on limited salt intake, are allowed unlimited access to water. There is tremor, incoordination and convulsions and there may be polioencephalomalacia. Hemoglobinuria and hypothermia may also occur.
w. loading test measures the concentrating power of the kidney by combining the water deprivation and ADH tests.
w. marker a substance injected into the body that will diffuse through all of the body water compartments. The reduction in its concentration after injection can be used as a measure of body water. Tritiated water is used for the purpose.
w. marker decay curve the curve of declining concentration of a water marker in intravascular fluid.
w. medication administration of medication in drinking water is used particularly in birds and also in swine.
w. provocative test measurement of intraocular pressure before and after the administration of a large volume of water by stomach tube. A marked increase in intraocular pressure occurs in glaucomatous eyes.
w. seed see **hydrocele**.
w. vapor partial pressure in humans is the same in venous and arterial blood, in pulmonary alveolar air and in tissues; it is assumed that the same generalization applies to animals.
water betony see ***Scrophularia aquatica***.
water bloom see **algae**, **algal** poisoning, **cyanobacteria**.
water bush ***Myoporum*** *acuminatum*.
water couch ***Paspalum*** *paspalodes*.
water dropwort common name for plants in the genus ***Oenanthe***. Includes fine-leaved water dropwort (*O. aquatica*), hemlock water dropwort (*O. crocata*), parsley water dropwort (*O. lachenalii*).
water figwort see ***Scrophularia aquatica***.
water-jet lavage débridement of necrotic tissue and discharge by the use of a jet of water. A pulsating jet is recommended and the use of excessive pressure (optimum is 60 psi) must be avoided.
water pepper ***Polygonum*** *hydropiper*.

VetBooks.ir

water primrose see *Ludwigia*.
water rot see **fleece** rot.
water-soluble vitamin see water-soluble **vitamin**.
waterbelly anasarca and ascites in cattle, usually that caused by rupture of the bladder or perforation of the urethra in males as a result of obstructive urolithiasis.
waterbuck (*Kobus ellipsiprymnus*) a medium to large, semiaquatic African antelope; the males have long, spiral horns.
waterfowl a loose term for anseriform birds especially ducks.
watering the giving of water to animals.
w. devices includes, troughs, ball-cock float valves, hydraulic rams, windmills, drinking nipples.
preslaughter w. ad. lib. water facilitates electrical stunning and hide removal and reduces danger of fecal contamination.
waterline disease a disease of black Labrador retrievers; there is pruritus, seborrhea and alopecia of the ventrum and legs. The cause is unknown.
waterpens [Af.] *Galenia africana* poisoning.
waters [*waw'tərz*] popular name for amniotic fluid. Called also waterbag.
watershed effect [*waw'tər-shed*] ischemic damage, caused by slow flow of blood because of poor arterial perfusion at the periphery of a circulatory field where there is an inadequate collateral circulation.
Waterside terrier an early name for the Airedale terrier.
watery milk an important observation in the recognition of chronic bovine mastitis; the wateriness can be detected by squirting milk from the suspect quarter into a pool of normal milk from an unaffected quarter, the wateriness is immediately apparent, especially if the test is carried out on a shiny black surface; ingenuity is required if all four quarters are affected.
watery mouth 1. a prominent sign in toxemic newborn calves with colibacillosis. The calf is in a state of toxic shock, is hypothermic, recumbent and wet around the mouth to the point that fluid is dripping from it. 2. a disease of newborn lambs in which this sign is prominent. The cause is obscure but a bacterial cause, possibly *Escherichia coli,* seems likely.
watery pork the pale, soft exudative pork of pigs affected by **porcine** stress syndrome.
Watson–Crick helix [*waht'sən- krik*] James D. Watson (1928-) and Francis H.C. Crick (1916-2004); along with Maurice Wilkins, co-discoverers of the structure of the DNA molecule and recipients of the 1962 Nobel Prize for Physiology or Medicine. See double **helix**.
Watsonius watsoni a digenetic trematode found in the intestinal wall of some primates and causes mucohemorrhagic diarrhea, hepatomegaly, ascites and urinary tract disease.
Watson's test a test which measures urobilinogen and urobilin in urine using ferrous hydroxide to reduce the urobilin to urobilinogen.
watt (W) [*waht*] a unit of electric power, being the work done at the rate of 1 joule per second. It is equivalent to 1 ampere under pressure of 1 volt.
wattage [*waht'əj*] the output or consumption of an electric device expressed in watts.
wattle[1] one of the fleshy appendages suspended from the head, spectacularly in turkeys, less so in other domestic birds, rarely in goats (tassels; see caprine wattle below), and sheep and pigs.
avian w. a double fold of skin, similar anatomically to the tissue of the bird's comb, suspended from the mandible of domestic fowls. They are bilateral, without feathers and have a red, meaty appearance.
caprine w's cylindrical cutaneous appendages that dangle from the throat of some goats. They are fusiform, 1.5–2 inches long, fleshy masses covered with normal skin and suspended usually from the mandibular area but may occur below the ear. Of unknown significance. Thought to be inherited as a single dominant gene. Called also tassel.
w. cholera a localized form of **fowl** cholera characterized by inflammation and necrosis of the wattles.
w. cyst fluid-filled cystic structure in the wattle of goats, most commonly Nubians; believed to be developmental abnormalities arising from the branchial cleft.
ovine w's identical to caprine but much less common.
porcine w's similar to caprine wattles in location and appearance but have a cartilaginous core and thought to be inherited.

W-2: Avian wattles and comb.
From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

wattle[2] Australian small trees and bushes in the plant genus ***Acacia*** in the family Mimosaceae. Includes black wattle (*A. cunninghamii, A. salicina*), black sally wattle (*A. salicina*), sally wattle (*A. glaucescens*), Sydney golden wattle (*A. longifolia*).
wattmeter [*waht'me-tər*] an instrument for measuring **wattage**.
wave [*wāv*] a uniformly advancing disturbance in which the parts undergo a double oscillation, as a progressing disturbance on the surface of a liquid or the rhythmic variation occurring in the transmission of electromagnetic energy.
brain w's changes in electric potential of different areas of the brain, as recorded by electroencephalography.
a w. a presystolic positive wave in the jugular vein easily detected in horses and cattle at the jugular inlet and caused by right atrial contraction. Its presence or absence is of value in differentiating partial atrioventricular heart block from sinoatrial heart block.
electromagnetic w's the entire series of ethereal waves which are similar in character, and which move with the velocity of light, but which vary enormously in wavelength. The unbroken series is known from the hertzian waves used in radio transmission, which may be miles in length (one mile equals 1.6×10^5 cm), through heat and light, the ultraviolet, X-rays, and gamma rays of radium to the cosmic rays, the wavelength of which may be as short as 40 femtometers (4×10^{-14} nm).
w. F, F w. 1. a muscle action potential seen on electromyographs; attributed to antidromically conducted motor nerve action potentials. 2. bidirectional, saw-toothed waves on an electrocardiographic tracing characteristic of atrial flutter. See atrial **flutter**. 3. in horses, used in reference to atrial fibrillation.
fluid w. see **thrill**.
light w's the electromagnetic waves that stimulate the retina. See also **vision**.
Mayer w's. waves in arterial blood pressure; brought about by oscillations in baroreceptor and chemoreceptor reflex control systems.
w. motion swirling motion in a drop of dense semen when viewed microscopically (100 × magnification). The intensity and rapidity of the swirling is a reflection of the concentration of the spermatozoa and their level of motility. Called also mass activity.
P w. a deflection in the normal electrocardiogram produced by the wave of excitation passing over the atria.
positive sharp w. an electromyographic tracing associated with denervation and some types of primary muscle disease.
pulse w. the elevation of the pulse felt by the finger or shown graphically in a recording of pulse pressure.
Q w. in the QRS complex, the initial electrocardiographic downward (negative) deflection, related to the initial phase of depolarization.
R w. the initial upward deflection of the QRS complex, following the Q wave in the normal electrocardiogram.
S w. a downward deflection of the QRS complex following the R wave in the normal electrocardiogram.

VetBooks.ir

T w. the second major deflection of the normal electrocardiogram, reflecting the potential variations occurring with repolarization of the ventricles.

T w. abnormalities a common finding in horses whose racing performance worsens. The cause is not identified but may be related to overtraining and the racing of unfit horses. Most animals recover spontaneously with rest. The validity of these abnormalities is now widely doubted.

U w. seen in the human electrocardiogram; represents repolarization of Purkinje cells.

wave mouth the tables of the molar teeth have a wavelike appearance due to uneven wear.

wavelength [*wāv'length*] the distance between the top of one wave and the identical phase of the succeeding one in the advance of waves of radiant energy.

wax [*waks*] a plastic solid of plant or animal origin or produced synthetically, used as a vehicle in skin dressings.

bone w. see **bone** sealant.

ear w. cerumen.

wax flower ***Hoya*** *australis*.

waxing [*wak'sing*] covering with wax.

poultry w. a technique for removing final hairs and feathers from incompletely plucked birds. They are dipped in hot wax which is removed when it is set.

teat w. a phenomenon in mares which indicates that foaling is imminent. The teats which are already distended suddenly exude a soft waxy covering, probably derived from the thick first colostrum, from the teat orifice. Not a completely reliable guide to an imminent foaling.

waxy casts see urinary **casts**.

Waygu Japanese cattle renowned for their carcass marbling characteristics, superior eating quality, enhanced flavor, tenderness and juiciness. In demand by other countries for breeding for these characteristics. In Japan, historically hand fed. The dominant black Wagyu strains are Tottori, Tajima, Shimane and Okayama. The dominant red Wagyu strains are Kochi and Kumamoto.

WAZA World Association of Zoos and Aquariums.

Wb weber.

WBC white blood cell (leukocyte); white blood (cell) count.

weak-at-birth due to early parturition, nutritional deficiency, especially of iodine, in the dam, injury during or prolonged birth, intra-uterine infection.

weak calf syndrome a group of undifferentiated diseases of newborn calves characterized by weakness, apathy, reluctance to stand, failure to suck and a humpbacked appearance.

weak lamb syndrome a group of undifferentiated diseases in which the lambs are weak, do not suck well and die of exposure or dehydration and starvation. Among the causes may be poor nutrition of the ewe before lambing, poor lamb-ewe bonding, poor milk supply in the ewe. It is common to find a combination of factors.

weak limb an important concept in the diagnosis of lameness in horses. The affected limb is dragged during progression, and has a low arc in the swing phase of the movement, the limb trembles, knuckles or collapses when weight is put on it, and knuckles or stumbles on it while walking.

weakness a weak bodily state as expressed by reluctance to and difficulty in rising, a shuffling, disinclination to move and then only slowly, eating slowly and a drooping posture. Can be the result of a general toxemia, of a mild form of paralysis, of anemia and other debilitating diseases.

episodic w. one that waxes and wanes, varying from mild or inapparent to severe in the same animal. A characteristic of certain neuromuscular, cardiovascular and metabolic disorders such as myasthenia gravis, polymyositis, hypoglycemia, abnormalities in blood potassium concentrations, and cardiac arrhythmias and conduction blocks.

wean [*wēn*] to discontinue suckling by the dam and substitute other feeding procedures which may include the provision of milk substitutes or replacers.

weaner a young food animal in the period immediately after weaning and up to 6–8 months of age. Called also weanling.

w. colitis in 6 month old weaner lambs 1–2 months after weaning; characterized by diarrhea and a low case fatality rate. A *Campylobacter*-like organism can be isolated.

w. illthrift loss of weight at weaning and failure to gain weight subsequently in lambs which appear to have adequate feed and worm control programs. In most cases the problem is multifactorial. Lightweight lambs at weaning are at particular high risk.

weaning the act of separating the young from the dam that it has been sucking, or receiving a milk diet provided by the dam or from artificial sources.

w. age the average age at which groups of lambs, calves or piglets are weaned off milk, which may be provided by the dam or by artificial means. In pastured animals the age is that at which the young animals are judged to be able to survive on their own by grazing, approximately 4–6 months. In intensive farming systems where good quality, well-balanced diets can be fed, and the young kept under close surveillance, early weaning is practiced successfully. Also modern farming methods demand early weaning so that the dams are again available for mating. Dairy calves, sucking pigs and some lambs are now weaned at 2–7 days after birth. Under natural conditions more normal weaning ages, though still subject to a great deal of variation are: calves (4–6 months); lambs, goat kids (8–10 weeks); piglets (30–60 days); foals (5–6 months); puppies (6–8 weeks); kittens (7–8 weeks).

early w. weaning before the young have begun to take significant amounts of alternative diets, e.g. piglets at 3 weeks of age. Usually because of a shortage of feed for the dam, or because of the need to increase the number of young produced per female per year. *Segregated* early weaning of pigs is a practice to reduce the transmission of disease from sow to offspring. Piglets are removed from the sow at 10–14 days of age and subsequently reared in a separate environment. *Medicated* early weaning of pigs is similar to segregated early weaning except the sow and litter are medicated with an antimicrobial active against a specific bacteria whose transmission from sow to piglet is being targeted.

heat w. the weaning of commercial chickens away from an artificial heat source at about 4 weeks of age.

w. weight the weight of the young at weaning. Used as a target for young food animals raised for commercial purposes and is an expression of the size at which the young are capable of leading an independent existence. In calves, in particular, the age is related to the development of adequate rumen function. Adjusted weaning weight in beef cattle is the weight immediately at weaning adjusted to 205 days of age and to mature dam age equivalence.

weanling [*wēn'ling*] see **weaner**.

w. enteritis see **coliform** gastroenteritis.

wear and tear pigment lipofuscin. See also **xanthosis**.

weasel (*Mustela* spp.) a small, short-legged, serpentine-bodied carnivore of great agility and voracity. Tawny colored, some turning white in winter.

weather climate, climatic conditions.

w. stain said of wool. See **fleece** rot.

w. stress cold, heat, wet stress.

weatlings see **middlings**.

weavemouth uneven wear of teeth associated with accelerated attrition. See also **wave mouth**.

weaver syndrome see progressive degenerative **myeloencephalopathy**.

weaving a vice of stabled horses manifested by continuous and vigorous rocking from side to side with the head and neck, and to a less extent the trunk.

web [*web*] 1. network of tissue, reasoning or electronic. 2. a tissue or membrane. See also **webbed**.

causation w. a network of interacting risk factors.

glottic w. the formation of granulation tissue across the lumen of the larynx, a complication of laryngeal surgery.

split w. a problem of racing Greyhounds. A split develops in the anterior edge of the interdigital web and causes lameness. If it is sufficiently deep it permits excessive spreading of the claws while racing, causing severe injury.

webbed [*webd*] connected by a membrane or strand of tissue.

weber (Wb) [*web'ər*] the SI unit of magnetic flux which, linking a circuit of one turn, produces in it an electromotive force of one volt as it is reduced to zero at a uniform rate in one second.

Weber–Christian disease see nodular nonsuppurative **panniculitis**.

Weber–Fechner law in stimulus–response relations the ratio of changes in stimulus strength which are perceptible to a basic strength of the same stimulus is constant.

W-3: Wedge gag. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

weddellite [*wed'ə-līt*] a form of calcium oxalate (calcium oxalate dihydrate). Found in oxalate **uroliths**.
wedder wether.
Wedelia genus of plants in America and Australia in the family Asteraceae; contain a carboxyatractyloside, wedeloside; causes acute hepatic necrosis, nephrosis and sometimes cardiomyopathy, congestive heart failure, death; includes *W. asperrima* (yellow daisy, sunflower daisy), *W. glauca (Pascalia glauca*, sunchillo). See also ***Wollastonia biflora***.
wedeloside carboxyatractyloside found in *Wedelia asperrima*.
wedge [*wej*] a solid rectangular object, thin at one end, thick at the other.
mouth w. made of metal; used to force open the molar arcades of the anesthetized horse or cow. The planes on which the molars ride are roughened to prevent slippage. Called also Bayer gag.
w. test a diagnostic test used to localize the cause of lameness in horses. The horse stands on a wooden wedge placed under a specific part of the hoof, placing pressure on certain structures or to cause extension of joints or tendons.
WEE Western equine encephalomyelitis.
weed 1. a plant growing out of place. 2. of horses, see sporadic **lymphangitis**.
noxious w. a plant defined by law as being particularly undesirable, invasive and difficult to control.
Weed method problem knowledge coupler system.
weedfish where a fish, e.g. carp, escapes from a fish farming habitat and populates a natural environment where it destroys natural breeding habitats of native fish.
weedkiller see **herbicide**.
Weeksella a genus of gram-negative, glucose-non-fermenting bacteria which are normal flora of dogs and cats.
weeping said of frozen meat on thawing; the fluid that runs away as thawing proceeds. It contains myoglobin, salts and protein and is fluid leaked from muscle fibers ruptured by the formation of crystals during the freezing stage. The amount of weeping, and it can represent 2.5% of the weight of a carcass, is greater if the freezing was done slowly and if the carcass is of poor quality. Beef is affected more than the other meats. Called also carcass drip.
weepy eye 1. a lay term for ocular discharge. 2. specifically, a conjunctivitis of rabbits caused mostly by *Pasteurella* spp. and characterized by ocular discharge which is soon spread over the face by the rabbit rubbing the eyes with its paws.
Wehrdikmansia see ***Onchocerca***.
Wei qi in traditional Chinese medicine, the equivalent of the immune system. See also **Qi**.
Weibel-Palade body [*vi'bəl pah-lād'*] ultrastructural markers of endothelial cells in primates and horses.
weight [*wāt*] heaviness; the degree to which a body is drawn toward the earth by gravity. See also Tables 2.1 and 2.2.
apothecaries' w. an outmoded system of weight used in compounding prescriptions based on the grain (equivalent 64.8 mg). Its units are the scruple (20 grains), dram (3 scruples), ounce (8 drams) and pound (12 ounces). See also Tables 2.2 and 2.3.
atomic w. the weight of an atom of a chemical element, compared with the weight of an atom of carbon-12, which is taken as 12.00000.
avoirdupois w. the system of weight still used for ordinary commodities in some English-speaking countries. Its units are the dram (27.344 grains), ounce (16 drams) and pound (16 ounces).
birth w. weight of the newborn at the time of birth.
body w. the animal's weight. In herbivores this is often debatable because of the variation in 'gut-fill' depending on the availability of palatable food. In the absence of scales the weights of large animals are often estimated on the basis of their age and their girth just behind the elbow. Called also liveweight. See also **body condition score**.
body w.-to-surface area determination of many drug dosages is physiologically more accurate when based on body surface area rather than body weight; used particularly in cancer chemotherapy. For conversion table for use in dogs see Table 20.
equivalent w. the weight in grams of a substance that is equivalent in a chemical reaction to 1.008 g of hydrogen. See also chemical **equivalent**.
w. gain increase in body weight for specific periods; the principal measure of productivity in meat animals.
w. loss the loss of body weight from that previously measured. This estimate must take into account the difference in 'gut-fill' and the effects of developing pregnancy and recent parturition.
metric w. see Tables 2.1 and 2.2.
molecular w. (mol. wt.) the weight of a molecule of a chemical compound as compared with the weight of an atom of carbon-12; it is equal to the sum of the weights of its constituent atoms. See also Table 4.
over w. see **overweight**.
shifting w. limb to limb sign indicative of lameness especially in horses; while standing the horse is continually shifting its weight from one limb to the opposite one of the pair.
weightlessness in horses induces osteoporosis if the period of weightlessness is long enough; in dogs the effects of weightlessness are confused with those of head-out immersion in water.
weight/volume measurement the system in which the solids are weighed and the fluids measured volumetrically.
Weil's disease human leptospirosis caused by *Leptospira icterohaemorragiae* and transmissible from rats to humans.
Weimaraner a medium- to large-sized dog with a distinctive short, silver-gray coat and amber, gray or blue-gray eyes, used for pointing and retrieving game. The ears are long and pendulous, the neck is long, and the tail is docked to a medium length. Outside the USA, a longhaired variety is recognized. The breed is predisposed to spinal dysraphism, hemophilia A and an immunodeficiency syndrome. Called also gray ghost.
Weinberg pen a pen for restraining adult ruminants which are to be slaughtered by the Jewish or Muslim methods.
weir vine ***Ipomoea*** *polpha* subsp. *weirana*.
Weitlaner retractor a self-retaining instrument, shaped like a scissors but the blades open when the ratcheted handles are closed. The blades each have four downward-pointing, curved prongs which retain their position in a spread wound.
Welch bacillus [*welch*] see ***Clostridium*** *perfringens*.
welding fumes inhalation causes acute chemical irritation and bronchitis; severe cases develop pulmonary emphysema.
well ribbed-up a good spring of ribs with a short, well-muscled flank or coupling to the hindquarter.
well waters can be poisonous; see **nitrate**, **sodium** chloride poisoning.
Wellingtons see **gum-boots**.
Welsh black dual-purpose black cattle breed originating in Wales, UK.
Welsh corgi a medium-sized, long, muscular dog with very short legs. Two types are recognized as separate breeds: *Cardigan* Welsh corgi, which is larger, has large, rounded, erect ears, a short, hard-textured coat, and a long, bushy tail. *Pembroke* Welsh corgi, which is more common, has a shorter body, smaller, pointed, erect ears, a medium length coat, and a very short, natural or docked, tail. The breeds are predisposed to cystinuria, intervertebral disk disease and progressive retinal atrophy.
Welsh mountain sheep a white or tan-faced wool and meat sheep; males are horned, females polled.
Welsh pig a long-faced, lop-eared, white pig, originating in Wales, UK.
Welsh pony 1. Welsh Mountain pony, a riding pony of any color but not broken colors, up to 12 hands high. 2. Welsh pony, similar to the Welsh Mountain pony but larger, up to 13.2 hands high. 3. Welsh cob.
Welsh springer spaniel a medium-sized dog of the spaniel type, midway in size between the Cocker spaniel and English springer spaniel. It is compact with pendulous ears, docked tail, and a red and white, thick, silky coat that is flat on the body but forms feathering on the legs, ears and under the body. Called also Starter.

VetBooks.ir

W-4: Welsh mountain wool sheep.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

W-6: Welsh springer spaniel.

W-7: West African dwarf goat.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

Welsh terrier a small (20 lb) dog with a wiry, black and tan coat that is shorter on the body and longer on the legs and muzzle. The ears are folded over, and the medium length, docked tail is carried upright.

wen [*wen*] 1. a sebaceous or epidermal inclusion cyst. 2. pilar cyst.

Wenckebach's phenonemon [*veng'kə-bahk*] see Mobitz **heart block**.

Wendener's disease chlorinated naphthalene poisoning.

Wensleydale an English longwool meat sheep, polled, with blue face and legs.

Wenyonella a genus of coccidia of the family Eimeriidae.
W. anatis found in domestic ducks.
W. gagari found in domestic ducks.
W. philiplevinei found in domestic ducks and causes severe inflammation of the mucosa of the ileum and rectum.

Werdnig-Hoffmann disease [*verd'nig hof'mahn*] a human disease which has a possible model in hereditary spinal muscular atrophy of Brittany spaniels.

Wernicke encephalopathy [*ver'nĭ-kə*] Wernicke-Korsakoff syndrome.

Wernicke–Korsakoff syndrome [*ver'nĭ-kə kor'sə-kof*] an inflammatory hemorrhagic encephalopathy in humans due to thiamine deficiency. Called also Wernicke's encephalopathy (disease, syndrome).

Wesselsbron disease a disease of cattle and sheep in southern Africa caused by flavivirus transmitted by mosquitoes and characterized by abortion and heavy mortality in newborn lambs and jaundice in adult sheep. The disease is similar to Rift Valley fever but there is no antigenic or taxonomic relationship between the viruses. Serological evidence indicates that the infection is very widespread and occurs as an asymptomatic or mild infection in many other species including humans.

Wessex saddleback a black pig with a white saddle right around its thorax, including the forelimbs. The ears are pitched forward.

West African dwarf goat a southwest African breed of horned, hairy (woolless) sheep; white with red or black spots, may be all black.

West Highland see **Highland** cattle.

West Highland white terrier a small (15–22 lb), muscular, very alert dog with short legs and a distinctive, white, medium length, double coat made up of outer, hard hairs and soft fur underneath. The eyes and nose are dark, the ears erect and pointed, and the tail, which is naturally a medium length is carried upright or over the back. The breed is predisposed to atopic dermatitis, craniomandibular osteopathy and globoid cell leukodystrophy. Called also 'Westie'.

West Nile fever [*west' nīl'*] a disease caused by West Nile virus, a mosquito borne flavivirus which infects birds, humans and other animals, particularly horses. Originally isolated in Uganda in 1937, it is endemic in Africa, the Middle East, and West Asia and in Australia (Kunjin virus variant) associated with asymptomatic infections and sporadic disease outbreaks in humans and horses. In 1999 it was introduced into New York City and has spread to all states and to Canada and Central America and the Carribean and in 2005 to South America. With these incursions, the disease in humans and horses increased in severity. Recently it has been detected in Europe. More than 200 bird species, which present variable susceptibility to infection and disease can be infected. Corvids and passeriformes are particularly susceptible and develop high levels of viremia and mortality. In the United States the American crow *Corvus brachyrhynchos*, the fish crow, *Corvus ossifragus*, and the blue jay, *Cyanocitta cristata* are important sources of infection. *Culex pipiens* is prominent as a vector, but other *Culex, Aedes* and *Anopheles* spp. mosquitoes are also recognized as vectors depending on the locale. Clinical signs in humans vary from inapparent or a mild febrile illness to acute, fatal myeloencephalitis and hepatitis. In horses, neurologic disease is the major sign with hind leg weakness, flaccid paralysis of the lower lip, impaired vision, ataxia, head pressing, aimless wandering, recumbency and death. Occurrence of clinical disease in horses is controlled by vaccination. A disease notifiable to OIE (see Table 22).

W-5: Welsh Pony.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

West Nile virus (WNV) [*west' nīl'*] a flavivirus associated with West Nile fever of humans and horses, as well as causing bovine abortion and stillbirths in Africa.

Westermark's sign [*ves'tər-mahrk*] decreased filling of the pulmonary vasculature due to thromboembolism.

Western blot [*wes'tərn*] an immunologic technique for the detection of proteins using a labeled probe. A protein mixture is separated by electrophoresis, then transferred to a membrane where the target is localized by the probe. Called also Western transfer.

western duck disease, western duck sickness see **botulism**.

Western equine encephalitis (WEE) see Western equine **encephalomyelitis**.

Western herbal medicine [*w*] see **herbal medicine**.

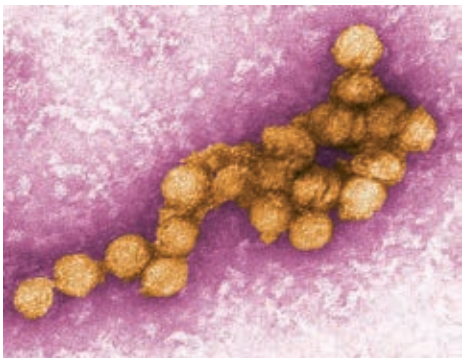
western labrador tea ***Ledum*** *glandulosum*.

Western transfer Western blot.

Westie West Highland white terrier.

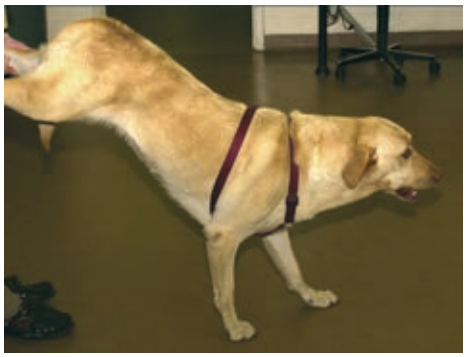
wet-belly disease a disease of farmed, male mink characterized by urinary incontinence and staining of the pelt along the belly, which is of economic importance. The cause is unknown, but obesity may be a contributing factor.

VetBooks.ir



W-8: Transmission electron micrograph of the West Nile virus (WNV).
Courtesy of CDC/PE Rollin; Photo: Cynthia Goldsmith

wet bench the facility in an X-ray dark room where the films are developed, fixed and washed.
wet brain brain edema.
wet calf disease ***Hyalomma*** toxicosis.
wet dewlap a moist dermatitis of the dewlap in rabbits, often precipitated by drooling from malocclusion, moisture from drinking pans or bowls, and damp cages.
wet-drying a husbandry practice of classifying ewes according to whether they have had a lamb in the current lambing season. Ewes that have a dry udder and no lambing stain by fetal fluids on the perineum are classified as dry-dry and did not lamb. Those with a lambing stain and milk in the udder are wet-wet and have lambed and it has sucked. Wet-dry ewes, with a lambing stain and some milk but the teats are dirty, have had a lamb but lost it.
wet preparations a method of preparing specimens for examination in which they are kept in their liquid state or suspended in a liquid, rather than being dried and then examined. Used in the diagnosis of trichomoniasis, leptospirosis and fungal infections.
wet tail proliferative ileitis, regional enteritis. A disease of hamsters, particularly the young, caused by *Lawsonia intracellularis*, characterized by diarrhea causing constant wetness of the tail, and dehydration. At necropsy there is marked hyperplasia of the ileal epithelium and a generalized enteritis. The disease may be endemic in commercial and laboratory colonies.
wether male sheep castrated at an early age before secondary sex characters have developed.
wetness constant wetness of the wool fleece or haircoat along the backs of animals, and caused by heavy rainfall over a long period, causes fleece rot in sheep and rain scald in horses. Constant wetness of the underparts caused by poor drainage in indoor housing, or too little bedding or a defect of urinary control by the animal causes local dermatitis referred to as wet, e.g. wet belly of mink, wet tail of hamsters, wet dewlap of rabbits.
wetting creating and maintenance of a wet surface. See also **wetness**.
w. agent substance that enhances wetting; detergents have been used internally as medicine, e.g. **dioctyl sodium sulfosuccinate** in mineral oil for bloat in cows and impaction in horses as a fecal softener but has proved to be toxic to horses.
whale large mammal, member of the order Cetacea, well adapted to aquatic life. See also **narwhal**.
false killer w. (*Pseudorca crassidens*) much smaller than the killer whale and lacking its fiercely predatory behavior.
killer w. (*Orcinus orca*), the largest member of the dolphin family (Delphinidae) with a black body and distinctive white markings. Toothed and carnivorous, it is the greatest predator amongst the whales. eating all kinds of fish life including other whales. Called also grampus, orca.
w. lice see ***Isocyamus delpini***.
pilot w. cetaceans in the dolphin family (Delphinidae), genus *Globicephala*. They have a long, stocky, black to dark gray body, up to 20 ft in length, rounded head and prominent dorsal fin. Commonly involved in mass beach strandings.
sperm w. (*Physeter macrocephalus*) largest of the toothed whales, up to 60 ft in length, with a large, square head and small jaw. Best known from the novel, *Moby Dick*.
white w. see **beluga**.
Wharton's jelly [*hwor'tən*] the soft, jelly-like intercellular substance of the umbilical cord; rich in hyaluronan.
wheal [*hwēl*] a localized area of edema on the body surface, often attended with severe pruritus and usually evanescent. It is the typical lesion of **urticaria**. Called also hives.
w. and flare reaction a central blanching surrounded by an erythematous zone of varying diameter, sometimes with pseudopodia, observed on the skin in response to intradermal exposure to allergen (antigen). A basis for detecting particular immediate hypersensitivities in an individual. Produced following release of histamine from mast cells following allergen binding to surface IgE bound to Fc receptor.
wheal erythema response see **wheal** and flare reaction.
wheal-flare see wheal-flare **reaction**.
wheat a plant used principally for its grain as human food and livestock feed. Wheat by-products of bran pollard, middlings, shorts are a major source of protein supplements for ruminants. Used also to a limited extent as a fodder by grazing the green crop or as green chop. Called also *Triticum vulgare*.
w. engorgement see **carbohydrate engorgement**.
w. enteropathy see wheat-sensitive **enteropathy**.
w. germ the embryo of wheat salvaged during the milling process. A rich source of tocopherol, thiamine, riboflavin and other vitamins.
w. pasture poisoning a form of hypocalcemic and hypomagnesemic tetany which occurs in cattle and sheep grazed on a green cereal crop. This may be done in a time of feed shortage or as a measure to control excessive growth of the crop. It can also occur when animals are grazed on a cereal crop which has been used as a cover crop to help establish a pasture. See also **lactation tetany**.
w. pollard itch dermatitis caused by the acarid mite ***Suidasia nesbitti***.
w. smut see ***Tilletia tritici***.
wheaten a pale yellow or fawn coat color.
w. terrier see **soft-coated wheaten terrier**.
wheelbarrowing a test for postural reactions in which the animal's hindquarters are supported and walking on the forelimbs is forced. Symmetry of movement, position of the head, neck and limbs, and abnormal movements are observed. Necessarily, only used in neurological examination of small animals.
wheeze [*hwēz*] a whistling respiratory sound.
wheezing breathing with a rasp or whistling sound. It results from constriction or obstruction of the throat, pharynx, trachea or bronchi.
whelping parturition in bitches.
w. box a low-sided, open-topped box designed to accommodate a whelping bitch and her newborn puppies. The bottom may have provision for heating.
whey [*hwa*] liquid residue from milk after the removal of cheese curds in the manufacture of cheese. An excellent protein supplement but difficult to handle in the liquid form, except to pigs maintained close to the cheese factory. Dried whey is easy to handle but processing costs are high.
whinny the horse's call that expresses pleasure and expectancy.
whip muscle [*hwip*] the sartorius muscle; a term used in Greyhounds.
whip stitch see continuous **suture**.
Whippet a small- to medium-sized (28 lb) sight hound, very sleek, fine-boned and with a short coat in any color or mixture of colors. The ears are small and folded over, the head long and flat, and the tail long and tapered. The dog resembles a miniature Greyhound



W-9: Wheelbarrowing test.
From Sharp NJH, Small Animal Spinal Disorders, 2nd Edition. Mosby, 2004.

and is often used for coursing. In earlier times, it was known as 'snap-dog'.

bully W. a name applied to Whippets with the abnormal body characterisitics associated with a homozygous mutation in myostatin.

Whipple's operation [*hwip'əl*] a technique for repair of a prolapsed vagina in the bitch based on submucous resection and suturing of the cut ends.

Whipple's triad [*hwip'əl*] the three criteria on which hyperinsulinism due to pancreatic islet-cell disease (most commonly insulinoma) is diagnosed: (1) neuromuscular signs with fasting or exercise, (2) low blood glucose concentrations associated with clinical signs, and (3) reversal of clinical signs with the administration of glucose.

whipworm [*hwip'wurm"*] see ***Trichuris***.

whirlbone lameness see trochanteric **bursitis**.

whirling disease important disease of salmonids, especially juvenile rainbow trout, caused by the myxozoan ***Myxobolus cerebralis*** which parasitizes the cartilage of the head. Affected fish lose their balance and chase their tails when startled. Survivors are usually badly deformed.

whiskering the rapid to and fro oscillation of the whiskers (mystacial vibrissae) that some rodents and rabbits perform, presumably to gain tactile information of the local environment. See also **vibrissa**.

whiskers 1. the coarse, long, widely spaced sensory sinus hairs located around the muzzle of most animal species. See also sinus **hair**. 2. superficial fungal growth found on chilled meat carcasses and caused by infection with *Mucor* and *Thamnidium* spp. fungi. Cause no significant damage to the meat but may cause a musty smell.

whistling high-pitched respiratory sound made by forced breathing through a very narrow opening; usually indicative of stenosis of a passage.

white [*hwit*] 1. a color lacking any hue; the color of fresh snow. 2. a coat color.

white blood cell leukocyte.

w. b. c. count see **blood** count.

white cedar see ***Melia***.

white cell leukocyte.

white cloud disease infectious disease of carp causing copious mucus secretion so that the patient looks to be enclosed in a cloud. The causative infection is *Pseudomonas fluorescens*.

white-coat effect evidence of anxiety in response to the presence of a health provider, usually clad in a white coat, which may alter various measurements such as blood pressure and heart rate. Observed especially in cats. See also white-coat **hypertension**.

white comb disease of fowls. See **favus**.

white dog shaker syndrome see **shaker dog disease**.

white eye calf syndrome stillborn or weak calves with congenital cataract. Occurs as a significant syndrome of calf death in the high desert country of the northwestern USA in occasional years. Some cases associated with congenital bluetongue infection, but others occur in non-bluetongue areas or years. Cause unknown, outcome fatal.

white face see **baldy**.

white-flowered rhododendron ***Rhododendron*** *albiflorum*.

white foal disease see lethal white **foal** syndrome.

White forceps forceps with ratcheted handles, a scissor type construction, long, down-curved blades with inturning opposed rat-tooth ends. Designed for tonsillectomy.

White Fulani a white with black points multipurpose breed of Nigerian cattle, which has lyre horns. See also **fulani**.

white grub see ***Posthodiplostomum*** *minimum*.

white heifer disease see imperforate **hymen**.

White Holland a pure white turkey with pink shanks. Called also Australian white.

white horsenettle ***Solanum*** *elaeagnifolium*.

white lead basic lead carbonate.

White leghorn a pure white, egg-laying breed of poultry with bright yellow legs and bill. The comb, face and wattles are red, the earlobes are white.

white line 1. the fusion between the wall and the sole of the hoof as seen in the horse. 2. the linea alba.

w. l. disease a disease in horses and sheep in which the wall of the hoof separates from the sole at the white line over a short part of its length. The cavity that is formed becomes packed with dirt causing pressure on the sensitive laminae and lameness. Eventually the cavity penetrates to the coronet and develops a sinus there.

white liniment a traditional, mildly stimulant embrocation containing oleic acid, turpentine oil and ammonium chloride; rubbed into sore and strained muscles and tendons.

white liver disease a specific hepatic dysfunction characterized by extensive hepatic lipidosis and seen only in cobalt deficient sheep. Clinically there is either photosensitization or anemia with emaciation. It is probably a toxic hepatopathy against which cobalt is protective.

white lotion traditional astringent application for the treatment of superficial abrasions such as girth and saddle galls in horses. Contains lead acetate and zinc sulfate and is poisonous if licked over a long period.

white matter, white substance the white nervous tissue, constituting the conducting portion of the brain and spinal cord, composed mostly of myelinated nerve fibers. Gray matter or substance is the term used to describe the tissues composed of unmyelinated fibers.

white moth plant see ***Araujia sericifera***.

white muscle disease 1. see **enzootic** muscular dystrophy. 2. of prawns, see **white tail disease**.

white muscle fibers see **muscle**.

white myofibers see **muscle**.

White nail scissors scissors designed for clipping tubular rather than flat nails, or claws. The cutting edges of the blades form a circle when open so that the claw cannot escape when they are closed.

white-nose syndrome a recently recognized fatal disease of bats caused by *Geomyces destructans*, mainly in the northeastern USA, characterized by a growth of white, fungus on the nose and other affected areas.

white phosphorus pure phosphorus, used at one time as a rodenticide.

white pulp see white **pulp**.

white shaker disease see **shaker dog disease**.

white spirit a petroleum distillate fraction used as an alternative to turpentine. The poisonous effects caused by ingestion are the same as for kerosene.

white spot 1. a fungal infection of the surface of chilled meat carcasses caused by *Sporotrichum carnis*. Appears as white, woolly spots that do no damage, can be wiped away easily but may give the meat a musty smell. 2. artifactual white spots on X-ray films are caused by dirt, specks of barium or iodine or medicines containing them on the animal or on the cassette or by dust or dirt on the screens.

white spot disease a disease of freshwater fish caused by the protozoan ***Ichthyophthirius*** *multifiliis* and manifested by white pustules on the skin and gills and in severe cases sloughing of extensive affected areas. Common in aquariums but occurs also in cultured fish in large groups in hatcheries and on fish farms.

white spot syndrome an infection of penaeid shrimp caused by a complex of baculoviruses; clinical signs include a loose cuticle with white or reddish-brown spots; 100% mortality in 3–10 days is not uncommon.

white-spotted kidney focal, nonsuppurative, interstitial nephritis in calves caused probably by bacteremia of undetermined origin. The lesion appears to exert little effect and is subsequently obliterated by changes in the kidney due to progressive fibrosis resulting from further increments of age.

White Suffolk a breed of Downs-type meat sheep produced by crossing **Suffolk sheep** and **Dorset down** and selecting against colored points and fibers in the fleece.

W-10: White-nose syndrome in Hailes Cave, Albany County, NY.
Photo provided by the New York State Department of Environmental Conservation. All rights reserved.

VetBooks.ir

white tail disease a disease of giant freshwater prawns or Malaysian prawns, caused by a nodavirus. There is a milky white discoloration of the tail that extends to all muscles in the abdomen and cephalothorax, followed by death. The disease is notifiable to the OIE (see Table 22). Called also white muscle disease.
whitebrush ***Aloysia*** *lycioides*.
whiteheads [*hwit'hed*] see ***Sphenosciadium capitellatum***.
Whitehouse technique surgery of the equine guttural pouch through a ventral midline or paramedian approach. A modification of the original technique is a paramedian approach immediately below the linguofacial vein.
whites see **leukorrhea**.
whiteside test a precursor of the **California mastitis test** and replaced by it; based on the development of viscosity in the milk when sodium hydroxide is added.
whitewood see ***Atalaya hemiglauca***.
Whitfield's ointment [*hwit'fēld*] a mixture containing 6% benzoic acid and 3% salicylic acid; used on the skin as a fungistatic and keratolytic agent.
Whitmore's disease [*hwit'mor*] melioidosis.
Whitten effect the introduction of a male into a large group of females results in a synchronization of the estrous cycles of the females. Phenomenon observed in mice.
WHO World Health Organization.
WHO juice an oral, hypertonic electrolyte solution, formulated by the World Health Organization for treatment of cholera in humans, but suitable for the treatment of gastroenteritis in many species; used particularly in dogs and cats. It contains dextrose, potassium chloride, sodium chloride and sodium bicarbonate.
whole blood blood as it comes from the artery or, more commonly, the vein, but usually assumed to be combined with an anticoagulant. Contains the cellular and plasma components of blood.
whole-colored there are no hairs of any color in the animal's coat other than those of the main color. Called also self-colored.
whole farm approach a method of assessing such parameters as the productivity or profitability, the freedom from disease and the mortality rate of a farm as a whole and not for a single enterprise or part of it.
whole farm budget one setting out the expected outcome of the whole farm's production plan in terms of profitability.
whole milk fed neonates fed on whole milk rather than diluted milk or milk replacer.
whole milk tetany of calves see hypomagnesemic **tetany**.
whoop [*hōōp*] a sonorous and convulsive inspiration; suggestive of the sound associated with whooping cough in humans.
whorl [*hwerl*] a spiral arrangement, as in the hairs that go to make up a cowlick.
wide behind said of a horse's gait in which the hindlimbs are moved wide apart.
wigged see **peruke**.
wiggings wool removed from around the eyes and face of the sheep.
Wikstroemia indica plant in the Thymelaceae family; contains toxic dihydroxycoumarin glycosides; has caused clotting defect, spontaneous hemorrhage in deer, dysentery in cattle; called also tie-bush.
Wilcoxon test [*wil-kok'sən*] a test used in statistics to compare paired data. Has the advantage of incorporating the size of the difference between the two sets of data in the comparison.
wild [*wild*] growing uncontrolled away from a domesticated environment. See under the name of the species, e.g. equid, sheep, swine, pig, turkey.
w. carrot see ***Daucus carota***.
w. date see ***Fadogia homblei***.
w. gooseberry see ***Nicandra physalodes***.
w. hop ***Rumex*** *vesicarius*.
w. pepper ***Daphne*** *mezereum*.
w. pineapple see ***Macrozamia***.
w. watermelon ***Citrullus*** *lanatus*.
wildebeest (*Connochaetes* spp.) an ungainly antelope with a head and horns like a buffalo; a carrier of the wildebeest-associated form of bovine **malignant catarrhal fever**. Called also gnu.
w.-associated bovine malignant catarrhal fever virus African malignant catarrhal fever.
wildedadel see ***Fadogia homblei***.
wilderoosmaryn ***Lantana*** *camara*.
wildlife animals running unrestrained in a natural environment.
Willis circle [*wil'is*] see ***circulus*** *arteriosus cerebri*.
Willis technique [*wil'is*] a flotation method, utilizing saturated common salt solution to float helminth eggs, and hence separate eggs from fecal debris. The eggs can then be counted in a fecal sample. Suitable for most nematodes but not for cestodes or trematodes.
willow primrose [*wil'o*] ***Ludwigia***.
willow weed [*wil'o*] ***Persicaria***, ***Polygonum*** *pennsylvanicum*.
pale w. w. *Persicaria lapathifolia*.
Wilms' tumor [*vilmz*] a rapidly developing malignant mixed tumor of the kidneys, made up of embryonal elements, and occurring chiefly in young pigs and chickens; called also embryonal nephroma, nephroblastoma.
Wilson–Harrison technique see perineal **urethrostomy**.
Wilson's disease [*wil'sən*] proposed as a model for chronic copper toxicosis in Bedlington and West Highland white terriers but there are significant differences. Called also hepatolenticular degeneration.
wilting dehydration of plants to the point where the leaves lose their turgor and hang limply. Can happen in living plants which later return to normal, to cut plants before they are fed out, or shortly following the application of herbicides. Thought to be a factor in increasing toxicity.
Wiltipoll a breed of sheep developed in Australia from the Wiltshire horn breed for the production of prime lamb. It is hornless and has a short white fleece that is completely shed each year.
Wiltshire cure a special English method of curing bacon which includes a period of maturation in a dry cool environment after a 3–4 day soak in brine.
Wiltshire horn an English, horned, meat sheep with a characteristic short fleece which is shed spontaneously each year.
wind [*wind*] 1. climatic expression of rate of air movement. 2. colloquial expression for ability to run a race without stopping for lack of respiratory reserve.
broken w. see chronic obstructive **pulmonary** disease.
w. direction has an effect on the speed of spread of an airborne disease, as determined by the population density in different directions, and the temperature which can be expected with winds from each weather quarter.
w. dispersal refers to the direction and distance of spread and the area contaminated by radioactive fallout, fungal spores and other dangerous agents.
w. roses starburst effect given by a graphic representation of the direction and frequency of wind at a given spot over a period of time. Is a reflection of the prevailing wind.
w. speed for epidemiological purposes the height above ground level that wind speed is measured needs to be quoted.
vaginal w. sucking noisy ingress and egress of air from the vulva, especially when moving; usually accompanies pneumovagina and a result of rectovaginal laceration, sometimes fistulation.
wind-borne disease particles of infective material are carried through the air by wind. How far the material travels and how infective it remains is determined by a number of environmental factors, especially moisture, temperature and wind velocity.
wind chill [*wind'chil*] because strong winds magnify convective heat loss from the body, a climatic hazard is not exposed simply by quoting the temperature. A combination of air temperature and mean wind speed gives the important wind chill index.
w. c. index derived from the equation:

$$W_{CI} = (10 \times W^{-2} + 10.45 - W)(33 - T)$$

where W_{CI}=wind chill index; W=mean wind speed in meters/sec; T=air temperature in degrees Celsius.
w. c. temperature special thermometers are available to express the effect of wind on the sensation of temperature. Based on the estimation of what the air temperature feels like to a human when the particular temperature is accompanied by a wind of a certain speed.
wind galls [*wind'gawl*] distentions of tendon sheaths and joint capsule at the fetlock of the horse. They can be quite obvious and esthetically unattractive but they appear to cause no interference to normal movement.
wind-sucking 1. see **crib**-biting. 2. see **rectovaginal** fistula. See also **pneumovagina**.

VetBooks.ir

windbreak a physical obstruction to the passage of the wind, usually in the form of a line or copse of tall bushes or low trees or a porous fence. Of very great importance in temperate climates and periods of cold, wet, windy weather. Neonatal lamb mortality, off-shears hypothermia of sheep and hypomagnesemia and lactation tetany are some of the risk diseases in these circumstances. During sheep weather alerts it may be necessary to improvise shelter. Some methods are: rows of bales of hay, mowing swathes of tall vegetation in a cereal crop or overgrown pasture being kept for hay. The sheep lie down in the alleys and keep out of the wind.

windkessel circulation winkessel (air chamber) vessels convert pulsatile inflow into a smoother outflow; a laboratory model used to explain the steady rate of flow of blood though the vessels.

windmill grass see ***Chloris***.

window [*win'do*] a circumscribed opening in a plane surface.

cochlear w., fenestra cochleae an aperture between the tympanic cavity of the middle ear and the cochlea of the internal ear; covered by the secondary tympanic membrane. Called also round window.

oval w. an oval opening in the inner wall of the middle ear, which is closed by the stapes; called also fenestra vestibuli.

round w. see cochlear window (above).

windpipe [*wind'pīp*] the trachea.

windsucking [*wind'sək-ing*] equine neurosis manifested by arching the neck, swallowing air and grunting; there is no grasping of objects.

windswept conformation defect where foals have both forelimbs, or both hindlimbs, with angular deformity in the same direction. Generally involves the carpus or the tarsus.

Winer's pore dilation see dilated **pore** of Winer.

wing [*wing*] a modified limb suitable for generating aerodynamic lift. Wing membranes or patagia are stretched between bony elements. In birds the wing surface is increased by large flight feathers (remiges) borne on the hand (primaries) or ulna (secondaries). In bats the patagia are more extensive than in birds through enlargement of the bones of the hand.

w. amputation the extreme form of deflighting.

dropped w. a name for *Salmonella typhimurium* infection in young pigeons which causes arthritis in the wing.

w. vein cutaneous ulnar vein; on the under surface of the extended wing, the favored location for venepuncture in most avian species.

winkers see **blinkers**.

winking [*wingk'ing*] quick opening and closing of the eyelids. Called also eyelid snapping; usually done with much force.

jaw w. involuntary closing of the eyelids associated with jaw movements.

w. mares big feature during the daily search for mares in heat in the breeding season; see vulvar winking (below).

W-11: Windswept foal. From Floyd AE, Mansmann, RA, Equine Podiatry. Saunders, 2008.

vulvar w. uncontrolled movement of the vulva in a mare on heat. Usually accompanied by protrusion of the clitoris.

Winkler's operation suture of the floor of the vagina to the prepubic tendon, performed as a prevention against prolapse of the ventral wall of the vagina and cervix in cows.

winter diet [*win'tər*] the daily ration of feed for animals in winter; in animals maintained outdoors there needs to be a dietary supplement in winter to compensate for the additional convection heat loss.

winter dysentery [*win'tər*] a highly contagious disease, predominantly of adult cattle in a herd characterized by a short-lived attack of profuse diarrhea, sometimes accompanied by dysentery. High morbidity but low case-fatality. Caused by bovine coronavirus.

winter kill deaths in cultivated finfish in water bodies where the temperature of the water is below the range of tolerance for the particular species.

winter mortality disease of Sydney rock oysters caused by *Mikrocytos roughlei*.

winter tetany see **lactation tetany**.

winter tick see ***Dermacentor*** *albipictus*.

wintergreen oil [*win'tər-grēn*] essential oil from *Gaultheria* plant or *Betula* bark that contains methyl salicylate, guaiacol, and cresol.

wintering ground a corral or other enclosure in which pastured animals are maintained during the snow season and fed on stored feed.

wintersweet ***Acokanthera*** *spectabilis*.

Winton disease see **seneciosis**.

Wintrobe method [*win'trōb*] 1. a macromethod of hematocrit determination, centrifuging blood in a flat-bottomed glass tube with thick, parallel sides that are marked with calibrations. See also **hematocrit**. 2. for erythrocyte sedimentation; measures the rate of settling in a Wintrobe hematocrit tube placed in a vertical position. See also erythrocyte **sedimentation** rate.

wire [*wir*] very thin metal rod or thread.

baling w. wire used for baling hay which can cause injury to animals. A constant hazard on farms that use hay baled with wire. The most serious injuries are to the lower limbs of horses when they are accidentally entangled in the wire, and **traumatic** reticuloperitonitis when the wire is chopped into small lengths by being passed through a chaff cutter. Now largely replaced by plastic or other fiber baling twine that does not have this risk.

barbed w. strong wire with sharp barbs at close intervals, used in fencing to deter livestock. Consists commonly of two strands twisted together and bearing sharp spines every 4 inches (10 cm) or so. Animals accidentally caught in a fence made of the wire can be badly lacerated.

interdental w. placed around teeth adjacent to a mandibular or maxillary fracture to provide stabilization.

interfragmentary w. may be used to stabilize the position of fracture fragments.

Kirschner w. see **Kirschner** wire.

w. loop lesion thickening of the glomerular basement membrane in glomerular tufts by deposition of immune complexes; seen in membranous glomerulonephritis.

wire worm [*wīr'werm*] of cattle, see ***Haemonchus*** *placei*.

wirehair a coarse, crimped and springy haircoat texture seen in some breeds of dogs, such as Dachshunds and German wirehaired pointers, and the American wirehaired cat.

Wirehaired pointing griffon a medium-sized (50–60 lb) hunting dog with a distinctive short, harsh dry coat in steel gray, gray with dirty white, or mixed with chestnut, that forms a mustache and eyebrows. In the UK, called also Korthals griffon.

Wirehaired vizsla a medium sized gundog with a wiry coat and larger build than the more common shorthaired Vizsla. The coat is a golden sand to russet color. Called also Hungarian wirehaired vizsla.

wireweed see ***Polygonum***.

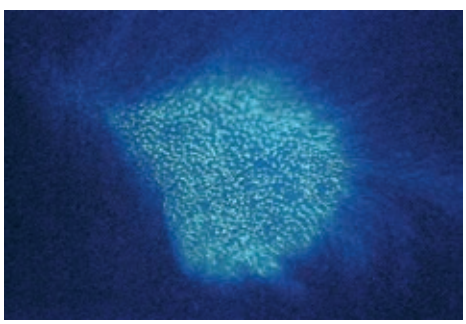
wiring [*wīr'ing*] electrical installation within a building. Faults in the installation or subsequently due to age or wear may cause injury. See **electrocution**, **free** electricity.

wirsung's duct [*vēr'soong*] see pancreatic **duct**.

Wisconsin mastitis test cowside test based on the development of a gel when a reagent is added if the number of inflammatory cells in the sample is high. Largely replaced by the similar California mastitis test.

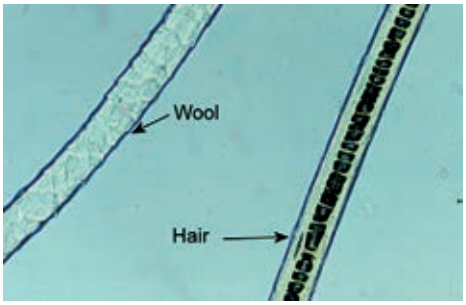
VetBooks.ir

wisent see European **bison**.
wishbone see **furcula**.
wisp a large, sponge-like piece of grooming apparatus home-made of woven straw.
Wisteria plant genus in legume family Fabaceae; contains glycoside wistarin, plus a lectin; causes diarrhea, abdominal pain, vomiting. Called also wisteria, a popular garden plant. Includes *W. floribunda* (Japanese wisteria), *W. sinensis* (*W. chinensis*, Chinese wisteria).
witch hazel [*wich' ha'zəl*] an extract from the leaves of *Hamamelis virginiana*, containing gallic acid and tannins, used topically as an astringent. Called also hamemelis.
witchgrass see ***Panicum** capillare*.
witch's milk colloquial expression for milk secreted by newborn animals.
withdrawal [*with-draw'əl*] pharmaceutically speaking, cessation of treatment with a particular drug.
w. reflex see **flexor** reflex.
w. time time interval that use of a drug in an animal must cease before the animal or any of its products can be used as human food. Based on determination of the time interval required for tissue concentrations of the substance to fall below critical levels as decreed by legislation. Called also withholding period.
withers [*with'ərz*] the region over the backline where the neck joins the thorax and where the dorsal margins of the scapulae lie just above the spines of the first few thoracic vertebrae below the skin.
fistulous w. see **fistulous** withers.
high w. low pelvis see **hyena** disease.
low w. a conformation defect in a horse.
withholding period the time interval after the withdrawal of a drug from the treatment of an animal before the animal or its products can be used for human food.
witstorm ***Thesium** lineatum*.
WMD white muscle disease.
wobble hypothesis [*wob'əl*] proposed by Francis Crick to observations that the 5′-base of the anticodon was capable of 'wobble' in its position during translation, allowing it to make alternative hydrogen bonding arrangements with several different codon bases.
wobbler syndrome incoordination in horses and dogs.
canine w. s. see **cervical** spondylomyelopathy.
equine w. s. see **enzootic** equine incoordination.
Wohlfahrtia a genus of flesh flies in the family Sarcophagidae.
W. magnifica, W. meigini, W. nuba, W. vigil deposit their larvae anywhere on the bodies of animals and cause tissue loss and some disfigurement.
wolf a wild member of the family Canidae. A brownish-gray dog which resembles a German Shepherd dog with a long nose and a bushy tail, noted for its ferocity as a hunter of game. Includes the red wolf (*Canis rufus*) and gray wolf (*C. lupus*).
wolf tooth small, rudimentary teeth in front of the first large cheek teeth in horses and if present counted as the first premolar. Usually only present in the upper jaw and usually shed in early maturity.
w. t. elevator special tool for extraction of equine wolf teeth.
Wolff-Chaikoff effect increased blood concentrations of thyroglobulin bound iodide inhibit further binding of iodide by the thyroid gland.
Wolff's law [*voolfs*] the law that claims changes in the form and function of a bone are followed by changes in its internal structure.
Wolff–Parkinson–White syndrome [*woolf' pahr'kin-sən hwīt'*] the association of paroxysmal tachycardia (or atrial fibrillation) and pre-excitation, in which the electrocardiogram displays a short P–R interval and a wide QRS complex which characteristically shows an early QRS vector (delta wave). Called also anomalous atrioventricular excitation. Occurs occasionally in dogs, horses and cats.
wolffian [*wool'fe-ən*] named for Kaspar Friedrich Wolff, German anatomist and embryologist (1733–1794).
w. body mesonephros.
w. duct see **mesonephric** duct.
wolfhound see **Borzoi**, **Irish wolfhound**.
wolfram (W) [*wool'frəm*] tungsten.
wolf's bane [*woolfs'bān*] see ***Aconitum** napellus*.
wolfsmelk ***Sarcostemma** viminale*.
Wolinella succinogenes one of the common bacterial residents of the rumen which participates in fermentative digestion of organic material.
Wollastonia biflora plant in the family Asteraceae; contains diterpenoid (kaurene) glycosides that are hepatotoxic causing liver necrosis. Called also *Wedelia biflora, Melanthera biflora*, mile-a-minute.
wolverine (*Gulo gulo*) a large, heavily built mustelid with thick legs, large head and short tail.
womb [*wōōm*] uterus.
wombat a thickset, nocturnal, herbivorous, burrowing marsupial in the Family Vombatidae, found only in Australia. It has short legs and a short, vestigial tail. There are three species, the common wombat (*Vombatus ursinus*), southern hairy-nosed wombat (*Lasiorhinus latifrons*) and the endangered northern hairy-nosed wombat (*L. krefftii*). An endearing subject of children's books, but in reality subjected to persecution because of damage to fencing and land degradation from its burrowing.
wood alcohol [*wood*] methyl alcohol.
wood anemone [*wood*] see ***Anemone***.
wood-eating a pica observed in sheep and horses kept in close confinement on diets low in roughage.
Wood's filter see **Wood's light**.
Wood's light, lamp ultraviolet radiation from a mercury vapor source, transmitted through a nickel oxide filter (Wood's filter), which holds back all but a few violet rays and passes ultraviolet wavelengths of about 365 nm; used in diagnosis of fungal infections of the skin and to reveal the presence of porphyrins and fluorescent minerals.
wood-pigeon a large gray pigeon with a red breast and a white collar. Called also ring-dove, *Columba palumbus*.
wood preservative substances used as dressing for lumber to protect it against mold, insects, pests, fire, etc. Animals housed in pens made of wood which has been treated with wood preservatives may be poisoned with arsenic if they ingest ash from wood that has been burned. Chlorinated phenols, chlorinated naphthalenes, copper–chrome–arsenate mixture, coal tar creosote and other coal tar preparations are some of the compounds used which are potentially toxic.
wood tar derivatives substances obtained by the destructive distillation of pine, sometimes juniper, wood. Includes pine oil, turpentine and pine tar. Pine oil yields phenol, creosol, toluene, methyl alcohol and acetone. See also pine **tar**, juniper **tar**.
wood tick see ***Dermacentor** andersoni*.
woodchuck [*wood'chuk*] see **groundhog**.
wooden tongue see **actinobacillosis**.
woody aster see ***Xylorrhiza***.
woody chest syndrome a syndrome caused when the thoracic musculature becomes rigid and interferes with respiration. Caused by rapid intravenous injection of fentanyl or droperidol-fentanyl and is reversible with naloxone hydrochloride.
woody pear see ***Xylomelum***.
wool [*wool*] the natural fiber produced by the skin of domesticated sheep, characterized by its quality of felting together by virtue of its imbricated surface.
w. ball see **trichobezoar**.
black w. inherited coat color in sheep.
w. blind the state of having excess wool growth around the eyes to the point where the sheep is unable to see.
break in w. see wool **break**.
broken w. see wool **break**.

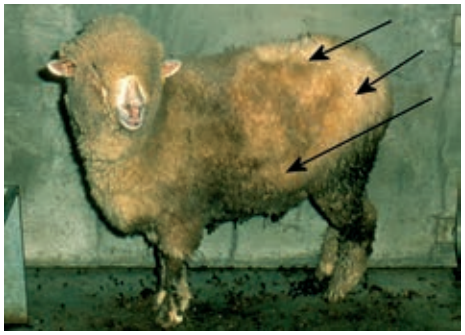


W-12: Apple green fluorescence under a Wood's lamp of hairs infected with *Microsporum canis.* From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

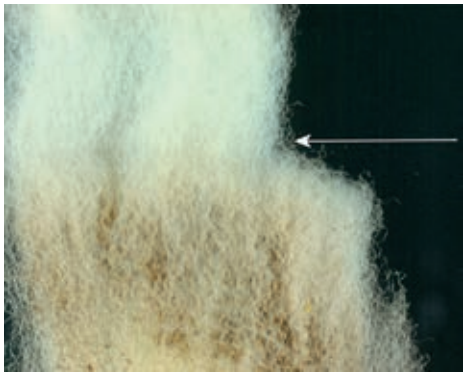


W-13: Wool fiber, non-medulated, and with imbricated surface compared with medullated hair fiber.



W-14: Wool pulling in sheep (with *Damalinia ovis*) occurring at the areas of the fleece that can be reached with the mouth.

carding w. wool suitable for the woollen trade.
carpet w. coarse low-grade wool, used in the manufacture of carpets.
w. classing see wool **classing**.
clean w. the basis on which the price of wool is set; scoured wool less charges and loss incurred in scouring.
combing w. long-fibered wool suitable for processing in a combing machine. Used in textile manufacture, especially worsted.
colored w. fibers naturally colored fibers in a fleece.
colored wool an inherited change in fleece color that may be general or local. Considered highly undesirable in the commercial wool industry as white wool can be dyed any color but naturally colored fibers do not allow uniform uptake of the dye. Colored wool may be black, gray, silver, brown, red and moorit and naturally colored fleeces are often preferred by hand spinners and weavers. An example of inherited local wool coloration occurs in the Badger Face Welsh Mountain, historically discriminated against but now grown as a distinct breed. In recent years a number of colored sheep associations have emerged to promote the production of sheep with colored fleeces.
dead w. wool plucked from a sheep which has been dead for some time; usually heavily contaminated and of little value. See also **fellmongering**.
dense w. staples carrying many fibers per unit area of skin surface.
w. depigmentation see **achromotrichia**.
w. discoloration see **fleece** rot, **mycotic** dermatitis.
doggy w. unevenly or poorly crimped wool; found in old sheep.
w. eating eating of rabbits' wool by other rabbits, or wool from garments by cats causes intestinal wool balls and obstruction of the gut. May be a manifestation of pica due to boredom.
w. fat see **lanolin**.
w. fiber abnormalities includes straight, steely wool, wool break, pigmentation, achromotrichia in black sheep.
w. fiber diameter thickness of the fiber; wool is sold on the basis of the average fiber diameter of the wool in the lot as determined by a machine and quoted in microns (micrometers); a more sophisticated classification is made on the basis of the average fiber diameter and the variability of the diameter.
greasy w. wool in its natural state, after removal from the sheep and before any commercial processing; contains yolk, suint, moisture, extraneous soil and vegetable matter.
green wool see **fleece** rot.
w. hairs the soft undercoat fibers in most cats and dogs, interspersed with the longer guard **hair**; the predominant fiber type in sheep.
hogget w. first fleece from a 10–14 month old sheep which has not been previously shorn.
hunger fine w. wool with a finer fiber diameter than expected for the sheep's age; caused usually by poor nutrition.
w. industry includes sheep farming, shearing, wool sales, wool processing and fiber and fabric manufacture.
lumpy w. see **mycotic** dermatitis.
w. maggots see cutaneous **myiasis**.
w. picking pulling at the wool of another sheep. It may be a vice due to over-confinement, or to an unspecified nutritional deficiency. Biting of another sheep as occurs in rabies may be confused with wool picking but not for long.
plain w. straight wool lacking crimp and character.
w. processing effluent liquid effluent from wool processing; has been a source of infection with anthrax.
w. pulling pulling by the sheep of its own wool, usually an indication of itchiness. Seeb with lice and mite infestations of the skin and also with scrapie.
w. quality the British standard for wool quality is based on the Bradford Spinning Count System and the wool qualified as to its Bradford Count. This originated in the 19th century and is based on the number of 560-yard worsted skeins that can be produced from one pound of clean wool; larger numbers mean finer wool.
w. rot see **fleece** rot.
w. rubbing the sheep rubs its fleece against a hard object. Usually an indication of itching caused by external parasites or to a systemic disease with manifestations in the skin. See also **scrapie**.
seedy w. wool heavily contaminated with plant seeds.
skin w. scoured wool from a fellmonger.
w. slip alopecia of housed ewes that are shorn in winter. The wool is lost over a large area of the back. There is no systemic illness and the wool regrows normally. The cause is unknown but the condition appears to be related to a high concentration of serum corticosteroids.
sound w. wool with no breaks in it that will stand up to the pressures of scouring, spinning and weaving.
straight-steely w. **steely wool**.
steely wool the appearance of wool of sheep which are suffering from a nutritional deficiency of copper. The wool loses its crimp and becomes straight and stringy and the fibers have reduced strength, elasticity and stainability. Caused by a defect of keratin metabolism.
stringy wool see **steely wool**.
strong wool wool with a comparatively wide fiber diameter, a classification now being superseded by stating the actual microns of diameter.
w. sucking a vice of cats, particularly Siamese and Siamese crosses, in which they suck or chew woollen objects. Believed to be an extension of sucking behavior.
tender w. wool which will break during the combing process in manufacturing.
w. wax see **lanolin**.
w. weight see **fleece** weight.
w. yield the percentage of raw wool that can be retrieved from processing in a state suitable for the particular type of production which is in hand, e.g. carpet making.
Wooley's solution a buffered-EDTA (ethylenediamine tetra-acetate) solution, pH 8.0, with bactericidal activity against



W-15: Break line in staple of tender wool.

VetBooks.ir

W-16: Woolly haircoat syndrome. Calf dead from cardiomyopathy.

gram-negative bacteria. Used topically, either alone or in combination with other antimicrobical agents, to treat resistant bacterial infections, particularly those involving *Pseudomonas* spp.

woollen fabrics such as tweeds, felts, flannels, blankets, knitwear made of wool with a shorter fiber length than that used for **worsted**.

woolly haircoat syndrome in horned and polled Herefords; the haircoat is abnormally short and curly; this sort of coat is also a marker for lethal inherited **cardiomyopathy**.

woolly syndrome haircoat of dogs with castration-responsive dermatosis may change in texture, becoming fluffy and crimped, resembling wool.

woolsorter's disease pulmonary anthrax.

work [*wərk*] in the context of farm animals work includes, besides the force times distance produced by the working or racing horse or dog, the caloric equivalent of such work measured as egg, milk, wool or meat production.

breathing w. breathing requires an energy utilization to overcome the resistance of the airway to air flow, repositioning of organs, the elasticity and surface tension forces in the respiratory system.

w. efficiency gross efficiency is the ratio of the caloric equivalent of work accomplished to the total energy metabolism. The gross work efficiency of muscular work by horses is about 25%, of milk production about 30%.

w. potential estimation estimation of the ability of a racehorse to perform work is an exercise in applied physiology but a satisfactory set of techniques has not yet been enunciated.

work-up [*werk'əp*] the procedures done to arrive at a diagnosis, including history taking, laboratory tests, X-rays, and so on.

working dogs breeds or individuals that are bred for or trained to do specific tasks that help humans in some way, such as sledge or cart dogs, police or guard dogs, and livestock tending dogs. In some dog classification systems used for competition, this group includes only those breeds that work livestock, e.g. Collie, Australian cattle dog, Australian kelpie, German Shepherd dog, Shetland sheepdog, Old English sheepdog, Hungarian puli and Welsh corgi, while other 'working dog' breeds, such as the Rottweiler and Saint Bernard, are **utility dogs**. See also assistance **dog**.

Working terrier see **Airedale terrier**.

World Association of Zoos and Aquariums (WAZA) an organization of zoos and aquariums dedicated to animal care and welfare, environmental education and global conservation. Previously called the International Union of Directors of Zoological Gardens.

World Conservation Union see **International Union for the Conservation of Nature and Natural Resources (IUCN)**.

World Health Organization (WHO) the specialized agency of the United Nations that is concerned with human health on an international level. The agency was founded in 1948 and in its constitution are listed the following objectives. 'Health is a state of complete physical and social well being, and not merely the absence of disease or infirmity. The enjoyment of the highest attainable standards of health is one of the fundamental rights of every human being without distinction of race, religion, political belief, economic or social condition. The health of all peoples is fundamental to the attainment of peace and security and is dependent upon the fullest cooperation of individuals and States. The achievement of any State in the promotion and protection of health is of value to all'. The major specific aims of the WHO are as follows: (1) To strengthen the health services of member nations, improving the teaching standards in medicine and allied professions, and advising and helping generally in the field of health. (2) To promote better standards for nutrition, housing, recreation, sanitation, economic and working conditions. (3) To improve maternal and child health and welfare. (4) To advance progress in the field of mental health. (5) To encourage and conduct research on problems of public health. In carrying out these aims and objectives the WHO functions as a directing and coordinating authority on international health. It serves as a center for all types of global and health information, promotes uniform quarantine standards and international sanitary regulations, provides advisory services through public health experts in control of disease and sets up international standards for the manufacture of all important drugs. Through its teams of physicians, nurses and other health personnel it provides modern medical skills and knowledge to communities throughout the world.

World Organisation for Animal Health formerly the Office International des Epizooties, but still known as the OIE. An intergovernmental organization established in 1924. The objectives of the OIE are to ensure transparency in the occurrence of global animal disease and zoonoses; to collect, analyze and disseminate scientific veterinary information; to provide expertise in the control of animal disease; to safeguard world trade by publishing health standards for international trade in animals and animal products; to promote the legal status and resources of national veterinary services; and to promote animal welfare through a science-based approach. It publishes guidelines and periodicals relating to international animal health (www.oie.int). See also Table 22 for the list of animal diseases notifiable to the OIE.

world scourge schistosomiasis.

World Society for the Protection of Animals (WSPA) an international organization concerned with animal welfare and related legislation.

worm egg count [*werm*] see **egg** count.

worm nodule disease esophagostomiasis.

worm resistance a significant increase in the ability of worms to tolerate doses of individual drugs which have previously been lethal to the worms.

worms in the context of veterinary science, endoparasitic helminths.

wormseed see ***Chenopodium ambrosioides***.

American w. *Chenopodium ambrosioides*.

wormwood [*werm'wood*] see ***Artemisia absinthium***.

worsted fabric made of combed wool with a longer fiber length than that used for **woollen** fabrics.

wound [*wōōnd*] a bodily injury caused by physical means, with disruption of the normal continuity of structures.

avulsive w. see **avulsion**.

blowing w. open pneumothorax.

clean w. operative wound that does not penetrate an organ or system; the normal surgical wound.

clean-contaminated w. basically a clean wound, but with some controlled exposure to the gastrointestinal or genitourinary tract.

contaminated w. one subject to trauma, aseptic surgical technic or entry of gastrointentinal or urinary tract contents.

w. contracture see **contracture**.

contused w. one in which the skin is unbroken.

dirty w. associated with infection or devitalized tissue.

w. healing agents topical agents which stimulate healing; includes preparations containing zinc, trypsin, neomycin, dyes and iodine.

incised w. one caused by a cutting instrument.

lacerated w. one in which the tissues are torn.

w. nonhealing failure to heal despite appropriate treatment being given.

open w. one that communicates directly with the atmosphere.

penetrating w. one caused by a sharp, usually slender object, which passes through the skin into the underlying tissues.

perforating w. a penetrating wound which extends into a viscus or bodily cavity.

pocket w. chronic, nonhealing wound in which there is granulation tissue but the overlying skin does not adhere. Seen most commonly in the axillae or groin of cats.

puncture w. penetrating wound.

sucking w. a penetrating wound of the chest through which air is drawn in and out.

surgical w. one deliberately produced during a surgical procedure, e.g. the original incision.
tangential w. an oblique, glancing wound which results in one edge being undercut.
traumatopneic w. sucking wound.
woven bone see woven **bone**.
wraparound arthrogryposis the limb joints are rigid but in addition the limbs are held close to the body and appear to be wrapped around it. See also **arthrogryposis**.
Wright's stain [*rīt*] see Wright's **stain**.
wrinkles [*ring'kəl*] small folds of skin in sheep, especially Merino, that are susceptible to staining and wetness and therefore to blowfly strike.
wrist [*rist*] the carpus; this human term is sometimes applied to animals.
wry [*ri*] distorted, twisted to one side.
w. bite see wry **mouth**.
w. nose see **nasal** deviation.
wryneck [*ri'neck*] hereditary condition in guinea pigs; the young are born with varying degrees of torticollis; less severely affected animals may appear normal after a few days.
wrytail a crooked tail as a result of malformation of coccygeal vertebrae; often an inherited defect and is desirable in some breeds of dogs, e.g. Bulldog, Boston terrier. In dogs, called also screw-tail.
WSPA World Society for the Protection of Animals.
wt weight.
Wuchereria see ***Brugia***.
wut see **Tollwut**.
w/v weight (of solute) per volume (of solvent).
Wyandotte medium-sized, dual-purpose breed of poultry; white, buff, blue, black, blue-laced or barred plumage. Legs and beak yellow.
Wyoming strangles *Corynebacterium pseudotuberculosis* abscesses in horses.
Wyominia tetoni a cestode of the family Thysanosomatidae found in bighorn sheep.

X

X symbol, *Kienböck's unit* (of X-ray exposure).
ξ xi, small letter; fourteenth letter in the Greek alphabet.
X-deletion X ovarian dysgenesis a chromosomal defect identified in mares; causes failure of germ cells to survive and the ovaries become inactive.
X disease see **chlorinated naphthalenes**.
X factor see **hemin**.
X-inactivation see the **Lyon hypothesis**, **dosage** compensation.
X-linked traits transmitted by genes on the X chromosome; sex-linked; the categories are X-linked dominant, X-linked recessive.
X-linked agammaglobinemia see Bruton's **agammaglobulinemia**.
X-linked trait sex-linked, e.g. coat color in cats, hemophilia.
x radiation see **radiation**, **X-ray**.
X-ray [*eks'ra*] electromagnetic radiation of wavelengths ranging between 5.0×10^{-6} and 5.0×10^{-4} μm (including grenz rays). X-rays are produced by the collision of a beam of electrons with a metal target in an X-ray tube. Called also roentgen rays. The penetrability and hardness of the X-rays increases with the voltage applied to the X-ray tube, which controls the speed with which the electrons strike the target. For diagnostic radiography, tube voltages in the range 50–120 kilovolts peak (kVp) are normally used. For radiation therapy, voltages in the 1–2 megavolt range are used for most treatment. Accelerating electrons to speeds high enough to produce megavoltage X-rays requires a linear accelerator (lineac). The X-ray exposure is proportional to the tube current (milliamperage) and also to the exposure time. In diagnostic radiography, the tube voltage and current and exposure time are selected to produce a high-quality radiograph with the correct contrast and film density. In radiation therapy, these exposure factors are selected to deliver a precisely calculated radiation dose to the tumor. The total dose is usually fractionated so that tumor cells can be oxygenated as surrounding cells die; this increases the sensitivity of the cells to radiation. Body tissues and other substances are classified according to the degree to which they allow the passage of X-rays (*radiolucency*) or absorb X-rays (*radiopacity*). Gases are very radiolucent; fatty tissue is moderately radiolucent. Compounds containing high-atomic-weight elements, such as barium and iodine, are very radiopaque; bone and deposits of calcium salts are moderately radiopaque. Water; muscle, skin, blood and cartilage and other connective tissue; and cholesterol and uric acid stones have intermediate density. See also **radiation** and **radiation therapy**. A double contrast study uses both a radiopaque and a radiolucent contrast medium; for example, the walls of the stomach or intestine are coated with barium and the lumen is filled with air. The resulting radiographs clearly show the pattern of mucosal ridges.
soft x. beam made at low kVp output. The beam has low energy and weak penetration.
x. tube a glass vessel with a high vacuum and two electrodes. A very high voltage electrical current is passed across the tube and drives a stream of electrons produced by a tungsten filament set in the face of the cathode to collide with the anode and generate X-rays.
xanthemia hypercarotenemia.
xanthic [*zan'thik*] 1. yellow. 2. pertaining to xanthine.
xanthine [*zan'thēn*] a purine compound found in most bodily tissues and fluids; it is a precursor of uric acid. Xanthine compounds such as theophylline have diuretic properties.
x. alkaloids see **caffeine**, **theobromine**, **theophylline**.
x. calculi see xanthine **urolith**.
dimethyl x. theobromine.
x. oxidase key enzyme in the pathway for purine breakdown. Catalyzes the conversion of hypoxanthine to xanthine and then to uric acid. Generates hydrogen peroxide, which can be a generator of free radicals in biological systems through reactions with superoxide ions.
trimethyl x. caffeine.
xanthinuria xanthine in the urine.
Xanthium plant genus in the family Asteraceae; contain a potent toxin, carboxyatractyloside, which causes acute hepatic necrosis. Poisoning results from eating the seeds, or the cotyledons of the young seedlings that grow in profusion after rain falls. Includes *X. ambrosioides*, *X. spinosum* (Bathurst burr), *X. strumarium* (*X. occidentale*, *X. pungens*, *X. californicum*, *X. cavanillesii*, *X. chinense*, *X. italicum*, *X. orientale*, Noogoora burr, cockleburr).
xanth(o)- word element. [Gr.] *yellow*.
Xanthocephalum ***Gutierrezia***.
xanthochromatic [*zan"tho-kro-mat'ik*] yellow-colored.
xanthochromia [*zan"tho-kro'me-ə*] yellowish discoloration of the skin or spinal fluid. Xanthochromic spinal fluid usually indicates hemorrhage into the central nervous system and is due to the presence of xanthematin.
xanthochromic [*zan"tho-kro'mik*] yellow-colored.

xanthochromia [*zan"tho-kro'me-ə*] yellowish discoloration of the skin or spinal fluid. Xanthochromic spinal fluid usually indicates hemorrhage into the central nervous system and is due to the presence of xanthematin.

xanthochromic [*zan"tho-kro'mik*] yellow-colored.

xanthogranuloma [*zan"tho-gran"u-lo'mə*] a tumor having histological characteristics of both granuloma and xanthoma.

xanthoma [*zan-tho'mə*] a papule, nodule or plaque in the skin due to lipid deposits; the color of a xanthoma is usually yellow, but may be brown, reddish, or cream. Microscopically, the lesions show light cells with foamy protoplasm (foam cells, xanthoma cells). They occur most commonly in White Leghorn chickens and rarely in other species. The formation of xanthomas may indicate an underlying disease, usually related to abnormal metabolism of lipids, including cholesterol. In reptiles they are associated with high cholesterol diets.

xanthomatosis [*zan"tho-mə-to'sis*] an accumulation of excess lipids in the body due to disturbance of lipid metabolism and marked by the formation of foam cells and Touton giant cells in skin lesions. Occurs in association with diabetes mellitus in the dog and is common in humans and chickens. See also **xanthoma**.

xanthomatous [*zan-tho'mə-təs*] pertaining to xanthoma.

xanthomegrin nephrotoxin produced by *Penicillium* spp. fungi.

xanthophyll [*zan'tho-fəl*] yellow pigment in plants.

Xanthorrhoea Australian plant genus in the family Xanthorrhoeaceae; contains an unidentified toxin which causes normally reversible posterior incoordination (wamps) with urinary incontinence in cattle; flower spikes most toxic. Includes *X. australis*, *X. fulva* (*X. hastile*, *X. hastilis*), *X. johnsonii*, *X. quadrangulata*, *X. semiplana*. Called also grasstree, blackboy, yakka.

xanthosine [*zan'tho-sēn*] a nucleoside composed of xanthine and ribose.

x.-5′-monophosphate purine nucleotide found in many animals; intermediate ion pathway to synthesis of guanosine 5′-monophosphate.

xanthosis [*zan-tho'sis*] yellowish discoloration; degeneration with yellowish pigmentation.

Xanthosoma American plant genus in the family Araceae; probably contains calcium oxalate raphide crystals; causes stomatitis, salivation. Includes *X. atrovirens*, *X. sagittifolium*. Called also cocoyam, elephant's ear, taro, tannia.

xanthurenic acid [*zanth"u-ren'ik*] a metabolite of L-tryptophan, present in normal urine and in increased amounts in vitamin B_6 deficiency.

Xe chemical symbol, *xenon*.

Xenarthra an order of placental mammals that includes anteaters, sloths and armadillos.

xenobiothomochelidonine one of the toxic alkaloids found in the plant *Chelidonium majus*.

xenobiotic [*zen"o-bi-ot'ik*] any substance, harmful or not, that is foreign to the animal's biological system.

x. transformation the principal mechanism for maintaining homeostasis during exposure to small foreign molecules such as drugs and toxins; the process deals with foreign chemicals which are too small for processing by the immune system; composed of enzyme systems evolved to render xenobiotics easily excreted, mainly in the liver; enzymic reactions classified as phase I (add to or expose functional chemical groups; includes cytochrome P-450 monooxygenases) and phase II (glucuronidation, conjugation and other reactions producing a large increase in water solubility to promote excretion). Cats lack the capacity for glucuronidation, making them more susceptible to certain poisonings, e.g. acetaminophen (paracetamol).

xenobiotics foreign organic compounds not produced in metabolism.

xenodiagnosis [*zen"o-di"ag-no'sis*] 1. diagnosis by means of finding, in the feces of clean laboratory-reared, parasite-free arthropod vectors allowed to feed on the host suspected of being infected by a protozoan, the infective forms of the organism causing the disease; used in diagnosis of trypanosomiasis. 2. diagnosis of trichinosis by means of feeding laboratory-bred rats or mice on meat suspected of being infected with *Trichinella*, and then examining the animals for the parasite.

xenogeneic in transplantation biology, denoting individuals or tissues from individuals of different species and hence of disparate cell type.

xenogenesis 1. **heterogenesis** (1). 2. production of offspring unlike either parent.

xenogenous [*zen-oj'ə-nəs*] caused by a foreign body, or originating outside the organism.

xenograft [*zen'o-graft*] a graft of tissue or organ transplanted between animals of different species; a heterograft.

Xenohaliotis californiensis a genus of intracellular bacteria in the family *Rickettsiaceae* that occurs in marine waters and infects the intestinal tract of abalone, causing the disease known as 'withering syndrome'. It is responsible for mortality in natural and cultured populations and is a disease notifiable to the OIE (see Table 22).

xenoimmunization development of antibodies in response to antigens derived from an individual of a different species.

xenoma a massive hypertrophic lesion caused in fish by the microsporidian protozoan parasites *Nosema* and *Pleistophora* spp.

xeromyceteria dryness of the nasal mucosa.

xenon (Xe) [*ze'non*] a chemical element, atomic number 54, atomic weight 131.30. See Table 4.

x.-133 (^{133}Xe) a radioisotope of xenon having a half-life of 5.3 days and a principal gamma ray photon energy of 81 keV; used for pulmonary ventilation imaging.

xenoparasite [*zen"o-par'ə-sīt*] an organism not usually parasitic on a particular species, but becomes so because of a weakened condition of the host.

xenophthalmia [*zen"of-thal'me-ə*] inflammation caused by a foreign body in the eye.

Xenopsylla a genus of fleas, including more than 30 species, many of which transmit disease-producing microorganisms.

X. cheopis the rat flea, which transmits *Pasteurella pestis*, the causative organism of plague and *Rickettsia typhi*, the causative organism of murine typhus.

xenoreactivity the reaction of lymphocytes or antibodies with xenoantigens.

xenotransplantation the transplantation of an organ or tissue from an animal of one species to an animal of a different species.

xer(o)- word element. [Gr.] *dry, dryness*.

xeroderma [*zēr"o-der'mə*] a mild form of ichthyosis; excessive dryness of the skin.

xerography [*ze-rog'rə-fe*] xeroradiography.

xeroma [*zēr-o'mə*] abnormal dryness of the conjunctiva; xerophthalmia.

xeromammography [*zēr"o-mə-mog'rə-fe*] xeroradiography of the mammary gland.

xerophagia the eating of dry food.

xerophthalmia [*zēr"of-thal'me-ə*] abnormal dryness and secondary changes to the corneoconjunctival surface due to tear film deficiency; called also ophthalmoxerosis.

xeroradiography [*zēr"o-rā"de-og'rə-fe*] the making of radiographs by a dry, totally photoelectric process, using metal plates coated with a semiconductor, such as selenium. The image produced by this process differs from conventional X-ray in that margins between tissues of varying densities are more enhanced. Hence, xeroradiography is especially beneficial in the diagnosis of mammary tumors. Structures such as tendons are also visually enhanced. It does, however, require higher doses of radiation. Called also xerography.

xerosialography [*zēr"o-si"ə-log'rə-fe*] sialography in which the images are recorded by xerography.

xerosis [*zēr-o'sis*] abnormal dryness, as of the eye (xerophthalmia), skin (xeroderma) or mouth (xerostomia).

xerostomia [*zēr"o-sto'me-ə*] dryness of the mouth from lack of the normal secretion.

xerotomography [*zēr"o-tə-mog'rə-fe*] tomography in which the images are recorded by xeroradiography.

xi [*zi, kse*] fourteenth letter in the Greek alphabet, Ξ or ξ.

***Xi*-cleft points** see **accumulation points**.

Ximenia americana plant in family Olacaceae; foliage of tree can cause cyanide poisoning; called also yellow plum.

xiphisternum [*zif"i-stur'nəm*] xiphoid process.

xiph(o)- word element. [Gr.] *xiphoid process*.

xiphocostal [*zif"o-kos'təl*] pertaining to the xiphoid process and ribs.

xiphoid [*zif'oid, zi'foid*] 1. sword-shaped; ensiform. 2. xiphoid process.

x. process the pointed process of cartilage, supported by a core of bone, connected with the posterior end of the body of the sternum.

xiphoiditis [*zif"oi-di'tis*] inflammation of the xiphoid process.

xiphopagus [*zī-fop'ə-gəs*] symmetrical conjoined twins united in the region of the xiphoid process.

VetBooks.ir

Xiphophorus a genus of small fish that bear live young; they are popular as aquarium fish. Used extensively in research, particularly genetics, genetic mapping and the study of melanomas. Includes **platyfishes** and **swordtails**.

XLD medium one used for isolation of salmonellae and *Yersinia* spp.

XO symbol for the karyotype in which there is only one sex chromosome, an X chromosome.

XO genotype in horses, pigs and cats causes infertile, usually anestrous, females; the uterus and external genitalia may be small and undeveloped.

XO ovarian dysgenesis the second female X chromosome is missing, hence the XO of the title, and the animal, most commonly a mare, has small inactive ovaries which lack germ cells, and small uteri and external genitalia.

Xoloitzcuintli a small- to medium-sized (10–50 lb) lively dog with large delicate ears held erect, a long neck and a long, thin tail. Most familiar as a hairless dog, there is also a coated variety and they both come in three sizes, toy, miniature and standard. The hairless variety has smooth skin without wrinkles, but with a few coarse hairs on the head, feet and tip of the tail. The coated variety has a short, flat coat in colors ranging from black to red or bronze. Known commonly as the Mexican hairless dog; called also Xolo.

3X rule in normal blood samples, hemoglobin × 3 = hematocrit (± 2%); a rapid check on the accuracy of laboratory results.

XX sex reversal inherited defect of sexuality occurring in goats and American Cocker spaniel puppies with an XX karyotype. They may be hermaphrodites if they also carry a Y-effect gene, e.g. the gene for polledness in goats.

XXX symbol for a chromosomal aberration found in mares and cows in which there is infertility because of ovarian hypoplasia.

XXX ovarian hypoplasia a chromosomal aberration found in mares and cows resulting in infertility caused by ovarian hypoplasia; estral cycles are long and irregular.

XX/XY chimerism see **chimera**.

XXXY males a cytogenetic chromosomal abnormality in bulls resembling human Klinefelter's syndrome and causing testicular hypoplasia.

XXY symbol for a karyotype associated with hypoplasia of the testes and hermaphroditism. It is seen in male **tortoiseshell** cats and has also been observed in sexually normal rams. See also **Y chromosome**.

XY sex reversal mares chromosomal abnormality in which affected mares vary from phenotypically normal, sterile mares with normal tubular reproductive organs but inactive ovaries to mares with ovotestes and aplastic tubular organs.

xylazine [*zī'lə-zēn*] an analgesic and sedative which has become very popular for the immobilization of adult ruminants and is also registered for use in dogs, cats, horses, deer and elk. Often used in combination with ketamine. Care is needed with its use in cattle because of the very low dose required in that species. Xylazine also causes a marked increase in plasma growth hormone concentrations.

x. stimulation test used in the diagnosis of abnormalities of pituitary function, e.g. pituitary dwarfism, and specifically deficiency of growth hormone. Plasma concentrations of growth hormone are measured before and after the intravenous administration of xylazine. In normal dogs, there is a marked increase but hypopituitary dogs fail to respond.

xylene [*zī'lēn*] an organic solvent used in processing histological specimens as a solvent for wax and a clearing agent. Narcotic and toxic if inhaled in high concentration.

xylidine [*zī'lī-din*] a compound used in blending gasoline; a potent hepatoxin.

xylitol [*zī'lī-tol*] a sweetener used widely by people as a sugar substitute. In dogs, cattle and goats it acts as a stimulant to release of insulin. Poisoning has occurred in dogs ingesting sugar-free chewing gum resulting in life-threatening hypoglycemia. At very high doses, it has been implicated in liver failure in dogs.

Xylocaine trademark for preparations of lidocaine, a topical and injectable anesthetic.

Xylohypha see ***Cladosporium***.

Xylomelum a genus of Australian shrubs and trees in the family Proteaceae. They contain cyanogenetic glycosides and have potential for causing cyanide poisoning. Includes *X. angustifolium* (sandplain woody pear), *X. pyriforme* (woody pear).

Xylorrhiza North American plant genus in the family Asteraceae. All of its members are selenium indicators and usually contain sufficient selenium, in the form of selenocompounds, to cause poisoning manifested by alopecia, lameness, laminitis, hoof deformity. The recorded species are *X. glabriuscula* (*X. parryi*), *X. tortifolia*, *X. venusta*, *X. villosa*. All called also woody aster. Formerly classified in genus *Aster*.

xylose [*zī'lōs*] a pentose occurring in mucopolysaccharides of connective tissue and sometimes in the urine; also obtained from vegetable gum.

x. absorption test, D-x. absorption test D-xylose is absorbed primarily in the duodenum and cranial jejunum; after oral administration, determination of urine or plasma concentrations at timed intervals can be used as an indication of intestinal absorption. Used in dogs and horses, but largely superseded by other methods of assessing small intestinal absorptive capacity.

xylulose [*zī'lu-lōs*] a pentose sugar occurring as D-xylulose and as L-xylulose, one of the few L-sugars found in nature; it is sometimes excreted in the urine. See also **pentosuria**.

xysma [*zis'mə*] material resembling bits of membrane in stools of diarrhea.

xyster [*zis'tər*] a filelike instrument used in surgery.

XY/XXY mosaic see **mosaic**.

Y

Y chemical symbol, *yttrium*.; symbol for *yotta*.

Y-autosome chromosomal aberration created artificially by irradiation in the process of producing sterile flies by the **sterile** insect release method.

Y chromosome the chromosome which causes the medulla of the embryonic gonad to form a testis. If there is one other chromosome present and it is X the newborn animal will be a fertile male. If there are two other X chromosomes, giving an XXY configuration, it will be a phenotypic male but sterile. Autosomal genes can have the same effect, creating an intersex newborn in an animal with XX chromosomes.

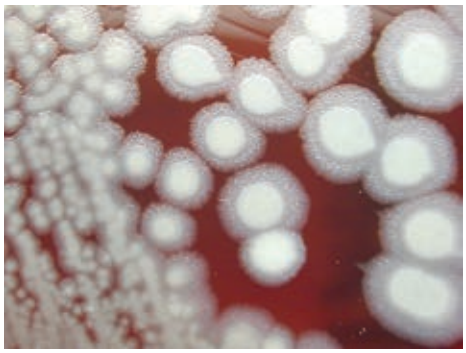
Y-linked inheritance inheritance determined by loci on the Y chromosome.

Y piece a leakproof connecting piece between the endotracheal tube and the anesthetic machine, the inspiratory and expiratory hoses of the machine each occupying an arm of the Y piece.

Y-plasty a technique for suturing V-shaped wounds in which part of the flap may be lost or destroyed, when the opposite end is extended and the flap is closed as the top of a Y. Also used for suturing circular wounds.

Y sutures anatomical structures connecting the concentric lamellae of the lens. The anterior one is erect, the posterior one is inverted.

yabapoxvirus [*yab'ə-poks"*] a poxvirus of African nonhuman primates.
yabby, yabbie Australian term for *Cherax destructor* (freshwater crayfish).
Yabila grass see ***Panicum*** *queenslandicum*.
YAC yeast artificial chromosome.
yak (*Bos grunniens*) a large, very longhaired ruminant, native to Central Asia, with a round forehead, widely separated horns, a shoulder hump and a grunting call instead of a lowing one. Hunted for its meat and hair, it is also an excellent draft animal and can survive well at altitudes above 13 000 ft (4000 m).
yakka *Xanthorrhoea*.
yam see ***Dioscorea***.
yang organs [*yang*] the hollow organs in the acupuncture catalog including stomach, intestines, biliary system, ureter, bladder, urethra, triple heater; they are not equivalent to the organs known in western medicine.
Yangtze River fever schistosomiasis.
Yankauer tip see **suction** tip.
Yankee war bridle a type of restraint used on horses; consists of a rope loop, passed around the horse's upper gum and over the head.
yard 1. a unit of linear measure, 3 feet, or 36 inches, equivalent to 86.44 cm. See also Table 2.5. 2. a small fenced enclosure called also corral. 3. in the UK is synonymous with feedlot. 4. to enclose animals in a small enclosure.
yardage fee charged each day cattle are in a feed yard.
yarded enclosed within a fenced area. In the UK yarded cattle is synonymous with feedlotted cattle; the animals are enclosed in a yard for a brief period and fed fattening rations.
Yatapoxvirus a genus in the order *Poxvirales*, family *Poxviridae* that contains two viruses, yabapoxvirus and tanapoxvirus, that infect monkeys and humans in West Africa.
yawning [*yawn'ing*] a deep, involuntary inspiration with the mouth open, often accompanied by the act of stretching. Repeated yawning in the presence of other signs, may accompany signs of chronic abdominal pain, hepatic disease or rabies.
Yb chemical symbol, *ytterbium*.
yearling an animal in its second year of age, e.g. yearling cattle, yearling filly, yearling colt.
y. disease rinderpest in wildebeeste in the Serengheti.
yeast [*yēst*] a general term including unicellular, nucleated, usually rounded fungi that reproduce by budding; some are fermenters of carbohydrates, and a few are pathogenic for animals. See also **mastitis**.
y. artificial chromosome cloning vectors developed for the cloning of large (200–500 kbp) DNA fragments; YAC libraries permit the cloning of large genes with their flanking regulatory sequences as well as families of contiguous genes. They are difficult to work with and have the further disadvantage that the cloned sequences are unstably retained.
avian gastric y. *Macrorhabdus ornithogaster*; see **megabacteriosis**.
brewer's y. *Saccharomyces cerevisiae* used in brewing beer, making alcoholic liquors, and baking bread. See also dried yeast (below).
dried y. dried cells of any suitable strain of *Saccharomyces cerevisiae*, usually a by-product of the brewing industry; used as a natural source of protein and B-complex vitamins.
y. products yeast additives derived from *Saccharomyces* cultures; commonly used in ruminant diets to increase dry matter intake and fiber digestion.
selenium y. selenium-enriched yeast; common form of selenium used to supplement the dietary intake.
y. two-hybrid system an experimental technique for identifying genes whose protein product interacts with another particular protein of interest.
yellow [*yel'o*] 1. the primary color produced by stimulation by light waves of wavelength of 571.5 to 578.5 nm. 2. a dye or stain that produces a yellow color.
yellow bighead see ***Panicum***.
yellow body see **corpus** luteum.
yellow burweed see ***Amsinckia***.
yellow calf see **copper** nutritional deficiency.
yellow dog tick see ***Haemaphysalis*** *leachi leachi*.
yellow drumsticks see ***Craspedia chrysantha***.
yellow fat recessive trait in rabbits resulting in an inability to metabolize xanthophylls, plant pigments which are precursors of vitamin A. The accumulation is unsightly but not harmful.
yellow fat disease a disease of many species, but particularly cats, mink and pigs, characterized by inflammation of adipose tissue and deposition of lipofuscin pigment in the adipose cells. Caused by a diet high in unsaturated fatty acids and low in vitamin E. In cats, it has been associated with feeding canned red tuna. Affected animals usually show anorexia, fever and a generalized hypersensitivity that is due to painful fat depots. Especially in cats, subcutaneous fat may be palpably hard, lumpy and painful. In pigs, caused by feeding fish meal. Called also pansteatitis and steatitis.
yellow grub see ***Clinostomum***.
y. g. disease metacercariae of *Clinostomum marginatum* cause cyst development of the skin and viscera of freshwater fish.
yellow-head disease a disease of cultured penaeid shrimp, particularly the giant black tiger shrimp caused by the yellow-head disease baculovirus; characterized by yellowish discoloration of gills and cephalothorax and general tissue necrosis and a high mortality rate.
yellow lamb disease characterized by anemia, hemoglobinuria and jaundice caused by absorption of *Clostridium perfringens* type A toxin from the intestine.
yellow lotion a devilishly ingenious way of marketing **white lotion** by including a yellow pigment.
yellow oxide see **mercuric** oxide.
yellow pop flower see ***Glishrocaryon***.
yellow rattle see ***Rhinanthus***.
yellow rice discolored grain caused by contamination with the fungus *Penicillium citreo-viride*.
yellow thickhead see ***Panicum***.
yellow vine see ***Tribulus*** *micrococcus*.
yellow weed see ***Amsinckia***.
yellow-wood see ***Terminalia oblongata*** subsp. *oblongata*.
yellowjacket [*yel'o-jak"ət*] stinging wasps in the family Vespidae, genera *Vespula* and *Dolichovespula*; often confused with hornets in the US and generally known as wasps in other countries.
yellowness average yellowness is now a required sale classification of scoured wool measured colorimetrically.
yellows enterotoxemic jaundice in lambs, caused by *Clostridium perfringens*, type A.
yellowses hepatic injury caused by poisoning by ***Narthecium*** *ossifragum*.
yelt gilt.
yerba-de-pasmo ***Baccharis*** *pteronioides*.
Yersinia a genus of ovoid or rod-shaped, nonencapsulated, gram-negative bacteria in the family *Enterobacteriaceae*.
Y. enterocolitica carried in the intestinal tract by many animal species but not commonly associated with disease in farm animals. Enterocolitis can occur in sheep and farmed deer. Gastrointestinal disease associated with *Y. enterocolitica* has increasing prevalence in humans and can be associated with a reactive arthritis as a sequel. Pork and pork products are major sources for human infection.
Y. pestis causes bubonic plague in humans and **sylvatic** plague in rodents and cats.



Y-1: *Yersinia pestis* on sheep blood agar after 72 hours' incubation. From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2004.

Y. pseudotuberculosis causes **yersiniosis** in laboratory animals, wild rodents and domestic species, including cattle, sheep and cats. Enteric disease can occur in cattle and sheep debilitated from cold, wet weather, inanition and starvtion, and in farmed deer procedures such as capture, yarding and recent transport. Human infection with *Y. pseudotuberculosis* is primarily manifest with septicemia, and renal failure is a sequel. Consumptiopn of water contaminated by animal feces is a risk factor. See also **pyemic** hepatitis.

Y. ruckeri causes enteric redmouth and salmonid blood spot disease especially of Atlantic salmon fry and parr.

Y. tularensis see ***Francisella tularensis***.

yersiniosis [*yər-sin″e-o′sis*] septicemia often with signs of gastroenteritis, caused by *Yersinia pseudotuberculosis,* occurring in wild rodents, birds, and, uncommonly, most domestic species, particularly cats. There is fever, severe toxemia and a high fatality rate. At postmortem there are large numbers of embolic abscesses in most organs. Called also pseudotuberculosis. Occurs also in many species of fish as a septicemia, caused by *Yersinia ruckeri*.

yesterday today and tomorrow see ***Brunsfelsia***.

yew [*yu*] any of a number of coniferous trees and shrubs in the genus ***Taxus***. Includes churchyard or Irish yew (*T. baccata* var. *fastigiata*), English or European yew (*T. baccata*), Japanese yew (*T. cuspitata*), western yew (*T. brevifolia*).

yin organs [*yin*] organs in the acupuncture catalog including the liver, pancreas, spleen, kidney, heart, pericardium, lungs; they are not equivalent to those of western medicine.

Yin-Yang the balance between deficiency and excess in functional activity of the organs which is the basis of traditional Chinese medicine's view of health versus dysfunction. The Yang organs are the hollow organs, stomach, intestines, biliary system, urinary bladder plus urethra and ureter. The Yin organs include the solid ones, the liver, spleen, pancreas, kidney, heart, pericardium, lungs.

yocto- (y) [Gr.] *eight*; a prefix used in the metric system of measurement to indicate one-million-million-million-millionth (10^{-24}) of the unit designated by the root with which it is combined.

yogurt, yoghurt a form of curdled milk produced by fermentation with organisms of the genus *Lactobacillus.* Used in the treatment of convalescing calves and other young animals after attacks of diarrhea.

yohimbine [*yo-him′bēn*] an α_2 adrenoceptor antagonist used to reverse sedation produced by α_2 adrenoceptor agonists such as xylazine.

y. challenge test used as a test for cataplexy in dogs; after administration, there is a marked reduction in the number and severity of clinical signs.

yoke [*yōk*] 1. an anatomical connecting structure; a depression or ridge connecting two structures. 2. a primitive device for coupling two or more animals to one vehicle or implement. Usually a wooden bar that sits on the top of the neck with a metal loop to go around the neck of each animal.

y. muscles a pair of extraocular muscles.

yokebail see **pillory**.

yolk [*yōk*] 1. the stored nutrient of the ovum; it is also rich in antibody which is absorbed into the circulation of the embryo in the last third of incubation and is the mechanism by which maternal antibody is transferred to the young bird. See also **yolk sac**, **egg**. 2. the combined secretion of the sebaceous and sudoriferous glands of the sheep's skin and extractable from the fleece.

y. emboli may be a cause of ataxia and head tilt in hens.

y. sacculitis see avian **omphalitis**.

y. stalk the connection, passing through the umbilicus, between the yolk sac and the fetus.

y. stain a stain of wool originating from the yolk.

yolk sac [*yōk sak*] one of the extraembryonic fetal membranes that balloons out from the fetal midgut. It helps to form a primitive placenta and promotes the development of the vitelline circulation. The vestigial yolk sac can be found about halfway along the small intestine of birds. The yolk sac membrane produces lymphoid stem cells that subsequently colonize the thymus and bursa of Fabricius. The stalk of the yolk sac is sometimes retained as Meckel's diverticulum of the small intestine.

y. s. infection see avian **omphalitis**.

inverted y. s. a form of placentation in which fetal splanchnic mesoderm in direct contact with maternal uterine tissue; occurs in laboratory rodents. Called also yolk sac placenta.

y. s. placenta see inverted yolk sac (above).

y. s. tumor shows varying stages of differentiation into tissues of multiple germ layers. Called also endodermal sinus tumor.

Yorkshire boarding vertical wooden planks not butted together used as exterior cladding on buildings used as animal accommodation. Provides a wind break and is well ventilated.

Yorkshire boot a piece of Kersey horse cloth (felt) with a tape attached at the middle of its width and along its length. It is wrapped around a horse's fetlock and the tape tied around the felt above the joint. The top part of the felt is now folded down over the bottom part. Designed to protect the fetlock against injury while working.

Yorkshire canary a breed of long, slim, elegant canaries with upright posture.

Yorkshire fog see ***Holcus lanatus***.

Yorkshire pig see **Large white**.

yotta- (Y) [Gr.] *eight*; a prefix used in the metric system of measurement to designate an amount 10^{24} (a trillion trillion or a septillion) times the unit specified by the root to which it is joined, as yottabyte.

Young forceps [*yung*] scissor type forceps with ratcheted handles and a sideways curve. The blades end in opposing loops that are fitted with grooved rubber stoppers. Used for grasping the tongue.

Young gag [*yung*] see **Bayer gag**.

ytterbium (Yb) [*ĭ-tur′be-əm*] a chemical element, atomic number 70, atomic weight 173.04. See Table 4.

yttrium (Y) [*ĭ″tre-əm*] a chemical element, atomic number 39, atomic weight 88.905. See Table 4.

Yucaipa disease a mild respiratory disease in chickens caused by avian paramyxovirus-2 (APMV-2).

Yucatan pig see miniature **pig**.

Yucca shidigera herbaceous plant of the lily family, native to Mexico; major source of commercial saponins. Yucca products are fred to swine for odor and ammonia control and appear to reduce the percentage of stillborn piglets when fed to sows in late gestation. The mechanisms for this reduction is unknown.

Yugoslavian hounds several breeds of scent hounds, most of which are not known outside Europe or the Balkan countries. They are medium-sized, have drop ears and long tails. Several coat types and colors are seen.

Z

VetBooks.ir

Z symbol for *zetta*.

Z zeta, capital letter; sixth letter in the Greek alphabet; symbol for atomic number.

ζ zeta, small letter; sixth letter in the Greek alphabet.

Z band, Z line a band of electrodense, noncontractile protein which runs across the muscle fiber and to which the myofibrils are attached.

Z-inactivation occurs in birds because dosage compensation for Z-linked genes does not occur in birds.

Z-linkage genes with loci on the Z chromosome.

Z-linked sexing use of alleles at Z-linked loci to determine sex of chicks at an early age. See **fast** feathering.

Z-myoplasty a technique for surgical correction of quadriceps muscle contracture.

Z-plasty repair of a skin defect by the transposition of two triangular flaps of adjacent skin to provide relief of skin tension, or for relaxation of scar contractures. Called also zigzagplasty.

Z-tenectomy a technique for tendon shortening.

Z-tenotomy a technique for tendon lengthening.

Zackel sheep a group of horned breeds of sheep widely dispersed through Europe and Asia. Used for carpetwool, meat and milk. Mostly white, some are brown, black or pied. Males have long spiral horns, females may be polled. Most breeds have long, thin tails.

Zalaphotrema a genus of digenetic trematodes which includes *Z. hepaticum* found in the liver of the sea lion.

Zaleya galericulata member of the Aizoaceae plant family; suspected to cause soluble oxalate poisoning, causing nephrosis, urolithiasis. Called also hogweed.

zamang see ***Samanea saman***.

Zamia American genus of **cycads** in the family Zamiaceae; causes incoordination, due to degeneration of the spinal cord, and hepatic necrosis. The toxin is identified as a cycad glycoside. Includes *Z. integrifolia* (*Z. floridana*, *Z. media*), *Z. portoricensis*, *Z. pujilla*, *Z. pumila* (*Z. debilis*, *Z. latifoliata*, *Z. silvicola*, *Z. umbrosa*). Called also coonties, Florida arrowroots, marangvey, derriengue, guayiga. See also **zamia** staggers.

zamia see **cycad**.

z. fern ***Bowenia*** *spectabilis*.

z. staggers irreversible posterior paresis and paralysis in cattle in Australia; caused by an unidentified toxin of **cycad** leaves or seeds; degenerative lesions present in spinal cord white matter, including the proprioceptive pathways. See also **derriengue**.

tree z. ***Cycas*** *armstrongii, C. media*.

zang-fu organs see **yin organs** and **yang organs**.

Zanha africana African tree in the family Sapindaceae; contains a toxic saponin; plant causes diarrhea and dysentery in browsing ruminants. Called also *Dialiopsis*.

Zantedeschia aethiopica member of the plant family Araceae; toxin is calcium oxalate raphide crystals; causes stomatitis, salivation. Called also arum lily, calla lily, varkoor.

Zea mays a grass in plant family Poaceae. A staple part of human and animal diet in many countries as corn or maize meal. The standing green crop, up to 10 ft high, makes excellent ensilage and green chop. May be infested with poisonous fungi in the field or as stored grain. May cause nitrate–nitrite poisoning. Called also corn, maize.

zearalanol [*zə-ral′ə-nol*] see **zeranol**.

zearalenone [*zə-ral′ə-nōn*] an estrogenic substance produced during the fermentation of stored grain by the fungus *Fusarium graminearum*. The effects of the toxin are enlargement of the pudenda, infertility and death of the newborn. See also **zeranol**.

zeboid a class of cattle intermediate between zebu and humpless British breed cattle, e.g. Chinese yellow, Sanga, Santa Gertrudis, Droughtmaster. Called also taurindicus.

zebra (*Equus* spp.) horse- or ass-like animals with a distinctive black and white striped coat, large ears, tufted tail and stiff mane. There are three species: plains or common zebra (*E. quagga*), mountain zebra (*E. zebra*), and Grevy's zebra (*E. grevyi*), and some recognized subspecies.

z. marks faint striping in coats of horses, usually on the legs, also the neck and withers.

zebrafish see ***Danio rerio***.

zebronkey a cross between zebra and donkey.

zebu a group of breeds of humped cattle, including Indian, East and West African, and most breeds of South-East Asian cattle. Origin of the Chinese Yellow, Sanga and Brahman. Includes Africander, Sahiwal, Sindhi and many others.

zein [*ze′in*] the principal protein in corn. Has low nutritive value, being deficient in lysine and tryptophan.

Zeis glands [*tsīs*] see **glands of Zeis**.

Zenith an Australian medium-woolled (21.5 to 23 microns), dual-purpose, polled sheep, produced by crossing sheep of Merino and Lincoln breeds.

Zenker's necrosis, degeneration [*tseng′ker*] see Zenker's **necrosis**.

zeony progeny of a zebra and a pony.

Zephyranthes see ***Cooperia pedunculata***.

Zepp operation a modification of the lateral ear resection in dogs in which a cartilaginous flap is turned downward and sutured in place as a 'drainboard' at the bottom of the opening created. It serves to reduce the possibility of stricture of the horizontal canal and minimize growth of haircoat at the opening which might impede aeration and drainage.

zepto- (z) [L.] *seven*; a prefix used in the metric system of measurement to indicate one-thousand-million-million-millionth (10^{-21}) of the unit designated by the root with which it is combined.

zeranol [*zer′ə-nol*] a synthetic **zearalenone** (6′-reduced zearalenone) marketed as Ralgro used as a growth promotant in cattle. Called also zearalanol.

zernike condenser special condenser used in phase contrast microscope.

zero [*ze′ro*] the point on a thermometer scale from which the graduations begin. The zero of the Celsius (centigrade) scale is the ice point; on the Fahrenheit scale it is 32° below the ice point.

absolute z. the lowest possible temperature, designated 0 on the kelvin or Rankine scale, the equivalent of −273.15°C or −459.67°F.

zero-order reactions generally pertaining to enzyme reactions where the rate of product formation is independent of substrate concentration.

zeta [*za′tə*] seventh letter in the Greek alphabet, Z or ζ.

zeta potential see zeta **potential**.

zetamethrin a beta-cypermethrin. Used in ear tags for control of ectoparasites on cattle.

zetta- (Z) [Gr.] *seven*; a prefix used in the metric system of measurement to designate an amount 10^{21} (a thousand-million-million-million or a sextillion) times the unit specified by the root to which it is joined, as zettabyte.

zeugopodium [*zoo″go-po′de-əm*] the segment of the limb corresponding to either the forearm or the leg.

zho, zo see **dzo**.

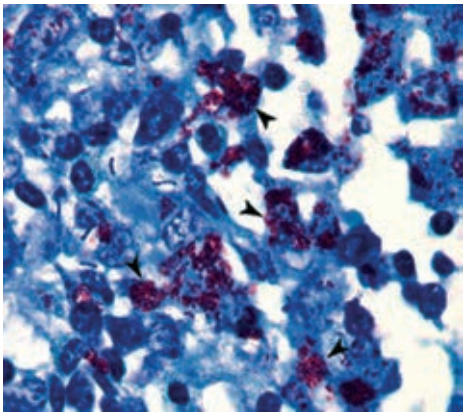
zidovudine [*zi-do′vu-dēn*] a thymidine analog with antiviral activity used in the treatment of AIDS in humans; has been used for feline immunodeficiency virus and feline leukemia virus infections in cats. Called also azidothymidine (AZT).

Ziehl-Neelsen stain [*tsēl′ nāl′sen*] a carbol-fuchsin stain most used for the detection of *Mycobacterium* spp.

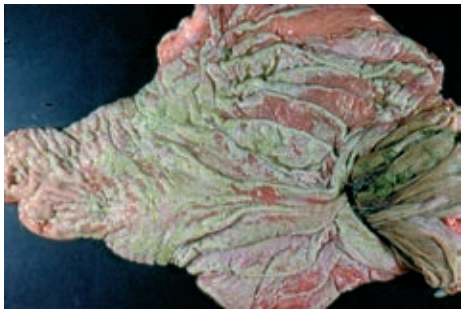
Zieria an Australian genus of shrubs and trees of the Rutaceae family.

Z. arborescens causes atypical interstitial pneumonia in cattle. There is a grunting dyspnea and a nasal discharge. Called also stinkwood.

Z. laevigata, Z. smithii suspected of causing cyanide poisoning.



Z-1: Ziehl-Neelsen stain. Acid-fast organisms mycobacterial organisms (arrowheads) are strongly stained bright red.
From Raskin RE, Meyer D, Canine and Feline Cytology, 2nd Edition. Saunders, 2010.



Z-2: Abomasal necrosis in a ewe that drank from a zinc sulfate footbath solution.

Zieve's syndrome [*zēv*] a human disease characterized by hemolytic anemia related to a low lipid content of erythrocyte cell membranes; some clinical similarity to hemoglobinuria which occurs in event horses after prolonged exercise.

zigadenine, zigadine, zygadenine plant toxin found in *Zigadenus* spp.

Zigadenus North American and African genus of the Liliaceae family. There are many species, some of them toxic some not. The toxins in the plants are steroid alkaloids of the veratrum group. Poisoning is characterized by salivation, vomiting, tachycardia, weakness, prostration and dyspnea. Death may occur within a few hours or not for a number of days. The list of toxic plants includes *Z. chlorantus*, *Z. densus*, *Z. elegans*, *Z. fremontii*, *Z. glaberimus*, *Z. glaucus*, *Z. intermedius*, *Z. leimanthoides*, *Z. nuttallii*, *Z. paniculatus*, *Z. venenosus* (*Z. gramineus*). Called also *Toxicoscordion, Zygadenus*, death camus.

zigzagplasty see **Z-plasty**.

Zimmerman's aluminum wire suture [*tsĭmer-mahn*] see Zimmerman's aluminum wire **suture**.

zinc (Zn) [*zingk*] a chemical element, atomic number 30, atomic weight 65.37. See Table 4. Zinc is a trace element that is a component of several enzymes, including DNA and RNA polymerases, and carbonic anhydrase. Zinc salts are used in skin lotions, eye washes, the treatment and prevention of footrot of sheep and facial eczema of sheep and cattle.

z. acetate a salt used as an astringent and styptic.

z. cadmium sulfide used in the preparation of fluoroscopic screens; is fluorescent and emits yellow-green light when excited by X-rays.

z. carbonate a mild astringent; used mainly as **calamine**.

z. chromate an industrial compound used in cold galvanizing of metal. Accidental access causes diarrhea and fatal enteritis.

z. finger motif sequence of approximately 30 amino acids, forming a helix-turn-helix, believed to form a structure that includes tetrahedrally coordinated zinc (II) ions. Found in many eukaryotic, prokaryotic and viral DNA-binding proteins.

z. finger protein DNA-binding proteins that contain zinc-finger motifs.

z. gelatin a mixture of zinc oxide, gelatin, glycerin and purified water; used topically as a protectant.

z. gluconate a source of supplementary zinc.

hereditary z. deficiency lethal trait A46; Adema disease; see inherited **parakeratosis**.

z. methionine a nutritional animal feed supplement that is used to prevent and/or control zinc deficiency in animal species, particularly cattle and camelids.

z. nutritional deficiency causes **parakeratosis** in pigs, a chronic, afebrile, noninflammatory disease of the epidermis characterized by crusty proliferation and cracking of the skin. Dogs fed diets with high concentrations of calcium or cereals may have poor absorption of zinc and develop signs of deficiency, primarily in the skin. See also zinc-responsive **dermatosis**.

z. ointment a preparation of zinc oxide and mineral oil in white ointment; used topically as an astringent and protectant.

z. oversupplementation causes hemolytic anemia, anorexia and vomiting.

z. oxide a compound used as a topical astringent and protectant. Inhalation of fumes causes interstitial emphysema and atelectasis.

z. phosphate used as a phosphate-bonded cement in restorative dentistry.

z. phosphide used commercially to control insect and rodent populations. Phosphine gas is liberated when the parent compound comes into contact with acidic moist environments. Clinical signs in poisoned animals are due to multisystemic effects (lung, liver, heart, kidney) of the parent and metabolite, although initial gastrointestinal signs predominate.

z. poisoning can be chronic and causes stiffness and lameness with particular involvement of the shoulder joint in which there is a degenerative arthritis (might be associated with a copper deficiency). In acute poisoning there is gastroenteritis with vomiting, abdominal pain, diarrhea and a Heinz body hemolytic anemia.

z.-responsive dermatoses see **parakeratosis**, zinc-responsive **dermatosis**.

z. stearate a compound of zinc with stearic and palmitic acids; used as a water-repellent protective powder in dermatoses.

z. sulfate a compound used as an ophthalmic astringent, in skin lotions (see **white lotion**), for sheep footrot, and the treatment of facial eczema. It is the common form of zinc for oral supplementation and treatment of zinc-responsive diseases.

z. sulfate flotation test used to demonstrate nematode eggs, protozoan cysts and larvae in feces and bronchial secretions.

z. sulfate turbidity test 1. serum globulins are precipitated by zinc sulfate. The test is used for the semiquantitative assessment of the immunological status of foals and calves when there is a question of whether they have suckled to receive immunoglubulins. 2. an outdated liver function test.

z. undecylenate a compound used topically in 20% ointment as an antifungal agent. See also **undecylenic acid**.

zineb an antifungal preparation used extensively agriculturally but without any apparent toxicity hazard.

zipper structure leucine [*zip'ər*] see **leucine** zipper.

zipper worm [*zip'ər*] ***Spirometra erinacei***.

zirconium (Zr) [*zir-ko'ne-əm*] a chemical element, atomic number 40, atomic weight 91.22. See Table 4.

z. chlorhydrate an astringent.

Zn chemical symbol, *zinc*.

zoacanthosis a dermatitis caused by penetration into the skin, of bristles, hairs, etc., of lower animals.

zolazepam [*zo'la-zə-pam*] a benzodiazepine tranquilizer most commonly used in a fixed-ratio combination with tiletamine.

Zoletil a fixed-ratio combination of the tranquilizer, zolazepam, with the dissociative anesthetic, tiletamine; used for injection anesthesia in dogs, cats, wild and zoo animals. It produces dose-dependent sedation to general anesthesia.

Zollinger-Ellison syndrome [*zol'in-jər el'ĭ-sən*] a triad comprising intractable, sometimes fulminating, upper gastrointestinal ulceration, extreme gastric hyperacidity, and nonbeta cell, gastrin-secreting, islet cell tumors (gastrinomas) of the pancreas. Clinical signs in affected dogs include vomiting, often with blood, anemia, diarrhea, weight loss, and sometimes signs of peritonitis.

zona [*zo'nə*] pl. *zonae* [L.] zone.

z. alba the white line in the horse's hoof.

z. fasciculata the thick middle layer of the adrenal gland.

z. glomerulosa the outermost layer of the adrenal cortex. Called also zona multiformis.

z. multiformis see zona glomerulosa (above).

z. pellucida 1. the transparent, noncellular, secreted layer surrounding an ovum. 2. area pellucida.

z. radiata a thickenbed cell membrane of the oocyte of certain animals such as some amphibia which exhibits conspicuous radial striations. Called also zona striata.

VetBooks.ir

z. reaction caused by the penetration of the zona pellucida by the spermatozoa.
z. reticularis the innermost layer of the adrenal cortex.
z. striata see zona radiata (above).
zona-free hamster ovum penetration ability assay a test of sperm function; the zona pellucida penetration assay is preferred.
zona pellucida penetration assay a test of sperm function preferred to the simpler zona-free hamster ovum penetration assay.
zone [zōn] an encircling region or area; by extension, any area with specific characteristics or boundary. See also **zona**.
autonomous innervation z. areas of innervation supplied by a single nerve, as for example the patch of skin on the medial side of the horse fore pastern which is supplied solely by the median nerve; used to assess the integrity of individual nerves.
axonic z. the all-or-none conducting zone of the three functionally significant zones of the neuron; includes axis cylinder and part of the arborizing axonal terminal.
ciliary z. the outermost of the three regions of the iris. See also pupillary zone (below) and **iris** collarette.
comfort z. an environmental temperature between 55° and 70°F (13° and 21°C) with a humidity of 30 to 55%.
cut back z. the part of any metaphysis of a long bone where the cortex is reduced to a narrower diameter than the adjacent growth plate; the process involves remodeling of primary and secondary trabeculae within cortical bone. It is a conspicuous feature on radiographs where the cortical margin appears roughened and, similarly, on bones prepared by maceration where this cut-back zone has a characteriistic porous appearance.
epileptogenic z. an area, stimulation of which may provoke an epileptic seizure.
equivalence z. a ratio of antigen and antibody which results in precipitation in which there is no unbound antibody or antigen.
focal z. in ultrasound, the area of the transducer where the sound beam is most sharply focused and where the area under examination will give the best image.
Fraunhofer z. in ultrasonography, the area of the sound beam beyond the focal zone where the beam diverges and resolution decreases.
Fresnel z. in ultrasonography, the area of the sound beam between the transducer and the focal zone in which complex diffraction patterns occur.
grenz z. a zone of relatively normal collagen demarcating the boundary between normal epidermis and a dermal lesion such as a granuloma or a neoplasm.
z. of inhibition the area without bacterial growth surrounding an antimicrobial-impregnated disk in an **antimicrobial** sensitivity test.
marginal z. the rim of tissue surrounding lymph follicles in the spleen which contains many lymphocytes and macrophages.
provisional calcification z. in developing bone longitudinal tubes of mineralized matrix which surround hypertrophic chondrocytes.
pupillary z. the innermost of the three regions of the iris, immediately outside the pupil. See also **ciliary** zone and **iris** collarette.
thermoneutral z. the ambient temperature at which mammals and birds can maintain their body temperature without increasing thermogenesis or evaporative heat loss.
transitional z. equitorial region of the crystalline lens in which epithelial fibers are transformed into lens fibers; the lens bow.
white z. horn of the hoof separating the wall horn from the sole horn; more common name is white line.
zonifugal [zo-nif'ə-gəl] passing outward from a zone or region.
zonipetal [zo-nip'ə-təl] passing toward a zone or region.
zonisamide [zo-nis'ə-mīd"] a sulfonamide anticonvulsant.
zonula [zo'nu-lə] pl. *zonulae* [L.] zonule.
z. adherens common component of junctional complexes between epithelial cells; forms an effective barrier between the lumen and connective tissue. Called also tight junction.
z. ciliaris the suspensory apparatus of the lens consisting of zonular fibers that extend from the ciliary processes to the lens capsule.
z. occludens see **tight junction**.
zonule [zo'nūl] a small zone.
ciliary z. a series of fine collagenous fibers connecting the ciliary process tips with the equatorial lens capsule, holding the lens in place. Called also lens zonule, zonule of Zinn.
zonulitis [zo"nu-li'tis] inflammation reflected on the ciliary zonule.
zonulolysis, zonulysis [zo"nu-lol'ĭ-sis, zo"nu-li'sis] dissolution of the ciliary zonule by use of enzymes, to permit surgical removal of the lens.
zonulotomy [zon"u-lot'o-me] incision of the ciliary zonule.
zoo a collection of wild animals kept in close or open confinement, usually for public viewing. There are strict licensing provisions for such places to ensure that the welfare of the animals is taken care of, and the safety of the public, and that the possibility of an exotic disease being introduced with additions of animal specimens from foreign countries is avoided. See also **game** farm.
zo(o)- word element. [Gr.] *animal*.
zoodermic [zo"o-dur'mik] performed with the skin of another species of animal, especially in reference to skin grafts.
zoogenous [zo-oj'ə-nəs] 1. acquired from animals. 2. viviparous.
zoogeny [zo-oj'ə-ne] the development and evolution of animals.
zoogeography [zo"o-je-og'rə-fe] defining the location and numbers of animal populations, and their variability with time.
zoogony [zo-og'ə-ne] the production of living young from within the body.
zoografting [zo'o-graft"ing] the grafting of animal tissue.
zooid [zo'oid] 1. animal-like. 2. an animal-like object or form. 3. an individual in a united colony of animals.
zoology [zo-ol'ə-je] the biology of animals.
zoom control in ultrasonography, a means of magnifying part of the image.
Zoomastigophora [zo"o-mas"tĭ-gof'ə-rə] a group of protozoa (zooflagellates), including all of the flagellates that parasitize higher animals.
zoonosis [zo-on'ə-sis] disease or infection that is naturally transmissible from vertebrate animals to humans. It can be bacterial, viral, or parasitic, or may involve unconventional agents. Zoonoses are a public health concern, but also create obstacles to international trade in animal products.
direct z. one transmitted by contact or via an inanimate vehicle and which requires only one reservoir vertebrate (passing directly from animal to humans without the involvement of a vector or intermediate host) to maintain the cycle of infection, e.g. rabies. See also **cyclozoonosis**, **metazoonosis**, **saprozoonosis**.
emerging z. newly recognized or newly evolved, or showing an increase in incidence or expansion in geographical, host or vector range.
reverse z. disease transmitted from humans to animals, such as tuberculosis.
zooparasite [zo"o-par'ə-sīt] any parasitic animal organism or species.
zoopathology [zo"o-pə-thol'ə-je] the science of the diseases of animals.
zoophagous [zo-of'ə-gəs] carnivorous.
zoophilic [zo"o-fil'ik] preferring animals to humans; said of certain fungi.
zoophobia [zo"o-fo'be-ə] abnormal fear of animals.
zoospore [zo'o-spor] a motile mitospore; a motile, flagellated, asexual spore, as produced by certain algae and fungi, and *Dermatophilus congolensis*.
zoospores see **ruminal** zoospores.
zootechny [zo"o-tek'ne] animal management as distinct from animal husbandry which includes the science, economics and biometry of the care of farm animals.
zootoxicosis disease caused by a zootoxin.
zootoxin [zo'o-tok"sin] a toxic substance of animal origin, e.g. venom of snakes, spiders and scorpions.
Zr chemical symbol, *zirconium*.
zwitterion [tsvit'er-i"on] an ion that has both positive and negative regions of charge. Called also dipolar ion.
zwoegersiekte [Dutch] see **maedi**.
zygacine one of the toxic alkaloids in ***Zigadenus***.
Zygadenus see ***Zigadenus***.
zygadine one of the toxic alkaloids in ***Zigadenus***.
zygal [zi'gəl] shaped like a yoke.
zygapophysis [zi"gə-pof'ĭ-sis] the articular process of a vertebra. See also facet **joints**.
zygion [zij'e-on] the most lateral point on the zygomatic arch.
zyg(o)- word element. [Gr.] *yoked, joined, a junction*.
zygodactylous having two toes directed forwards and two backwards as in some birds, e.g. parrots.

VetBooks.ir

zygodactyly [*zi"go-dak'tə-le*] union of digits by soft tissues (skin), without bony fusion of the phalanges involved.

zygoma [*zi-go'mə*] 1. the zygomatic process of the temporal bone. 2. zygomatic arch. 3. a term sometimes applied to the zygomatic bone.

zygomatic [*zi"go-mat'ik*] pertaining to zygomatic bone.

z. arch the arch formed by the processes of the zygomatic and temporal bones.

z. bone the bone forming the hard part of the cheek and the lower, lateral portion of the rim of the orbit. See also Table 10.

z. gland a salivary gland, formerly known as the orbital or upper molar gland, best developed in carnivores; located above the zygomatic arch and below the eye. Enlargement or mucocele of the gland causes exophthalmos.

z. mucocoele accumulation of salivary secretions from the zygomatic gland. It appears as a protruding mass under the conjunctiva of the lower eyelid.

z. process a projection from the frontal or temporal bone, or from the maxilla, by which they articulate with the zygomatic bone.

zygomaticofacial [*zi"go-mat"i-ko-fa'shəl*] pertaining to the zygoma and face.

zygomaticotemporal [*zi"go-mat"i-ko-tem'pər-əl*] pertaining to the zygoma and temporal bone.

zygomorphism the anatomical principle of bilaterality of antimeres (right and left halves of the body).

Zygomycetes [*zi"go-mi-se'tēz*] see ***Phycomycetes***.

zygomycetes [*zi"go-mi-se'tēz*] members of the taxonomic class of fungi which includes two orders, *Mucorales* and *Entomophthorales*.

zygomycosis [*zi"go-mi-ko'sis*] rare infection by fungi in the class, Zygomycetes, causes granulomatous lesions in many species, most often in the gastrointestinal tract. A rare example is *Conidiobolus incongruus* infection causing cutaneous granulomata and invasion of the lungs as in nasal zygomycosis in sheep. Immune suppression is believed to be a predisposing factor. See also **mucormycosis**, **entomophthoromycosis**. Most infections previously called phycomycosis were believed to have been caused by zygomycetes.

zygomycotes members of the Zygomycota phylum of fungi. Includes *Mucor*, *Rhizopus* spp.

zygon [*zi'gon*] the stem connecting the two branches of a zygal fissure.

Zygophyllum plant genus in the family Zygophyllaceae; can cause nitrate–nitrite poisoning; suspected of causing mortality in sheep and cattle. Called also *Roepera*, twin leaf. Includes *Z. ammophilum*, *Z. apiculatum*.

zygosity [*zi-gos'i-te*] the condition relating to conjugation, or to the zygote, as (1) the state of a cell or individual in regard to the alleles determining a specific character, whether identical (homozygosity) or different (heterozygosity); or (2) in the case of twins, whether developing from one zygote (monozygosity) or two (dizygosity).

zygospore [*zi'go-spor*] a thick-walled sexual spore produced by fungi in the class *Zygomycetes*.

zygote [*zi'gōt*] the cell resulting from union of a male and female gamete; the fertilized ovum. More precisely, the cell after synapsis at the completion of fertilization until first cleavage.

zygotene [*zi'go-tēn*] the synaptic stage of the first meiotic prophase in which the two leptotene chromosomes undergo pairing by the formation of synaptonemal complexes to form a bivalent.

zymase enzyme found in yeasts that catalyzes the fermentation of sugar to alcohol and CO_2.

zymic pertaining to enzymes or fermentation.

zym(o)- word element. [Gr.] *enzyme, fermentation*.

zymodemes populations of parasites with identical isoenzymes.

zymogen [*zi'mo-jən*] an inactive precursor that is converted into an active enzyme, usually by cleavage of a small polypeptde by action of an acid or another enzyme or by other means; a proenzyme.

z. cells the secretory cells that secrete the zymogens.

z. granules contained in the cytoplasm of the secretory cells in the relevant gland. Contain the zymogen.

Zymonema farciminosum see ***Histoplasma*** *farciminosum*.

Table 2.4 Weights and measures conversion: capacity

Non-metric to metric
1 cu. inch = 16.387 milliliter (cu. cm)
1 cu. foot = 0.028317 cu. meter
1 cu. yard = 0.7646 cu. meter
1 gallon, imp. (1.2 gallon, US) = 4.546 liter
1 gallon, US (0.83 gallon, imp.) = 3.788 liter
Metric to non-metric
1 cu. centimeter = 0.061 cu. inch
1 cu. meter = 1.308 cu. yard
1 liter = 0.220 gallon, imp.
1 liter = 0.264 gallon, US

See also Table 2.3.

Table 2.5 Weights and measures conversion: length

Non-metric to metric
1 inch = 2.54 centimeters
1 foot = 0.3048 meter
1 yard = 0.9144 meter
1 rod (pole or perch) = 5.0292 meters
1 chain = 0.0201 kilometers
1 mile = 1.609 kilometers
Metric to non-metric
1 millimeter = 0.03937 inch
1 centimeter = 0.3937 inch
1 meter = 1.0936 yards
1 kilometer = 0.6215 mile

Table 9 Arteries

Artery	Other names	Origin	Comments
abdominal aa.	*see* cranial and caudal abdominal aa.		
abdominal aorta	aorta abdominalis (NAV) abdominal part of descending aorta	from the thoracic aorta at its entrance into the aortic hiatus	the abdominal aorta runs in the midline, to the left of the vena cava, and terminates by bifurcation into the internal iliac aa. just cranial to the sacral promontory; it typically but not universally gives off paired lumbar, deep circumflex, external and internal iliac aa., renal aa., ovarian or testicular aa., caudal phrenic, cranial abdominal and suprarenal aa., the unpaired celiac a., and cranial and caudal mesenteric aa.
adrenal aa.	aa. adrenales mediae (NAV—pigs), a. adrenalis media (NAV—carnivores), supra-renal aa.	from the abdominal aorta	the adrenal glands are supplied by various aa. in different species; all receive blood from the caudal adrenal branches of the renal a.; the middle adrenal a. is only found in carnivores and pigs; cranial adrenal branches come from either the caudal phrenic, cranial abdominal, celiac or cranial mesenteric aa.
angularis oculi a.	a. angularis oculi (NAV)	from the terminal branch of the facial a. (in most species) or the buccal a. (pigs)	the vessel typically courses caudodorsally to reach the medial angle of the eye
angularis oris a.	a. angularis oris (NAV)	from the inferior labial a. (horse), the superior labial a. (ruminants) or the facial a. (dog)	a small a. to the corner of the mouth that has a variable origin
anterior ciliary aa.	aa. ciliares anteriores (NAV)	from the external ophthalmic a. (pigs) or from its muscular branches (others)	these vessels perforate the sclera near the corneoscleral junction and unite with the posterior ciliary vessels to supply the iris and ciliary body
anterior conjunctival aa.	aa. conjunctivales anteriores (NAV)	from the malar a. (pigs) or the supraorbital a. (ruminants)	these are vessels to the bulbar conjunctiva adjacent to the corneoscleral junction
aorta (NAV)		the base of the left ventricle	this, the largest artery in the body, is the parent to all others except the pulmonary aa.; its elasticity dampens the pulsatile flow from the left ventricle; see also its divisions: the ascending aorta, aortic arch and descending aorta
aortic arch	arcus aortae (NAV)	the ascending aorta	this is the communication between the ascending and descending aorta, derived embryologically in mammals from the left fourth aortic arch of the embryo and in birds from the right fourth arch; it gives off the brachiocephalic trunk and, in the dog and cat, the left subclavian a.
aortic arches 1–6	arcus aorticus I–VI	the ventral aorta of the embryo	the series of six paired embryonic aa. that connect the ventral and dorsal aortae; the first disappears totally, the second largely disappears, the third contributes to the internal carotids; the left (mammals) and right (birds) fourth arch forms the definitive aortic arch of the adult; the fifth only appears in lower vertebrates; the sixth contributes to the pulmonary aa. and the ductus arteriosus; anomalous forms may cause vascular rings around the structures passing through the mediastinum
aortic isthmus	isthmus aortae (NAV)	the aortic arch	this is a narrowing of the aortic arch that occurs in the fetus at or just proximal to the union of the aorta with the ductus arteriosus; it sometimes persists in the adult
arcuate a.	a. arcuata (NAV)	from the dorsal pedal a.	this short a. of carnivores crosses the hock transversely giving off the dorsal metatarsal aa.
arterial circle of the brain	*see* cerebral arterial circle		
a. of the clitoris	a. clitoridis (NAV)	a terminal branch of the internal pudendal a.	a homolog of the a. of the penis in the male; it gives off the a. of the vestibular bulb
a. of the ductus deferens	a. ductus deferentis (NAV)	from the prostatic a. (carnivores) or the umbilical a. (others)	this a., the homolog of the uterine a., supplies the deferent duct and forms an anastomotic loop with a branch of the testicular or prostatic a.

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
a. of the penile bulb	a. bulbi penis (NAV)	from the dorsal a. of the penis	this vessel supplies the corpus spongiosum of the penis near the sciatic arch
a. of the penis	a. penis (NAV)	a terminal branch of the internal pudendal a.	this a. to the penis arises at the sciatic arch and gives off the a. to the penile bulb, and the dorsal and deep aa. of the penis; in the horse it is augmented by a supply from the middle and cranial penile aa.
a. of the vestibular bulb	a. bulbi vestibuli (NAV)	from the a. of the clitoris	this is the homolog of the a. of the penile bulb in males; it passes to the ventral surface of the vulva
ascending aorta	aorta ascendens (NAV)	from the left ventricle	this is the initial segment of the aorta; at its origin it is expanded by the aortic sinuses to form the aortic bulb from which the left and right coronary aa. arise; it continues as the aortic arch
ascending palatine a.	a. palatina ascendens (NAV)	from the common carotid a. (sheep), the lingual a. (dogs, pigs), the linguofacial trunk (horses) or the occipital a. (cattle)	a small a. to the muscles and mucosa of the soft palate
ascending pharyngeal a.	a. pharyngea ascendens (NAV)	from the common carotid a. (ruminants), the cranial thyroid a. (most horses) or the external carotid a. (dogs)	a vessel that runs in the roof of the pharynx where it supplies the local tissues and often gives off palatine, pharyngeal and, in cattle, tonsillar branches and also a significant contribution to the rete mirabile.
auricular aa.	*see* caudal and rostral auricular aa.		
axillary a.	a. axillaris (NAV)	the continuation of the subclavian a.	this a. is arbitrarily named the axillary a., as the subclavian a. passes round the first rib; it provides the main supply to the forelimb and gives off the external and lateral thoracic, subscapular and cranial circumflex humeral aa. before it continues down the arm as the brachial a.
basilar a.	a. basilaris (NAV)	from the fusion of the two vertebral aa. and the rostral continuation of the ventral spinal a.	this a. is typically unpaired and runs forwards onto the ventral aspect of the medulla to end on the cerebral arterial circle; it gives off the caudal cerebellar and labyrinthine aa. plus branches to the medulla and pons
bicarotid trunk	truncus bicaroticus (NAV)	from the brachiocephalic trunk	in pigs, horses and ruminants the brachiocephalic trunk terminates by dividing into a right subclavian a. and a short bicarotid trunk; this then divides into the two common carotid aa.; these usually arise independently in dogs
brachial a.	a. brachialis (NAV)	this a. is the continuation of the axillary a.	this largest a. of the forelimb begins just distal to the shoulder and runs along the medial aspect of the arm to the elbow, navigating the supracondyloid foramen in the cat; its main branches typically include the deep and superficial brachial, bicipital, collateral ulnar, transverse cubital and common interosseous aa.; it continues as the median a.
brachiocephalic trunk	truncus brachiocephalicus (NAV), brachiocephalic a.; common brachiocephalic trunk	the aortic arch	this is the largest branch of the aorta; it runs forwards from the aortic arch and typically supplies the head by giving off a bicarotid trunk or two independent common carotid aa.; it also supplies the right forelimb by giving off the right subclavian a.; in ruminants and horses it also supplies the left forelimb by giving off the left subclavian a.
broncho-esophageal a.	a. bronchoesophagea (NAV)	from the thoracic aorta, or from one of the dorsal intercostal aa.	this a., like many to the alimentary tract, is usually unpaired; it gives off one or more bronchial branches that provide oxygenated blood to the lung, especially the bronchial tree, and esophageal branches
buccal a.	a. buccalis (NAV)	the maxillary a.	in most species the a. supplies the pterygoids and muscles and glands of the cheek; it sends a branch to the zygomatic gland in dogs and an additional rostral deep temporal a. in pigs and cattle

(Continued)

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
carotid aa.	*see* bicarotid trunk, common, external and internal carotid aa.		
caudal abdominal a.	a. abdominalis caudalis (NAV)	from the external iliac a. (carnivores) or the deep femoral or pudendoepigastric trunk (ruminants)	this a. is found in carnivores and ruminants; it is relatively small and runs cranially parallel to the rectus abdominis muscle
caudal auricular a.	a. auricularis caudalis (NAV)	from the external carotid a.	the a. runs dorsally to reach the back of the ear where it variably gives off lateral, medial and intermediate auricular branches, parotid and occipital branches, and a deep auricular a.
caudal cerebellar a.	a. cerebelli caudalis (NAV)	from the basilar a.	the a. runs under the trapezoid body, wraps around the medulla and reaches the cerebellar hemispheres; it gives branches to these structures plus ones to the choroid plexus
caudal cerebral a.	a. cerebri caudalis (NAV), deep cerebral a.	from the caudal communicating branch of the cerebral arterial circle	this large a. of the brain wraps around the cerebral peduncle and is distributed mainly to the midbrain; it is mostly concealed by the overlying cerebral hemispheres; it gives off central (perforating), cortical and choroidal branches and a rostral cerebellar a.
caudal circumflex humeral a.	a. circumflexa humeri caudalis (NAV)	from the subscapular a.	this a. runs with the axillary nerve on the flexor surface of the shoulder; it gives off the collateral radial a. and anastomoses with the cranial circumflex humeral a.; it supplies the shoulder region
caudal communicating a.	a. communicans caudalis (NAV)	from the internal carotid and basilar aa.	this vessel forms the caudal quadrant of the cerebral arterial circle; its major branch is the caudal cerebral a.
caudal deep epigastric a.	*see* caudal epigastric a.		
caudal epigastric a.	a. epigastrica caudalis (NAV), caudal deep epigastric a.	from the pudendoepigastric trunk, or occasionally, the deep femoral a.	the a. runs forwards and penetrates the deep surface of the rectus abdominis muscle and, near the umbilicus, anastomoses with its cranial epigastric counterpart
caudal femoral aa.	*see* proximal, middle and distal caudal femoral aa.	from the femoral a.	these three aa. are directed caudally into the medial muscles of the thigh including the adductors and the semimembranosus
caudal gluteal a.	a. glutea caudalis (NAV)	a terminal branch of the internal iliac a.	a large a. that arises at widely different sites in different species—from near the lumbosacral junction in horses and dogs, to the lesser sciatic notch in pigs and ruminants; it supplies the hamstrings and tail and may give off the iliolumbar, cranial gluteal, obturator, dorsal perineal and caudal rectal aa. and various aa. to the tail
caudal interosseous a.	a. interossea caudalis (NAV)	from the continuation of the common interosseous a.	this large a. of the carnivore forearm runs on the interosseous membrane to the carpus where it is called the palmar branch; there it supplies the deep palmar arch; in cats it gives off the ulnar a.
caudal mammary a.	a. mammaria caudalis (NAV)	from the external pudendal a.	this a. to the mammary gland is found in the mare, ewe and cow; it is the homolog of the male cranial a. of the penis
caudal meningeal a.	a. meningea caudalis (NAV)	from the occipital a.	this a. passes through the mastoid foramen to supply the dura; before entering the foramen it supplies the atlanto-occipital joint and adjacent tissues; it is absent from the cat
caudal mesenteric a.	a. mesenterica caudalis (NAV)	from the abdominal aorta	this is the smallest and most caudal of the three unpaired aa. that supply the abdominal parts of the alimentary canal; it arises beneath the fourth to the sixth lumbar vertebrae, runs in the mesocolon and supplies the terminal parts of the large intestine; it divides into the left colic and cranial rectal aa.; in ruminants it gives off the sigmoidal aa. too
caudal pancreaticoduodenal a.	a. pancreaticoduodenalis caudalis (NAV)	from the cranial mesenteric a.	this a. runs in the mesentery of the ascending limb of the duodenum; it divides to give branches that anastomose with the jejunal aa. near the duodenojejunal flexure and with the cranial pancreaticoduodenal a. at the caudal flexure of the duodenum

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
caudal phrenic a.	a. phrenica caudalis (NAV)	from the abdominal aorta; in carnivores by a common trunk with the cranial abdominal a.	this a. may have a variable origin from the aorta or its branches near the aortic hiatus; it ramifies in the crura of the diaphragm
caudal rectal a.	a. rectalis caudalis (NAV); caudal hemorrhoidal a.	from the internal pudendal a. or one of its branches	this is one of the three rectal aa.; it divides into dorsal and ventral branches which supply the anus, its sphincters and the overlying skin and cutaneous glands
caudal superficial epigastric a.	a. epigastrica caudalis superficialis (NAV)	from the external pudendal a.	this a. lies superficially on the ventral surface of the rectus abdominis muscle and runs forwards to anastomose with the cranial superficial epigastric a.; in ruminants and mares its initial part is called the cranial mammary a.
caudal thyroid a.	a. thyroidea caudalis (NAV)	of variable origin from the brachiocephalic trunk or nearby branches	this small vessel runs cranially by the trachea to join the cranial thyroid a. by the thyroid gland, which it supplies; it also supplies the esophagus and the trachea
caudal tibial a.	a. tibialis caudalis (NAV)	from the popliteal a.	this a. supplies the muscles of the calf, especially the digital flexors
caudal vesical a.	a. vesicalis caudalis (NAV)	from the prostatic or vaginal a., or one of their branches	this a. supplies the neck of the bladder over the caudolateral surface, and provides the main blood supply to the bladder; it gives off ureteric and urethral branches
celiac a.	a. celiaca (NAV)	from the abdominal aorta	this is the most cranial of the three unpaired aa. from the abdominal aorta that supply the alimentary tract; it supplies the stomach, spleen, liver, and parts of the pancreas and small intestine; it usually has three branches—the splenic, left gastric and hepatic aa. (and in some, the caudal phrenic a.)
celiacomesenteric a.		from the abdominal aorta	this a. is a common variant in which the celiac and cranial mesenteric aa. share a common origin
central a. of retina	a. centralis retinae (NAV)	it arises from the union of a branch of the external with the internal ophthalmic a.	an a. that runs within the terminal portion of the optic nerve to enter the eye at the optic papilla; its branches spread out over the retina and were long thought to be true anatomical end-arteries, but are now considered to be physiological end-arteries only; this a. is significant because it nourishes the retina and individual vessels are visible with an ophthalmoscope
cerebral aa.	*see* cerebral arterial circle; rostral, middle and caudal cerebral aa.		
cerebral arterial circle	circulus arteriosus cerebri (NAV), circle of Willis, arterial circle of the brain	from the paired internal carotid aa., and the median basilar a.	this main source of blood to the brain is typically hour-glass shaped and encircles the optic chiasma and the hypophysis on the ventral surface of the brain; its formation from an anastomosis of three major aa. helps ensure a constant supply along its branches; its four quadrants are made up of the paired rostral cerebral and caudal communicating aa.
ciliary aa.	*see* long and short posterior ciliary aa., and anterior ciliary aa.		
circle of Willis	*see* cerebral arterial circle		
circumflex humeral aa.	*see* cranial and caudal circumflex humeral aa.		
circumflex scapular a.	a. circumflexa scapulae (NAV)	from the subscapular a.	this a. gives off the nutrient a. of the scapula and supplies the adjacent region of the caudal part of the scapula
collateral radial a.	a. collateralis radialis (NAV)	from the caudal circumflex humeral a. (most species) or the deep brachial a. (horses)	this a. runs with the radial nerve in the brachial groove to the craniolateral aspect of the forearm supplying muscles on its course; it gives off a medial collateral a. and in pigs and ruminants a superficial antebrachial a.

(Continued)

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
collateral ulnar a.	a. collateralis ulnaris (NAV)	from the brachial a. (most species) or the superficial brachial a. (cats)	this a. curves around the inside of the elbow with the ulnar nerve and courses down to the carpus; it supplies parts of the triceps and the flexors of the carpus and digits
common carotid a.	a. carotis communis (NAV), the carotid	from the bicarotid trunk (pigs, horses and ruminants) or the brachiocephalic trunk (dogs)	this is the largest of the paired arteries that run to the head; it usually ascends the neck in a sleeve of connective tissue, the carotid sheath, in company with the vagosympathetic trunk and the internal jugular vein on either side of the trachea; its main branches are the cranial and caudal thyroid aa.; it terminates by dividing into the external and internal carotid aa.
common interosseous a.	a. interossea communis (NAV)	this is the terminal branch of the brachial a.	this short a. runs across to the space between the radius and ulna just distal to the elbow where it soon divides into the cranial and caudal interosseous aa.; in dogs it gives off the ulnar a.
communicating aa.	*see* rostral and caudal communicating aa.		these vessels unite the left and right halves of the cerebral arterial circle
condylar a.	a. condylaris (NAV)	from the occipital a. (dogs, ruminants and horses) or the internal carotid a. (pigs)	a variably developed vessel that enters the cranium through foramina near the occipital condyles and supplies the local dura; it also sends twigs to the inner and middle ear
conjunctival aa.	*see* anterior and posterior conjunctival aa.		
cornual a.	a. cornualis (NAV)	the superficial temporal a.	this a. supplies the horn of ruminants; because the adventitia of its branches is firmly applied to grooves in the bony cornual process, the a. tends not to retract when an animal is dehorned, thus encouraging extensive hemorrhage
coronary aa.	*see* right and left coronary aa.		these vessels supply the myocardium; in all species their main branches run subepicardially where they cannot be compressed by ventricular systole; they receive about 10% of the cardiac output; the left is larger in dogs and ruminants, the right in pigs and horses
costoabdominal a.	*see* dorsal costoabdominal a.		
costocervical trunk	truncus costocervicalis (NAV)	from the subclavian a.	this a. forms a common trunk for two to five of the branches of the subclavian, namely the deep cervical, dorsal scapular and thoracic vertebral aa. (dogs), plus the supreme intercostal and vertebral aa. (ruminants); in pigs and horses it is a common trunk to only the supreme intercostal and dorsal scapular aa.
cranial abdominal a.	a. abdominalis cranialis (NAV)	from the abdominal aorta (pigs) or by a common trunk with the caudal phrenic a. (carnivores)	this a. arises at about the level of the third lumbar vertebra and ramifies in the cranial part of the abdominal wall, mostly between the transverse abdomnis and the internal abdominal oblique muscles; it is absent from horses and ruminants
cranial a. of the penis	a. penis cranialis (NAV)	from the external pudendal a.	this a. passes forwards on the body of the penis to the glans; it is only large in the stallion; in the mare it is represented as the caudal mammary a.
cranial circumflex humeral a.	a. circumflexa humeri cranialis (NAV)	the last branch of the axillary a.; occasionally from neighboring aa.	an a. that supplies some of the muscles on the cranial aspect of the shoulder and arm
cranial epigastric a.	a. epigastrica cranialis (NAV)	from the internal thoracic a.	this a. pierces the diaphragm then runs first on and then in the rectus abdominis muscle until it anastomoses with the caudal epigastric a.; in dogs and ruminants it gives off a superficial branch
cranial gluteal a.	a. glutea cranialis (NAV)	from the internal iliac a. (ruminants, cats and pigs) or the caudal gluteal a. (dogs and horses)	this a. supplies the musculature over the wing of the ilium including the gluteal muscles themselves, and in some species sends twigs to the longissimus; its branches in some species include the obturator and iliolumbar aa.
cranial interosseous a.	a. interossea cranialis (NAV)	from the terminal division of the common interosseous a.	this a. arises on the medial side of the interosseous membrane between the radius and ulna just below the elbow to gain the lateral side; it gives off a recurrent interosseous a. and supplies local muscles as it runs down the forearm

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
cranial laryngeal a.	a. laryngea cranialis (NAV)	from the common carotid a. (pigs and ruminants), cranial thyroid a. (horses) or the external carotid a. (dogs)	this vessel arises near the termination of the common carotid and supplies the muscles and mucosa of the larynx
cranial mammary a.	a. mammaria cranialis (NAV)	from the external pudendal a.	this a. of cows, ewes and mares is the highly developed proximal part of the caudal superficial epigastric a. of others
cranial mesenteric a.	a. mesenterica cranialis (NAV)	from the abdominal aorta just caudal to the celiac a.; sometimes from a combined celiacomesenteric a.	this is the middle of the three unpaired aa. that supply the abdominal part of alimentary canal; it nourishes most of the intestines and arises under the first or second lumbar vertebra; it serves as an axis about which the developing gut rotates and passes caudal to the transverse colon; it gives off the caudal pancreaticoduodenal, jejunal, ileal, ileocolic, right and middle colic aa., and in ruminants a large collateral branch
cranial pancreaticoduodenal a.	a. pancreaticoduodenalis cranialis (NAV)	from the gastroduodenal branch of the right gastric a.	this a. often runs partly within the pancreas; it typically anastomoses with the caudal pancreaticoduodenal a. near the caudal flexure of the duodenum
cranial phrenic a.	a. phrenica cranialis (NAV)	from the thoracic aorta	this a. is found only in the horse and supplies the right or left crus of the diaphragm (in the horse the caudal phrenic a. is absent)
cranial rectal a.	a. rectalis cranialis (NAV); cranial hemorrhoidal a.	from the caudal mesenteric a.	this a. begins in the mesentery usually supplying the terminal parts of the colon before passing to the rectum where it anastomoses with the middle and caudal rectal aa.
cranial superficial antebrachial a.	a. antebrachialis superficialis (NAV)	from the superficial brachial a. (dogs and cats)	this small vessel rapidly divides into lateral and medial branches which run with the superficial branches of the radial nerve down the forearm; these branches may interfere with cephalic vein venipuncture
cranial thyroid a.	a. thyroidea cranialis (NAV)	from the common carotid a.	this large a. arises near the termination of the common carotid; it supplies the thyroid gland and typically gives off pharyngeal, cricothyroid and caudal laryngeal branches to the laryngeal muscles and pharynx
cranial tibial a.	a. tibialis cranialis (NAV)	a. terminal branch of the popliteal a.	the largest a. of the shank that runs between the muscle groups on its craniolateral side; it gives off the recurrent cranial tibial a. and others and terminates as the dorsal pedal a. over the flexor aspect of the hock
cranial vesical a.	a. vesicalis cranialis	the umbilical a.	this a. is small in dogs and cattle and best developed in sheep; it supplies the cranial aspect of the bladder
crural interosseous a.	a. interossea cruris (NAV)	from the caudal tibial a.	an a. of the shank of pigs and cattle that supplies the digital flexors of the hindlimb
deep antebrachial a.	a. profunda antebrachii (NAV)	from either the common interosseous or the brachial a.	this a. and its branches supply the deep heads of the flexors of the carpus and digits
deep a. of the clitoris	a. profunda clitoridis (NAV)	from the dorsal a. of the clitoris	this a. supplies the erectile tissue of the clitoris
deep a. of the penis	a. profunda penis (NAV)	from the dorsal a. of the penis	this a. penetrates the corpus cavernosum of the penis
deep auricular a.	a. auricularis profunda (NAV)	from the caudal auricular a.	a vessel derived from the caudal auricular, or one of its branches, that gains the inner surface of the ear cartilage and which supplies the skin of the external acoustic meatus
deep brachial a.	a. profunda brachii (NAV)	from the brachial a.	this a. is given off near the middle of the arm and mainly supplies the triceps muscles; in the horse it gives off the collateral radial a.
deep cerebral a.	*see* caudal cerebral a.		
deep cervical a.	a. cervicalis profunda (NAV)	mostly from the costocervical trunk, but in horses from the brachiocephalic and left subclavian aa.	the a. leaves the thorax through the first or second intercostal space and runs up to the nape, supplying the epaxial muscles of the neck

(Continued)

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
deep circumflex iliac a.	a. circumflexa ilium profunda (NAV)	from the abdominal aorta (carnivores) or the external iliac a. (other species)	this a. arises in the caudal part of the abdomen and supplies the caudal flank and some of the thigh; in ruminants and the horse it also extends further cranially; it divides into cranial and caudal branches that run mostly between the transverse abdominis and the internal abdominal oblique muscles
deep femoral a.	a. profunda femoris (NAV)	from the external iliac a. before the femoral a. is formed	the a. passes caudally towards the adductor muscles of the thigh; it gives off the pudendoepigastric trunk; its major terminal branch is the medial circumflex femoral a.
deep lingual a.	a. profunda linguae (NAV)	the lingual a.	the mobility of the tongue demands that this a. runs a flexuous course within the depths of the tongue; it runs between the hyoglossus and genioglossus, giving off dorsal lingual branches
deep palmar arch	arcus palmaris profundus (NAV), subcarpal arch	from the deep palmar branch of the radial a. (all species) plus other aa. that vary according to species	the deep palmar arch forms an anastomotic loop on the flexor surface of the carpus which gives off the palmar metacarpal aa. that run down between the metacarpal bones; the loop encourages a reliable source of blood to the digits, even if some vessels are compressed
deep plantar arch	arcus plantaris profundus (NAV)	from the lateral and medial plantar aa. on the caudal and distal aspect of the hock	this anastomotic loop gives origin to the plantar metatarsal aa. in like manner to the deep palmar arch of the forelimb
deep temporal aa.	a. temporalis profunda caudalis/ rostralis (NAV)	from the maxillary a. or, in cats, from the rete mirabile	there is only a single (caudal) vessel in the small ruminants but an additional rostral a. in others; they are mainly aa. to the temporal muscle
descending aorta	aorta descendens (NAV), dorsal aorta	from the aortic arch	this, the longest segment of the aorta, is made up of thoracic and abdominal parts; *see* thoracic aorta and abdominal aorta
descending genicular a.	a. genus descendens (NAV)	from the femoral a.	this vessel runs down the inside of the thigh to the stifle joint, supplying branches to the distal ends of the quadriceps and to the joint itself
descending palatine a.	a. palatina descendens (NAV)	a terminal branch of the maxillary a.	the a. runs a short course within the pterygopalatine fossa before dividing into sphenopalatine, and greater and lesser palatine aa.; these branches supply the nasal chambers and the hard and soft palates
digital aa.	*see* dorsal, palmar and plantar proper digital aa., dorsal, palmar and plantar common digital aa. and, for horses, palmar and plantar digital aa.		
distal caudal femoral a.	a. caudalis femoris distalis (NAV)	from the femoral a.	the distal member of three aa. that are directed caudally into the medial muscles of the thigh
dorsal a. of the clitoris	a. dorsalis clitoridis (NAV)	from the a. of the clitoris	the homolog of the dorsal a. of the penis of the male
dorsal a. of the penis	a. dorsalis penis (NAV)	from the a. of the penis	this is the a. that runs along the dorsum of the penis that, in stallions, receives augmentation from the middle and cranial penile aa.
dorsal carpal rete	rete carpi dorsale (NAV)	from the cranial interosseous and other aa.	this is a delicate network over the dorsum of the carpus that gives rise to the dorsal metacarpal aa.
dorsal common digital aa. (forelimb)	aa. digitales dorsales communes (NAV)	from the superficial dorsal arch (if present) or various antebrachial aa.	these aa. run superficially between the metacarpal bones and unite distally with the deeper dorsal metacarpal aa.; they give origin to the dorsal proper digital aa.
dorsal common digital aa. (hindlimb)	aa. digitales dorsales communes (NAV)	from the cranial branch of the saphenous a. (carnivores only)	these aa. run specifically between the metatarsal bones and unite distally with the deeper dorsal metatarsal aa.; they give origin to the dorsal proper digital aa., as in the forelimb
dorsal costoabdominal a.	a. costoabdominalis dorsalis (NAV)	from the thoracic aorta	this a. is effectively the last of the dorsal intercostals but because it lies caudal to the last rib also supplies some of the abdominal wall
dorsal intercostal aa.	aa. intercostales dorsales (NAV)	most arise from the thoracic aorta but the first few come from the costocervical trunk, the supreme intercostal or other aa.	these paired segmental aa. mostly run subpleurally close to the caudal border of the rib between the nerve cranially and the vein caudally (= 'NAV'); collateral branches may pass to the cranial border of the rib; most give off dorsal, cutaneous and mammary branches; the vessel terminates by anastomosing with the ventral intercostal branches of the internal thoracic a.

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
dorsal metacarpal aa.	aa. metacarpeae dorsales (NAV)	from the dorsal carpal rete	these aa. run between the metacarpal bones and unite distally with the more superficial dorsal common digital aa.; they give origin to the dorsal proper digital aa.
dorsal nasal a.	a. dorsalis nasi (NAV)	from the facial a. (horses), the infraorbital a. (dogs) or the malar a. (ruminants)	this a. runs along the nasal bone supplying the dorsal part of the muzzle and, in the horse, the nasal diverticulum
dorsal pedal a.	a. dorsalis pedis (NAV)	the continuation of the cranial tibial a.	this major a. to the foot crosses the flexor aspect of the hock; in most species it gives off lateral and medial tarsal aa. and one or more perforating tarsal aa.; in the horse it continues as the large dorsal metatarsal a.; in carnivores it turns laterally as the arcuate a. that then gives off the series of dorsal metatarsal aa.
dorsal perineal a.	a. perinealis dorsalis (NAV)	from the vaginal a. (ruminants and pigs) or the caudal gluteal a. (carnivores)	this a. contributes to the supply of the external anal sphincter and adjacent parts of the perineum
dorsal proper digital aa.	aa. digitales dorsales propriae (NAV)	from the division of the dorsal common digital aa.	with the palmar (or plantar) proper digital aa. these aa. provide blood to the toes; they are named axial or abaxial according to their relation to the axis of the foot
dorsal scapular a.	a. scapularis dorsalis (NAV), transverse a. of the neck, transverse colli a.	from the costocervical trunk (dogs, ruminants and horses) or the subclavian a. (pigs)	an a. that runs dorsally supplying the cervical part of the ventral serrate muscle and ending in the muscles beneath the withers
ductus arteriosus (NAV)		the pulmonary trunk	the ductus develops from the left sixth aortic arch that unites the pulmonary trunk with the aorta; it serves as a pulmonary bypass in the fetus and usually closes a short time after birth; its remnant in the adult is the ligamentum arteriosum
episcleral aa.	aa. episclerales (NAV)	the long posterior ciliary aa., and the muscular branches of the external ophthalmic a.	these vessels supply the sclera from the external surface
external carotid a.	a. carotis externa (NAV)	the terminal branch of the common carotid a.	this large vessel supplies the jaws, face and superficial structures over the cranium and, in ruminants and cats, also contributes substantially to the blood supply to the brain; its major branches are the occipital, cranial laryngeal, ascending pharyngeal, lingual, facial (or linguofacial trunk), caudal auricular, parotid, superficial temporal and maxillary aa.
external ethmoid a.	a. ethmoidalis externa (NAV)	external ophthalmic a.	the continuation of the external ophthalmic a. that enters the cranium through the ethmoidal foramen to join the internal ethmoidal a. with which it forms a small rete; it gives off the rostral meningeal a. and some nasal branches that supply the ethmoturbinates
external iliac aa.	aa. iliaca externa (NAV)	from the abdominal aorta at the level of the last one or two lumbar vertebrae	this a. is the major parent a. for the hindlimb; it also contributes to the body wall and in some species makes some contribution to the pelvic viscera; in most species it gives off the deep circumflex iliac, the caudal abdominal and the deep femoral aa. before escaping into the thigh as the femoral a.
external maxillary a.	*see* linguofacial trunk		
external ophthalmic a.	a. ophthalmica externa (NAV)	the maxillary a.	this a. arises in the depth of the orbit and supplies both the bulb of the eye and the adnexa; its main branches are typically the supraorbital, lacrimal and long posterior ciliary aa.
external pudendal a.	a. pudenda externa (NAV)	from the pudendoepigastric trunk, or occasionally from the deep femoral a.	this a. passes through the inguinal canal, emerging at the medial border of the superficial inguinal ring where its branches supply the ventral body wall and parts of the external genitalia; its main branches are the caudal superficial epigastric a. and either the ventral scrotal or ventral labial branch, and the cranial a. of the penis or caudal mammary a.

(Continued)

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
external thoracic a.	a. thoracica externa (NAV). *See also* lateral thoracic a.	the axillary a.	this is one of the major aa. to supply the pectoral muscles; in the pig it gives rise to the lateral thoracic a.
facial a.	a. facialis (NAV)	from the external carotid a. (dogs and pigs) or the linguofacial trunk (cattle and horses)	the a. begins by coursing medial to the ventral border of the mandible, then crosses to the lateral side and runs over the cheek by the edge of the masseter muscle; it can be used for taking the pulse as it crosses the mandible; depending on the species it gives off submental, sublingual, superior and inferior labial, lateral and dorsal nasal, and angularis oculi aa.; the vessel is missing in sheep and goats and is small in pigs
femoral a.	a. femoralis (NAV)	the direct continuation of the external iliac a.	it runs through the femoral canal and down the inside of the thigh to the caudal aspect of the stifle joint where it becomes the popliteal a.; it is a useful a; on which to feel the pulse where it lies between the sartorius and pectineus muscles just cranial to the femoral vein; its main branches are the lateral circumflex femoral, descending genicular and saphenous aa., and the proximal, middle and distal caudal femoral aa.
gastric aa.	*see* left and right gastric aa., left and right gastroepiploic aa., short gastric aa. and gastroduodenal a.		
gastroduodenal a.	a. gastroduodenalis (NAV)	from the hepatic a.	the a. courses to the duodenum where it divides into the right gastroepiploic and the cranial pancreaticoduodenal aa.
genital aa.	*see* ovarian, testicular, uterine, vaginal and prostatic aa.		
greater palatine a.	a. palatina major (NAV)	from the descending palatine a.	this a. runs through the palatine canal in the hard palate and continues forwards in the rostral palatine groove; it supplies both the hard palate and, via the palatine fissure, the rostral floor of the ventral nasal meatus
hemorrhoidal aa.	*see* cranial, middle and caudal rectal aa.		
hepatic a.	a. hepatica (NAV)	one of the three main branches of the celiac a.	the a. runs to the liver which it supplies and ends by dividing into the right gastric and gastroduodenal aa.
hypogastric a.	*see* internal iliac a.		
ileal aa.	aa. ilei (NAV)	from the cranial mesenteric a.	a series or bundle of ileal aa. leave the cranial mesenteric and form vascular arcades within the mesoileum; these arcades often change their pattern along the gut, providing some indication of the segment exposed at surgery; the aa. are in continuity with the jejunal and ileocolic aa.
ileocecocolic a.	*see* ileocolic a.		
ileocolic a.	a. ileocolica (NAV), *ileocecocolic* a.	from the cranial mesenteric a.	this a. always supplies the segments of gut around the ileocolic junction and, depending on the species, may supply other parts too; it may give off right and middle colic aa. and one or more cecal aa. in addition to the ileal and colic branches
iliacofemoral a.	a. iliacofemoralis (NAV)	from the obturator a.	this a. crosses the ventral surface of the ilium to supply the cranial muscles of the thigh and the hip joint; it is only present in the horse
iliolumbar a.	a. iliolumbalis (NAV)	from the internal iliac a. (ruminants and pigs), the cranial gluteal a. (cats and horses) or the internal iliac a. (dogs)	an a. that typically supplies the hypaxial muscles before passing beneath the shaft of the ilium to reach the tensor fasciae latae and adjacent muscles
inferior alveolar a.	a. alveolaris inferior (NAV)	from the maxillary a.	before this a. enters the mandibular foramen it gives off the mylohyoid branch; it courses along the mandibular canal supplying the jaw and teeth before emerging as the mental branches which supply the lower lip and chin
inferior labial a.	a. labialis inferior (NAV), mandibular labial a., a. of the lower lip	from the facial a. (most species), the buccal a. (pigs) or the transverse facial a. (sheep and goats)	in most species this is the first vessel to be given off the facial a. after it has emerged onto the face; it typically runs a long course parallel with the mandible to reach the lower lip

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
infraorbital a.	a. infraorbitalis (NAV)	a terminal branch of the maxillary a.	the a. enters the maxillary foramen to pass along the infraorbital canal; it gives off the malar a. in horses and dogs, dental branches in all, and in some species dorsal or lateral nasal branches
intercostal aa.	*see* dorsal intercostal aa.		the intercostal aa. form anastomotic loops in which the dorsal intercostal aa. unite with the ventral intercostal branches of the internal thoracic a.
interdigital a.	a. interdigitalis (NAV)	from the dorsal and palmar (or plantar) common digital aa.	these aa. communicate between the palmar (or plantar) and the dorsal common digital aa.
internal carotid a.	a. carotis interna (NAV)	one of the terminal branches of the common carotid a.	a major supplier of blood to the brain; in horses this a. lies within a mucosal fold that hangs from the roof of the guttural pouch where it is vulnerable to erosion from fungal infections; in ruminants and cats the extracranial part disappears in adults; in dogs the artery runs through the carotid canal; the a. may course through the cavernous and other dural sinuses where heat exchange may take place
internal ethmoidal a.	a. ethmoidalis interna (NAV)	from the rostral cerebral a.	this small a. runs forwards to the cribriform plate and forms a rete with the external ethmoidal a. before supplying the ethmoturbinates
internal iliac a.	a. iliaca interna (NAV), hypogastric a.	this a. forms the terminal division of aorta	this large a. arises near the penultimate lumbar vertebra and runs towards or beyond the pelvic surface of the shaft of the ilium; it is short in horses and carnivores and long in pigs and ruminants; it, or its branches, supply the pelvic viscera ('visceral branches') or the pelvic wall ('parietal branches'); its terminal divisions are the caudal gluteal and internal pudendal aa. and it or its branches give rise to the lumbar, iliolumbar, cranial gluteal and umbilical aa.
internal maxillary a.	*see* maxillary a.		
internal ophthalmic a.	a. ophthalmica interna (NAV)	from the rostral cerebral a. or the rostral epidural rete mirabile (cattle)	a slight vessel in domestic mammals that courses with the optic nerve to the eye, receives an anastomotic branch from the external ophthalmic a. and continues as the central a. of the retina
internal pudendal a.	a. pudenda interna (NAV)	one of the terminal branches of the internal iliac a.	the a. is particularly long in carnivores and horses in which it mimics the course of the internal iliac of other species; in horses and dogs it gives off the prostatic or vaginal a. to the pelvic viscera; in most species it gives off the urethral, ventral perineal and penile or clitoral aa.; it may also supply the vestibular aa.
internal spermatic a.	*see* testicular a.		
internal thoracic a.	a. thoracica interna (NAV)	from the subclavian a.	this a. runs mostly on the dorsal surface of the sternum, ventral to the transverse thoracic muscle; it gives off thymic, mediastinal and perforating branches to the mammary glands in those with pectoral mammae, and a series of ventral intercostal branches; it terminates by dividing into the musculophrenic and cranial epigastric aa.
jejunal aa.	aa. jejunales (NAV)	from the cranial mesenteric a.	a series or bundle of jejunal aa. leave the cranial mesenteric a. and form vascular arcades in the mesojejunum; they anastomose orally with the duodenal branch of the caudal pancreaticoduodenal a. and aborally with the ileal aa.
labyrinthine a.	a. labyrinthi (NAV)	from the basilar a. or the caudal cerebellar a.	this vessel runs into the internal acoustic meatus with the vestibulocochlear nerve to supply the inner ear
lacrimal a.	a. lacrimalis (NAV)	from the external ophthalmic a. or the maxillary a. (cat)	a branch to the lacrimal gland and adjacent regions
lateral circumflex femoral a.	a. circumflexa femoris lateralis (NVA)	from the femoral a.	this a. supplies parts of the quadriceps, the hip joint and the cranial part of the thigh; it divides into ascending, descending and transverse branches

(Continued)

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
lateral nasal a.	a. lateralis nasi (NAV), ramus lateralis nasi rostralis (NAV—ruminants)	from the facial a. (horses) or the infraorbital a. (dogs and pigs)	an a. to the side of the muzzle
lateral plantar a.	a. plantaris lateralis (NAV)	from the caudal branch of the saphenous a.	this a. runs over the lateral side of the plantar aspect of the hock; it is a major contributor to the deep plantar arch from which the plantar metatarsal aa. arise
lateral tarsal a.	a. tarsea lateralis (NAV)	from the dorsal pedal a.	this is a small a. that supplies the dorsolateral parts of the hock in all species bar the horse
lateral thoracic a.	a. thoracica lateralis (NAV), formerly called the external thoracic a.	from the axillary a. (carnivores) or the external thoracic a. (pigs)	it is found only in the pig and carnivores and runs in the axilla between the deep pectoral and the latissimus dorsi; it also gives off lateral mammary branches
left colic a.	a. colica sinistra (NAV)	from the caudal mesenteric a.	the a. runs a straight, cranially directed course within the mesocolon in most species, supplying the descending colon; the extensive small colon of the horse means the a. is divided into several long branches in this species
left coronary a.	a. coronaria sinistra (NAV)	the left sinus of the aortic bulb	the vessel runs between the atria and the ventricles and emerges onto the surface of the heart just caudal to the pulmonary trunk; the paraconal branch runs in the interventricular groove to the apex of the heart while the circumflex runs in the coronary groove in which it ends in pigs and horses; in dogs and ruminants it continues as a subsinuosal branch
left gastric a.	a. gastrica sinistra (NAV)	one of the three main branches of the celiac a., sometimes arising from the splenic a.	the a. reaches the cardia via the gastrophrenic ligament and runs along the lesser curvature to anastomose with the right gastric a.; in ruminants it passes cranioventrally over the right side of the rumen to reach the abomasum where it becomes the left gastroepiploic a.
left gastroepiploic a.	a. gastroepiploica sinistra (NAV)	from the splenic a. (most species) or the left gastric a. (ruminants)	the a. runs along the greater curvature of the stomach (or the abomasum) and anastomoses with the right gastroepiploic a.; it gives off epiploic branches to the omentum and short gastric aa. to the stomach
left ruminal a.	a. ruminalis sinistra (NAV)	the celiac a. or one of its branches	despite its name the a. runs first on the right of the rumen, then passes along the cranial groove to gain the left longitudinal groove of the rumen
lesser palatine a.	a. palatina minor (NAV)	from the descending palatine a. (most species) or the maxillary a. (cat)	this vessel supplies the soft palate
ligamentum arteriosum (NAV)		the pulmonary trunk	this ligament is the atrophied remnant of the ductus arteriosus; the left recurrent laryngeal nerve passes around it; in aberrant cases it can contribute to the formation of congenital vascular rings around the esophagus
lingual a.	a. lingualis (NAV)	the external carotid a. (dogs, pigs, sheep and goats) or the linguofacial trunk (horses and cattle)	a large branch of the external carotid that is the principal a. to the tongue; once it reaches the root of the tongue it is called the deep lingual a.; in some species it gives off ascending palatine, perihyoid and sublingual branches
linguofacial trunk	truncus linguofacialis (NAV), external maxillary a.	the external carotid a.	an arterial pattern found in horses and cattle in which the lingual and facial aa. share a common origin
long posterior ciliary aa.	aa. ciliares posteriores longae (NAV)	from the external ophthalmic a. (ruminants) or from the union of both the internal and external ophthalmic aa. (others)	these vessels pierce the posterior part of the sclera and run forwards between the choroid and sclera to the ciliary body; they give off the short posterior ciliary aa. to the choroid and the episcleral aa. to the external surface of the sclera
lumbar aa.	aa. lumbales (NAV)	from the abdominal aorta and median sacral a.	these are paired segmental aa. that supply the local vertebrae, spinal cord, skin and back muscles and may contribute to the dorsal part of the flank

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
malar a.	a. malaris (NAV)	from the infraorbital a. (dogs and horses) or the maxillary a. (ruminants and pigs)	an a. that runs on the floor of the orbit forwards to the medial corner of the eye, supplying the eyelids and adjacent structures
mandibular alveolar a.	*see* inferior alveolar a.		
mandibular labial a.	*see* inferior labial a.		this name for the inferior labial a. appeared in earlier editions of the NAV
maxillary a.	a. maxillaris (NAV), internal maxillary a.	from the external carotid a.	this continuation of the external carotid a. mainly supplies the orbit and upper jaw and in some species the brain; its main branches typically include the inferior alveolar, rostral tympanic, middle meningeal, deep temporal, external ophthalmic, buccal, infraorbital and descending palatine aa.
maxillary labial a.	*see* superior labial a.		this name for the superior labial a. appeared in earlier editions of the NAV
medial circumflex femoral a.	a. circumflexa femoris medialis (NAV)	the a. is a terminal branch of the deep femoral a.	this a. runs in the adductors and some parts of the hamstrings; it gives off obturator, acetabular, deep, ascending and transverse branches; the deep branch anastomoses with the lateral circumflex femoral a.
medial palmar a.	a. digitalis palmaris communis II (NAV—horse)	a continuation of the median a. beyond the carpus	this is the largest a. of the cannon region of the horse's forelimb; it runs between the tendons of the interosseous and deep digital flexor muscles; it divides in the distal quarter of the metacarpus into medial and lateral palmar (proper) digital aa.
medial plantar a.	a. plantaris medialis (NAV)	from the caudal branch of the saphenous a.	this a. runs over the medial side of the plantar aspect of the hock; it is a major contributor to the deep plantar arch from which the plantar metatarsal aa. arise
medial tarsal a.	a. tarsea medialis (NAV)	from the dorsal pedal a.	this is a small a. that supplies the dorsomedial parts of the hock in all species bar the horse
median a.	a. mediana (NAV)	the continuation of the brachial a.	this is the major a. of the forearm except in the cat; it begins just distal to the elbow where, in the horse, it can be used to take the pulse; it courses down the caudomedial aspect of the forearm and typically gives off the radial a. and in some species the deep antebrachial a. before contributing to the palmar carpal arches
median caudal a.	a. caudalis mediana (NAV), middle tail a.	a direct continuation of the median sacral a. (most species) or the left or right caudal gluteal a. (horses)	this is usually the largest a. of the tail and runs in the midline on its ventral surface (unpaired); in some species hemal arches or chevron bones protect the a. as it passes over the intervertebral joints; the a. can be used for taking the pulse, especially in cattle
median sacral a.	a. sacralis mediana (NAV)	from the terminal trifurcation of the aorta	the a. is a direct continuation of the aorta that leads directly into the median caudal a.; it gives off sacral branches, and is often absent from the horse
meningeal aa.	*see* rostral, middle and caudal meningeal aa.		
middle a. of the penis/clitoris	a. penis/clitoridis media (NAV)	from the obturator a.	this a., only found in horses, is a major source of blood to the penis or clitoris
middle caudal femoral a.	a. caudalis femoris media (NAV)	from the femoral a.	the middle member of three aa. that are directed caudally into the medial muscles of the thigh
middle cerebral a.	a. cerebri media (NAV)	from the cerebral arterial circle near the termination of the internal carotid a.	this is the largest vessel supplying the brain; it runs over the ventral and lateral surface to supply much of the cerebral cortex; it gives off choroidal and cortical branches
middle colic a.	a. colica media (NAV)	from the cranial mesenteric a. (ruminants), the ileocolic a. (dogs) or the right colic a. (pigs and horses)	this is a relatively small a. that supplies the transverse colon; it anastomoses with the right and left colic aa.
middle meningeal a.	a. meningea media (NAV)	from the maxillary a. (dogs, pigs and horses) or the occipital a. (ruminants)	the a. enters the cranium via the foramen ovale in dogs and ruminants, and via the foramen lacerum orale in horses and pigs; it ramifies in the dura; in pigs it supplies a branch to the rostral epidural rete mirabile

(Continued)

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
middle rectal a.	a. rectalis media (NAV); middle hemorrhoidal a.	from the vaginal or prostatic a.	this is the terminal branch of the genital a. and it anastomoses in the rectal wall with the cranial and caudal rectal aa.
musculophrenic a.	a. musculophrenica (NAV)	from the internal thoracic a.	this terminal branch of the internal thoracic a. runs subperitoneally between the interdigitations of the diaphragm and transverse abdominis muscles; it gives off ventral intercostal branches
obturator a.	a. obturatoria (NAV)	from the cranial gluteal a. (most species), the iliolumbar a. (pigs) or the internal iliac a. (sheep)	the a. runs along the shaft of the ilium to the cranial border of the obturator foramen which it navigates before joining (in some species) branches of the deep femoral a.; in horses it gives off the iliacofemoral and the middle penile (or clitorine) aa.; it is usually absent from dogs and cattle
occipital a.	a. occipitalis (NAV)	from the external carotid a. (dogs and horses) or the internal carotid a. (pigs and ruminants)	this a. arises just after the terminal bifurcation of the common carotid a. and runs to the muscles of the nape and poll; it usually anastomoses with the vertebral a. and thus contributes to the basilar a.; typically it gives off condylar and caudal meningeal aa.
omocervical a.	*see* superficial cervical a.		
ovarian a.	a. ovarica (NAV)	from the abdominal aorta	like the testicular a. the terminal part of the ovarian a. is highly contorted and intimately related to the ovarian vein—a relationship that may serve for transvascular hormonal exchange; it gives off a tubal and a uterine branch (formerly called the cranial uterine a.)
palatine aa.	*see* ascending, descending, greater and lesser palatine aa. and the sphenopalatine a.		
palmar common digital aa.	aa. digitales palmares communes I–IV (NAV), medial palmar a. (horses)	from the superficial palmar arch (if present) or branches of the median, radial and other aa.	these aa. provide the principal blood supply to the toes; they run between the metacarpal bones and distally unite with the palmar metacarpal aa. to form larger vessels that divide between the digits into the palmar proper digital aa.
palmar (digital) aa. (horses)	a. digitalis lateralis/medialis (NAV), a. digitalis palmaris propria III (NAV)	from the medial palmar a.	this is a special, simpler, name applied to the palmar proper digital aa. of the horse; the medial and lateral aa. run on the palmar surface of the pastern and end by uniting in the solar canal of the distal phalanx in a terminal arch
palmar metacarpal aa.	aa. metacarpeae palmares (NAV)	from the deep palmar arch	these aa. are deep vessels that run between the metacarpal bones and distally unite with the palmar common digital aa.
palmar proper digital aa.	aa. digitales palmares propriae (NAV)	from the division of the palmar common digital aa.	with the dorsal proper digital aa. these vessels make up the blood supply to the toes; they are named axial or abaxial according to their relation to the axis of the foot (except in horses where they are termed simply lateral or medial)
pancreatic aa.	*see* cranial and caudal pancreaticoduodenal aa.		
penile aa.	*see* a. of the penis and a. of the penile bulb, and cranial, dorsal, deep and middle aa. of the penis		
perforating tarsal aa.	a. tarsea perforans distalis/proximalis (NAV)	from the dorsal pedal a.	a distal perforating tarsal a. is found in all species except carnivores (pigs have a proximal one too); the a. passes through the tarsus to contribute to the deep plantar arch
perineal aa.	*see* dorsal and ventral perineal aa.		
phrenic aa.	*see* caudal and cranial phrenic, phrenicoabdominal and musculophrenic aa.		
phrenicoabdominal a.		from the abdominal aorta	this a. is found in carnivores and is a common trunk of the caudal phrenic and cranial abdominal aa. of other species

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
plantar common digital aa.	aa. digitales plantares communes I–IV (NAV)	from the medial plantar a. or the deep plantar arch	these are the superficial aa. on the sole of the foot; they unite with the plantar metatarsal aa. and perforating branches from the dorsum to form larger vessels that divide between the digits to form the plantar proper digital aa.
plantar digital aa. (horses)	a. digitalis lateralis/medialis (NAV), a. digitalis plantaris propria III (NAV)	from the perforating branch of the dorsal metatarsal a. plus a number of small uniting vessels	these aa. are essentially similar to the palmar digital aa. of the forelimb, differing only in their origin
plantar metatarsal aa.	aa. metatarseae plantares (NAV)	from the deep plantar arch	these aa. are deep vessels that run between the metatarsal bones and distally unite with the plantar common digital aa.
plantar proper digital aa.	aa. digitales plantares propriae (NAV)	from the division of the plantar common digital aa.	with the dorsal proper digital aa. these vessels make up the blood supply to the toes; they are named axial or abaxial according to their relation to the axis of the foot (except in horses where they are termed simply lateral or medial)
popliteal a.	a. poplitea (NAV)	this is continuation of the femoral a.	the a. is located close to the caudal surface of the stifle joint; it runs between the heads of the gastrocnemius and gives off the caudal tibial a. and, in some species, a crural interosseous a. before continuing as the cranial tibial a.; it supplies numerous branches to the stifle joint and its articular rete
posterior ciliary aa.	*see* long and short posterior ciliary aa.		
posterior conjunctival aa.	aa. conjunctivales posteriores (NAV)	from the external ophthalmic a. or its branches	these vessels run along the sclera to reach the conjunctival fornices
proper digital aa.	*see* palmar, plantar and dorsal proper digital aa.	arise from the division of the common digital aa.	the basic scheme of the arterial supply to the digits is for each digit to be supplied with four aa., one located at each quadrant; they are derived from the division of the dorsal and palmar common digital aa.
prostatic a.	a. prostatica (NAV), urogenital a., urethrogenital a.	from the internal pudendal a. (horses and carnivores) or the internal iliac a. (pigs and ruminants)	this is the main a. of the pelvic viscera in males; it is homologous with the vaginal a.; it passes over the side of the rectum and gives off a caudal vesical a. and an a. of the deferent duct and, after supplying the prostate, ends as the middle rectal a.
proximal caudal femoral a.	a. caudalis femoris proximalis (NAV)	from the femoral a.	the proximal member of three aa. that are directed caudally into the medial muscles of the thigh
pudendoepigastric trunk	truncus pudendoepigastricus (NAV)	from the deep femoral a., or rarely, the external iliac a.	this is a short a. that runs forwards from the pubic brim to the medial part of the deep inguinal ring, where it divides into the caudal epigastric and the external pudendal aa.
pulmonary aa.	a. pulmonalis dextra/sinistra (NAV)	the pulmonary trunk	the right and left pulmonary aa. arise from the pulmonary trunk; the right a. passes ventral to the trachea to reach the hilus; each a. divides into lobar aa. that tend to run on the lateral side of the companion bronchi
pulmonary trunk	truncus pulmonalis (NAV)	the right ventricle	a short, elastic a. of similar diameter to the aorta but with somewhat thinner walls; it rapidly divides into the right and left pulmonary aa.
radial a.	a. radialis (NAV)	from the median a.	the site of origin of the a. varies between species, arising in the proximal forearm in the dog and the distal forearm in the horse and cat; it gives off dorsal and palmar branches to the carpal rete and carpal arches
rectal aa.	*see* cranial, middle and caudal rectal aa.		
recurrent ulnar a.	a. recurrens ulnaris (NAV)	from the ulnar a.	this a. unites the ulnar and collateral ulnar aa. of carnivores

(Continued)

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
renal a.	a. renalis (NAV)	from the abdominal aorta	the renal aa. arise beneath the first to the fourth lumbar vertebrae depending on the species, the right usually cranial to the left; they transmit about one fifth of the cardiac output; each divides into dorsal and ventral branches which give off an array of interlobar aa. within the substance of the kidney; the a. also has caudal adrenal and ureteric branches
rete carpi dorsale	*see* dorsal carpal rete		
rete mirabile branches	ramus and rete mirabile epidurale rostrale (NAV)	the maxillary a. or its branches	ruminants usually have rostral and caudal branches that pierce the oval and orbitorotund foramina to supply the epidural rete
reticular a.	a. reticularis (NAV)	from the left ruminal a.	this a. runs along the left side of the rumen and before entering the ruminoreticular groove gives off esophageal branches and sometimes phrenic branches
right colic a.	a. colica dextra (NAV), aa. colicae dextrae (NAV—ruminants)	from the cranial mesenteric a. (pigs and horses) or the ileocolic a. (carnivores and ruminants)	this a. provides the principal supply to the ascending colon and is thus large in herbivores which have a well-developed ascending colon; its branches pass over and along the coils of the spiral colon of ruminants and pigs, and between the dorsal and ventral segments of the large colon of the horse; it is in continuity with branches of the middle colic and ileocolic aa.
right coronary a.	a. coronaria dextra (NAV)	the right sinus of the aortic bulb	the vessel runs between the atria and ventricles to emerge onto the cranial surface of the heart to the right of the pulmonary trunk; its circumflex branch runs in the coronary groove where it fades out in dogs and ruminants; in pigs and horses it continues as the subsinuosal branch within the subsinuosal interventricular groove
right gastric a.	a. gastrica dextra (NAV)	from the hepatic a.	the a. courses to the pyloric region in the lesser omentum and anastomoses with the left gastric a.; in ruminants the a. first joins the duodenum and runs orally to the pylorus; it gives off pancreatic and gastric branches
right gastroepiploic a.	a. gastroepiploica dextra (NAV)	one of the terminal branches of the gastroduodenal a.	the a. runs along the greater curvature of the stomach or the abomasum and anastomoses with the left gastroepiploic a.; it gives off epiploic branches to the omentum and short gastric aa. to the stomach
right ruminal a.	a. ruminalis dextra (NAV)	usually from the splenic a.	this a. is the principal supply to the rumen; it runs caudally along the right face of the organ, and then within the right accessory, caudal and left longitudinal grooves, giving off right and left, dorsal and ventral coronary aa.
rostral auricular a.	a. auricularis rostralis (NAV)	from the superficial temporal a.	this branch ascends behind the temporomandibular joint to ramify in the rostral auricular and temporal muscles
rostral cerebellar a.	a. cerebelli rostralis (NAV)	from the caudal communicating a.	the vessel runs around the brain stem between the colliculi and the cerebellar hemispheres to the vermis, supplying these structures en route
rostral cerebral a.	a. cerebri rostralis (NAV)	from the internal carotid a.	this a. runs from the internal carotid a. forwards to the longitudinal fissure of the brain where it unites with its fellow; it may give off a separate bridging rostral communicating a. that unites with its fellow; its final course is along the corpus callosum; it gives off the internal ophthalmic and internal ethmoidal aa.
rostral communicating a.	a. communicans rostralis (NAV)	from the rostral cerebral a.	the union between the two rostral cerebral aa. is often by this separate small vessel
rostral meningeal a.	a. meningea rostralis (NAV)	from the external or internal ethmoidal aa.	this a. supplies the dura of the rostral part of the cranium
saphenous a.	a. saphena (NAV)	from the femoral a. in the proximal part of the thigh	the a. runs a superficial course over the medial aspect of the limb, often dividing near the stifle into cranial and caudal branches; the cranial branch reaches the hock and in some forms the dorsal common digital a.; the caudal branch runs to the sole where it gives off the lateral and medial plantar aa.

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
short gastric aa.	aa. gastricae breves (NAV)	from the splenic a.	these are short vessels that detach from the splenic a. and supply the greater curvature of the fundic region of the simple stomach
short posterior ciliary aa.	aa. ciliares posteriores breves (NAV)	the long posterior ciliary aa.	these vessels arise from the long posterior ciliary aa. and pierce the sclera near the optic nerve; they supply the choroid
sphenopalatine a.	a. sphenopalatina (NAV)	from the descending palatine a.	this vessel runs rapidly through the sphenopalatine foramen to enter the nasal chambers where it gives off the lateral and septal caudal nasal aa. that supply the richly vascular nasal mucous membrane
splenic a.	a. lienalis (NAV)	one of the three main branches of the celiac a.	it not only supplies the spleen (by splenic branches) but also continues as the left gastroepiploic a. (in simple stomached animals); it gives off the short gastric aa. to the stomach and epiploic branches to the omentum; in ruminants it gives off the right ruminal a. and pancreatic branches
stylomastoid a.	a. stylomastoidea (NAV)	the caudal auricular a. (dogs, ruminants), condylar a. (pigs) or deep auricular a. (horses)	a small a. that passes along the facial nerve through the stylomastoid foramen to supply the middle ear
subcarpal arch	*see* deep palmar arch		
subclavian a.	a. subclavia (NAV)	the right a. always arises from the brachiocephalic trunk; the left a. also arises from the brachiocephalic in horses and ruminants and from the aortic arch in pigs and dogs	this is the principal a. to the limb, continuing as the axillary a.; its main branches in the dog are the vertebral a., the costocervical trunk, and the superficial cervical and internal thoracic aa.; in pigs and ruminants the deep cervical a. also arises from it; in horses the vertebral a. comes off the costocervical trunk instead
sublingual a.	a. sublingualis (NAV)	from the lingual a. (pigs and ruminants) or the submental a. (dogs and horses)	the a. runs along the dorsal surface of the geniohyoid muscle, supplying the ventral parts of the tongue, the floor of the mouth, the frenulum linguae and the sublingual glands
subscapular a.	a. subscapularis (NAV)	from the axillary a.	a large a. that runs along the caudal border of the scapula; it gives off the caudal circumflex humeral, thoracodorsal and circumflex scapular aa. which, with the parent a., mainly supply the muscles caudal to the shoulder
superficial brachial a.	a. superficialis brachialis	from the brachial a.	this a. is only present in carnivores; it runs over the flexor aspect of the elbow and becomes the cranial superficial antebrachial a.
superficial cervical a.	a. cervicalis superficialis (NAV), omocervical a.	from the subclavian a.	this a. supplies the muscles around the base of the neck and the shoulder; it gives off deltoid, ascending and prescapular branches and the suprascapular a.
superficial circumflex iliac a.	a. circumflexa ilium superficialis (NAV)	from the femoral a. (dogs) or lateral circumflex femoral a. (cats)	this a., found only in carnivores, supplies the muscles on the cranial aspect of the thigh beneath the ilium
superficial cranial epigastric a.	a. epigastrica cranialis superficialis (NAV)	from the cranial epigastric a.	this a. of carnivores and ruminants runs caudally in the subcutis from near the xiphoid; it gives off mammary branches in carnivores
superficial dorsal arch	arcus dorsalis superficialis (NAV)	the cranial superficial antebrachial a. and the dorsal carpal branch of the cranial interosseous and sometimes other aa.	this delicate vascular network over the dorsum of the carpus is not always present; it gives off the dorsal common digital aa.
superficial palmar arch	arcus palmaris superficialis (NAV), supracarpal arch	from the superficial palmar branch of the radial a. plus a major vessel that varies according to species	the superficial palmar arch forms an anastomotic loop on the flexor surface of the metacarpus which gives off the palmar common digital aa. that run between the metacarpal bones; unlike the deep arch the superficial arch is sometimes absent
superficial temporal a.	a. temporalis superficialis (NAV)	the external carotid a.	one of the terminal branches of the external carotid that typically supplies the region between the ear and eye and usually gives off the transverse facial, rostral auricular and lateral palpebral aa.; in ruminants it also gives off the cornual a.

(Continued)

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
superior labial a.	a. labialis superior (NAV), maxillary labial a., a. of the upper lip	from the facial a. (most species), the buccal a. (pigs) or the transverse facial a. (sheep and goats)	in the horse this is the second vessel to be given off the facial a. after it has emerged onto the face; it typically runs a course parallel with the mandible to reach the upper lip
supracarpal arch	*see* superficial palmar arch		
supraorbital a.	a. supraorbitalis (NAV)	from the external ophthalmic or neighboring aa.	a small vessel that supplies the eyelids and adjacent forehead; in the horse it passes through the supraorbital foramen; it is absent in the dog
suprarenal aa.	*see* adrenal aa.		
suprascapular a.	a. suprascapularis (NAV)	from the superficial cervical a. (dogs and sheep), the caudal circumflex humeral a. (pigs) or the axillary a. (horses and cattle)	this a. supplies the stabilizing muscles of the shoulder, especially the supraspinatus and infraspinatus; it gives off an acromial branch in some species
supratrochlear a.	a. supratrochlearis (NAV)	from the external ophthalmic a.	a branch best developed in pigs that supplies the medial side of the orbit and upper eyelid
supreme intercostal a.	a. intercostalis suprema (NAV)	from the costocervical trunk	this vessel runs inside the thorax by the side of the vertebral bodies and gives origin to the first few dorsal intercostal aa.; it is absent in the dog
tail aa.	*see* median caudal a.	the median sacral and caudal gluteal aa.	there are typically nine main aa. running along the tail; paired lateral caudal, dorsolateral caudal, ventrolateral caudal and ventral caudal aa., and the unpaired median caudal a., which is the largest
testicular a.	a. testicularis (NAV), internal spermatic a.	from the abdominal aorta	the origin of this a. reflects the embryological origin of the gonad; its course is initially straight until it reaches the internal inguinal ring where it forms a major component of the spermatic cord; from here it becomes highly contorted and is embedded in the pampiniform plexus of veins that probably function for heat exchange; it reaches the testis at the head of the epididymis and gives off branches to the epididymis and deferent duct
thoracic aorta	aorta thoracica (NAV)	in the strict sense from the termination of the aortic arch, but in the broader sense from the left ventricle	this is the intrathoracic part of the descending aorta that runs beneath the vertebral bodies to pierce the diaphragm at the aortic hiatus; its main branches are the dorsal intercostal, costoabdominal and broncho-esophageal aa., and in the horse the cranial phrenic aa.
thoracic vertebral a.	a. vertebralis thoracica (NAV)	from the costocervical trunk	this a. of the dog performs a similar role to the supreme intercostal of other species by giving off the second and third dorsal intercostal aa.
thoracodorsal a.	a. thoracodorsalis (NAV)	from the subscapular a.	this a. runs along the medial surface of the latissimus dorsi muscle, which it supplies together with the pectorals and axillary lymph centre
thyroid aa.	*see* cranial and caudal thyroid aa.		
transverse colli a.	*see* dorsal scapular a.		
transverse cubital a.	a. transversa cubiti (NAV)	from the brachial a. near the elbow	this a. crosses the flexor aspect of the elbow and supplies the carpal and digital extensors and other local muscles before passing down the forearm
transverse facial a.	a. transversa faciei (NAV)	the superficial temporal a.	the vessel runs over the masseter, to which it sends branches; in ruminants the rostral end is large and supplies aa. to the upper and lower lips
ulnar a.	a. ulnaris (NAV)	from the common interosseous a. (dogs) or the caudal interosseous a. (cats)	this vessel is only found in carnivores; it runs amidst the flexors of the carpus and paw with the ulnar nerve, giving off the recurrent ulnar a.
umbilical a.	a. umbilicalis (NAV)	from the internal iliac a. (carnivores, pigs and cattle) or the internal pudendal a. (horses)	this a. conducts blood to the placenta via the navel and umbilical cord in the fetus; it reaches the umbilicus by coursing in the lateral ligament of the bladder and accompanying the urachus; in the adult its distal remnant forms the round ligament of the bladder in the free border of the lateral ligament; depending on the species it may give off the cranial vesical and uterine aa. and the a. of the ductus deferens

VetBooks.ir

VetBooks.ir

Table 9 Arteries—cont'd

Artery	Other names	Origin	Comments
urethral a.	a. urethralis (NAV)	from the internal pudendal a.	the a. supplies the pelvic urethra, especially its more caudal part; it is absent in the horse
urethrogenital a.	*see* vaginal a. and prostatic a.		
urogenital a.	*see* vaginal a. and prostatic a.		
uterine a.	a. uterina (NAV), middle uterine a., caudal uterine a.	from the umbilical a. (pigs and ruminants), the external iliac a. (horses) or the vaginal a. (carnivores)	this is the main a. to the uterus in all species; it runs in the broad ligament, dividing into several branches that anastomose with the uterine branches of the ovarian and vaginal aa.; it enlarges strikingly during pregnancy; when palpated in pregnant cows it yields a characteristic fremitus or thrill from about the third month of pregnancy
vaginal a.	a. vaginalis (NAV), urogenital a., urethrogenital a.	from the internal pudendal a. (horses and carnivores) or the internal iliac a. (pigs and ruminants)	this a., the homolog of the prostatic a. of the male, gives off a uterine a. or branch, and a dorsal perineal a. in pigs and ruminants; as in the male it gives off a caudal vesical a. and ends as the middle rectal a.
ventral perineal a.	a. perinealis ventralis (NAV)	a terminal branch of the internal pudendal a.	this a. supplies the perineum; it usually gives off the caudal rectal a. to the anus and dorsal labial or scrotal branches; in cattle it contributes a branch to the mammary gland
vertebral a.	a. vertebralis (NAV)	from the subclavian a. (dogs), the costocervical trunk (horses), or the left subclavian a. (left a.) or the brachiocephalic trunk (right a.) (pigs and ruminants)	this a. runs mostly in the transverse canal of the cervical vertebrae, giving off spinal rami that supply the spinal cord and vertebral bodies; after anastomosing with the occipital a. it enters the vertebral canal via the lateral vertebral foramen of the atlas; it unites with its fellow to form the basilar a., which supplies the caudal part of the brain in dogs and horses; in the ox the a. mostly enters the vertebral canal between the axis and the third cervical vertebra and contributes to the blood supply to the whole brain; in the sheep it usually contributes little to the cerebral flow; its significance relates to the maintenance of consciousness during ritual slaughter
vesical aa.	*see* cranial and caudal vesical aa.		
vestibular a.	a. vestibularis (NAV)	from the internal pudendal a.	this a. is restricted to cows and supplies the wall of the vaginal vestibule

Table prepared by John Grandage. NAV, Nomina Anatomica Veterinaria.

Table 10 Bones

Bone	Other names	Comments
accessory carpal bone	os carpi accessorium (NAV), os pisiforme (NAV), pisiform	the atypical carpal bone that projects to the palmar side of the wrist or knee; it serves as a sesamoid bone for flexors of the carpus
aitch-bone		*see* hip bone
angulare (NAA)		*see* mandible
ankle bone		*see* talus
anvil		*see* incus
apparatus hyoideus (NAV)		*see* hyoid bone
articulare (NAA)		*see* mandible
astragalus		*see* talus
atlas (NAV)	C1, first cervical vertebra	a specialized ring-like cervical vertebra that has no body, a wide vertebral canal for accommodation of the tooth-like process (dens), broad wing-like transverse processes and articular surfaces for synovial joints with the occipital condyle(s) and the axis
axis (NAV)	C2, dentata, epistropheus, second cervical vertebra	a specialized cervical vertebra that forms a pivot joint with the atlas through the tooth-like process (dens) that it bears on the cranial end of its body
baculum		*see* os penis
basihyoid bone	basihyal, basihyoideum (NAV), os basibrachiale rostrale (NAA), corpus ossis hyoidei	the unpaired, median, body of the hyoid bone, found near the root of the tongue; it usually bears horns that articulate with the skull and with the larynx
basioccipital	os basioccipitale (NAV)	the bone that forms the floor of the caudal part of the skull and which in birds bears a single condyle for articulation with the vertebral column
basisphenoid	os basisphenoidale (NAV)	a bone at the base of the skull between the basioccipital and presphenoid, from which it is separated by cartilaginous joints; its dorsal surface is dished to receive the pituitary and it bears a pair of large temporal wings, the alisphenoids
breastbone		*see* sternum
calcaneus (NAV)	calcaneum, fibular tarsal bone, heel bone, os calcis	the elongated tarsal bone beneath the point of the hock that bears a tuber on its summit for muscle insertion
cannon bone		*see* metacarpal bones 1–5, metatarsal bones 1–5
capitate		*see* carpal bone III
carpal bones	ossa carpi (NAV), wrist bones	primitively 12 bones in three rows; now from two bones (e.g. fowl) to eight bones (e.g. horse) disposed in two rows
carpal bone I	C1, first carpal, os carpale I (NAV), trapezium (NAV)	the first and most medial of the distal row of carpal bones, often missing in the horse and some other species
carpal bone II	C2, os carpale II (NAV), os trapezoideum (NAV), second carpal, trapezoid	the second bone from the medial side of the distal row of carpal bones; in ruminants it is fused to carpal bone III
carpal bone III	C3, capitate, magnum, os carpale III (NAV), os capitatum (NAV), third carpal	the third of the four bones in the distal row of carpal bones; it is large in the horse and in ruminants it is fused to carpal bone II
carpal bone IV	C4, fourth carpal, hamate, os carpale IV (NAV), os hamatum (NAV)	the most lateral of the distal row of carpal bones; in carnivores it articulates with metacarpals 4 and 5
carpometacarpus (NAA)		the largest bony element of the manus (hand) of a bird's wing, made up of several fused metacarpal, carpal and phalangeal bones
caudal vertebrae	coccygeal vertebrae, tail bones, vertebrae caudales (NAV)	the relatively simple bones of the tail that often consist of a body only, although the proximal ones bear a neural arch and hemal processes; numbers vary widely both within and between species from three to 25
central tarsal bone	centrale, os naviculare (NAV), os tarsi centrale (NAV), scaphoid	the bone in the center of the hock sandwiched between the talus and the distal tarsals; it is fused to the fourth tarsal bone in ruminants
centrale		*see* central tarsal bone
ceratobranchial	os ceratobranchiale (NAA)	the bone forming the first (ventral) part of the horns of the avian hyoid apparatus
ceratohyoid	ceratohyoideum (NAV)	the segment of the mammalian hyoid apparatus that runs cranially from the basihyoid to the epihyoid on each side
cervical vertebrae	vertebrae cervicales (NAV)	the vertebrae of the neck; typically seven in mammals and a variable number (14–25) in birds; characterized by the presence of a transverse foramen that conducts the vertebral vessels
cheekbone		*see* zygomatic
clavicle	clavicula (NAV) collarbone, furcula (NAA), wishbone	a bracing element of the shoulder girdle that runs from the sternum to the scapula; it is well developed in animals that grasp but is reduced or absent from most domestic mammals; in birds the two clavicles are fused to form the wishbone (furcula) which may not meet the sternum
clod bone		*see* humerus

VetBooks.ir

VetBooks.ir

Table 10 Bones—cont'd

Bone	Other names	Comments
coccyx (NAA)		*see* pygostyle
coffin bone		*see* distal phalanx
collar bone		*see* clavicle
columella (NAA)	stapes	the only auditory ossicle of birds; it extends from the tympanic membrane to the vestibular window
coracoid	coracoideum (NAA)	a large bone of the avian thoracic girdle that runs from the scapula to the sternum; it braces the shoulder against the pull of the flight muscles; in eutherian mammals it is reduced to a process born on the scapula
costae (NAV)		*see* ribs
costae fluctuantes (NAV)		*see* floating ribs
costae spuriae (NAV)		*see* false ribs
costae sternales (NAV)		*see* true ribs
costae verae (NAV)		*see* true ribs
cuboid		*see* tarsal bone IV
cuneiform		*see* ulnar carpal bone, tarsal bone I, tarsal bone II, tarsal bone III
dentary		*see* mandible
dentata		*see* axis
distal phalanx	coffin bone, os unguiculare (NAV, carnivores), os ungulare (NAV, ungulates), P3, pedal bone, phalanx distalis (NAV), terminal phalanx, os pedis	the terminal bone of the digit; it articulates with the adjacent phalanx at the distal interphalangeal joint; in ungulates it supports the hoof, while in carnivores it bears an ungual crest that supports the claw matrix and an ungual process that supports the claw itself
distal sesamoid	navicular bone (horses), os sesamoideum distale (NAV)	the sesamoid bone found on the palmar or plantar surface of the coffin joint (distal interphalangeal joint) of ungulates, over which the deep digital flexor tendon plays
dorsal sesamoids	ossa sesamoidea dorsalia (NAV)	the sesamoid bones found in the extensor tendons as they pass over the joints of the digit; found in cattle, dogs and some other species
ear ossicles	ossicula auditus (NAV)	the chain of bones that conducts auditory impulses from the eardrum to the inner ear and that serves to convert oscillations in air to oscillations in fluid. *See* malleus, incus and stapes. In birds it consists of a single bone, the columella (q.v.)
ectethmoid bone	os ectethmoidale (NAA)	the lateral part of the ethmoid complex of the avian skull
entoglossal bone	os entoglossum (NAA), paraglossal bone	the part of the avian hyoid apparatus that lies within the tongue; it is usually shaped like an arrow-head
epibranchial bone	os epibranchiale (NAA)	the bone forming the end of the horns of the avian hyoid apparatus
epihyoid bone	epihyoideum (NAV)	the paired bone that makes up the segment of the mammalian hyoid apparatus between the ceratohyoid and the stylohyoid on each side; the bone is much reduced in horses
epistropheus		*see* axis
ethmoid bone	os ethmoidale (NAV). *See also* ectethmoid, mesethmoid	the bone forming the rostral boundary of the cranium; it is made up of a cribriform plate (through which olfactory nerves enter the cranium), a perpendicular plate (a caudal continuation of the nasal septum), and paired lateral masses composed of a labyrinth of ethmoturbinates (that include the dorsal and middle nasal conchae) that occupy the nasal chambers
exoccipital	os exoccipitale (NAA), the lateral part of the occipital bone	the paired skull bones that flank the foramen magnum and which in mammals bear condyles for articulation with the atlas
false ribs	costae spuriae (NAV)	ribs that do not articulate directly with the sternum; there are four pairs in the dog and cat, five in ruminants, seven or eight in pigs, and ten in horses
femur (NAV)	os femoris (NAV), roundbone, thigh bone	the long bone of the thigh; its spheroidal head articulates in the acetabulum, and its distal knuckle with the tibia; the neck is stout in the horse, less so in ruminants and pigs, and narrower still in dogs and cats; the femur possesses trochanters (processes) for muscular attachment—the third trochanter is conspicuous in the horse and rabbit
fibula (NAV)	brooch bone	the smaller of the two bones of the calf or leg that articulates with the tibia and in some species forms the lateral wall of the hock (ankle) joint; it is reduced or absent in ruminants and horses
fibular tarsal bone		*see* calcaneus
floating ribs	costae fluctuantes (NAV)	false ribs, whose distal ends do not unite with adjacent ribs; there is typically one pair in dogs, cats and pigs, and none in ruminants and horses
frontal bone	os frontale (NAV)	the membrane bone of the forehead; it is paired in domestic animals, but is usually single in the human skull

(Continued)

Table 10 Bones—cont'd

Bone	Other names	Comments
furcula (NAA)		*see* clavicle
hamate		*see* carpal bone IV
hammer		*see* malleus
hip bone	aitch-bone, innominate bone, os coxae (NAV)	a compound bone, made up of the ilium, ischium and pubis, that meets and usually fuses with its fellow at the pelvic symphysis ventrally and forms a joint with the sacrum dorsally; the three components meet at the cup-shaped acetabulum
hock bones		*see* tarsal bones
holy bone		*see* sacrum
humerus (NAV)	arm bone, clod bone	the long bone of the upper arm that contributes to the shoulder and elbow joints
hyoid bone	apparatus hyoideus (NAV), hyoid apparatus, os hyoideum (NAV)	the paired chain of bones that serves to suspend the larynx and tongue from the skull. *See* individual bones: basihyoid, ceratohyoid, epihyoid, thyrohyoid, stylohyoid and tympanohyoid (mammals), and basibranchial, ceratobranchial, entoglossal, epibranchial and urohyal (birds)
ilium	haunch bone, hook bone, os ilium (NAV)	the cranial part of the hip bone; it forms a firm joint with the sacrum and caudally at the acetabulum a fixed joint with the pubis and ischium; in large herbivores it is flared and bears a conspicuous coxal tuber that supports the body wall; in dogs and cats its cranial margin forms a rounded iliac crest
incisive bone	os incisivum (NAV), premaxilla	the paired bone at the front of the upper jaw that bears the incisor teeth
incus (NAV)	anvil	the middle of the mammalian ear ossicles; it lies between the malleus and stapes
innominate bone		*see* hip bone
intermediate carpal bone	lunar bone, os carpi intermedium (NAV), os lunatum (NAV), semilunar bone	the middle bone in the proximal row of carpals; in dogs and cats it is fused to the radial carpal bone
intermediate phalanges	phalanges intermediate (NAA)	the bones of the avian toes that lie between the proximal and distal phalanges; in the fowl digit 1 has zero, 2 has one, 3 has two, and 4 has three bones
interparietal bone	inca bone, os interparietale (NAV)	a skull bone found in the midline between the two parietals that often ossifies from two centers and bears the sagittal crest externally and the tentorial process on its deep face
ischium	pin bone, os ischii (NAV)	the caudal bone of the hip; it usually meets its fellow in the midline and the other components of the hip bone at the acetabulum; it bears the sciatic tubers that are subcutaneous in dogs and ruminants
jugal	os jugale (NAA). *See also* zygomatic bone (mammals)	the bone of the cheek; in birds it is involved in cranial kinesis (opening of the upper jaw)
kneecap		*see* patella
knucklebone		*see* talus
lacrimal bone	os lacrimale (NAV), os prefrontale (NAA), prefrontal bone (birds)	the delicate plate of bone forming the medial and ventral wall of the orbit that contains the first part of the tear duct; in some species it contains parts of the paranasal sinuses
lumbar vertebrae	backbone, vertebrae lumbales (NAV)	the vertebrae of the loins; there are usually seven in dogs and cats, and six in horses, pigs and ruminants; they bear long transverse processes that project laterally in ungulates and cranioventrally in carnivores
lunar bone		*see* intermediate carpal bone
magnum		*see* carpal bone III
malar		*see* zygomatic
malleus (NAV)	hammer	the ear ossicle attached to the inner surface of the eardrum
mandible	dentary, mandibula (NAV), lower jawbone; composed of six separate bones in birds and reptiles—the ossa mandibulae (NAA); os dentale, supraangulare, angulare, spleniale, prearticulare, articulare	the two halves are separate in carnivores and ruminants but fused in adult horses, pigs and humans; composed of six separate bones in birds and reptiles—the ossa mandibulae (NAA)
maxilla (NAV)	os maxillare (NAA), upper jawbone	the principal bone of the upper jaw that bears the canine and cheek teeth and is frequently excavated to house the maxillary paranasal sinus(es); it also makes up the major component of the hard palate which is fenestrated in many marsupials
mesethmoid bone	os mesethmoidale (NAA)	the skull bone of birds that forms a vertical interorbital septum
metacarpal bones 1–5	cannon bone (ungulates), ossa metacarpalia I–V (NAV), pastern bones (carnivores), splint bones (horses)	the bones of the palm that extend from the wrist or knee (carpus) to the digits; in horses only the third is well developed, with 2 and 4 as splint bones; in ruminants 3 and 4 are fused
metatarsal bones 1–5	cannon bone (ungulates), ossa metatarsalia I–V (NAV), pastern bones (carnivores), splint bones (horses)	the bones of the sole that extend from the hock or ankle (tarsus) to the digits; in horses only the third is well developed, with 2 and 4 as splint bones; in ruminants 3 and 4 are fused

VetBooks.ir

Table 10 Bones—cont'd

Bone	Other names	Comments
middle phalanx	os coronale (NAV), phalanx media (NAV), P2, second phalanx, small pastern bone	the middle bone of those digits that have three phalanges; in horses it lies between the pastern and coffin joints
nasal bone	os nasale (NAV)	a pair of bones forming the crest of the muzzle; the distal end bears a single point in horses, a double point in cattle. In ruminants the pair form a slightly mobile syndesmosis with the frontal bone proximally and with each other medially; accordingly ruminant skulls often show the nasal bones detached from the rest of the skull.
nasal conchae	os conchae nasalis ventralis (NAV), turbinals, turbinate bones	the delicate scroll-like bones that occupy the nasal chambers and support the nasal mucous membrane; the dorsal conchae belong to the ethmoturbinate part of the ethmoid bone
navicular bone		*see* distal sesamoid, central tarsal bone
notarium (NAA)	os dorsale (NAA)	a specialized bone of the back of certain birds (e.g. fowl); formed from the fusion of from two to five vertebrae of the thoracic region; the fusion removes the need for heavy epaxial muscles that would militate against flight.
occipital bone	os occipitale (NAV)	the cranial bone that surrounds the foramen magnum; made up of basal, lateral and squamous parts; in birds it is considered to be composed of the basioccipital, exoccipital and supraoccipital parts (q.v.)
orbitosphenoid	os orbitosphenoidale (NAA)	*see also* presphenoid
os basibranchiale caudale (NAA)		*see* urohyal
os basibranchiale rostrale (NAA)		*see* basihyoid
os calcis		*see* calcaneus
os compedale (NAV)		*see* proximal phalanx
os coronale (NAV)		*see* middle phalanx
os coxae (NAV)		*see* hip bone
os cuboideum (NAV)		*see* tarsal bone IV
os cuneiforme intermedium (NAV)		*see* tarsal bone II
os cuneiforme laterale (NAV)		*see* tarsal bone III
os cuneiforme mediale (NAV)		*see* tarsal bone I
os dentale (NAA)		*see* mandible
os dorsale (NAA)		*see* notarium
os hamatum (NAV)		*see* carpal bone IV
os ilium (NAV)		*see* ilium
os incisivum (NAV)		*see* incisive bone
os ischium (NAV)		*see* ischium
os lunatum (NAV)		*see* intermediate carpal bone
os naviculare (NAV)		*see* central tarsal bone, distal sesamoid
os pelvicum (NAA)		*see* synsacrum
os penis (NAV)	baculum, penis bone	the bone present in the penis of dogs, cats, seals, bats, some primates and rodents and other groups of mammals; it serves to support the organ, especially the glans penis
os pterygopalatinum (NAA)		*see* palatine bone
ossa carpi (NAV)		*see* carpal bones
ossa cordis (NAV)	heart bones	one or two small bones found within the fibrous skeleton of the heart of cattle, and occasionally other animals
ossa tarsi (NAV)		*see* tarsal bones
os scaphoideum (NAV)		*see* radial carpal bone
ossicula auditus (NAV)		*see* ear ossicles
os squamosum (NAA)		*see* temporal bone
os suffraginis		*see* proximal phalanx
os tali		*see* talus
os trapezoideum (NAV)		*see* carpal bone II

Table 10 Bones—cont'd

Bone	Other names	Comments
os triquetrum (NAV)		*see* ulnar carpal bone
os unguiculare (NAV)		*see* distal phalanx
os ungulare (NAV)		*see* distal phalanx
otic bones	ossa otica (NAA), ear capsule bones: epiotic, opisthotic, and pro-otic bones	these avian bones correspond to the petrous and tympanic parts of the mammalian temporal bone
palatine bone	os palatinum (NAV), os pterygopalatinum	a paired bone found at the caudal margin of the hard palate, sometimes hollowed to contain a paranasal air sinus
paraglossal bone		*see* entoglossal bone
parasphenoid	os parasphenoidale (NAA)	part of the primitive sphenoid complex of birds and lower vertebrates
parietal bone	os parietale (NAV)	one of a pair of large membrane bones of the roof of the skull between the frontals and occipital
pastern bones		*see* proximal phalanx, middle phalanx, metacarpal bones 1–5, and metatarsal bones 1–5
patella (NAV)	kneecap	the largest sesamoid bone of the body, found in the tendon of the quadriceps muscle as it passes over the stifle (knee) joint; it is triangular in animals that have three patellar ligaments, and rod-like in animals with a single ligament; it is sometimes complemented with patellar cartilages and parapatellar cartilages
pedal bone		*see* distal phalanx
phalanges		*see* proximal phalanx, middle phalanx, intermediate phalanges, distal phalanx
pin bone		*see* ischium
pisiform		*see* accessory carpal bone
ploughshare bone		*see* pygostyle, vomer
prearticulare (NAA)		*see* mandible
prefrontal bone		*see* lacrimal bone
premaxilla	os premaxillare (NAA), the incisive bone (q.v.) of mammals	the largest bone of the upper beak of birds; it is subject to wide variation associated with beak shape
presphenoid	os presphenoidale (NAV)	the more rostral of the sphenoid bones; it lies beneath the optic chiasm and bears a pair of small orbital wings (orbitosphenoids)
proximal phalanx	large pastern bone (ungulates), os compedale (NAV), os suffraginis (ungulates), phalanx proximalis (NAV), PI, pastern bone (ungulates)	the most proximal of the bones of the digit that in ungulates contributes to the fetlock and pastern joints
proximal sesamoids	ossa sesamoidea proximalia (NAV)	the pair of bones associated with the interosseous muscle that is found on the palmar surface of the metacarpophalangeal or metatarsophalangeal joint of each digit
pterygoid bone	os pterygoideum (NAV)	one of a pair of small skull bones associated with the caudal nares and often fused to the sphenoid
pterygopalatine bone		*see* palatine bone
pubis (NAV)		the medial element of the hip bone; it meets with its fellow in the midline to form the ventral boundary of the pelvic inlet; in most birds the two pubes do not meet at the symphysis but are directed caudally
pygostyle	coccyx (NAA), ploughshare bone, pygostylus (NAV), rump post, urostyle	the tailbone of birds, made up of three to six fused caudal vertebrae
quadrate	quadratum (NAA). *See also* incus	a small avian skull bone that forms a joint with the lower jaw and with adjacent elements in the skull; the incus is its mammalian homolog
quadratojugal	os quadratojugale (NAA)	a caudal bone of the avian cheek
radial carpal bone	os carpi radiale (NAV), os scaphoideum (NAV), radiointermediate, scaphoid, scapholunare	the most medial of the proximal row of carpal bones; in some species it represents the fusion of more than one carpal element; in birds it is one of the two remaining carpal bones
radius (NAV)		one of the two bones of the forearm; it bears a head for articulation with the humerus and a distal extremity for articulation with the carpus; in ungulates it is more or less fused with the ulna
ribs	costae (NAV)	the serially arranged, paired, long, thin, curved bones that form the lateral walls of the chest; they are made up of a dorsal (vertebral) bony part and a ventral cartilaginous part (mammals) or a bony sternal part (birds). *See also* true ribs, false ribs, floating ribs
rostral bone	os rostrale (NAV)	the bone of the snout that is best developed in pigs but is also found in cattle
rump post		*see* pygostyle

VetBooks.ir

Table 10 Bones—cont'd

Bone	Other names	Comments
sacrum	holy bone, os sacrum (NAV), vertebrae sacrales (NAV)	the series of fused vertebrae that lie between the two hip bones; usually made up of five bones in horses and cattle, four in sheep and pigs, and three in dogs and cats
scaphoid		*see* radial carpal bone, central tarsal bone
scapula (NAV)	shoulder-blade	the principal bone of the mammalian thoracic girdle; typically flat and triangular, bearing a spine on its lateral surface and an articular glenoid at its ventral or lateral extremity for the shoulder joint; usually long, thin and flat in birds
scleral bones	ossa sclerae (NAA)	the overlapping plates of bone that occupy the sclera of the avian eye near its corneal junction
semilunar		*see* intermediate carpal bone
sesamoids		*see* distal, dorsal, proximal
shoulder-blade		*see* scapula
sphenoid bones		*see* basisphenoid, presphenoid
spleniale (NAA)		*see* mandible
splint bones		*see* metacarpal bones 1–5, metatarsal bones 1–5
squamous		*see* temporal
stapes (NAV)	stirrup, columella	the third and deepest of the mammalian ear ossicles; it is shaped like a stirrup and its footplate oscillates against the oval window of the inner ear; in birds only the stapes is represented—*see* columella
sternal ribs		*see* true ribs
sternum (NAV)	breastbone	the median bone of the ventral thorax that articulates with true ribs; in mammals it is composed of a manubrium, body and xiphoid made up of individual sternebrae and cartilages (six sternebrae in pigs, seven in horses and ruminants, eight in cats and dogs); in birds the bone is large and variable; in flying birds it bears a carina or keel; in non-flying birds (ratites) it is smooth
stirrup		*see* stapes
stylohyoid bone	stylohyal, stylohyoideum (NAV)	the paired bone that makes up the segment of the mammalian hyoid apparatus between the epihyoid and the tympanohyoid on each side
supraangulare (NAA)		*see* mandible
supraoccipital	os supraoccipitale (NAA), the squamous part of the occipital bones	the largest part of the occipital bone; it makes up the roof of the foramen magnum and is the site of insertion of the nuchal ligament in some species
sutural bones	ossa suturarum (NAV), wormian bones	inconstant and variable bones that appear along the sutures of the skull, especially around the sites of the fontanelles
synsacrum (NAA)	os pelvicum, pelvic vertebrae	a rigid part of the avian skeleton, made up of fused lumbar and sacral vertebrae with some contributions from the thoracic and caudal vertebrae and the pelvic girdle
talus (NAV)	ankle bone, astragalus, knucklebone, os tali, tibial tarsal bone	the large tarsal bone that forms a mobile joint with the tibia at the hock, that bears a pulley-like surface (trochlea) at the proximal surface, and in some species, such as ruminants, a distal trochlea too
tarsal bones	hock bones, ossa tarsi (NAV)	the bones of the ankle or hock; primitively there were about 12 bones; in modern tetrapods there are about seven or fewer; in modern birds the tarsal bones are incorporated into the tibiotarsus and tarsometatarsus
tarsal bone I	os tarsale I (NAV), os cuneiforme mediale (NAV), first tarsal, medial cuneiform, T1	the most medial of the distal row of tarsal bones; in horses it is fused with tarsal bone II
tarsal bone II	os tarsale II (NAV), os cuneiforme intermedium (NAV), middle cuneiform, second tarsal, T2	the second of the distal row of tarsal bones; in horses it is fused with tarsal bone I
tarsal bone III	os tarsale III (NAV), os cuneiforme laterale (NAV), lateral cuneiform, third tarsal, T3	the third of the distal row of tarsal bones; in horses it is large for articulation with the cannon bone
tarsal bone IV	os tarsale IV (NAV), os cuboideum (NAV), cuboid, fourth tarsal, T4	the most lateral of the distal row of tarsal bones; it articulates with both the fourth and fifth metatarsals; in ruminants it is fused with the central tarsal bone
tarsometatarsus (NAA)	cannon bone	the avian bone formed from the fusion of metatarsal bones II, III and IV and some distal tarsals
temporal bone	os temporale (NAV), os squamosum (NAA)	the bone making up a large part of the side of the skull; composed of a petrous part (pars petrosa) that houses the inner ear, tympanic (pars tympanica) and endotympanic (pars endotympanica—cat) parts that house the middle and part of the external ear, and a squamous part (pars squamosa) that contributes to the cranial wall and jaw articulation in mammals
thoracic vertebrae	vertebrae thoracicae (NAV), dorsal vertebrae	the vertebrae of the chest; characterized by facets for articulation with ribs; typically 13 in cats, dogs, cattle and sheep, 15 in pigs and 18 in horses; in birds they are often fused—*see* notarium, synsacrum

(Continued)

VetBooks.ir

Table 10 Bones—cont'd

Bone	Other names	Comments
thyrohyoid bone	thyrohyoideum (NAV)	the paired bone that makes up the segment of the mammalian hyoid apparatus between the basihyoid and the thyroid cartilage on each side
tibia (NAV)	shinbone	the larger and more medial of the two bones of the 'crus' or 'leg' proper, articulating proximally, at the stifle joint, with the femur and fibula and distally, at the hock joint, with the talus and fibula—*see* tibiotarsus
tibial tarsal bone		*see* talus
tibiotarsus (NAA)	drumstick, shankbone	the large limb bone of birds that extends from the stifle to the ankle joints and that is composed of both tibial and tarsal elements
trapezium (NAV)		*see* carpal bone I
trapezoid		*see* carpal bone II
true ribs	costae sternales (NAV), costae verae (NAV), sternal ribs	ribs that articulate with the sternum; there are typically nine in dogs and cats, eight in horses and ruminants, and seven in pigs
turbinate bones		*see* nasal conchae
tympanohyoid	tympanohyoideum (NAV), tympanohyal	the paired element that makes up the segment of the mammalian hyoid apparatus between the stylohyoid and the skull on each side; it usually remains cartilaginous
ulna (NAV)		one of the two bones of the forearm; its proximal end is elongated to form the olecranon at the elbow; the narrow distal end articulates with the carpus; in horses the distal end is incorporated into the radius
ulnar carpal bone	os carpi ulnare (NAV), os triquetrum (NAV), cuneiform	the most lateral of the proximal row of carpal bones; it articulates with the accessory carpal bone; in birds it is one of the two carpal bones
urohyal	os basibranchiale caudale (NAA), urohyoid, keel	a caudally directed median element in the avian hyoid apparatus
urostyle		*see* pygostyle
vertebrae		*see* cervical vertebrae, thoracic vertebrae, lumbar vertebrae, caudal vertebrae, notarium, sacrum, synsacrum, pygostyle
vomer (NAV)	ploughshare bone, share bone	a gutter-shaped bone that supports the floor of the cartilaginous nasal septum
wishbone		*see* clavicle
wormian bones		*see* sutural bones
zygomatic	os zygomaticum (NAV), cheekbone, jugal, malar	the principal bone of the zygomatic arch

Table prepared by John Grandage. NAA, Nomina Anatomica Aviam; NAV, Nomina Anatomica Veterinaria.

Table 11 Joints

Joint	Other names	Comments
accessory carpal joint	articulatio ossis carpi accessorii (NAV)	the synovial joint between the accessory carpal and ulnar carpal bones; this, the only accessory carpal joint in ruminants, is supplemented in many species by a second joint between the accessory carpal and the ulna (or fused radius and ulna); it is supported by several accessory carpal ligaments
amphiarthrosis		an outmoded term for a slightly moveable cartilaginous joint such as a symphysis (q.v.)
ankle joint		an ambiguous term in veterinary science that refers either to the hock joint *(see* tarsal joints) or to the fetlock joint *(see* metacarpophalangeal joint)
antebrachiocarpal joint	articulatio antebrachiocarpea (NAV), radiocarpal joint	the composite joint between the radius and ulna and the proximal row of carpal bones. In ungulates it allows much palmar flexion but is prevented from dorsal flexion by stop facets and palmar ligaments; it permits a range of motions in carnivores
atlantoaxial joint	articulatio atlantoaxialis (NAV), 'NO' joint	the pivot joint between the dens of the axis and the fovea in the atlas that mainly allows rotation of the head on the neck; the dens is anchored by a ligament to the floor of the atlas (horses), or to the margin of the foramen magnum (dog, cat, pig); in birds it may be divided into several components
atlanto-occipital joint	articulatio atlantooccipitalis (NAV), 'YES' joint	the synovial joint between the atlas and the paired occipital condyles (mammals) or single occipital condyle (birds) that allows nodding and a limited amount of lateral motion
carpal joint	articulatio carpi (NAV), knee joints (ungulates), wrist joints	the several synovial joints of the carpus, comprising the antebrachiocarpal, middle carpal, carpometacarpal, intercarpal, intermetacarpal and accessory carpal joints (qq.v.), these joints act mainly as a hinge supported by collateral ligaments and probably serve as shock absorbers
carpometacarpal joints	articulationes carpometacarpeae (NAV)	the synovial joints between the distal row of carpal bones and the metacarpal bones; the joint cavity usually communicates with that of the middle carpal joint; movements are restricted

VetBooks.ir

Table 11 Joints—cont'd

Joint	Other names	Comments
cartilage joints	articulationes cartilagineae (NAV)	joints in which the uniting tissue is cartilaginous and which serve to allow movement or growth; *see* synchondrosis, symphysis
coffin joint		*see* distal interphalangeal joint
composite joint	articulatio composita (NAV)	a synovial joint in which more than two bones take part, such as the carpal, tarsal or stifle joints
condylar joint	articulatio condylaris (NAV)	a synovial joint that allows motion in two planes, such as an ellipsoid or sellar joint (qq.v.)
coronal suture	sutura coronalis (NAV)	the suture between the frontal and parietal bones
costochondral joints	articulationes costochondrales (NAV)	the fibrous joints between ribs and their cartilages; cf. intrachondral joints
costovertebral joints	articulationes costovertebrales (NAV), juncturae costarum (NAA), rib joints	the joints between the ribs and the vertebral column; one part unites the head of the rib to the bodies of adjacent vertebrae, the other unites the tubercle of the rib to the transverse process of the more caudal vertebra; the more caudal joints tend to be simpler and allow greater mobility
cranial synchondroses	synchondroses cranii (NAV)	the cartilaginous joints between the bones at the base of the skull—the presphenoid, basisphenoid and basioccipital
diarthroses		*see* synovial joints
distal interphalangeal joint(s)	articulationes interphalangeae distales manus/pes (NAV), coffin joint (ungulates)	the joint(s) between the middle and distal phalanges that in some species also incorporates a distal sesamoid; motion is either restricted (ungulates), modest (dogs) or extensive (cats)
ear ossicle joints	articulationes ossiculorum auditus (NAV): articulatio incudomallearis (NAV), and articulatio incudostapedia (NAV)	the synovial joints between the three ear ossicles, noted for their minute size and elastic ligaments, they comprise the incudomallear joint between the malleus (hammer) and incus (anvil), and the incudostapedial joint between the incus and stapes (stirrup)
elbow joint	articulatio cubiti (NAV), junctura cubiti (NAA)	a composite joint between the humerus, radius and ulna. In ungulates it is a simple hinge between the condyle of the humerus and the fused radius and ulna; in others it also allows some supination, in which the head of the radius rotates upon the capitulum of the humerus and around a fixed ulna
ellipsoidal joint	articulatio ellipsoidea (NAV)	a joint between egg- and spoon-shaped articular surfaces that allows motion in only two planes
femoropatellar joint	articulatio femoropatellaris (NAV)	the synovial joint between the patella and the trochlea of the femur; the patella is united to the tibial tubercle via a single patellar ligament in small animals and three patellar ligaments in large animals; it is stabilized in the trochlear groove by paired collateral ligaments and by patellar cartilages of various forms in the different species
femorotibial joint	articulatio femorotibialis (NAV); *see* stifle joint	the synovial joint between the paired femoral and tibial condyles that is of complex form primarily to serve as a hinge-joint but also to allow some rotation, and contains paired fibrocartilaginous, semilunar menisci that make the joint congruent; it is stabilized by cruciate, collateral and meniscal ligaments
fetlock joint		the metacarpophalangeal and metatarsophalangeal joints (qq.v.) of ungulates, especially the horse
fibrous joints	articulationes fibrosae (NAV), junctura fibrosa (NAA)	joints in which the uniting tissue is fibrous and which serve to allow movement or growth; *see* gomphoses, sutures, syndesmoses
frontonasal hinge	craniofacial hinge, nasal–frontal hinge	the fibrous joint between the upper jaw and the skull of birds that is part of the mechanism of cranial kinesis, which allows both jaws to participate in opening and closing
ginglymus (NAV)		*see* hinge-joint
gomphosis (NAV)	articulatio dentoalveolaris (NAV), peg-and socket joint	the suspension of a tooth in its socket by means of a periodontal membrane; it allows very limited movement
hinge-joint	ginglymus (NAV)	a synovial joint that allows motion in only one plane, such as flexion and extension, and which is usually stabilized by a pair of collateral ligaments
hip joint	articulatio coxae (NAV), coxofemoral joint	the ball-and-socket joint between the head of the femur and the acetabulum of the hip bone; it allows three planes of motion and has a roomy joint capsule; a ligament of the femoral head limits adduction and, in horses, an accessory ligament restricts abduction. Birds possess an additional joint between the femoral trochanter and the antitrochanter of the synsacrum
hock joint		*see* tarsal joints
humeral joint		*see* shoulder joint
humeroradial joint	articulatio humeroradialis (NAV)	a component of the elbow joint between the head of the radius and the capitulum of the humerus. In all species the joint acts as a hinge, but in animals that can supinate their forearms (e.g. dogs) the radius also is able to rotate against the capitulum
humeroulnar joint	articulatio humeroulnaris (NAV)	the major component of the elbow joint, in which the trochlear notch of the ulna engages the trochlea of the humerus to make a simple hinge supported by collateral ligaments

(Continued)

Table 11 Joints—cont'd

Joint	Other names	Comments
incudomallear joint		*see* ear ossicle joints
incudostapedial joint		*see* ear ossicle joints
intercarpal joints	articulationes intercarpeae (NAV)	the synovial joints between the lateral and medial surfaces of the carpal bones that allow them to shuffle against one another
intermandibular joint	articulatio intermandibularis (NAV), mandibular symphysis	the joint between the two halves of the mandible that allows each half to rotate axially; it is partly fibrous and partly cartilaginous; it is mobile in ruminants, carnivores and rabbits but becomes a fixed synostosis in pigs and horses
intermetacarpal joints	articulationes intermetacarpeae (NAV)	the small synovial joints between the proximal ends of the metacarpals; they communicate with the carpometacarpal joints and allow only small amounts of movement
interphalangeal joints		*see* proximal interphalangeal joints; distal interphalangeal joints
intersternal joints		*see* sternal joints
intertarsal joint	articulatio intertarsalis (NAA)	the avian homolog of the mammalian hock joint, in which the tarsal elements have either fused to the tibia or to the metatarsus
intertransverse joints	articulationes intertransversariae lumbales (NAV), articulatio intertransversaria lumbosacralis (NAV)	synovial joints between the transverse processes of adjacent lumbar vertebrae and between the sacrum and last lumbar vertebra of the horse that serve to restrict lateral bending of the spine
intervertebral joints		*see* atlantoaxial joint, intertransverse joints, zygapophyseal joints, intervertebral symphysis
intervertebral symphysis	intercentral joints, articulationes intercorporea (NAA), symphysis intervertebralis (NAV)	the moveable joint between the bodies of adjacent vertebrae that is united by a fibrocartilaginous intervertebral disc and supported by dorsal and ventral longitudinal ligaments (mammals); in birds most joints are either synostoses or saddle-shaped synovial joints
intrachondral joints	articulationes intrachondrales (NAV)	the synovial joints that occur within the costal cartilages of several ribs of ruminants, near the costochondral junctions
knee joint		an ambiguous term in veterinary science, referring to either the stifle joint or the carpal joints (qq.v)
knuckle		the metacarpophalangeal and interphalangeal joints (qq.v.) of the hand
lambdoidal suture	sutura lambdoidea (NAV)	the suture between the parietal and occipital bones
manubriosternal joint	articulatio synovialis manubriosternalis (NAV)	the first intersternebral joint, which develops as a cartilage joint but later becomes synovial in ruminants and pigs
metacarpo-/metatarsophalangeal joints	articulationes metacarpo-/metatarsophalangeae (NAV), fetlock joints (ungulates), knuckles (primates)	the joints between the distal ends (heads) of the metacarpals and the proximal phalanges, each usually incorporating two sesamoid bones; in ungulates the joints are restricted to a simple hinge, whereas in others the rounded heads of the metacarpals permit other motions
middle carpal joint	articulatio mediocarpea (NAV), midcarpal joint	the composite joint between the proximal and distal rows of carpal bones; its cavity communicates with that of the carpometacarpal joint. In ungulates the bones bear stop facets that prevent over extension (dorsal flexion)
pastern joint		the proximal interphalangeal joint (q.v.) of ungulates
pelvic symphysis	pubic symphysis (human), symphysis pelvina (NAV)	the cartilaginous joint between the two hip bones that usually involves both the pubes and ischia, in most domestic species the symphysis fuses at about the time of maturity; in some species (e.g. human) it remains a cartilaginous joint throughout life. It is absent from most birds
pivot joint		*see* trochoid joint
plane joint	arthrodial joint, articulatio plana (NAV), gliding joint	a synovial joint in which the articular surfaces are flat and allow gliding motions
proximal interphalangeal joints	articulationes interphalangeae proximales, manus/pes (NAV), knuckle (primates), pastern joint (ungulates)	the synovial joint(s) between the proximal and middle phalanges that is typically a simple hinge-joint supported by collateral ligaments. At rest the bones are at right-angles in digitigrade animals (e.g. dogs) and in a straight line in ungulates
pubic symphysis		*see* pelvic symphysis
radiocarpal joint		*see* antebrachiocarpal joint
radioulnar joints	articulatio radioulnaris proximalis/distalis (NAV)	joints between the radius and ulna found in animals that can supinate their forearms. A proximal synovial joint forms part of the elbow joint, with the margin of the radial head articulating with the notch in the ulna; the radius and ulna are united along most of the forearm by an interosseous, antebrachial membrane, while a small synovial joint at the distal end completes the articulation
sacroiliac joint	articulatio sacroiliaca (NAV), sacroiliac synchondrosis	the joint between the auricular surfaces of the wings of the ilium and sacrum; it allows only limited movement, is partly cartilaginous (craniodorsally) and partly synovial (caudoventrally), and contains numerous intra-articular ligaments
sagittal suture	sutura sagittalis (NAV)	the suture between the two parietal bones
schindylesis		a wedge-and-groove type of suture

VetBooks.ir

Table 11 Joints—cont'd

Joint	Other names	Comments
sellar joint	articulatio sellaris (NAV), saddle joint	a synovial joint in which the articular surfaces are shaped like a saddle and permit motion in only two planes
shoulder joint	articulatio humeralis (NAA), articulatio humeri (NAV), humeral joint	the ball-and-socket joint between the glenoid of the scapula and the head of the humerus that permits motion in three planes, has an extensive joint capsule and ligaments that are weak or absent (mammals); in birds the coracoid also contributes to the glenoid
simple joint	articulatio simplex (NAV)	a synovial joint in which only two bones articulate
spheroidal joint	articulatio spheroidea (NAV), ball-and-socket joint, cotyloid joint	the most freely moveable of all synovial joints, in which a rounded head sits in a hollow cup, usually characterized by few ligaments and abundant surrounding musculature
sternal joints	intersternal joints, intersternebral joints, synchondroses sternales (NAV)	cartilaginous joints between adjacent sternebrae that tend to ossify with increasing age yet rarely ankylose to form a single bone; they allow little or no movement. In ruminants the first intersternal joint is synovial
sternocostal joints	articulationes sternocostales (NAV)	synovial joints between the costal cartilages of true ribs (mammals) or sternal ribs (birds) and the sternum
stifle joint	articulatio genus (NAV), junctura genus (NAA), knee joint (bipeds)	the composite joint between the femur, tibia and patella, made up of the femorotibial and femoropatellar joints (qq.v.). In birds the joint is further complicated by a femorofibular joint
suture	sutura (NAV), seam	a fibrous joint between membrane bones; it may be saw-toothed (sutura serrata), overlapping (sutura squamosa), interleaved (sutura foliata), abutting (sutura plana) or a wedge-and-groove (a schindylesis). Sutures mostly serve to allow growth with limited movement. Each is named according to the participating bones, e.g. internasal suture, except for the coronal, sagittal and lambdoidal sutures (qq.v.)
symphysis (NAV)	amphiarthrosis (outmoded)	a cartilaginous joint that allows limited movement, such as between the vertebral bodies
synarthrosis		a fixed joint: *see* suture, synchondrosis, synostosis
synchondrosis (NAV)		a fixed cartilaginous joint, such as that between the shaft of a bone and its epiphysis, which serves to allow growth but no movement
syndesmosis (NAV)		any fibrous joint that allows at least a modest amount of movement
synostosis (NAV)	ankylosis	a former fibrous or cartilaginous joint that has become ossified and is immovable
synovial joints	articulationes synoviales (NAV), diarthroses	freely moveable joints in which the bearing surfaces of the bones are clothed with articular cartilage, lubricated with synovial fluid and united by a joint capsule that has a synovial lining and a fibrous exterior
synsacral joints	articulationes synsacri (NAA)	the synostoses between the vertebral bodies, spinous transverse processes and ilia of the avian synsacrum
tarsal joints	ankle joints (bipeds), articulatio tarsi (NAV), hock joint (quadrupeds), intertarsal joint (birds)	a composite synovial joint between the tibia and fibula, the individual tarsal bones and the metatarsals; the most mobile of these is the hinge-joint between the tibia and fibula and the talus (tarsocrural joint); the several remaining joints mostly allow only limited movement, because they are united by strong collateral, plantar and dorsal ligaments; the joints are called calcaneocuboid, centrodistal, intermetatarsal, intertarsal, talocalcaneal, talocalcaneocentral and tarsometatarsal joints
temporomandibular joint	articulatio temporomandibularis (NAV), jaw joint	the synovial joint between the condylar process of the mandible and the mandibular fossa of the temporal bone; the articular cartilage on the mandible is fibrous and the cavity is divided by an articular disk; it is modified to allow mostly hinge motion in carnivores, to-and-fro motion in rodents, and side-to-side movements in other herbivores
tibiofibular joints	articulatio tibiofibularis proximalis/distalis (NAV)	synovial joints between the proximal and distal ends of the fibula with the tibia; both joints occur in carnivores but the joint is variable, depending on the development of the fibula; in ruminants the distal end is represented as a separate bone (os malleolare) and the proximal end is fused to the tibia
trochoid joint	articulatio trochoidea (NAV), pivot joint	a synovial joint that allows only rotation, such as between the human radius and ulna or between the dens and atlas
zygapophyseal joints	articulationes processuum articularium (NAV), articulationes zygapophysalis (NAA), facet joints, interneural joints, juncturae zygapophyseales	the synovial joints between the articular processes of adjacent vertebrae that unusually serve to restrict motion while still allowing certain sliding motions

Table prepared by John Grandage. NAA, Nomina Anatomica Avium; NAV, Nomina Anatomica Veterinaria.

Table 12 Ligaments

Ligament	Other names	Origin	Insertion	Comments
accessory carpal ligg.	lig. accessorio-carpoulnare (NAV), etc.	the lateral and distal parts of the accessory carpal bone	the lateral side of the ulna, ulnar carpal, 4th carpal and 5th metacarpal bones	four strong and distinct ligg. are included under this general name
accessory lig. (of deep digital flexor)	carpal check lig., inferior check lig., lig. accessorium (NAV), subcarpal check lig.	the distal row of the carpal bones via the palmar carpal lig.	the deep digital flexor tendon, near the middle of the cannon bone	in horses: a purely fibrous head of the deep digital flexor muscle; part of stay-apparatus
accessory lig. (of hip joint)	lig. accessorium ossis femoris (NAV)	prepubic tendon	the fovea of femoral head	unique to horses; restricts abduction
accessory lig. (of superficial digital flexor)	lig. accessorium (NAV), radial check lig., superior check lig.	the distal end of the radius	the superficial digital flexor tendon, near the carpus	in horses: a strong, thin, fibrous head to the superficial digital flexor muscle
alar ligg.	ligg. alaria (NAV)	the apex of the dens of the axis	the lateral parts of the foramen magnum	in carnivores and pigs
annular lig. (of radius)	lig. anulare radii (NAV)	the edge of the medial coronoid process of the ulna	the edge of the lateral coronoid process of the ulna	it forms a loop within which the head of the radius can rotate
apical lig. of dens	lig. apicis dentis (NAV)	the apex of the dens of the axis	the ventral part of the foramen magnum	in all bar horses: *see* longitudinal lig. of dens
anterior cruciate lig.	*see* cranial cruciate lig.			
broad sacrotuberous lig.	lig. sacrotuberale latum (NAV). *See also* sacrotuberous lig.	the lateral border of the sacrum and first two tail vertebrae	the sciatic spine and sciatic tuber, leaving two gaps: sciatic foramina	in ungulates, this broad sheet forms the lateral pelvic wall
carpal check lig.	*see* accessory lig. (of deep digital flexor)			
caudal cruciate lig.	lig. cruciatum caudale (NAV), medial cruciate lig., posterior cruciate lig.	the lateral part of the popliteal notch of the tibia	the cranial part of the intercondylar fossa on the medial femoral condyle	permits flexion and rotation but limits caudal motion of the tibial plateau over the femoral condyles
caudal lig. (of temporo-mandibular joint)	lig. caudale (NAV)	the retroarticular process of temporal bone	the caudal surface of the neck of the mandibular condyle	an elastic lig.
check ligg.	*see* accessory ligg. of digital flexors (deep and superficial)			
collateral ligg.	ligg. collateralia (NAV)	close to the margin of the male articular surface of a hinge-joint	near the center of curvature of the female articular surface	found on the sides of hinge-joints; they are present in all joints distal to the hip and shoulder
collateral patellar ligg.	*see* femoropatellar ligg.			
collateral sesamoidean ligg. (of fetlock, etc.)	ligg. sesamoidea collateralia (NAV)	the epicondyles of the head of the metacarpal	the abaxial borders of the proximal sesamoid bones	these ligg. make the sesamoids track in one plane
collateral sesamoidean ligg. (of coffin bone, etc.)	ligg. sesamoidea collateralia (NAV), suspensory ligg. of distal sesamoid bone, suspensory navicular ligg.	the abaxial borders of the distal end of the proximal phalanx	the ends of the distal sesamoid bone	these ligg. suspend the sesamoid; it is held in place distally by the unpaired sesamoid lig.
conjugal lig.	*see* intercapital lig.			
coracohumeral lig.	lig. coracohumerale (NAV)	the coracoid process of the scapula	the tubercles of the humerus	well-developed in primates to help suspend the arm
costotransverse lig.	lig. colli costae, lig. costotranversarium (NAV), lig. of the tubercle	the transverse process of each thoracic vertebra	the non-articular part of the tubercle of a rib	the strongest lig. binding a rib to a vertebra
costoxiphoid lig.	lig. costoxiphoidea (NAV)	the internal surface of the costal cartilages of the last true ribs	the dorsal surface of the xiphoid process	it supports the xiphoid process
cranial cruciate lig.	anterior cruciate lig., lateral cruciate lig., lig. cruciatum craniale (NAV)	the cranial part of the intercondylar area of the tibia	the caudal part of the intercondylar fossa on the lateral femoral condyle	permits flexion and rotation but limits forward motion of the tibial plateau on the femoral condyles

Table 12 Ligaments—cont'd

Ligament	Other names	Origin	Insertion	Comments
cruciate ligg.	*see* cranial cruciate lig., caudal cruciate, distal interdigital, and cruciate sesamoidean ligg.			various ligg. found in different parts of the body that are disposed in a cross
cruciate sesamoidean ligg.	ligg. sesamoideum cruciata (NAV)	the bases of the proximal sesamoid bones	the diagonally opposite side of the proximal phalanx	a short and deep member of the series of sesamoidean ligg.
digital annular ligg.	proximal and distal digital annular ligg., lig. anulare digiti (NAV)	the sides of the proximal and middle phalanges and the overlying fascia	the opposite sides to those for the origin	broad (e.g. horse) or narrow (ox, dog) hoop-like bands that hold down the flexors over the pastern
distal interdigital lig.	ligg. interdigitalia distalia (NAV), cruciate ligg.	the abaxial eminences at the proximal end of the middle phalanx	the axial ends of the distal sesamoid bones	an important lig. of ruminants that prevents the toes from spreading
dorsal atlantoaxial lig.	lig. atlantoaxiale dorsale (NAV)	the cranial end of the spinous process of the axis	the caudal border of the dorsal arch of the atlas	it limits all extreme motions of the joint
dorsal carpal ligg.	lig. radiocarpeum dorsale (NAV), etc., dorsal intercarpal ligg.	eminences on the dorsal side of the radius, ulna and proximal carpals	eminences on the dorsal side of the distal carpals and metacarpals	at least four separate ligg. have been identified that are included under this general name
dorsal longitudinal lig.	lig. longitudinale dorsale (NAV)	the dorsal surface of all vertebrae caudal to the atlas . . .	. . . extending from the dens of the axis to the tail	forms the floor of the vertebral canal; narrowest in the middle of each body
dorsal sacroiliac ligg.	ligg. sacroiliaca dorsalia (NAV)	the caudal parts of the sacral wing, and in large animals the spinous processes of the sacrum	the sacral tuber and adjacent parts of the ilium	in large animals the ligg. are in two parts: a funicular part to the sacral spines and a membranous part to the sacral wing
dorsal tarsal ligg.	ligg. tarsi dorsalia	various points on the dorsal aspect of the hock, esp. the medial side of the talus	various points on the dorsal aspect of the hock, esp. the central tarsal and the distal row of the tarsal bones	these are strong to limit the amount of intratarsal motion; they complement the even stronger plantar tarsal ligg.
femoropatellar ligg.	ligg. femoropatellare laterale/mediale, (NAV), collateral patellar ligg.	the lateral and medial epicondyles of the femur	the sides of the patella	in small animals the ligg. merge with the femoral fascia
glenohumeral ligg.	ligg. glenohumeralia (NAV)	the margin of the glenoid	the margin of the humeral head, near the tubercles	weak, broad, slack, varied, indistinct ligg. best developed in the human shoulder
iliofemoral lig.	lig. iliofemorale (NAV)	the iliac part of the acetabular rim	the neck of the femur	a slight thickening of the hip-joint capsule
iliolumbar lig.	lig. iliolumbale (NAV)	the margins of the transverse processes of the lumbar vertebrae	the ventral surface of wing of the ilium	conspicuous in horses and cattle; it merges with the intertransverse lig.
inferior check lig.	*see* accessory lig. (of deep digital flexor)			
inguinal lig.	lig. inguinale (NAV), arcus inguinalis, (NAV), Poupart's lig.	the tuber coxae and adjacent parts of the ilium	the lateral margin of the prepubic tendon, adjacent to the pubis	it is the caudal part of the aponeurosis of the external abdominal oblique muscle
interarcuate ligg.	*see* ligg. flava			
intercapital lig.	conjugal lig., lig. intercapitale (NAV)	the groove in the head of the rib	the corresponding groove in the opposite rib	in most species the lig. is missing from the first pair and last few pairs of ribs
interosseous lig. of forearm	lig. interosseum antebrachii (NAV)	the rough area on the proximal ulna	the rough area on the proximal radius	only in carnivora
intersesamoidean ligg.	*see* palmar ligg.			
interspinous ligg.	ligg. interspinalia (NAV)	the caudal border of the spinous processes of the vertebrae	the cranial border of the spinous processes of the next caudal vertebra	ligg. made up of fiber bundles most obvious in thoracolumbar vertebrae
intertransverse ligg.	ligg. intertransversaria (NAV)	the caudal border of the transverse processes of the vertebrae	the cranial border of the transverse processes of the next caudal vertebra	ligg. made up of bundles of fibers, only conspicuous in lumbar vertebrae

(Continued)

Table 12 Ligaments—cont'd

Ligament	Other names	Origin	Insertion	Comments
intra-articular lig.	conjugal lig., lig. capitis costae intra-articulare (NAV)	the groove in the head of a rib	the intervertebral disk, the cranial vertebra, and the opposite rib (*see* intercapital lig.)	the precise form of the lig. varies according to the particular rib involved
ischiofemoral lig.	lig. ischiofemorale (NAV)	the sciatic part of the acetabular rim	the neck of the femur	a slight thickening of the hip-joint capsule
lateral cruciate lig.	*see* cranial cruciate lig.			
lateral lig. (of atlanto-occipital joint)	lig. laterale (NAV)	the lateral part of the dorsal arch of the atlas	the jugular process of the occipital bone	appears to restrict turning the head too far to the side
lateral lig. (of temporomandibular joint)	lig. laterale (NAV)	the lateral margin of mandibular fossa of temporal bone	the lateral pole of the condyloid process of the mandible	a strong, ill-defined thickening of the joint capsule
ligg. flava (NAV)	interarcuate ligg., yellow ligg.	the caudal border of the arch of a vertebra	the cranial border of the arch of the more caudal vertebra	a thin membranous lig. composed of elastic tissue
lig. of femoral head	lig. capitis ossis femoris (NAV), lig. teres femoris, round lig. (of femur)	the acetabular fossa	the fovea in the head of the femur	limits adduction; absent from aquatic mammals, sloths
lig. of sciatic arch	lig. arcuatum ischiadicum (NAV)	the caudal border of one ischium along the sciatic arch . . .	. . . to the caudal border of the other ischium	this lig. in concert with the pubic lig. helps stabilize the pelvic symphysis
lig. teres femoris	*see* lig. of femoral head			
longitudinal lig. of dens	lig. longitudinale dentis (NAV)	the dorsal surface of the dens of the axis	inside the ventral arch of the atlas, cranial to fovea	in horses; cf. apical lig. of dens
medial cruciate lig.	*see* caudal cruciate lig.			
meniscal ligg.	lig. transversum genus (NAV) (= inter-meniscal lig.). *See also* meniscofemoral lig.	each horn of the menisci of the stifle joint	the adjacent intercondylar area of the tibia	these ligg. tether the menisci, while allowing them to glide on the tibia
meniscofemoral lig.	lig. meniscofemorale (NAV)	the caudal horn of the lateral meniscus of the stifle	the caudal part of the intercondylar fossa	prevents over-extension and rotation of the stifle when fully extended
nuchal lig.	back-strap, lig. nuchae (NAV), paddy-whack	a cranial continuation of the supraspinous lig. from the spines of the first few thoracic vertebrae	the dorsal spine of axis (most mammals), external occipital protuberance and 3rd to 6th cervical vertebrae (large mammals)	an elastic lig., best developed in large animals, that helps support the head; made up of a funicular part to the occiput or axis, and a laminar part (horse, ox) to other cervical vertebrae
oblique sesamoidean ligg.	ligg. sesamoidea obliqua (NAV)	the distal border of the palmar lig. and the proximal sesamoid bones	a V-shaped ridge on the palmar surface of the middle phalanx	with the straight lig., the strongest of the sesamoidean ligg.
orbital lig.	lig. orbitale (NAV)	the zygomatic process of frontal bone	the frontal process of zygomatic bone	it completes the bony orbit in species in which there is a gap (e.g. dogs); relatively larger in brachycephalics
palmar annular lig. (of fetlock)	lig. anulare palmare (NAV)	the fascia and ligg. over the sides of the fetlock . . .	. . . to the same fascia and ligg. on the opposite side	this lig. holds the digital flexors in place during flexion of the fetlock
palmar carpal ligg.	lig. radiocarpeum palmare (NAV), etc.	the eminences on the palmar side of the radius, ulna and proximal carpals	the eminences on the palmar side of the distal carpals and metacarpals	at least six separate ligg. have been identified that are included under this general name
palmar ligg. (of fetlock/ metacarpophalangeal joint)	ligg. palmaria (NAV), intersesamoidean lig.	one of the proximal sesamoid bones . . .	. . . to the other of the proximal sesamoid bones	a fibrocartilaginous pad that extends beyond the sesamoid bones and forms a bearing surface for the deep digital flexor
palmar ligg. (of pastern joint)	ligg. palmaria (NAV)	the palmar margin of the distal articular surface of the proximal phalanx	the palmar margin of the proximal articular surface of the middle phalanx	these ligg. are well developed in large animals, when up to four per digit may be present

VetBooks.ir

Table 12 Ligaments—cont'd

Ligament	Other names	Origin	Insertion	Comments
patellar lig./ligg.	lig. patellae (NAV), lig. patellae laterale/ intermedium/mediale (NAV—large animals), straight patellar ligg.	the apex of the patella; in large animals the lateral border and patellar cartilage too	the tibial tuberosity	in horses and cattle there are three patellar ligg., in small animals only one
plantar ligg. (of hind fetlock)	*see* palmar ligg. (of fetlock/ metacarpophalangeal joint) of which it is the hindlimb homolog			
plantar tarsal ligg.	ligg. tarsi plantaria (NAV)	various points on the plantar aspect of the hock, but esp. the calcaneus	various points on the plantar surface of the hock, but esp. the distal tarsals and metatarsals	a very strong compound lig. that takes the strain of the Achilles tendon and keeps the hock straight
posterior cruciate lig.	*see* caudal cruciate lig.			
proximal interdigital lig.	lig. interdigitale proximale (NAV)	the axial surfaces of the middles of the proximal phalanges	the opposing phalanx of the adjacent digit a little more distally, to form a cross	an important lig. of ruminants that limits the amount the toes may spread
pubic lig.	lig. pubicum craniale (NAV)	the pubic pecten (brim) on one side . . .	. . . to the pubic pecten on the other side	with the lig. of the sciatic arch, it reinforces the pelvic symphysis
pubofemoral lig.	lig. pubofemorale (NAV)	the pubic part of the acetabular rim	the neck of the femur	a slight thickening of the hip-joint capsule
radial check lig.	*see* accessory lig. (of superficial digital flexor)			
radiate lig. (of rib)	lig. capitis costae radiatum (NAV)	the bodies of the thoracic vertebrae	the neck of the rib	a fan-shaped lig. on the ventral aspect of the joint
round lig.	*see* lig. of femoral head			
sacroiliac ligg. (interosseous part)	ligg. sacroiliaca interossea (NAV). *See also* dorsal sacroiliac ligg., ventral sacroiliac ligg.	the auricular area and adjacent parts of the sacrum	the auricular area and adjacent parts of the ilium	these complex, short intra-articular ligg. are assisted by the dorsal and ventral ligg., q.v.
sacrotuberous lig.	lig. sacrotuberale (NAV). *See also* broad sacrotuberous lig.	the caudolateral part of the sacrum and adjacent first tail vertebra	the lateral angle of the sciatic tuber	in carnivores; this thick strong lig. is readily palpable and stabilizes the sacroiliac joint
sesamoidean ligg.	*see also* straight, oblique, short, cruciate, inter- and collateral sesamoidean ligg.	the distal surface of the proximal sesamoid bones	the palmar surface of the middle and proximal phalanges	the functional insertion of the interosseous muscle
short sesamoidean ligg.	ligg. sesamoideum brevia (NAV)	the distal border of the proximal sesamoid bones	the proximal border of the proximal phalanx	the shortest, deepest and weakest of the sesamoidean ligg.
sternal lig.	lig. sterni (NAV)	the dorsal surface of the manubrium	the dorsal surface of the xiphoid	a homolog of the longitudinal ligg. of the vertebral column
sternocostal radiate ligg.	ligg. sternocostalia radiata (NAV)	the dorsal and ventral surfaces of the sternum	the costal cartilages	the ligg. serve as reinforcements of the joint capsules
straight sesamoidean lig.	lig. sesamoideum rectum (NAV)	the distal border of the palmar lig. and the proximal sesamoid bones	the complementary cartilage of the middle phalanx	the only one of the sesamoidean ligg. to reach the middle phalanx
subcarpal check lig.	*see* accessory lig. (of deep digital flexor)			
superior check lig.	*see* accessory lig. (of superficial digital flexor)			
supraspinous lig.	lig. supraspinale (NAV)	the spinous processes of the thoracic vertebrae	the spinous processes of lumbar, sacral and caudal vertebrae	a ligament that limits excessive spinal flexion
suspensory lig. (of proximal sesamoid bones)	interosseous muscle, mm. interossei (NAV), middle interosseous	the distal row of carpal bones and the proximal parts of the metacarpals	the proximal sesamoid bones, the common extensor tendon, and via the sesamoidean ligg.,	one of the major passive supports for the fetlock joint in the horse; in other species it is a fleshy muscle

(Continued)

VetBooks.ir

Table 12 Ligaments—cont'd

Ligament	Other names	Origin	Insertion	Comments
			the palmar surface of the proximal and middle phalanges	
suspensory lig. (of distal sesamoid bone)	*see* collateral sesamoidean ligg.			
tarsal ligg.	*see* dorsal tarsal ligg., plantar tarsal ligg., collateral ligg.			over 30 separate ligg. of the hock are described
transverse acetabular lig.	lig. transversum acetabuli (NAV)	one horn of the lunate face of the acetabulum . . .	. . . to the other horn of the lunate face	the lig. bridges the acetabular notch to become part of the articular surface
transverse atlantal lig.	lig. transversum atlantis (NAV)	one side of the arch of the atlas . . .	. . . to the other side of the arch	in carnivores, pigs; it holds the dens against the ventral arch of the atlas
transverse humeral lig.	lig. transversum humerale	the greater tubercle of the humerus	the lesser tubercle of the humerus	the lig. holds the tendon of the biceps brachii in the intertubercular groove
transverse lig. of stifle	*see* meniscal ligg.			
ungual cartilage ligg.	ligg. chondro-compedalia (NAV), etc.	the borders of the ungual cartilage of the distal phalanx of the horse	all three phalanges	only in Equidae; made up of five groups of ligg. that anchor the cartilage
unpaired distal sesamoidean lig.	lig. sesamoideum distale impar (NAV)	the flexor surface of the distal phalanx	the distal surface of the distal sesamoid bone	in ungulates; this lig. binds the navicular bone to the coffin joint
ventral longitudinal lig.	lig. longitudinale ventrale (NAV)	the ventral surface of all vertebrae caudal to the axis . . .	. . . extending from neck to tail	best developed in the lumbar region
ventral sacroiliac ligg.	ligg. sacroiliaca ventralia (NAV)	an extensive area around the sacroiliac joint on the wing of the sacrum	a large area of the ventral surface of the wing of the ilium	these ligg. are complemented by dorsal and interosseous ligg.
yellow ligg.	*see* ligg. flava			

Table prepared by John Grandage. NAV, Nomina Anatomica Veterinaria.

VetBooks.ir

Table 13 Muscles

Part 13.1 Muscles of the head and neck*

Muscle	Other names	Origin	Insertion	Innervation	Comments
13.1A Muscles of the muzzle and lips					
buccinator	m. buccinator (NAV), the trumpeter's m.	from the lips and alveolar borders of the jaws over the cheeks	a longitudinal raphe between the two origins	the buccal branches of the facial nerve	this cheek muscle helps control food in the vestibule of the mouth; it is made up of several parts
caninus	m. caninus (NAV), lateral dilator of nostril	in the horse: the maxilla near the end of the facial crest	the lateral wing of the nostril	the buccal branch of the facial nerve	it dilates the nostril; it is well-developed in the horse
cutaneous colli	*see* platysma				
cutaneous faciei	*see* platysma				
depressor of the lower lip	m. depressor labii inferioris (NAV) or mandibularis	the alveolar border of the mandible as far caudad as the masseter	the stroma of the lower lip	the ventral buccal branch of the facial nerve	absent from carnivores; may merge with buccinator
depressor of the upper lip	m. depressor labii superioris (NAV), depressor rostri	facial tubercle (ox) or end of the facial crest	the snout, below the nostril	the dorsal buccal branch of the facial nerve	especially well-developed in the pig
dilator of nostril	m. dilator naris apicalis (NAV), transverse nasal muscle	the medial border of the nostril	its fellow in the midline	the buccal branch of the facial nerve	well-developed in the horse. *See also* caninus
incisive mm.	m. incisivus superioris/inferioris (NAV)	the alveolar borders of the incisor teeth	fibers radiate away from their origins into the lips	the buccal branches of the facial nerve	these muscles hold the lips close against the jaws and assist the orbicularis oris
levator nasolabialis	m. levator nasolabialis (NAV)	mostly from the nasal bones	the upper lip and adjacent parts of the muzzle	the branches of the facial nerve	derived from the deep part of the sphincter colli muscle
levator of the upper lip	m. levator labii superioris (NAV) or maxillaris	the side of face (species vary) beneath the levator nasolabialis	fascicles into upper lip, except in horses, in which it inserts by a common tendon with its fellow	the dorsal buccal branch of facial nerve	involved in Flehmen response
orbicularis oris	m. orbicularis oris (NAV)	within the stroma of the lips	the skin of the lips or remaining within the stroma	the buccal branches of the facial nerve	the muscle to close the mouth (rima oris)
platysma (NAV)	the NAV subdivides this m. into m. cutaneous colli and m. cutaneous faciei	the dorsal superficial fascia of the neck; fibers run between the deep and superficial layers of the sphincter colli	the commissures of the lips after running forwards over the parotid and cheek	the buccal branches of the facial nerve	a sheet of muscle that makes up the bulk of the cutaneous muscle of the neck and face
13.1B Muscles of the tongue					
genioglossus	m. genioglossus (NAV)	the medial surface of the mandible caudal to the symphysis	it is fan-shaped and runs in a sagittal plane to the dorsum of the tongue	the hypoglossal nerve	acts to depress the tongue, especially along its axis
hyoglossus	m. hyoglossus (NAV)	the lateral side of the basihyoid and adjacent bones	the root and caudal two-thirds of the tongue	the hypoglossal nerve	acts to retract and depress the tongue
intrinsic m. of tongue	m. lingualis proprius (NAV), proper muscle of the tongue	various parts within the substance of the tongue	various parts within the substance of the tongue	the hypoglossal nerve	fibres run in many directions; produce complex mortions such as protrusion
styloglossus	m. styloglossus (NAV)	the lateral side of the stylohyoid bone	various parts of the tongue, but especially the tip	the hypoglossal nerve	acts to retract the tongue
13.1C Muscles of the pharynx					
caudal pharyngeal constrictors	mm. constrictores pharyngis caudales (NAV)	the lateral wall of the thyroid and cricoid cartilages	the median raphe in the roof of the pharynx	the pharyngeal plexus	made up of the thyropharyngeal and cricopharyngeal muscles

(Continued)

Table 13 Muscles—cont'd

Part 13.1 Muscles of the head and neck*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
caudal stylopharyngeus	m. stylopharyngeus caudlis (NAV)	the medial face of the stylohyoid bone	the dorsolateral wall of the pharynx	the pharyngeal plexus	a dilator of the pharynx
ceratopharyngeus	*see* middle pharyngeal constrictor, comments				
chondropharyngeus	*see* middle pharyngeal constrictor, comments				
cricopharyngeus	m. cricopharyngeus (NAV)	the lateral wall of the arch of the cricoid cartilage	the fibers meet at the median fibrous raphe	the pharyngeal plexus	the most caudal of the pharyngeal constrictors
hyopharyngeus	*see* middle pharyngeal constrictor				
levator of the soft palate	m. levator veli palatini (NAV)	the tympanic part of the temporal bone	it spreads out from the wall of the pharynx into the soft palate	the pharyngeal plexus	it runs caudal and parallel to the tensor of the soft palate; it raises the soft palate
middle pharyngeal constrictor	m. constrictor pharyngis medius (NAV), m. hyopharyngeus (NAV)	mainly from the dorsal end of the thyrohyoid bone	the muscle fans out to meet its fellow on the median raphe in the pharyngeal roof	the pharyngeal plexus	it was formerly divided into small ceratopharyngeal and large chondropharyngeal components
palatinus	m. palatinus (NAV)	the caudal rim of the hard palate	the aponeurosis of the soft palate	the pharyngeal plexus	this small muscle runs longitudinally; it shortens the palate
palatopharyngeus	m. palatopharyngeus (NAV)	the palatine bone and soft palate	the median fibrous raphe in the roof of the pharynx	the pharyngeal plexus	the most rostral of the pharyngeal constrictors; it mainly shortens the pharynx
pharyngeal constrictors	*see* rostral, middle and caudal pharyngeal constrictor				
pterygopharyngeus	m. pterygo-pharyngeus (NAV)	the pterygoid bone and soft palate	the median fibrous raphe in the roof of the pharynx	the pharyngeal plexus	the most dorsal pharyngeal constrictor; it shortens the pharynx
rostral pharyngeal constrictors	mm. constrictores pharyngis rostrales (NAV), *see* palato- and pterygopharyngeus				
rostral stylopharyngeus	m. stylopharyngeus rostralis (NAV)	the rostral border of the stylohyoid bone	the median raphe in the roof of the pharynx	the pharyngeal plexus	in ruminants it is an additional rostral pharyngeal constrictor that acts as a nasopharyngeal sphincter
stylopharyngeus	*see* rostral stylopharyngeus and caudal stylopharyngeus				
tensor of the soft palate	m. tensor veli palatini (NAV)	various parts of the temporal bone and the auditory tube	fibers pass around the hamulus of the pterygoid to fan into the aponeurosis of the soft palate	the pharyngeal plexus	it runs parallel to the tensor of the soft palate; it tenses the soft palate
thyropharyngeus	m. thyropharyngeus (NAV)	the lateral wall of the lamina of the thyroid cartilage	the fibers meet at the median fibrous raphe	the pharyngeal plexus	part of the caudal pharyngeal constrictor

Table 13 Muscles—cont'd

Part 13.1 Muscles of the head and neck*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
13.1D Muscles of the hyoid apparatus					
ceratohyoid	m. ceratohyoideus (NAV)	the cranial border of the thyrohyoid bone	the caudal border of the ceratohyoid bone	the glosso-pharyngeal nerve	a small triangular muscle that reduces the angle between the hyoid bones
cricothyroid	m. cricothyroideus (NAV)	the arch and caudal border of the cricoid cartilage	the caudal border of the thyroid lamina	the cranial laryngeal nerve	it depresses the thyroid and so lengthens the vocal folds
geniohyoid	m. geniohyoideus (NAV)	the mandible, by the symphysis	the lingual process of the hyoid bone or the basihyoid	the hypoglossal nerve	it pulls the hyoid forwards; in concert with the sternohyoid, it expands the pharynx
mylohyoid	m. mylohyoideus (NAV)	the medial face of the alveolar border of the mandible	a midline raphe beneath the tongue and the basihyoid	the mylohyoid branch of the mandibular nerve	a thin, sheet-like muscle that acts like a sling to lift the tongue
occipitohyoid	m. occipitohyoideus (NAV), jugulohyoid	the jugular process of the occipital bone	the proximal end of the stylohyoid bone	the facial nerve	a small muscle that retracts the hyoid apparatus
omohyoid	*see under* Muscles of the neck				
sternohyoid	*see under* Muscles of the neck				
stylohyoid muscle	m. stylohyoideus (NAV)	the muscular angle of the stylohyoid bone	the ends of the basihyoid bone	the facial nerve	it elevates the roof of the tongue and compresses the pharynx
thyrohyoid	m. thyrohyoideus (NAV)	an oblique line on the lamina of the thyroid cartilage	the thyrohyoid bone	the hypoglossal nerve	a small muscle that acts to draw the larynx closer to the tongue
tranverse hyoid	m. hyoideus transversus (NAV)	the medial face of the ceratohyoid bone	the homologous point on the bone of the other side	the glossopharyngeal nerve	to draw the two halves of the hyoid together
13.1E Muscles of the larynx					
cricoarytenoid	*see* dorsal and lateral cricoarytenoid				
dorsal cricoarytenoid	m. cricoarytenoideus dorsalis (NAV)	the median ridge and lamina of the thyroid cartilage	fibers converge to insert on the muscular process of the arytenoid cartilage	the recurrent laryngeal nerve	the only muscle to dilate the rima glottidis; it does so by rotating the arytenoid cartilage. Becomes paretic in roaring horses
hyoepiglotticus	m. hyoepiglotticus (NAV)	the medial surface of the ceratohyoid bone	the midline with its fellow that joins the ventral surface of the epiglottis	the hypoglossal nerve	a small muscle that depresses the epiglottis onto the tongue
lateral cricoarytenoid	m. cricoarytenoideus lateralis (NAV)	the rostral border of the arch of the cricoid cartilage	the vocal process of the arytenoid cartilage	the recurrent laryngeal nerve	serves to close the rima glottidis
sternothyroid	*see under* Muscles of the neck				
thyroarytenoid	m. thyroarytenoideus (NAV). *See also* ventricular m., vocal m.	the medial surface of the lamina of the thyroid cartilage	the vocal process of the arytenoid cartilage	the recurrent laryngeal nerve	this muscle has distinct parts within the vocal and vestibular folds; it slackens the folds and closes the rima
transverse arytenoid	m. arytenoideus transversus (NAV)	the dorsal surface of the arytenoid cartilages	a median fibrous raphe	the recurrent laryngeal nerve	serves to close the intra-cartilaginous parts of the rima glottidis
ventricular m.	m. ventricularis (NAV), oral thyroarytenoid m., vestibular m. (of larynx)	the lamina of the thyroid cartilage; in dogs the cuneiform process of the arytenoid	the muscular process of the arytenoid	the recurrent laryngeal nerve	part of the thyroarytenoid m.; it closes the glottis and dilates the laryngeal saccule (when present)
vestibular m. (of larynx)	*see* ventricular m.				

(Continued)

Table 13 Muscles—cont'd

Part 13.1 Muscles of the head and neck*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
vocalis	m. vocalis (NAV), aboral thyroarytenoid m.	the body of the thyroid cartilage	the vocal process of the arytenoid	the recurrent laryngeal nerve	part of the thyroarytenoid m.; it closes the glottis and slackens the vocal fold
13.1F Muscles of the eye and eyelids					
bulbar mm.	mm. bulbi (NAV), extrinsic muscles of the eye, eye muscles, etc.	mostly from the common tendinous ring around the optic foramen	the scleral surface mostly in front of the equator	the oculomotor, trochlear and abducent nerves	the six (human) or seven (domestic mammals) muscles that move the eyeball; *see* dorsal oblique, dorsal rectus, lateral rectus, medial rectus, retractor bulbi, ventral oblique, ventral rectus
corrugator supercilii	*see* levator of the medial angle of the eye				
dorsal oblique	m. obliquus dorsalis (NAV), m. obliquus superior bulbi (NA)	in the depths of the orbit near ethmoid foramen	it inserts near the equator, between the dorsal and lateral recti	the trochlear nerve	the muscle first runs forward on the medial side of the orbit, before bending round the trochlea
dorsal rectus	m. rectus dorsalis (NAV), m. rectus superior bulbi (NA)	the common tendinous ring around the optic foramen	the upper part of the sclera in front of the equator	the oculomotor nerve	the muscle turns the eye upwards
lateral rectus	m. rectus lateralis (NAV), m. rectus lateralis bulbi (NA)	the common tendinous ring around the optic foramen	the lateral part of the sclera in front of the equator	the abducent nerve	the muscle turns the eye outwards
levator of the medial angle of the eye	m. levator anguli oculi medialis (NAV), corrugator supercilii	the frontal bone above and medial to the orbit	the upper eyelid	the auriculo-palpebral branch of the facial nerve	a small muscle in the domestic species
levator of the upper eyelid	m. levator palpebrae superioris (NAV)	the pterygoid crest	by a thin tendon in the upper eyelid	the oculomotor nerve	a muscle of the eyelids not innervated by the facial nerve
malaris	m. malaris (NAV)	the fascia in front of the eye	the lower eyelid	the facial nerve	a small and inconstant muscle
medial rectus	m. rectus medialis (NAV), m. rectus medialis bulbi (NA)	the common tendinous ring around the optic foramen	the medial part of the sclera in front of the equator	the oculomotor nerve	the muscle turns the eye medially and is used in convergence
oblique mm.	*see* dorsal oblique, ventral oblique				
orbicularis oculi	m. orbicularis oculi (NAV)	the skin and stroma of the eyelids; the palpebral ligament	the skin of the eyelids and the palpebral ligament	the auriculo-palpebral branch of the facial nerve	the muscle to close the eyes (rima palpebrarum)
retractor bulbi	m. retractor bulbi (NAV)	the common tendinous ring around the optic foramen	the sclera at the back of the eyes	the abducent nerve	not found in the human orbit; a muscle in four parts that pulls the eyeball into the orbit
retractor of the lateral angle of the eye	m. retractor anguli oculi lateralis (NAV)	the fascia near the zygomatic arch (dogs)	the lateral corner of the eye	the auriculo-palpebral nerve	a small muscle of facial expression
straight mm. of the eye	*see* dorsal, lateral, ventral and medial rectus				
ventral oblique	m. obliquus ventralis (NAV), m. obliquus inferior bulbi (NA)	in the medial wall of the orbit behind the lacrimal fossa	it inserts near the equator, between the ventral and lateral recti	the oculomotor nerve	the shortest of the bulbar mm.
ventral rectus	m. rectus ventralis (NAV), m. rectus inferior bulbi (NA)	the common tendinous ring around the optic foramen	the lower part of the sclera in front of the equator	the oculomotor nerve	the muscle turns the eye downwards
zygomatic	m. zygomaticus (NAV); the smiling m.	the fascia over the masseter muscle; in dogs the scutular cartilage	the commissures of the mouth intermingling with the orbicularis oris	the auriculopal-pebral branch of the facial nerve	a thin ribbon-like muscle

VetBooks.ir

Table 13 Muscles—cont'd

Part 13.1 Muscles of the head and neck*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
13.1G Muscles of the ear and forehead					
caudal auricular mm.	caudal ear mm., mm. auriculares caudales (NAV), m. cervico-scutularis and mm. cervicoauricularis	the fascia of the neck and occiput	the scutiform cartilage and caudal part of the conchal cartilage	the caudal auricular branch of the facial nerve	a group of about four muscles that mostly draw the ear backwards
dorsal auricular mm.	dorsal ear mm., mm. auriculares dorsales (NAV), mm. interscutularis, parietoscutularis, partietoauricularis	the fascia over the scutiform cartilage and the top of the head	the scutiform cartilage and dorsal surface of the conchal cartilage	the auriculopal-pebral branch of the facial nerve	a group of two or three muscles on the top of the head that help erect the ear
rostral auricular mm.	anterior ear mm., mm. auriculares rostrales (NAV)	the fascia over the scutiform cartilage and rostral part of the forehead	the rostral part of the dorsal surface of the conchal cartilage	the auriculopal-pebral branch of the facial nerve	a group of about eight muscles that draw the ear forwards, etc.
stapedius	m. stapedius (NAV)	the mastoid wall of the middle ear	the neck of the stapes	the stapedial branch of the facial nerve	one of the smallest of all muscles; it dampens ossicle oscillation
tensor tympani	m. tensor tympani (NAV)	the wall of the bony auditory tube	the upper end of the handle of the malleus	the trigeminal nerve via the otic ganglion	it tenses the eardrum and dampens the oscillations
ventral auricular mm.	ventral ear mm., mm. auriculares ventrales (NAV), mm. parotidoauricularis, styloauricularis	the fascia over the parotid gland	the fibers run dorsally to insert on the antitragus of the auricular cartilage	the cervical branch of the facial nerve	a small but distinct group of muscles that help depress and retract the ear
13.1H Muscles of mastication					
digastric	m. digastricus (NAV), biventer	the jugular process of the occipital bone	the ventral border of the mandible	the mylohyoid branch of the trigeminal nerve and the facial nerve (to cranial and caudal bellies)	it opens the jaw; it is not always clear that it is made up of two bellies (e.g. in the dog)
lateral pterygoid	m. pterygoideus lateralis (NAV), external pterygoid	the lateral part of the sphenoid bone	the medial face of the neck and condyle of the mandible	the mandibular branch of the trigeminal	a small muscle that pulls the jaw forwards or to the side
masseter	m. masseter (NAV)	the zygomatic arch and facial crest	the lateral face of the mandible, especially its ramus	the mandibular branch of the trigeminal	relatively large in herbivores; it acts to close the jaw
medial pterygoid	m. pterygoideus medialis (NAV), internal pterygoid	the lateral part of the sphenoid, pterygoid and palatine bones	the medial face of the ramus of the mandible	the mandibular branch of the trigeminal	it closes the jaw and also helps to pull it to the side, as in chewing the cud
temporal	m. temporalis (NAV)	the surface and crest-like border to the temporal fossa	the coronoid process of the mandible	the mandibular branch of the trigeminal	it closes the jaw; relatively small in herbivores
13.1I Muscles of the neck					
biventer	m. biventer cervicis (NAV)	the spines of the first few thoracic vertebrae	the occipital bone beneath the nuchal crest	the dorsal branches of the last six cervical nerves	the more dorsal half of the semispinalis capitis muscle
brachiocephalic	*see under* Muscles of the Forelimb				
caudal oblique m. of the head	m. obliquus capitis caudalis (NAV)	the side of the spinous process of the axis	the dorsal surface of the wing of the atlas	the dorsal branch of the second cervical nerve	a large muscle that rotates the atlas and head
cervical iliocostal	m. iliocostal cervicis (NAV), ascending cervical	the angles of the first few ribs	the transverse processes of the last few cervical nerves	the cervical nerves	the cranial part of the iliocostal muscle
complexus	m. complexus (NAV)	the transverse and articular processes of the thoracic and cervical vertebrae	the occipital bone beneath the nuchal crest	the dorsal branches of the last six cervical nerves	the more ventral half of the semispinalis capitis muscle

(Continued)

Table 13 Muscles—cont'd

Part 13.1 Muscles of the head and neck*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
cranial oblique m. of the head	m. obliquus capitis cranialis (NAV)	the ventral surface of the wing of the atlas	the jugular and mastoid processes; the nuchal crest	the dorsal branch of the first cervical nerve	a large muscle that extends and bends the head sideways
cutaneous m. of the neck	m. cutaneous colli (NAV)	the dorsal superficial fascia of the neck; fibers run between the deep and superficial layers of the sphincter colli	the commissures of the lips after running forwards over the parotid and cheek	the buccal branches of the facial nerve	part of the platysma
dorsal straight mm. of the head	m. rectus capitis dorsalis major/minor (NAV)	the spine of the axis (major); the dorsal arch of the atlas (minor)	the occipital bone, dorsal to the foramen magnum	the dorsal branch of the first cervical nerve	a group of deep muscles beneath the poll that extends the head
intertransverse	m. intertransversarii dorsales and ventrales cervicis (NAV)	the transverse processes of the cervical vertebrae	the transverse and articular processes of the cervical vertebrae	the cervical nerves	deep, short, muscles on the side of the neck, divided into dorsal and ventral parts
lateral straight m. of the head	m. rectus capitis lateralis (NAV)	the ventral arch of the atlas, next to the ventral straight m.	the jugular process of the occipital bone	the ventral branch of the first cervical nerve	a small muscle beneath the atlas that flexes the head
long m. of the head	m. longus capitis (NAV), rectus capitis ventralis major	the transverse processes of cervical vertebrae 3–5	the base of the skull on the basioccipital or basisphenoid	the ventral branches of the cervical nerves	a flexor of the head and part of the neck
long m. of the neck	m. longus colli (NAV)	the ventral surface of the bodies of thoracic vertebrae 1–6 and the transverse processes of the cervical vertebrae	the bodies and transverse processes of the cervical vertebrae	the ventral branches of the cervical nerves	a flexor of the neck that lies adjacent to the spine and is in contact with its fellow of the other side
longest m. of the atlas	m. longissimus atlantis (NAV)	the transverse processes of the first few thoracic vertebrae	the wing of the atlas	the dorsal branches of the last six cervical nerves	it runs in company with the longest muscle of the head
longest m. of the head	m. longissimus capitis (NAV)	the transverse processes of the first few thoracic vertebrae	the mastoid process of the temporal bone	the dorsal branches of the last six cervical nerves	the most cranial division of the longissimus group of muscles
multifidi	mm. multifidi (NAV)	the articular processes of the last four or five cervical vertebrae	the spinous and articular processes of the cervical vertebrae	the dorsal branches of the last six cervical nerves	the deepest of all the cervical muscles
oblique mm. of the head	*see* cranial oblique m. of the head, caudal oblique m. of the head				
omohyoid	m. omohyoideus (NAV)	the subscapular fascia near the shoulder joint; or the transverse processes of the last cervical vertebrae (ox)	the basihyoid bone	the ventral branch of the first cervical nerve	best developed in the horse; more weakly developed in other species; absent from the dog
omotransversarius	*see under* Muscles of the Forelimb				
rhomboids	*see under* Muscles of the Forelimb				
scalene mm.	mm. scalenus ventralis, medius and dorsalis (NAV)	the cranial border of the first rib and in some, the lateral side of the first few ribs	the transverse processes of the last four cervical vertebrae	the ventral branches of the cervical and thoracic nerves	variously subdivided in domestic species; has respiratory and neck-moving actions
semispinalis capitis	*see* biventer m., complexus m.				
sphincter colli	m. sphincter colli superficialis and profundus (NAV)	the superficial fascia of the throat and face	the skin of the throat, lips and adjacent regions	the buccal branches of the facial nerve	slender muscle strands variously disposed; some facial muscles are derived from the deep division

Table 13 Muscles—cont'd

Part 13.1 Muscles of the head and neck*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
spinalis	*see under* Muscles of the Back				
splenius	m. splenius capitis/ cervicis (NAV)	the spines of the first three or four thoracic vertebrae	the nuchal crest and transverse processes of cervical vertebrae 1–5	the dorsal branches of the last six cervical nerves	acts to elevate the head or to turn it and the neck to one side
sternocephalic	m. sternocephalicus	the manubrium of the sternum	the caudal border of the mandible and/or the mastoid and/or the occipital parts of the skull	the ventral branch of the accessory nerve (the eleventh cranial nerve)	in some species mandibular, mastoid or occipital parts can be identified
sternomandibularis	*see* sternocephalic				
sternothyrohyoid	m. sternohyoideus and (NAV) m. sternothyroideus (NAV)	the manubrium of the sternum	the lamina of the thyroid cartilage and the basihyoid bone	the ventral branches of the first and second cervical nerves	may be mostly single (e.g. horse) or mostly double (e.g. dog)
straight mm. of the head	*see* dorsal, ventral and lateral straight mm. of the head				
trapezius	*see under* Muscles of the Forelimb				
ventral serrate	*see under* Muscles of the Forelimb				
ventral straight m. of the head	m. rectus capitis ventralis (NAV)	the ventral arch of the atlas	the basioccipital bone, ventral to the foramen magnum	the ventral branch of the first cervical nerve	a small muscle beneath the atlas that flexes the head

Part 13.2 Muscles of the trunk*

Muscle	Other names	Origin	Insertion	Innervation	Comments
anal sphincters	*see* external anal sphincter/ internal anal sphincter	as sphincter mm. neither have distinct origins	as sphincter mm. neither have distinct insertions	the internal m. is innervated by autonomic fibers, the external m. by somatic fibers	the two mm. are disposed concentrically; in some species anal sacs lie between them
biventer	*see under* Muscles of the Head and Neck				
brachiocephalic	*see under* Muscles of the Forelimb				
bulbocavernosus	*see* bulbo-spongiosus				
bulboglandularis	m. bulboglan-dularis (NAV)	the raphe over the dorsal part of the pelvic urethra (pig)	the m. spreads out over the surface of the bulbourethral glands	probably the perineal branch of the pudendal nerve	the m. is well- developed in pigs; striated, and may be derived from urethral, ischiourethral or bulbospongiosus mm.
bulbospongiosus	m. bulbospon-giosus (NAV), bulbocaverno-sus m.	a median raphe at the sciatic arch; the wall of the corpus cavernosum	fibers unite with their fellows to encircle the urethra or form U-shaped loops ventral to it	the perineal branch of the pudendal nerve	pulsatile contraction during ejaculation and, in some species, during urination; in the female *see* vestibular and vulvar constrictors
caudal preputial m.	m. preputialis caudalis (NAV), retractor preputii	the superficial fascia near the inguinal region	the mm. from each side meet in a loop beneath the prepuce	the lateral thoracic nerve	the m. is best developed (but variably) in bulls
coccygeus	m. coccygeus (NAV)	the medial side of the sciatic spine	the transverse processes of the first few coccygeal vertebrae	the sacral nerves, often via the pudendal or caudal rectal nerve	the most lateral of the mm. that make up the pelvic diaphragm

(Continued)

Table 13 Muscles—cont'd

Part 13.2 Muscles of the trunk*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
complexus	*see under* Muscles of the Head and Neck				
cranial preputial m.	m. preputialis cranialis (NAV), protractor preputii	the superficial fascia near the xiphoid	the mm. from each side meet in a loop beneath the prepuce	the lateral thoracic nerve	it supports the prepuce and restores its position after the penis detumesces
cremaster	m. cremaster (NAV)	the iliac fascia by the caudal border of the internal abdominal oblique m.	the parietal layer of the vaginal tunic of the testis	the genitofemoral nerve	the m. passes through the inguinal canal and raises the testis
cutaneous mm.	bark m., panniculus carnosus, orbicular m.	the superficial fascia of various regions	the skin of various regions	the lateral thoracic, facial and some other nerves	many individually named mm.; well developed in echidnas, hedgehogs and armadillos
cutaneous trunci	subdivisions of this m. include: preputial, supramammary and omobrachial	the hypodermis of the gluteal region	fibers run longitudinally before terminating near the axilla	the lateral thoracic (= motor n.); sensory innervation to the overlying skin is via the segmental spinal nn.	the dual nerve supply is useful in the cutaneous trunci reflex; the preputial m. (q.v.) is derived from it
diaphragm	diaphragma (NAV), skirt	the costal cartilages of the last true ribs and the false ribs; the lumbar vertebrae and the xiphoid cartilage	a central tendon	the left and right phrenic nerves; intercostal nerves	the partition between thorax and abdomen that is the main inspiratory m.; it also regulates pressure in the thorax and abdomen
diaphragm (pelvic)	*see* levator ani and coccygeus				
dorsal serrate (cranial and caudal parts)	m. serratus dorsalis cranialis/ caudalis (NAV)	the thoracolumbar fascia	the cranial part to the lateral side of the middle ribs; the caudal part to the caudal ribs	the thoracic nerves	the cranial part draws the ribs forwards (during inspiration); the caudal part draws the ribs back (during expiration)
erector of penis	*see* ischio-cavernosus				
erector of spine	m. erector spinae (NAV), sacrospinal m.	the spines of the lumbar and sacral vertebrae and the iliac crest via an extensive aponeurosis	numerous complex insertions involving the ribs, vertebrae and skull	the dorsal branches of the spinal nerves	a complex of mm. that are mostly fused caudally but which subdivide into longissimus, iliocostal and spinal parts more cranially
external abdominal oblique	m. obliquus externus abdominis (NAV)	the lateral surface of the ribs and the thoracolumbar fascia	the linea alba and the prepubic tendon, fibers running obliquely caudoventrally	the intercostal, costoabdominal and lumbar nerves	the most superficial of the abdominal mm.; it has a large ventral aponeurosis
external anal sphincter	m. sphincter ani externus (NAV)	as the m. is a sphincter only a few fibers are attached to neighboring soft tissue such as the fascia below the tail	most fibers embrace the anal canal and each other; a few blend ventrally with the perineal body and the genitalia	the anal branch of the pudendal nerve	the m. is made up of subcutaneous, superficial and deep parts; it is a striated m. under voluntary control
external intercostals	mm. intercostales externi (NAV)	the caudal border of each rib	the cranial border of the next rib at a more ventral point	the intercostal nerves	inspiratory mm. that may also act during forced expiration
iliacus	*see under* Muscles of the Hindlimb				
iliocostal	m. iliocostalis (NAV)	the iliac crest, the septum between it and the longissimus m., and the caudal ribs	the ribs and the transverse process of the seventh cervical vertebra	the dorsal branches of the spinal nerves	it is the lateral division of the epaxial mm.; it has both lumbar and thoracic parts

Table 13 Muscles—cont'd

Part 13.2 Muscles of the trunk*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
iliopsoas	*see under* Muscles of the Hindlimb				
intercostals	*see* external and internal intercostals, and subcostals				
internal abdominal oblique	m. obliquus internus abdominis (NAV)	the thoracolumbar fascia, the inguinal ligament and the ilium	the linea alba, the prepubic tendon and the last few ribs; fibers run cranioventrally	the intercostal, costoabdominal and lumbar nerves	the middle of the mm. of the flank; it is thick and fleshy near the tuber coxae
internal anal sphincter	m. sphincter ani internus (NAV)	the wall of the anal canal	the wall of the anal canal	autonomic fibers from the pelvic and hypogastric nerves via the pelvic plexus	an involuntary, smooth m. that is the thickened terminal part of the circular m. of the alimentary canal
internal intercostals	mm. intercostales interni (NAV)	the caudal border of each rib	the cranial border of the next rib at a more dorsal point	the intercostal nerves	expiratory mm. that may also act during forced inspiration to brace the intercostal tissues
intertransverse mm.	mm. intertrans-versarii (NAV)	the transverse processes of the vertebrae	the transverse processes of adjacent or nearby vertebrae	the dorsal and ventral branches of adjacent spinal nerves	a complex group of small, deep mm. in all parts of the spine
ischiocavernosus	m. ischiocavern-osus (NAV), erector of the penis or clitoris	the sciatic tuber behind the crus of the penis or clitoris	the sides and ventral surface of the crus of the penis or clitoris	the perineal branch of the pudendal nerve	it compresses the crus of the penis or clitoris so erecting the corpus cavernosum distally
ischiourethralis	m. ischio-urethralis (NAV)	the dorsal surface of the sciatic arch	the ventral surface of the pelvic urethra	the perineal branch of the pudendal nerve	it probably aids erection by compression of the dorsal veins of the penis
latissimus dorsi	*see under* Muscles of the Forelimb				
levator ani	m. levator ani (NAV), medial coccygeus	the medial surface of the sciatic spine	the perineal body, external anal sphincter and coccygeal vertebrae	the sacral nerves, usually via the pudendal or caudal rectal nerve	a principal part of the pelvic diaphragm very well developed in the human pelvis
levators of ribs	mm. levatores costarum (NAV)	the transverse processes of the last cervical and the thoracic vertebrae	the cranial borders of the ribs near their angles	the intercostal nerves	small inspiratory segmental mm. that draw the ribs forwards
longissimus	m. longissimus (NAV), eye m., longissimus dorsi, long dorsi	the iliac crest, and the spinous and other processes of the lumbar and thoracic vertebrae	the transverse processes of the thoracic and cervical vertebrae, and the temporal bone	the dorsal branches of the spinal nerves	the large, middle division of the epaxial mm.; has lumbar, thoracic, cervical and capital parts; *see* erector of spine
multifidi	mm. multifidi (NAV)	a complex set of mm. that arise mainly from the articular processes of the vertebrae	short and long varieties insert mainly into the spinous processes of the more cranial vertebrae	the medial branches of the dorsal divisions of the segmental spinal nerves	numerous, short, individual, overlapping mm. from the sacrum to the axis
omotransverse	*see under* Muscles of the Forelimb				
pectorals	*see under* Muscles of the Forelimb				
pelvic diaphragm	diaphragma pelvis (NAV). *See* levator ani and coccygeus				
preputial mm.	*see* cranial and caudal preputial mm.				

(Continued)

Table 13 Muscles—cont'd

Part 13.2 Muscles of the trunk*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
protractor preputii	*see* cranial preputial m.				
psoas mm.	*see under* Muscles of the Hindlimb				
quadratus lumborum	m. quadratus lumborum (NAV)	the lumbar transverse processes and the last ribs	the ventral surface of the wing of the sacrum	the intercostal and lumbar nerves	the psoas mm. lie ventral to it
rectus abdominis	m. rectus abdominis (NAV)	the caudal part of the sternum and the adjacent costal cartilages	the pubis by means of the prepubic tendon	the intercostal, costoabdominal, and lumbar nerves	tendinous intersections cross the m. transversely
rectus thoracis	m. rectus thoracis (NAV), transverse costarum	the lateral face of the first rib	the ventral ends of the first few ribs	the intercostal nerves	despite its name and position it is not homologous with the rectus abdominis
retractor of the clitoris	m. retractor clitoridis (NAV)	the last sacral or first few caudal vertebrae	partly around the anus; most to the clitoris	the perineal branch of the pudendal nerve	a feeble homolog of the retractor penis
retractor penis	m. retractor penis (NAV)	the last sacral or first few caudal vertebrae	partly around the anus; mostly on the ventral surface of the penis near the preputial fornix	the perineal branch of the pudendal nerve	mostly smooth m.
retractor preputii	*see* caudal preputial m.				
retractor of the ribs	m. retractor costae (NAV)	the transverse processes of the first few lumbar vertebrae	the caudal border of the last rib	the lumbar nerves	it acts as an expiratory m. by drawing the ribs backwards
rhomboids	*see under* Muscles of the Forelimb				
rotators	mm. rotatores (NAV)	the transverse processes of the vertebrae	short and long varieties insert onto the spinous processes of the two vertebrae more cranial to it	medial branches of the dorsal divisions of the segmental spinal nerves	the deepest of the transversospinalis mm.
sacrocaudal mm.	mm. sacrocaudalis ventralis/ dorsalis medialis/ lateralis (NAV)	various parts of the sacral and first few tail vertebrae	various parts of the more distal members of the caudal vertebrae	the sacral and caudal nerves	a series of eight mm. arranged in dorsal and ventral arrays
scalene mm.	*see under* Muscles of the Head and Neck				
semispinalis	m. semispinalis (NAV), semispinal m.	the transverse processes of the vertebrae	the spines of the more cranial vertebrae	the dorsal divisions of the segmental spinal nerves	frequently fused with the spinalis m.; present in thoracic, cervical and capital parts
spinalis	m. spinalis (NAV), spinal m.	the tips of the spines of the verterbae	the spines of the more cranial vertebrae	the dorsal divisions of the segmental spinal nerves	frequently fused with the semispinalis m.
subclavius	*see under* Muscles of the Forelimb				
subcostals	mm. subcostales (NAV)	the caudal borders of the ribs near their vertebral ends	the cranial borders of ribs more than one away from the origin	the intercostal nerves	an occasional derivative of the internal intercostal, e. g. over ribs 9–11 of dogs
supramammary	m. supra-mammarius cranialis/ caudalis (NAV)	the superficial fascia near the xiphoid	passes under the mammae to reach the pubic region	the lateral thoracic nerve	present in the bitch; it is the homolog of the preputial mm. of the male

Table 13 Muscles—cont'd

Part 13.2 Muscles of the trunk*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
tail mm.	*see* sacrocaudal and inter-transverse mm.				
transverse abdominis	m. transversus abdominis (NAV)	the transverse processes of the lumbar vertebrae and the medial surfaces of the asternal ribs	the linea alba and the xiphoid cartilage	the intercostal, costoabdominal and lumbar nerves	the deepest of the abdominal mm. with long fibers
transverse thoracic	m. transversus thoracis (NAV), false skirt	the dorsal surface of the sternum or the sternal ligament	the costal cartilages of most of the true ribs	the intercostal nerves	the m. draws the two halves of the thorax together, thus assisting expiration
transversospinalis	m. transverso-spinalis (NAV)	a complex set of mm. that arise from the spinous, transverse and other processes of the vertebrae	fascicles run between vertebrae that are adjacent to, close to, or at some distance from one another	the medial branches of the dorsal divisions of the segmental spinal nerves	the most medial of the epaxial mm.; made up of the semispinalis, multifidi and rotators
trapezius	*see under* Muscles of the Forelimb				
urethralis	m. urethralis (NAV)	the m. surrounds the pelvic urethra	it is made up of longitudinal and transverse fibers	the perineal branch of the pudendal nerve	it is present in both males and females
ventral serrate	*see under* Muscles of the Forelimb				
vestibular constrictor (of vulva)	m. constrictor vestibuli (NAV)	the m. is a sphincter that lies cranial to the constrictor of the vulva	it is incomplete dorsally	the perineal branch of the pudendal nerve	with the vulvar constrictor it is the homolog of the male bulbo- spongiosus m.
vulvar constrictor	m. constrictor vulvae (NAV)	the m. is a sphincter that is continuous with the external anal sphincter	it lies within the labia	the perineal branch of the pudendal nerve	with the vestibular constrictor it is the homolog of the male bulbo- spongiosus m.

Part 13.3 Muscles of the forelimb*

Muscle	Other names	Origin	Insertion	Innervation	Comments
abductor of digit 2	m. abductor digit II (NAV)	the palmar face of the second metacarpal bone of the pig	the first phalanx of digit 2	the deep branch of the ulnar nerve	one of the stronger intrinsic mm. of the pig's trotter
abductor of digit 5	m. abductor digit V (NAV), abductor digiti quinti	the accessory carpal bone	the lateral sesamoid bone in common with the flexor of digit 5	the deep branch of the ulnar nerve	one of the stronger intrinsic mm. of the paw
abductor digiti quinti	*see* abductor of digit 5				
abductor pollicis brevis	m. abductor digiti I [pollicis] brevis (NAV), short abductor of the thumb	connective tissue at the base of the dewclaw	the medial surface of the proximal phalanx of the dewclaw	the deep branch of the ulnar nerve	the most medial of the three tiny mm. that supply the dewclaw of carnivores
abductor pollicis longus	*see* oblique extensor (of carpus)				
adductor of digit 1	*see* adductor pollicis				
adductor of digit 2	m. adductor digit II (NAV), adductor of the second digit	the flexor retinaculum of the carpus	the lateral surface of the proximal phalanx of digit 2	the deep branch of the ulnar nerve	with the adductor of digit 5 this m. pulls the toes of a paw together
adductor of digit 5	m. adductor digiti V (NAV), adductor of the fifth digit, adductor digiti quinti	the flexor retinaculum of the carpus	the medial surface of metacarpal 5 and the proximal phalanx of digit 5	the deep branch of the ulnar nerve	with the adductor of digit 2 this m. pulls the toes of a paw together
adductor digiti quinti	*see* adductor of digit 5				

(Continued)

Table 13 Muscles—cont'd

Part 13.3 Muscles of the forelimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
adductor pollicis	m. adductor digiti I [pollicis] (NAV), adductor of the thumb	connective tissue at the base of the dewclaw	the lateral side of the proximal phalanx of the dewclaw	the deep branch of the ulnar nerve	the most lateral and stoutest of three special mm. of the dewclaw of carnivores
anconeus	m. anconeus (NAV)	the epicondylar crest and adjacent caudal surface of the humerus	the lateral surface of the olecranon	the radial nerve	a small m. that occupies the space between the triceps and the olecranon fossa
articular m. of shoulder	m. articularis humeri (NAV), capsularis	the caudal rim of the glenoid cavity	the neck of the humerus	the axillary nerve	small and of doubtful function; found in horses and occasionally pigs
biceps	m. biceps brachii (NAV)	the supraglenoid tubercle	the radial tuberosity and the tendon of the radial carpal extensor	the musculo-cutaneous nerve	a biarticular m. that flexes the elbow and extends the shoulder
brachialis	m. brachialis (NAV)	the caudal surface of the proximal half of the humerus	the medial borders of the radius and ulna	the musculo-cutaneous nerve	an exclusive flexor of the elbow
brachiocephalic	m. brachiocephalicus (NAV)	depending on the species, various parts of the nuchal crest, mastoid process, nape and adjacent regions	the distal part of the crest of the humerus between the biceps and the brachialis	the dorsal and ventral branches of the accessory nerve and the axillary nerve	a m. that is divided into two parts by the clavicle or the clavicular tendon; *see* cleidocephalic and cleidobrachial mm.
brachioradialis	m. brachioradialis (NAV), long supinator	the lateral supracondylar ridge of the humerus	the distal end of the radius	the radial nerve	a supinator that is absent from many animals; well developed in the cat, weak in the dog, large in the human arm
capsularis	*see* articular m. of shoulder				
cleidobrachial	m. cleidobrachialis (NAV)	the clavicle or the clavicular tendon and the cleidocephalic m.	the distal part of the crest of the humerus	the accessory and axillary nerves	this m. makes up the distal segment of the brachiocephalic m.
cleidocephalic	m. cleidocephalicus (NAV)	the nuchal crest, mastoid process, nape and adjacent regions depending on the species	the clavicle or the clavicular tendon and the cleidobrachial m.	the accessory nerve	the m. is divided into cervical, mastoid and occipital parts, which were formerly regarded as separate mm.
cleidocervical	m. cleidocervicalis, m. cleidocephalicus pars cervicalis (NAV)	the dorsal midline raphe over the cranial half of the neck	the clavicle or the clavicular tendon and the cleidobrachial m.	the accessory nerve	amongst the domestic animals it is only well developed in cats and dogs
cleidomastoid	m. cleidomastoideus, m. cleidocephalicus pars mastoideus (NAV)	the mastoid process of the temporal bone	the clavicle or the clavicular tendon and the cleidobrachial m.	the accessory nerve	this part of the cleidocephalic is present in all of the domestic mammals
cleidooccipital	m. cleidooccipitalis, m. cleidocephalicus pars occipitalis (NAV)	the nuchal crest and sometimes adjacent regions of the neck	the clavicle or the clavicular tendon and the cleidobrachial m.	the accessory nerve	it is best developed in pigs and ruminants
cleidotrans-versarius	*see* omotransverse				
common digital extensor	m. extensor digitorum communis (NAV)	the lateral epicondylar crest of the humerus; in some, the radius and ulna too	the proximal ends of the distal phalanges of digits 2–5	the radial nerve	in ruminants a distinct medial belly is present that supplies digit 3

Table 13 Muscles—cont'd

Part 13.3 Muscles of the forelimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
coracobrachial	m. coracobrachialis (NAV)	the coracoid process of the scapula	on either side of the tuberosity for the teres major	the musculocutaneous nerve	a small m. that crosses the shoulder and has, presumably, an adductor function
deep digital flexor	m. flexor digitorum profundus (NAV), flexor perforans	the medial epicondyle of the humerus and the medial surfaces of the olecranon and radius; in some species an accessory head from the palmar carpal ligament	the semilunar line on the solar surface of the distal phalanx	the median and/or the ulnar nerve	the accessory head in horses is also called the subcarpal or inferior check ligament
deep pectoral	m. pectoralis profundus (NAV), m. pectoralis ascendents (NAV alternative), ascending pectoral, caudal deep pectoral, minor pectoral (human)	all or most of the sternebrae, the fascia over the xiphoid and the costal cartilages	the greater and lesser tubercles of the humerus	the pectoral nerves	the m. is a strong retractor and adductor of the forelimb; insertions vary between species
deltoid	m. deltoideus (NAV)	the spine of the scapula, the acromion and the clavicle	the deltoid tuberosity and brachial fascia	the axillary nerve	a shoulder flexor and abductor with scapular, acromial and clavicular heads
descending pectoral	m. pectoralis descendens (NAV), cranial superficial pectoral	the manubrium and adjacent parts of the ribs and sternum	the crest of the humerus, and the brachial and antebrachial fascia	the pectoral nerves	this is the most cranial and superficial of the pectorals
digital flexors	*see* deep and superficial digital flexors				
extensor carpi radialis	*see* radial extensor of the carpus				
extensor carpi ulnaris	*see* ulnaris lateralis				
extensor of digit 2	m. extensor digiti II (NAV)	the proximal end of the ulna	it fuses with the tendon of the common digital extensor to the second digit	the radial nerve	readily identifiable in the pig
flexor carpi radialis	*see* radial flexor of the carpus				
flexor carpi ulnaris	*see* ulnar flexor of the carpus				
flexor of digit 2	m. flexor digiti II (NAV)	the deep flexor tendon	the proximal phalanx and adjacent tissue of digit 2	the deep branch of the ulnar nerve	in domestic mammals the m. is only of significance in the pig
flexor of digit 5	m. flexor digiti V (NAV), flexor digiti quinti	the accessory carpal ligament	a common tendon with the abductor of digit 5	the deep branch of the ulnar nerve	one of four short mm. that act on the palmar side of digit 5
flexor digitorum brevis	*see* short digital flexor				
flexor perforatus	*see* superficial digital flexor				
flexor perforans	see deep digital flexor				
flexor pollicis brevis	m. flexor digiti I [pollicis] brevis (NAV), short flexor of the thumb	the connective tissue at the base of the dewclaw	the sesamoid bone at the base of the proximal phalanx	the deep branch of the ulnar nerve	the middle of the three small, short mm. that act on the dewclaw of carnivores
infraspinatus	m. infraspinarus (NAV)	the infraspinous fossa and cartilage of the scapula	the greater tubercle of the humerus	the suprascapular nerve	a stabilizing m. and abductor of the shoulder
interflexors	mm. interflexorii (NAV)	the tendon of the deep digital flexor	the tendon of the superficial digital flexor	the median nerve	a m. with several possible homologs; true function obscure

VetBooks.ir

Table 13 Muscles—cont'd

Part 13.3 Muscles of the forelimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
interosseous	mm. interossei (NAV), suspensory ligament (horse)	the proximal ends of the metacarpal bones	the proximal sesamoid bones and, indirectly, the proximal phalanges and the digital extensor tendons	the ulnar nerve	four mm. in each dog paw; fleshy in carnivores and the pig; mostly fibrous in ruminants and horses
lateral digital extensor	m. extensor digitorum lateralis (NAV), extensor digiti minimi (humans)	the lateral collateral ligament of the elbow and adjacent parts	the proximal ends of the proximal phalanges of digits 3–5, or the tendons of the common extensor at this point	the radial nerve	the number of tendons varies from four in the cat to one in the horse and the human arm
latissimus dorsi	m. latissimus dorsi (NAV), broadest m. of the back	an aponeurosis continuous with the thoracolumbar fascia over the caudal thorax and loins	the teres tubercle or the crest of the lesser tubercle	the thoracodorsal nerve	one of the major retractors of the forelimb; it makes up most of the dorsal fold of the human axilla
lumbricales	mm. lumbricales (NAV)	the abaxial borders of the tendons of the deep digital flexor	the proximal ends of the proximal phalanges of digits 3–5 on the palmomedial side	the deep branch of the ulnar nerve	pale flimsy mm. that lie mostly between the superficial and deep digital flexors
m. of Phillips	extensor of the fourth and fifth digits; the radial head of the common digital extensor	the proximal end of the radius as a separate head of the common digital extensor (in horses)	a tendinous slip off the common digital extensor that joins the tendon of the lateral digital extensor	the radial nerve	its tendon can take on a number of different forms over the metacarpus
m. of Thiernesse	the ulnar head of the common digital extensor	the proximal end of the ulna as a separate head of the common digital extensor (in horses)	a delicate tendon descends on the medial side of the common digital extensor tendon to end on the proximal phalanx	the radial nerve	an uncommon variation of the common digital extensor that may correspond to the extensor of digit 2
oblique extensor (of carpus)	m. abductor digiti I [pollicis] longus (NAV), long abductor of the thumb	the lateral border of the middle of the radius and ulna	the proximal end of metacarpal 1, or 2 in the horse	the radial nerve	the belly is partly covered by the common digital extensor
omotransverse	m. omotrans- versarius (NAV), cleidotrans- versarius	the acromion, the spine of the scapula, or the fascia over the shoulder	the caudal border of the wing of the atlas; in horses the transverse processes of cervical vertebrae 2–4 also	the ventral branches of the cervical nerves	the m. overlies the superficial cervical lymph node, and may fuse with or course deep to the brachiocephalic
pectorals	*see* superficial pectorals, deep pectoral, subclavius				
Phillips' m.	*see* m. of Phillips				
pronator quadratus	m. pronator quadratus (NAV)	the medial interosseous border of the ulna	the medial border of the radius	the median nerve	in carnivores but not in ungulates
pronator teres	m. pronator teres (NAV)	the medial epicondyle of the humerus	the medial border and cranial surface of the proximal radius	the median nerve	in carnivores but not ungulates, in which it is reduced to a ligament
radial extensor of the carpus	m. extensor carpi radialis (NAV)	the lateral epicondylar crest of the humerus	the tuberosities on the proximal ends of the dorsal surface of meta-carpal 3 (and 2)	the radial nerve	long and short heads are recognizable in cats and in some dogs
radial flexor of the carpus	m. flexor carpi radialis (NAV)	the medial epicondyle of the humerus	the proximal end of metacarpal 2 and sometimes metacarpal 3	the median nerve	the m. has a long thin tendon of insertion
rhomboids	mm. rhomboideus thoracis/cervicis/ capitis (NAV)	the occiput, the dorsal midline of the neck and the thoracic spines	the medial surface of the scapular cartilage or the dorsal border of the scapula	the ventral branches of cervical and thoracic nerves	the divisions into parts vary among species; the m. forms the hump of Indian breeds of cattle

Table 13 Muscles—cont'd

Part 13.3 Muscles of the forelimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
short digital flexor	m. flexor digitorum brevis (NAV), palmaris brevis accessorius	the dorsal surface of the superficial digital flexor tendon	the palmar surface of the metacarpo-phalangeal joint of digit 5 (dogs) and digits 3–5 (cats)	the deep branch of the ulnar nerve	only found in carnivores; well developed in cats
subclavius	m. subclavius (NAV), cranial deep pectoral, prescapular part of the deep pectoral	the manubrium and adjacent parts of the sternum and ribs	the cranial border of the scapula and the clavicle	the cranial pectoral nerve or the subclavian nerve	the m. is large in the pig and horse
subscapular	m. subscapularis (NAV)	the subscapular fossa	the lesser tubercle of the humerus	the subscapular nerve	a stabilizing m. and adductor of the shoulder
superficial digital flexor	m. flexor digitorum superficialis (NAV), flexor perforatus	the medial epicondyle of the humerus; in some species there is an accessory head from the distal radius	the proximal extremity of the middle phalanx	the median and/or the ulnar nerve	the accessory head in horses is also called the radial check ligament
superficial pectorals	mm. pectorales superficiales (NAV)	the manubrium and adjacent parts of the ribs and sternum	the crest of the humerus, and the antebrachial fascia	pectoral nerves	these mm. vary between species; *see* the two components: transverse and descending pectoral
supinator	m. supinator (NAV)	the lateral epicondyle of the humerus	the cranial surface of the radius	the radial nerve	this m. is a synergist of the brachioradialis
supraspinatus	m. supraspinatus (NAV)	the supraspinous fossa, spine and cartilage of the scapula	the greater and lesser tubercles of the humerus	the suprascapular nerve	a stabilizing m. and extensor of the shoulder
suspensory lig.	*see* interosseous				
tensor of the antebrachial fascia	m. tensor fasciae antebrachii (NAV)	the latissimus dorsi, especially its ventral border	the olecranon and the deep fascia of the forearm	the radial nerve	a thin broad m. whose action is similar to the long head of the triceps
teres major	m. teres major (NAV)	the caudal angle of the scapula	the teres tubercle	the axillary nerve	it flexes the shoulder and rotates the limb inwards
teres minor	m. teres minor (NAV)	the middle of the caudal border of the scapula	the greater and deltoid tubercles	the axillary nerve	a small m. that flexes the shoulder and rotates the arm outwards
Thiernesses's m.	*see* m. of Thiernesse				
transverse pectoral	m. pectoralis transversus (NAV), caudal superficial pectoral	the manubrium and adjacent parts of the ribs and sternum	the crest of the humerus and the antebrachial fascia	the pectoral nerves	one of the two superficial pectorals
trapezius	m. trapezius (NAV), cucullaris	the dorsal midline raphe and supraspinous ligament from about the third cervical to the tenth thoracic vertebra	the cervical part inserts along the whole scapular spine, the thoracic part only along the proximal part of the spine	the dorsal branch of the accessory nerve	in combination the right and left mm. resemble a shawl or cowl draped over the withers, hence the name cucullaris
triceps—accessory head	m. triceps brachii, caput accessorium (NAV)	the caudal surface of the humerus	the olecranon of the ulna	the radial nerve	it is found in carnivores in which it is surrounded by other heads
triceps—lateral head	m. triceps brachii, caput laterale (NAV)	the tricipital line of the humerus	the lateral side of the summit of the olecranon	the radial nerve	it often merges with the long head
triceps—long head	m. triceps brachii, caput longum (NAV)	the caudal angle and caudal border of the scapula	the summit of the olecranon	the radial nerve	usually the largest head of the triceps; the only head to be biarticular
triceps—medial head	m. triceps brachii, caput mediale (NAV)	the medial surface of the humerus	the medial side of the summit of the olecranon	the radial nerve	often the smallest of the three heads

(Continued)

Table 13 Muscles—cont'd

Part 13.3 Muscles of the forelimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
ulnar carpal extensor	*see* ulnaris lateralis				
ulnar flexor of the carpus	m. flexor carpi ulnaris (NAV)	the medial epicondyle of the humerus and the medial surface of the ulna	the accessory carpal bone	the ulnar nerve	the humeral head is much the larger
ulnaris lateralis	m. extensor carpi ulnaris (NAV), m. ulnaris lateralis (NAV alternative)	the lateral epicondyle of the humerus caudal to the collateral ligament of the elbow	the accessory carpal bone; the fourth or fifth metacarpal bone	the radial nerve	despite its radial innervation and name, in most species it is a flexor of the carpus
ventral serrate	m. serratus ventralis cervicis/thoracis (NAV), the cervical and thoracic ventral serrates	the transverse processes of the last five cervical vertebrae and the first eight to ten ribs	the serrated face of the medial surface of the scapula	the ventral branches of the cervical nerves and the long thoracic nerve	the right and left mm. act together to suspend the cranial part of the trunk like a sling between the forelimbs

Part 13.4 Muscles of the hindlimb*

Muscle	Other names	Origin	Insertion	Innervation	Comments
abductor cruris caudalis	*see* caudal crural abductor				
abductor of digit 1	*see* abductor hallucis				
abductor of digit 2	m. abductor digiti II (NAV)	the plantar face of the second metatarsal bone	the first phalanx of digit 2	the tibial nerve	found in pigs
abductor of digit 5	m. abductor digiti V (NAV), abductor digiti quinti	the calcaneus	the proximal phalanx of digit 5; sometimes its superficial flexor tendon	the tibial nerve	it consists of two parts, and in the dog is partly tendinous
abductor hallucis	m. abductor digiti I [hallucis] (NAV), abductor of the big toe	connective tissue on the plantar surface of the tarsus	the base of the proximal phalanx of digit 1	the tibial nerve	absent from most domestic mammals; occurs in some primates
accessory flexor	*see* quadratus plantae				
accessory gluteal	m. gluteus accessorius (NAV). *See also* piriformis	the gluteal line on the dorsal surface of the ilium	the greater trochanter of the femur	the cranial gluteal nerve	the m. is a deep portion of the middle gluteal; not present in carnivores
adductor	m. adductor (NAV). *See also* short, long and great adductors	the ventral surface of the pelvis and the symphyseal tendon of the gracilis	the rough face of the femur	the obturator nerve	the m. is made up of three or four parts which are variably fused in each species
adductor brevis	*see* short adductor				
adductor of digit 1	*see* adductor hallucis				
adductor of digit 2	m. adductor digiti II (NAV), adductor of the second digit	the plantar surface of the tarsus	the lateral surface of the proximal phalanx of digit 2	the tibial nerve	with the adductor of digit 5 this m. pulls the toes of a paw together
adductor of digit 5	m. adductor digiti V (NAV), adductor of the fifth digit, adductor digiti quinti	the plantar surface of the tarsus	the medial surface of the metatarsal and proximal phalanx of digit 5	the tibial nerve	with the adductor of digit 2 this m. pulls the toes of a paw together
adductor hallucis	m. adductor digiti I [hallucis] (NAV), adductor of the big toe	connective tissue at the distal end of the tarsus	the lateral side of the proximal phalanx of digit 1	the tibial nerve	absent from most domestic species; large in the human foot
adductor longus	*see* long adductor				
adductor magnus	*see* great adductor				
articular m. of hip	m. articularis coxae (NAV), capsularis coxae	the cranial rim of the acetabulum	the proximal end of the femur after passing over the joint capsule	the cranial gluteal nerve	in horses and carnivores; it may have a receptor function

VetBooks.ir

Table 13 Muscles—cont'd

Part 13.4 Muscles of the hindlimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
articular m. of stifle	m. articularis genus (NAV), capsularis genus	the cranial surface of the femur just proximal to the trochlea	with the quadriceps m. onto the tibial tuberosity	the femoral nerve	in carnivores; it may function to tense the pouch of the stifle joint capsule
biceps	*see* biceps femoris and gluteobiceps				
biceps femoris	m. biceps femoris (NAV)	the sacrotuberous ligament and sciatic tuber (all spp): the spinous and transverse processes of the last sacral vertebrae (horses, pigs and ruminants)	the fascia lata crural fascia, patella, patellar ligament, tibia and calcanean tuber	branches of the sciatic nerve: the caudal gluteal nerve and muscular branches of the tibial nerve	the m. is large, complex, and varied between species; it is one of the hamstrings and one of the principal extensors of the hip
caudal crural abductor	m. abductor cruris caudalis (NAV), the tenuissimus	the distal end of the sacrotuberous ligament	the crural fascia on the lateral side	the fibular nerve	a long ribbon-like m. found in dogs and, in more rudimentary form, in cats
caudal tibial	m. tibialis caudalis (NAV)	the caudal surface of the tibia and fibula	the plantar surface of the distal phalanges of the major digits; the medial face of tarsus (carnivores)	the tibial nerve	one of the deep digital flexors except in carnivores in which it is an independent m.
caudofemoral	*see* gluteofemoral				
cranial tibial	m. tibialis cranialis (NAV)	the proximal tibia and crural fascia	the proximal end of metatarsal 3; via the medial (cunean) tendon, tarsal bones 1 and 2 (horse)	the peroneal nerve	the m. is superficial in carnivores but is partly concealed by the long extensor and peroneus tertius in others
deep digital flexors	mm. flexores digitorum profundus (NAV)	the caudal surfaces of the tibia and fibula	the plantar aspect of the distal phalanx of the major digits	the tibial nerve	a composite m. of three parts; *see* lateral and medial digital flexors and the caudal tibial m.
deep gluteal	m. gluteus profundus (NAV)	the shaft of the ilium and the spine of the ischium	the greater trochanter	the cranial gluteal nerve	a small gluteal m. that acts more as an abductor than as a hip extensor
digital flexors	*see* deep, superficial, lateral, medial and short digital flexors, and the caudal tibial m.				
extensor digitorum longus	*see* long digital extensor				
extensor hallucis longus	*see* long extensor of the hallux				
external obturator	m. obturatorius externus (NAV), m. obturatorius externus pars intrapelvina (NAV, ruminants)	the ventral surface of the pelvis around the obturator foramen (all species); the inner surface also in ruminants and pigs	the trochanteric fossa	the obturator nerve	the m. is called external because it lies outside the pelvis despite it lying deeply; the intrapelvic part was formerly known as the internal obturator
fibular mm.	*see* peroneus brevis, longus and tertius				
flexor accessorius	*see* quadratus plantae				
flexor digitorum brevis	*see* short digital flexor				
flexor hallucis brevis	m. flexor digiti I [hallucis] brevis (NAV), short flexor of the big toe	the connective tissue at the base of the dewclaw	the base of the proximal phalanx of digit I	the tibial nerve	only present in carnivores if the hind dewclaw is complete
flexor hallucis longus	*see* lateral digital flexor				

(Continued)

VetBooks.ir

Table 13 Muscles—cont'd

Part 13.4 Muscles of the hindlimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
gastrocnemius	m. gastrocnemius (NAV)	lateral and medial heads from the supracondyloid tuberosities of the distal femur	the calcaneal tuber	the tibial nerve	the major component of the triceps surae
gemelli	mm. gemelli (NAV)	the lateral side of the ramus of the ischium	the trochanteric fossa	the sciatic nerve	the single m. of the domestic mammals is formed from the fusion of two parts
gluteals	*see* accessory, deep, middle and superficial gluteal, gluteobiceps, gluteofemoral and piriformis	the dorsal surface of the ilium and adjacent regions	mostly to the greater and the third trochanters of the femur	the cranial and caudal gluteal nerves	a major group of extensor mm. of the hip that act synergistically with the hamstrings
gluteobiceps	m. gluteobiceps (NAV)	the broad sacrotuberous ligament and the sciatic tuber	the fascia lata, crural fascia, patella, patellar ligament, tibia and calcaneal tuber	the caudal gluteal nerve	the m. represents a fusion of the cranial part of the biceps and the superficial gluteal; in pigs and ruminants
gluteofemoral	m. gluteofemoralis (NAV), caudofemoral, cranial crucial abductor	the second to fourth tail vertebrae	the fascia lata and the patella	the caudal gluteal nerve	amongst the domestic mammals the m. is unique to the cat
gracilis	m. gracilis (NAV)	the symphyseal tendon beneath the pelvic symphysis, in common with the adductor	the fascia over the medial surface of the stifle joint and thus, indirectly, the tibia	the obturator nerve	the m. is broad in the domestic mammals despite its name
great adductor	m. adductor magnus (NAV)	the ventral surface of the pelvis and the symphyseal tendon	the rough face of the femur	the obturator nerve	the largest of the adductors; fused with the short adductor in ruminants and pigs
hamstrings	an informal grouping of mm.; *see* biceps femoris, semi- tendinosus and semimembranosus	various parts of the sacrum, ischium and associated ligaments	the fascia lata, crural fascia, patella, patellar ligaments, tibia and calcaneal tuber (the 'strings')	branches of the caudal gluteal and sciatic nerves	the major group of extensors of the hip that act in concert with the gluteals for forward propulsion
iliacus	m. iliacus (NAV), iliac m.	the ventral surface of the wing of the ilium	the lesser trochanter of the femur	the femoral nerve	a part of the iliopsoas m. that acts to flex the hip joint
iliopsoas	m. iliopsoas (NAV), fillet steak m.	the bodies of most of the lumbar vertebrae and the ventral surface of the wing of the ilium	the lesser trochanter of the femur	the ventral branches of the lumbar nerves	the tender m. of fillet steak; made up of the psoas major and iliacus mm.
interflexors	mm. interflexorii (NAV)	the tendon of the deep digital flexor with the suspensory ligament of the pad	the tendons of the superficial digital flexor, more distally	the tibial nerve	only found in carnivores, in which they are paired (unpaired in the forefoot)
intermediate vastus	m. vastus intermedius (NAV)	the cranial surface of the femur	the patella and thus, indirectly, the tibial tuberosity	the femoral nerve	the least distinct of the three vasti and the smallest of the quadriceps
internal obturator	m. obturatorius internus (NAV)	the inner surface of the pelvis around the obturator foramen	the trochanteric fossa after passing over the lesser sciatic notch	the caudal gluteal nerve	present in horses and carnivores; *see also* the external obturator with which it can be confused
interosseous	mm. interossei (NAV), suspensory ligament (horse)	the proximal ends of the metatarsal bones	the proximal sesamoid bones and, indirectly, the proximal phalanges	the tibial nerve	four mm. in each dog paw; fleshy in carnivores and the pig, mostly fibrous in horses and ruminants
lateral digital extensor	m. extensor digitorum lateralis (NAV)	the lateral collateral ligament of the stifle and adjacent parts	the long digital extensor tendon (horse); middle phalanx of digit 4 (ruminants); the proximal phalanx of digit 5 (carnivores)	the peroneal nerve	the m. lies deep or caudal to the peroneus longus

(Continued)

Table 13 Muscles—cont'd

Part 13.4 Muscles of the hindlimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
lateral digital flexor	m. flexor digitorum lateralis (NAV); formerly called flexor hallucis longus	the caudal surface of the tibia and fibula	the plantar surface of the distal phalanges of the major digits	the tibial nerve	the deepest and largest of the three deep digital flexors
lateral vastus	m. vastus lateralis (NAV)	the cranial and lateral surface of the femur	the patella and thus, indirectly, the tibial tuberosity	the femoral nerve	one of the four components of the quadriceps
long adductor	m. adductor longus (NAV); confused with the short adductor in some texts	the ventral surface of the pubis	the rough face of the femur	the obturator nerve	found independently only in the cat; in others it is fused with the pectineus
long digital extensor	m. extensor digitorum longus (NAV), extensor of digit 3	the extensor fossa of the femur, with the peroneus tertius	the proximal ends of the distal phalanges of digits 2–5	the peroneal nerve	depending on species the m. has one to three bellies and one to four tendons
long digital flexor	*see* medial digital flexor				
long extensor of the hallux	m. extensor digiti I [hallucis] longus (NAV), long extensor of the first digit	the middle part of the fibula	the proximal phalanx of digit 2 (carnivores and pigs); the metatarsals (sheep); the big toe (primates)	the peroneal nerve	absent from cattle and horses
long peroneal	*see* peroneus longus				
lumbricales	mm. lumbricales (NAV)	the abaxial borders of the tendons of the deep digital flexor	the proximal ends of the proximal phalanges of digits 3–5	the tibial nerve	pale mm. of horses and carnivores
medial digital flexor	m. flexor digitorum medialis (NAV); formerly called long digital flexor	the caudal surface of the tibia and fibula	the plantar aspect of the distal phalanx of the major digits	the tibial nerve	the medial component of the deep digital flexors; its tendon joins that of the lateral flexor distal to the hock
medial vastus	m. vastus medialis (NAV)	the cranial and medial surface of the femur	the patella and thus, indirectly, the tibial tubercle	the femoral nerve	one of the four components of the quadriceps
middle gluteal	m. gluteus medius (NAV). *See also* accessory gluteal	the iliac crest, the gluteal surface of the ilium, and (in horses) the aponeurosis of the longissimus lumborum	the greater trochanter of the femur	the cranial gluteal nerve	a large m.; the largest m. of the horse, in which it extends unusually far forward over the loins
obturators	*see* external and internal obturator				
pectineus	m. pectineus (NAV)	the pecten of the pubis and the iliopubic eminence	the medial lip of the rough face of the femoral shaft	the obturator and/or the femoral nerves	a strong spindle-shaped m. that forms the caudal boundary of the femoral canal
peroneus brevis	m. peroneus brevis (NAV), fibularis brevis, short peroneal	the lateral surface of the distal two-thirds of the fibula	the proximal end of the fifth metatarsal	the peroneal nerve	only present in carnivores, even then as a weak m.
peroneus longus	m. peroneus longus (NAV), fibularis longus, long peroneal	the proximal end of the fibula and adjacent regions	after a lateral course it inserts on the first or second tarsals or the first metatarsal	the peroneal nerve	absent from horses; it acts to pronate the foot
peroneus tertius	m. peroneus tertius (NAV), fibularis tertius, third peroneal, femorotarsal tendon	the extensor fossa of the femur	the distal tarsal bones and the metatarsals, varying with species	the peroneal nerve	absent from carnivores, fleshy in pigs and ruminants, and fibrous in horses

VetBooks.ir

Table 13 Muscles—cont'd

Part 13.4 Muscles of the hindlimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
piriformis	m. piriformis (NAV)	the last sacral vertebra and the sacrotuberous ligament	the greater trochanter in common with the middle gluteal m.	the caudal gluteal nerve	this is a separate m. in carnivores; in others it fuses with the middle gluteal
popliteus	m. popliteus (NAV)	the popliteal fossa on the lateral condyle of the femur	caudomedial surface of the tibia	the tibial nerve	a m. concerned with rotating (pronating) the distal limb
psoas major	m. psoas major (NAV)	the bodies of the lumbar vertebrae	the lesser trochanter of the femur	the ventral branches of the lumbar nerves	the larger part of the iliopsoas complex that acts to flex the hip
psoas minor	m. psoas minor (NAV)	the bodies of the last few thoracic and first few lumbar vertebrae	the iliopectineal eminence of the pelvis	the ventral branches of the lumbar nerves	the m. has a shiny tendon that is conspicuous in the abdominal roof
quadratus femoris	m. quadratus femoris (NAV)	the ventral surface of the ischium beneath the sciatic tuber	the caudal surface of the femur near the lesser trochanter	the sciatic nerve	a smaller extensor and supinator of the limb
quadratus plantae	m. quadratus plantae (NAV), m. flexor accessorius (NAV alternative)	the plantar and lateral surfaces of the calcaneus	the tendon of the deep digital flexors	the tibial nerve	this small m. is effectively the tarsal head of the deep digital flexors; only in carnivores
quadriceps	m. quadriceps femoris (NAV). *See also* rectus femoris, and lateral, medial and intermediate vastus mm.	the shaft of the femur (the three vastus mm.) and the body of the ilium (the rectus femoris)	the patella and thus, indirectly, the tibial tuberosity	the femoral nerve	separation into four heads is not always easy
rectus femoris	m. rectus femoris (NAV)	the body of the ilium just in front of the acetabulum	the base of the patella and thus, indirectly, the tibial tuberosity	the femoral nerve	the only biarticular member of the quadriceps; it extends the stifle and flexes the hip
sartorius	m. sartorius (NAV), tailor's m.	the coxal tuber (carnivores) or the iliac fascia and body of the ilium (others)	the fascia over the medial aspect of the stifle	the saphenous nerve or the cranial branch of the femoral nerve	in dogs the m. is divided into cranial and caudal bellies
semimembranosus	m. semi-membranosus (NAV), the semimem	the sciatic tuber (all species); the sacrosciatic ligament (horse)	the medial aspect of the stifle joint	the caudal gluteal and tibial branches of the sciatic nerve	the vertebral head contributes to the rounded rump of the horse
semitendinosus	m. semi-tendinosus (NAV), the semiten	the sciatic tuber (all species); the spinous and transverse processes of the caudal vertebrae (pigs and horses)	the medial aspect of the stifle joint, the tibial crest and the calcaneal tendon	the caudal gluteal and tibial branches of the sciatic nerve	the vertebral head accounts for the rounded rump of the pig and horse; it is one of the hamstrings; not notably tendinous in the domestic mammals
short adductor	m. adductor brevis (NAV); confused with the long adductor in some texts	the ventral surface of the pubic tubercle	the rough face of the femur just distal to the lesser trochanter	the obturator nerve	in ruminants and pigs the m. is fused with the great adductor
short digital extensor	m. extensor digitorum brevis (NAV)	connective tissue over the dorsum of the hock	via the tendons of the long digital extensor to digits 2, 3 and 4	the peroneal nerve	best developed in carnivores and pigs, in which it is divided into three parts
short digital flexor	m. flexor digitorum brevis (NAV)	the dorsal surface of the superficial digital flexor tendons	the tendons of the deep digital flexor: digit 5 in dogs and digits 3–5 in cats	the tibial nerve	only found in carnivores; well developed in cats
short flexor of digit 1	*see* flexor hallucis brevis				
short flexor of the hallux	*see* flexor hallucis brevis				
short peroneal	*see* peroneus brevis				

Table 13 Muscles—cont'd

Part 13.4 Muscles of the hindlimb*—cont'd

Muscle	Other names	Origin	Insertion	Innervation	Comments
soleus	m. soleus (NAV)	the proximal end of the fibula	the calcaneal tendon and tuber	the tibial nerve	absent from dogs, broad in pigs, narrow in most other species
superficial digital flexor	m. flexor digitorum superficialis (NAV)	the supracondyloid fossa of the femur	partly on the point of the hock and mainly on the middle phalanges of weight-bearing digits	the tibial nerve	in horses the m. is mostly fibrous and synchronizes the action of the hock and stifle
superficial gluteal	m. gluteus superficialis (NAV), gluteus maximus (humans). *See also* gluteobiceps	the sacrum and first caudal vertebra, the sacrotuberous ligament, the gluteal fascia and the coxal tuber	the greater trochanter (most species) or the third trochanter (horses)	the caudal gluteal nerve	a small m. in domestic mammals though big in humans, in which it forms most of the buttocks
suspensory lig.	*see* interosseous mm.				
tensor fasciae latae	m. tensor fasciae latae (NAV)	the coxal tuber	the fascia lata	the cranial gluteal nerve	in pigs, horses and ruminants it unites with the superficial gluteal
tenuissimus	*see* caudal crural abductor				
third peroneal	*see* peroneus tertius				
triceps surae	m. triceps surae (NAV), the triceps of the calf	the distal end of the femur and the proximal fibula	the calcaneal tuber on the point of the hock	the tibial nerve	more commonly known as gastrocnemius and soleus
vasti	*see* lateral, intermediate and medial vastus mm.				

Table prepared by John Grandage. NA, Nomina Anatomica; NAV, Nomina Anatomica Veterinaria.

*Some muscles may belong with equal validity to other divisions or subdivisions; most avian and reptilian muscles have been omitted as have most smooth muscles and a few trivial ones.

Table 14 Nerves

Nerve	Other names	Origin	Branches	Type, distribution and comments
abducent n.	n. abducens, (NAV), sixth cranial n.	the pons, beneath the floor of the fourth ventricle		a motor n. to the lateral rectus and rectractor bulbi muscles
accessory n.	n. accessorius (NAV), eleventh cranial n., spinal accessory n., n. of Willis	it has both cranial roots from the medulla and spinal roots from the first few cervical segments of the spinal cord	internal and external, the external further dividing into dorsal and ventral branches	the internal branch contributes to the vagus and hence supplies the palate, pharynx and larynx; the external branch supplies the sleeve of superficial muscles around the neck that includes the trapezius, the brachiocephalic and sternocephalic
accessory palatine n.	n. palatinus accessorius (NAV)	the greater palatine n.		one or more small sensory nn. that traverse minor foramina in the palatine bone to supply parts of the hard and soft palates
acoustic n.	*see* vestibulocochlear n.			
ampullary nn.	n. ampullaris anterior, lateralis and posterior (NAV), n. utriculoampullaris (NAV)	the vestibular n.		the three special sensory nn. from the semicircular canals; the nn. run from the crista of the ampulla of each canal
ansa axillaris (NAV)		the union of the musculocutaneous and axillary nn.		only present in ungulates; just distal to the axillary artery
ansa cervicalis (NAV)	loop of the hypoglossal n.	the ventral division of C1 (cervical n. 1) and sometimes C2 and C3	the loop connects with the hypoglossal n.	the loop apparently contributes motor fibers to some of the strap muscles of the neck

(Continued)

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
antebrachial nn.	*see* caudal and lateral cutaneous antebrachial nn. and cranial and medial cutaneous nn. of the forearm			
auriculopalpebral n.	n. auriculopalpebralis (NAV)	the facial n.	rostral auricular, zygomatic and palpebral branches	the n. contributes to the rostral auricular plexus over the forehead and is motor to some of the ear and most of the eyelid muscles
auriculotemporal n.	n. auriculotemporalis (NAV)	the mandibular n.	the n. of the external acoustic meatus; rostral auricular nn; transverse facial branch	a sensory n. to the ear, temple, cheek and the side of the face; it supplies the guttural pouch (horse), the parotid gland, the external acoustic meatus and the tympanic membrane
axillary n.	n. axillaris (NAV)	the cervical nn. C7 and C8 (and occasionally C6)	after muscular branches it gives off a craniolateral cutaneous n. of the arm and a cranial cutaneous n. of the forearm	the n. supplies most flexors of the shoulder (the teres major and minor and the deltoid muscles) and twigs to the subscapular and brachiocephalic muscles
brachial plexus	plexus brachialis (NAV)	the ventral divisions of cervical nn. C5 to C8 and thoracic nn. T1 and T2	about a dozen large branches to the forelimb and some of its extrinsic muscles	the plexus roots unite in various ways to form trunks and then fasciculi that give rise to the dorsal scapular, subclavian, suprascapular, subscapular, musculocutaneous, axillary, pectoral, long and lateral thoracic, thoracodorsal, radial, median and ulnar nn.
buccal branches	rami buccales (NAV)	the facial n.		the main terminal branches of the facial n. that supply the muscles of expression over the cheeks, lips and muzzle; they should not be confused with the buccal *nerve*, which is sensory
buccal n.	n. buccalis (NAV)	the mandibular n.		a sensory n. to the mucous membrane and skin of the cheek that should not be confused with the motor buccal *branches* of the facial n. (above)
cardiac nn.	nn. cardiaci cervicales/ thoracici (NAV)	mainly from the middle cervical and the thoracic sympathetic ganglia		these nn. provide the sympathetic innervation to the heart; the parasympathetic innervation is supplied by the depressor n. and the cardiac branches of the vagus
caroticotympanic nn.	nn. caroticotympanici (NAV)	the internal carotid plexus	the tympanic plexus	tiny nn. that convey sympathetic fibers to the tympanic plexus
carotid nn.	nn. caroti externi (NAV), n. caroticus internus	the cranial cervical sympathetic ganglion		these fine sympathetic nn. run with the carotid arteries to the carotid plexus
caudal nn.	nn. caudales (NAV), nn. coccygei (NAV alternative), tail nn.	the conus medullaris of the spinal cord	dorsal and ventral branches	there are typically about five pairs of caudal nn. in the domestic mammals; the two primary branches of each unite to form a dorsal and a ventral caudal plexus or trunk; the nn. are motor and sensory to the tail
caudal auricular n.	n. auricularis caudalis (NAV)	the facial n.		one or two nn. leave the facial n. on its emergence from the stylomastoid foramen and supply the platysma and caudal ear muscles

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
caudal clunial nn.	nn. clunium caudales (NAV)	the ventral branches of the sacral nn. usually via the caudal cutaneous femoral n.		sensory nn. over the sciatic tubers that stream out of the ischiorectal fossa
caudal cutaneous antebrachial n.	n. cutaneus antebrachii caudalis (NAV)	the ulnar n.		one of the four sensory nn. of the forearm
caudal cutaneous femoral n.	n. cutaneus femoris caudalis (NAV)	the ventral branches of the first few sacral nn.	the perineal nn. and caudal clunial nn.	the n. supplies the skin around the sciatic tubers and the caudal aspect of the thigh
caudal cutaneous sural n.	n. cutaneus surae caudalis (NAV), lateral plantar cutaneous sural n. (horses)	the tibial n.		a sensory n. to the plantar aspect of the hock and metapodium
caudal gluteal n.	n. gluteus caudalis (NAV)	mainly the sacral roots of the lumbosacral trunk	it supplies branches to the superficial gluteal and piriformis muscles	the n. leaves the lumbosacral trunk after escaping from the pelvis via the greater sciatic foramen
caudal iliohypogastric n.	n. iliohypogastricus caudalis (NAV)	the ventral branch of the second lumbar n., provided there are at least seven lumbar vertebrae	lateral and ventral cutaneous branches	the iliohypogastric n. is duplicated into cranial and caudal nn. in animals with more than six lumbar vertebrae; the n. supplies the muscles and skin over a segment of the flank
caudal laryngeal n.	n. laryngeus caudalis (NAV)	the recurrent laryngeal n.		motor n. to all the intrinsic muscles of the larynx except the cricothyroid
caudal lateral cutaneous n. of the arm	n. cutaneus brachii lateralis caudalis (NAV)	the radial n. as it winds around the brachial groove		this is a sensory n. to the skin just proximal to the elbow on its lateral side; the radial n. gives off several other cutaneous nn.
caudal nasal n.	n. nasalis caudalis (NAV)	the pterygopalatine n.	the nasopalatine n.	a sensory n. that passes through the sphenopalatine foramen to innervate the mucous membrane of the nasal chambers
caudal rectal nn.	nn. rectales caudales (NAV), middle haemorrhoidal n. (for one variant)	the pudendal n. or from the same sacral nn. as the pudendal n.	muscular and cutaneous branches	it may be duplicated and is subject to other variations; it is sensory to the skin of the anus and adjacent regions (with the superficial perineal n.) and is motor to the levator ani
cervical nn.	nn. cervicales (NAV), C1–C8 (mammals)	the cervical spinal cord	a segmental distribution to the neck and to plexuses that supply the ear, diaphragm and forelimb	most mammals have eight pairs of cervical nn. which lie cranially and caudally to the seven cervical vertebrae
cervical plexus	plexus cervicalis (NAV)	the ventral divisions of cervical nn. 1–4	the transverse cervical, great auricular and supraclavicular nn. and the ansa cervicalis	the plexus communicates with the cranial nn. via the ansa cervicalis
ciliary nn.	*see* short and long ciliary nn.			
clunial nn.	nn. clunium craniales/ medii/caudales (NAV)	the dorsal and ventral branches of the sacral nn., and the dorsal branches of the lumbar nn.		these are mainly sensory nn. to the loins, rump, buttocks, and the outside and caudal parts of the thigh; *see* cranial, middle and caudal clunial nn.
cochlear n.	n. cochlearis (NAV)	the vestibulocochlear n.	the spiral ganglion	a special sensory n. that conducts auditory impulses from the spiral ganglion of the cochlea

(Continued)

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
common fibular n.	n. fibularis communis (NAV), n. peroneus communis (NAV alternative), common peroneal n.	the sciatic n. about half way down the thigh	the lateral cutaneous sural n., the deep and superficial fibular nn.	relatively few branches are given off this major termination of the sciatic n. before it divides into its superficial and deep branches just distal to the stifle joint
common peroneal n.	*see* common fibular n.			
cornual n.	ramus cornualis (NAV), cornual branch of the zygomaticotemporal n., horn n., rami cornuales (NAV, goats), cornual branch of the infratrochlear n.	the zygomaticotemporal branch of the zygomatic n. from the maxillary n.; the infratrochlear n. from the ophthalmic n. (goats); the first cervical n. may also contribute	the n. branches before reaching the base of the horn and supplying the corium	the sensory nn. to the horn; the principal n. is accompanied by an artery and vein; in cattle it can be blocked for local anesthesia as it emerges from the temporal fossa about midway between the base of the horn and the postorbital bar; the cornual n. of cattle was formerly thought to be a branch of the lacrimal n.
costoabdominal n.	n. costoabdominalis (NAV), subcostal n. (humans)	the ventral branch of the last thoracic n.	as for the intercostal nn.	this n. closely resembles an intercostal n. but is given a different name because it lies caudal to the last rib rather than between the ribs
cranial nn.	nn. craniales (NAV)	within the cranium	*see* individual nn.	twelve pairs are recognized: *see* olfactory, optic, oculomotor, trochlear, trigeminal, abducent, facial, vestibulocochlear, glossopharyngeal, vagus, accessory and hypoglossal nn.
cranial clunial nn.	nn. clunium craniales (NAV)	the dorsal primary branches of the lumbar nn.		the cranial of three groups of sensory nn. to the rump (= clunes); these nn. supply the skin over the loins and in front of the hip
cranial cutaneous n. of the forearm	n. cutaneus antebrachii cranialis (NAV)	the cranial lateral cutaneous n. of the arm, a branch of the axillary n.		the n. is a continuation of the cranial lateral cutaneous n. of the arm; in the dog it runs with the medial branch of the superficial radial n.
cranial gluteal n.	n. gluteus cranialis (NAV)	mainly the last one or two lumbar and the first sacral nn. via the lumbosacral trunk	it gives off branches to the muscles over the cranial part of the rump	the n. leaves the lumbosacral trunk after escaping from the pelvis via the greater sciatic foramen; it supplies the gluteal and tensor fasciae latae muscles
cranial iliohypogastric n.	n. iliohypogastricus cranialis (NAV)	the ventral branch of the first lumbar n.	lateral and ventral cutaneous branches	the iliohypogastric n. is duplicated into cranial and caudal nn. in animals with more than six lumbar vertebrae; the n. supplies the muscles and skin over a segment of the flank
cranial laryngeal n.	n. laryngeus cranialis (NAV)	the vagus n.	internal and external branches; the depressor n.	the internal branch supplies the mucous membrane lining the larynx while the external supplies the cricothyroid muscle; the depressor n. runs to the heart
cranial lateral cutaneous n. of the arm	n. cutaneus brachii lateralis cranialis (NAV)	the axillary n.	the cranial cutaneous n. of the forearm	this is the sensory termination of the axillary n. that extends along the cranial aspect of the arm
cutaneous colli n.	*see* transverse cervical n.			

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
cutaneous nn. of the forearm	*see* caudal and lateral cutaneous antebrachial nn., and cranial and medial cutaneous nn. of the forearm			
deep branch of the radial n.	n. radialis, ramus profundus (NAV)	the parent radial n. within the brachial groove	muscular branches	a motor n. that plunges into the extensor muscles of the forearm and digit close to their origins near the elbow
deep fibular n.	n. fibularis profundus (NAV), n. peroneus profundus (NAV alternative)	the common fibular n. just distal to the stifle	muscular branches and the dorsal metatarsal nn.	it supplies the long and lateral digital extensors, the cranial tibial and the peroneus tertius muscles; it divides over the hock into lateral and medial branches that supply the short extensor muscles before becoming the dorsal metatarsal nn.
deep perineal n.	n. perinealis profundus (NAV)	the pudendal n., as one branch (ox) or as several branches (dog)		it supplies the striated muscle of the perineum and the skin of the scrotum, prepuce and, in some, the caudal part of the udder
deep peroneal n.	*see* deep fibular n.			
deep petrosal n.	n. petrosus profundus (NAV), deep vidian n.	the carotid artery plexus	the n. of the pterygoid canal	the n. carries postganglionic sympathetic fibers from the cranial cervical ganglion to the greater petrosal n.
deep vidian n.	*see* deep petrosal n.			
deep temporal nn.	nn. temporales profundi (NAV)	the masticatory n.		two or three branches are motor nn. to the temporal muscles
depressor n.	n. depressor (NAV)	the cranial laryngeal n.		the n. runs with the vagus or sympathetic nerves to the myocardium; its stimulation lowers blood pressure
digital nn.	nn. digitales	various nn.		strictly, the digital nn. are any of those nn. to the fingers and toes that are not formed from the common digital nn., i.e. those nn. that are not 'proper digital nn.'
dorsal common digital nn. (forelimb)	nn. digitales dorsales communes (NAV)	the lateral and medial branches of the superficial radial n.; the dorsal branch of the ulnar n.	the proper dorsal digital nn.	these are the superficial nn. over the dorsum of the metapodium; they are called common nn. because they are common to two digits and terminate by dividing into proper digital nn.; carnivores have four, pigs three, ruminants two and horses none
dorsal common digital nn. (hindlimb)	n. digitalis dorsalis communis II/III/IV (NAV)	the superficial and deep fibular nn.	the dorsal proper digital nn.	in the hindlimb these nn. arise mainly from the superficial peroneal n.; they unite with the deeper dorsal metatarsal nn. derived from the deep fibular n.
dorsal metatarsal nn.	n. metatarseus II/III/IV (NAV)	the deep fibular n.		these nn. often unite with the dorsal common digital nn. of the paw
dorsal n. of clitoris	n. dorsalis clitoridis (NAV)	the termination of the pudendal n.		the n. is sensory to the clitoris
dorsal n. of penis	n. dorsalis penis (NAV)	the termination of the pudendal n.		the n. is sensory to the penis and prepuce
dorsal n. of scapula	n. dorsalis scapulae (NAV)	the fifth cervical n.		it supplies motor fibers to the rhomboid muscle

(Continued)

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
dorsal proper digital nn.	nn. digitales dorsales proprii (NAV)	the dorsal common digital nn.		these are the main nn. to the dorsum of the foot formed from the division of the common dorsal digital nn.; they are absent from the horse
dorsal thoracic n.	*see* thoracodorsal n.			
dorsal vagal trunk	truncus vagalis dorsalis (NAV), dorsal esophageal trunk	the right and left vagus nn.	branches to the celiac ganglion, stomach and intestines	this n. with its ventral partner enters the abdomen at the esophageal hiatus and provides the major parasympathetic supply to the alimentary tract
eighth cranial n.	*see* vestibulocochlear n.			
eleventh cranial n.	*see* accessory n.			
ethmoidal n.	n. ethmoidalis (NAV)	the nasociliary n.	lateral and medial nasal branches	the n. enters the cranium via the ethmoidal foramen, escapes again through the cribriform plate to supply sensory fibers to the dorsal part of the nasal chambers
external acoustic meatus n.	n. meatus acustici externi (NAV)	the auriculotemporal n.		it is sensory to the external acoustic meatus and to the tympanic membrane
external spermatic n.	*see* genitofemoral n.			
facial n.	n. facialis (NAV), n. intermediofacialis (NAV alternative), seventh cranial n.	the caudal border of the pons at the lateral extremity of the trapezoid body	the greater petrosal n.; the stapedial n.; the caudal auricular n.; the auriculopalpebral n.; the intermediate n.	a derivative of the second branchial arch; the n. traverses the facial canal in the temporal bone and ramifies over the cheek and temple; a mixed n. whose clinical significance relates to its motor supply to the muscles of facial expression
femoral n.	n. femoralis (NAV)	mainly the ventral branches of the fourth and fifth lumbar nn.	muscular rami and the saphenous n.	it forms within the substance of the iliopsoas and leaves the abdomen with that muscle; it innervates both the iliopsoas and all four heads of the quadriceps but probably has no cutaneous branches (except for its saphenous branch)
fibular nn.	*see* common superficial and deep fibular nn.			
fifth cranial n.	*see* trigeminal n.			
first cranial n.	*see* olfactory nn.			
fourth cranial n.	*see* trochlear n.			
frontal n.	n. frontalis (NAV)	the ophthalmic n.	the frontal sinus n.; the supraorbital n.; the supratrochlear n.	a sensory n. that arises within the orbit and often escapes through the supraorbital foramen to be part of a plexus over the forehead
frontal sinus n.	n. sinuum frontalium (NAV)	the frontal n.		a sensory n. to the frontal sinus
genitofemoral n.	n. genitofemoralis (NAV), external spermatic n.	the ventral branches of the third and fourth lumbar nn.	genital and femoral branches	it is the most cranial n. in the lumbosacral plexus; it supplies the psoas and cremaster muscles, runs through the inguinal canal and supplies the skin and genitalia around the superficial inguinal ring
glossopharyngeal n.	n. glossopharyngeus (NAV), ninth cranial n.	filaments from the side of the medulla	proximal and distal ganglia; the tympanic n.; pharyngeal plexus	a mixed n. that innervates the structures derived from the third branchial arch including the throat muscles and salivary glands; it does so mostly via the pharyngeal plexus (with the vagus)

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
gray rami communicantes	gray communicating branches	from the sympathetic trunk	to the ventral branches of most of the thoracic and lumbar spinal nn.	in some animals it is possible to distinguish these rami (containing postganglionic nonmyelinated sympathetic fibers) from white rami (containing preganglionic myelinated sympathetic fibers), but in many animals both types of fiber are found within the same ramus
great auricular n.	n. auricularis magnus (NAV)	the ventral division of the second cervical n.		a sensory n. to the parotid region and the convex surface of the ear
greater occipital n.	n. occipitalis major (NAV)	the dorsal division of the second cervical n.		it ramifies in the skin of the poll
greater palatine n.	n. palatinus major (NAV)	the pterygopalatine n.	the accessory palatine nn.	a large sensory n. to the hard palate, gums and the floor of the nasal chambers
greater petrosal n.	n. petrosus major (NAV), greater superficial petrosal n.	the facial n.	the n. of pterygoid canal	a mixed n. that consists mainly of taste fibers to the palate and parasympathetic fibers to the lacrimal gland and some mucous glands
greater splanchnic n.	n. splanchnicus major (NAV), the thoracic splanchnic n.	the thoracic sympathetic ganglia excluding the first five and last one or two		it passes from the thorax into the abdomen to end mainly in the celiacomesenteric plexus; it supplies filaments to the thoracic aorta and the adrenal medulla
hypogastric n.	n. hypogastricus (NAV)	the caudal mesenteric ganglion	branches to the pelvic plexus	this n. consists largely of postganglionic sympathetic fibers that are ultimately distributed to the pelvic viscera via the pelvic plexus
hypoglossal n.	n. hypoglossus (NAV), twelfth cranial n.	the caudal part of the medulla	lingual branches	the motor n. to the muscles of the tongue and to the geniohyoid
iliohypogastric n.	n. iliohypogastricus (NAV). *See also* cranial and caudal iliohypogastric nn.	the ventral branch of the first lumbar n.	lateral and ventral cutaneous branches	in animals with six lumbar vertebrae or fewer this n. is not qualified with the adjective cranial or caudal as it is in those with seven; it supplies the muscles and skin over a segment of flank
ilioinguinal n.	n. ilioinguinalis (NAV)	the ventral branch of the second or third lumbar n.	lateral and ventral cutaneous branches	this n. is from the second lumbar spinal n. in animals with six lumbar vertebrae or fewer, and from the third spinal nerve in animals with seven lumbar vertebrae or more; it supplies muscles and skin over a segment of the flank
inferior alveolar n.	n. alveolaris inferior (NAV), mandibular alveolar n.	the mandibular n.	the mylohyoid n.; the mental nn.	the terminal motor and sensory branch of the mandibular n. that ramifies in the lower jaw, its teeth and the lower lip
infraorbital n.	n. infraorbitalis (NAV)	the maxillary n.	alveolar, nasal and labial branches	the sensory n. to the muzzle; it is large in all domestic mammals, especially the pig
infratrochlear n.	n. infratrochlearis (NAV)	the ophthalmic n. or its nasociliary branch	palpebral, sinus and cornual branches	a sensory n. to the medial angle of the eye, third eyelid, lacrimal caruncle, ducts and sac, the frontal sinus and, in horned ruminants, the rostrolateral surface of the base of the horn

(Continued)

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
intercostal nn.	nn. intercostales (NAV), rami ventrales nn. thoracici (NAV)	these nn. are formed from all the ventral branches of the thoracic nn. except for the first and last	the rami communicates; lateral and ventral cutaneous branches; the intercostobrachial n.	the first intercostal n. is only a small portion of the ventral branch of the first thoracic n.; typically each intercostal n. runs adjacent to the pleura with an artery and vein near the caudal border of a rib; the last few nn. also supply part of the flank
intercostobrachial n.	n. intercostobrachialis (NAV)	the lateral cutaneous rami of some of the cranial intercostal nn. plus fibers from the lateral thoracic n.	branches to the skin near the elbow and the omobrachial cutaneous muscle	the n. contains motor fibers (in ruminants and the horse) which are derived from the lateral thoracic n.and supply the omobrachial muscle
intermediate n.	n. intermedius (NAV), Wrisberg's n.	the smaller, sensory root of the facial n.	branches to the geniculate ganglion and the chorda tympani	a special sensory n. for taste from the rostral parts of the tongue (about two-thirds in humans, about four-fifths in domestic mammals) and secretomotor parasympathetic fibers to sublingual, mandibular and other salivary glands
interosseous antebrachial n.	n. interosseus antebrachii (NAV)	the median n.		a small n. that penetrates the interosseous membrane before innervating the pronator quadratus
Jacobson's n.	*see* tympanic n.			
jugular n.	n. jugularis (NAV)	the cranial cervical ganglion		this sympathetic n. sends fibers to the distal ganglion of the glossopharyngeal n. and to the proximal ganglion of the vagus
lacrimal n.	n. lacrimalis (NAV)	the ophthalmic n. joined by the zygomaticotemporal n.		a sensory n. to the upper eyelid that receives secretomotor fibers from the zygomaticotemporal n. which ramify in the lacrimal gland
lateral cutaneous antebrachial n.	n. cutaneus antebrachii lateralis (NAV)	the superficial branch of the radial nerve		this cutaneous n. supplies dorsal and lateral aspects of the forearm; the parent n. also supplies the dorsal aspect of the manus in all species except the horse
lateral cutaneous femoral n.	n. cutaneus femoris lateralis (NAV)	the ventral branch of the third or fourth lumbar n.		this caudal n. of the flank pierces the body wall beneath the coxal tuber and supplies the front and lateral parts of the thigh
lateral cutaneous sural n.	n. cutaneus surae lateralis (NAV), lateral cutaneous n. of the calf	the common fibular n.		a sensory n. to the lateral side of the calf just distal to the stifle joint
lateral palmar n.	*see* palmar nn.			
lateral plantar cutaneous sural n. (horses)	*see* caudal cutaneous sural n.			
lateral pterygoid n.	n. pterygoideus lateralis (NAV)	the mandibular n.		a motor n. to the lateral pterygoid muscle
lateral thoracic n.	n. thoracicus lateralis (NAV)	mainly from the eighth cervical n. and the first thoracic n. via the brachial plexus	branches to the pectoral muscle and to the cutaneous trunci	this is the only motor n. to the cutaneous trunci—its ability to induce twitches in the flank skin is used to assess the integrity of the spinal cord between the brachial plexus and the spinal n. receiving the sensory stimulus

VetBooks.ir

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
least splanchnic n.	n. splanchnicus imus (NAV)	the last thoracic ganglion		an uncommon variant that conveys sympathetic fibers to the renal plexus
lesser palatine n.	n. palatinus minor (NAV)	the pterygopalatine n.		a mainly sensory n. to the soft palate and palatine tonsil; it also contains some autonomic fibers and taste fibers
lesser petrosal n.	n. petrosus minor (NAV)	the tympanic n. via the tympanic plexus		the continuation of the tympanic n. (from the ninth cranial n.) that runs to the otic ganglion and thence to the parotid gland
lesser splanchnic n.	n. splanchnicus minor (NAV)	the last one or two thoracic ganglia		it passes from the thorax into the abdomen to end mainly in the celiacomesenteric plexus with a similar distribution to the greater splanchnic n.; sometimes absent
lingual n.	n. lingualis (NAV)	the mandibular n.	the sublingual n.	the general sensory n. (excluding taste) to the tongue, the floor of the mouth and the gums of the lower jaw
long ciliary nn.	nn. ciliares longi (NAV)	the nasociliary n.		general sensory nn. to the cornea and sympathetic fibers to the dilator of the pupil; two or three pierce the sclera near the optic n.
long thoracic n.	n. thoracicus longus (NAV)	the more cranial roots of the brachial plexus	branches to the ventral serrate muscle	the n. runs along the side of the chest over the ventral serrate muscle
lumbar nn.	nn. lumbales (NAV)	the lumbar part of the spinal cord	dorsal and ventral primary divisions	these are typical segmental spinal nn. distributed to the epaxial muscles and flank; the ventral divisions often have individual names and most contribute to the lumbosacral plexus
lumbar plexus	plexus lumbalis (NAV)	the ventral branches of about the last five lumbar nn.	about five named nn. to the flank, groin, thigh, leg and genitalia, and a contribution to the sacral plexus	the lumbar plexus gives origin to the ilioinguinal, genitofemoral, lateral cutaneous femoral, femoral and obturator nn., and to the lumbosacral trunk to make up the lumbosacral plexus
lumbar splanchnic nn.	nn. splanchnici lumbales (NAV)	the lumbar sympathetic ganglia		these form a variable series of paired nn. that run from the sympathetic trunk to the prevertebral ganglia around the ventral surface of the abdominal aorta
lumbosacral plexus	plexus lumbosacralis (NAV)	the ventral branches of the last five lumbar nn. and the sacral nn.	about 15 nerves are given off to the flank, pelvis, tail, and hindlimb	the plexus roots unite in various ways to form trunks and then fasciculi that give rise to named nn.; *see* lumbar plexus and sacral plexus
lumbosacral trunk	truncus lumbosacralis (NAV)	mainly from the last two or three lumbar and the first two sacral nn.	the cranial and caudal gluteal nn., and the sciatic n.	the largest and most important part of the lumbosacral plexus that continues as the sciatic n.
major palatine n.	*see* greater palatine n.			
major petrosal n.	*see* greater petrosal n.			
mammary nn.	rami mammarii laterales/ mediales (NAV)	from the lateral and ventral branches of the intercostal nn.		these branches of the intercostal nn. only apply to animals with pectoral and abdominal mammary glands

(Continued)

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
mandibular n.	n. mandibularis (NAV)	trigeminal n.	the masticatory n.; the lateral and medial pterygoid nn.; the n. to the tensor tympani; the n. to the tensor of the soft palate; the buccal n.; the auriculotemporal n.; the lingual n.; the inferior alveolar n.	one of the three divisions of the trigeminal n.; it carries both sensory and motor fibers; it carries information from the ear, the side of the face, the temple, the lower jaw, the lower lip and the mouth; it provides the motor supply to the muscles of mastication
mandibular alveolar n.	*see* inferior alveolar n.			
masseteric n.	n. massetericus (NAV)	the masticatory n.		the motor n. to the masseter muscle; it passes over the mandibular notch
masticatory n.	n. masticatorius (NAV)	the mandibular n.	the masseteric n.; the deep temporal nn.	the motor n. to the muscles of mastication made up of the fused masseteric and deep temporal nn.; these may arise separately from the mandibular n.
maxillary n.	n. maxillaris (NAV)	the trigeminal n.	the zygomatic n.; the pterygopalatine n.; the infraorbital n.; the pterygoid canal n.	a sensory division of the trigeminal n. that supplies the lips, gums and teeth of the upper jaw, the muzzle, nose and nasal chambers, and the front of the face below the eyes
medial cutaneous n. of the forearm	n. cutaneus antebrachii medialis (NAV), medial antebrachial cutaneous n.	the musculocutaneous n.	the n. ramifies in the skin of the forearm	this n. is sensory to the medial side of the forearm as far as the carpus in dogs; in horses its territory is more extensive and reaches as far distally as the fetlock
medial palmar n.	*see* palmar nn.			
medial plantar n.	*see* plantar nn.			
medial pterygoid n.	n. pterygoideus medialis (NAV)	the mandibular n.		a motor n. to the medial pterygoid muscle
median n.	n. medianus (NAV)	the more caudal roots of the brachial plexus, typically C8 and T1	the branches vary according to species but typically include an interosseous antebrachial n. and two or more common palmar digital nn.	a large n. from the brachial plexus that innervates the pronators of the forearm and most of the digital flexors (flexor carpi radialis, superficial digital flexor, radial and humeral heads of the deep digital flexor); it is also a major sensory n. to the foot
mental nn.	n. mentalis (NAV, horse, ruminants); nn. mentales (NAV, carnivores, pigs)	the inferior alveolar n.		a sensory n. to the lower lip; in some species (dogs, pigs) there is more than one mental foramen from which the nn. Escape from the mandibular canal
middle clunial nn.	nn. clunium medii (NAV)	the lateral branches of the dorsal primary branches of the sacral nn.		the middle of three groups of sensory nn. to the rump (= clunes); these nn. supply the skin over the hip joint and the lateral side of the upper thigh
middle haemorrhoidal n.	see caudal rectal nn.			
minor palatine n.	*see* lesser palatine n.			
minor petrosal n.	*see* lesser petrosal n.			

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
musculocutaneous n.	n. musculocutaneus (NAV)	cervical nn. C7 and C8 via the brachial plexus; (C5–7 in humans)	proximal and distal muscular branches, the ansa axillaris, and the medial cutaneous n. of the forearm	it supplies motor fibers to the flexor muscles of the elbow (the biceps brachii and the brachialis) and to the coracobrachialis
mylohyoid n.	n. mylohyoideus (NAV)	the inferior alveolar n.		a motor n. to the mylohyoid muscle and the rostral belly of the digastric muscle
nasociliary n.	n. nasociliaris (NAV)	the ophthalmic n.	the n. to the ciliary ganglion; the long ciliary nn.; the ethmoidal n.; the infratrochlear n.	a sensory n. that is the continuation of the parent ophthalmic n. and whose branches supply the nose and medial canthus of the eye (*see* individual nn.)
nasopalatine n.	n. nasopalatinus (NAV)	the caudal nasal n. (from the pterygopalatine n.)		a terminal sensory n. of the maxillary n. that pierces the palatine fissure from the floor of the nose to supply the hard palate
nn. erigentes	*see* pelvic nn.			
ninth cranial n.	*see* glossopharyngeal n.			
obturator n.	n. obturatorius (NAV)	mainly from the ventral branches of the fourth, fifth and sixth lumbar nn.	branches to the adductor muscles of the thigh: i.e. the gracilis, adductor, pectineus and external obturator	the n. is vulnerable to crush injuries from dystocia as it courses adjacent to the shaft of the ilium prior to escaping through the obturator foramen to innervate the adductor muscles
oculomotor n.	n. oculomotorius (NAV), third cranial n.	the ventral surface of the cerebral crus of the midbrain	dorsal and ventral branches; the ciliary ganglion lies on the ventral branch from which short ciliary nn. are given off	the n. divides on entering the orbit: the dorsal branch supplies the dorsal rectus and levator of the upper lid, and the ventral branch supplies the ventral and medial straight and the ventral oblique muscles; it also carries parasympathetic fibers to the ciliary ganglion that are motor to the pupillary sphincter and the ciliary muscle
olfactory nn.	nn. olfactorii (NAV), first cranial n.	the olfactory bulb within the rostral cerebral fossa	about 20 bundles through the cribriform plate	special sensory nonmyelinated nn. to the olfactory mucous membrane supported mainly on the ethmoturbinates
ophthalmic n.	n. ophthalmicus (NAV)	the trigeminal n.	the lacrimal n.; the frontal n.; the nasociliary n.; the infratrochlear n.	the smallest of the three primary divisions of the trigeminal; it is a sensory n. to the eye and orbit, the forehead and parts of the nose
optic n.	n. opticus (NAV), second cranial n.	the optic chiasma		the special sensory n. that mediates vision and runs a sinuous course from the optic disk to the optic chiasma; it is regarded as an outgrowth of the brain and is clothed in meninges
palatine nn.	*see* greater and lesser palatine nn.			
palmar nn. (horses)	n. palmaris medialis/lateralis (NAV), n. digitalis palmaris communis II/III (NAV alternative)	the median and ulnar nn.	the palmar digital nn.	these are the two large sensory nn. of the metacarpal region of the horse found between the digital flexors and the interosseous muscle; they are united in the mid-cannon region by a communicating branch

(Continued)

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
palmar common digital nn.	n. digitalis palmaris communis I/II/III/IV (NAV), medial and lateral palmar nn. (horses)	the terminal divisions of the median and ulnar nn.	the proper palmar digital nn.	these are the superficial nn. over the palmar aspect of the metapodium; they are sensory nn.; the deep nn. are termed palmar metacarpal nn. and include motor fibers
palmar digital nn.	n. digitalis palmaris medialis/lateralis (NAV), proper palmar digital nn.	the medial and lateral palmar nn.	a dorsal branch	the sensory nn. to the horse's foot that begin at the fetlock joint; here they give off the dorsal branch which supplies the dorsum of the pastern and hoof
palmar metacarpal nn.	nn. metacarpei palmares (NAV)	the deep branches of the median and ulnar nn.	muscular branches	these are the deep nn. of the metapodial region
palpebral n branches	*see* auriculopalpebral n.			
pathetic n	*see* trochlear n.			
pectoral nn.	nn. pectorales caudales/craniales (NAV), ventral thoracic nn.	all the roots of the brachial plexus	branches to the pectoral muscles	the nn. are variable; a cranial group supplies the superficial pectoral muscles and a caudal group the deep pectoral muscles
pelvic nn.	nn. pelvini (NAV), pelvic splanchnic nn., nn. erigentes	the ventral branches of the sacral nn.		the nn. are predominantly parasympathetic to the pelvic plexus but also contain a few sympathetic fibers as they become distributed to the pelvic viscera
pelvic splanchnic n.	*see* pelvic nn.			
perineal nn.	*see* superficial and deep perineal nn.			
peroneal nn.	*see* common, superficial and deep fibular nn.			
phrenic n.	n. phrenicus (NAV)	typically the cervical nn. C6 and C7 (horse), C5, C6 and C7 (dog) or C3, C4 and C5 (human)	pericardial branches	the n. provides motor fibers to the diaphragm; its course from the cervical spinal cord reflects the embryological origin of the muscle
plantar nn.	n. plantaris medialis/lateralis (NAV)	the terminal branches of the tibial n.	the plantar common digital nn.	the homolog of the palmar n. of the forelimb
plantar common digital nn.	n. digitalis plantaris communis II/III/IV (NAV), medial and lateral plantar nn. (horses)	the terminal divisions of the medial plantar n. (from the tibial n.)	the proper plantar digital nn.	these are the superficial nn. over the plantar aspect of the metapodium; they are sensory nn.; the deep nn. are termed plantar metatarsal nn.
plantar metatarsal nn.	nn. metatarsei plantares (NAV)	the lateral plantar n. (from the tibial n.)	these nn. unite with the plantar common digital nn.	these are the deep nn. over the plantar aspect of the metapodium
pneumogastric n.	*see* vagus n.			
proper digital nn.	nn. digitales proprii (NAV)	the common digital nn.		the proper digital nn. are derived from the division of a common digital n.; they 'properly' belong to one digit rather than being common to more than one like their parent n.; there are typically four proper digital nn. per digit—two dorsal, two palmar

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
proper palmar digital nn.	n. digitalis palmaris proprius I/II/III/IV/V (NAV)	the common palmar digital nn.		there are typically two of these nn. per digit, the axial and abaxial
pterygoid nn.	*see* lateral and medial pterygoid nn.			
pterygoid canal, n. of	n. canalis pterygoidei (NAV), vidian n.	the greater and deep petrosal nn.		the n. receives parasympathetic and sensory fibers from the greater petrosal n. and sympathetic fibers from the deep petrosal n.; they course in the pterygoid canal to the pterygopalatine ganglion; the ganglion supplies the lacrimal, palatine and nasal glands
pterygopalatine n.	n. pterygopalatinus (NAV)	the maxillary n.	the major and minor palatine nn.; the caudal nasal n.	a short n. that detaches from the maxillary n. in the pterygopalatine fossa, that bears a number of small ganglia, and whose terminal branches supply the palate and the nasal chambers
pudendal n.	n. pudendus (NAV)	usually from all the sacral nn. in the dog (S1–S3), and the more caudal ones (S2–S4) in the horse and ruminants	the deep and superficial perineal nn., some cutaneous nn. and finally the dorsal n. of the penis or clitoris	this is a large n. that is sensory to the perineum, rectum and genitalia, and often motor to the striated muscles of the perineum; its precise form and course vary between species
radial n.	n. radialis (NAV)	mainly the last two cervical and the first thoracic nn. via the brachial plexus	the muscular branch, deep branch and superficial branch (of the radial n.); the caudal lateral cutaneous n. of the arm	one of the largest nn. from the brachial plexus; it provides motor fibers to the extensor muscles of the elbow, carpus and digit, and to the supinators of the paw; it also conveys sensory cutaneous fibers from some lateral and cranial parts of the limb
rami communicantes (NAV)	communicating branches	the ventral branches of most of the thoracic and lumbar spinal nn.	to and from the sympathetic trunk and the spinal nn.	these nerves unite the sympathetic trunks with the central nervous system via the thoracolumbar spinal nerves. *See also* gray and white rami communicantes
recurrent laryngeal n.	n. laryngeus recurrens (NAV)	the vagus n.	tracheal and esophageal branches; caudal laryngeal n.	the n. that embryologically supplies the sixth branchial arch including parts of the larynx, trachea and esophagus; it is sensory as far cranial as the vocal folds and motor to most of the laryngeal muscles; the right n. loops over the right subclavian artery, the left n. around the ligamentum arteriosum
rostral auricular nn.	nn. auriculares rostrales (NAV)	the auriculotemporal n.		a sensory n. to the external ear and adjacent regions of the temple
sacral nn.	nn. sacrales (NAV)	the sacral segments of the spinal cord (usually found within the lumbar part of the vertebral column)	dorsal and ventral branches that leave the sacrum by separate foramina	the ventral divisions contribute to the lumbosacral plexus with both somatic and autonomic components

(Continued)

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
sacral plexus	plexus sacralis (NAV), sciatic plexus	the ventral divisions of the sacral nn. and the lumbosacral trunk	the cranial and caudal gluteal, caudal cutaneous femoral, caudal clunial, sciatic, pudendal, pelvic and caudal rectal nn.	the plexus is rarely considered in isolation—in conjunction with the lumbar plexus it makes up the lumbosacral plexus
sacral splanchnic nn.	nn. splanchnici sacrales (NAV)	the sacral sympathetic ganglia		these form a variable series of tiny paired nn. that run from the sacral sympathetic trunk to form a plexus around the iliac vessels
saphenous n.	n. saphenus (NAV)	the femoral n.	a muscular and a cutaneous branch	the muscular branch supplies the sartorius, the cutaneous branch the craniomedial parts of the thigh, leg, hock and foot
second cranial n.	*see* optic n.			
seventh cranial n.	*see* facial n.			
sciatic n.	n. ischiadicus (NAV), ischiatic n.	mainly the last lumbar and the first sacral nn. via the lumbosacral trunk	it gives off muscular branches to the hamstrings and finally divides into the fibular and tibial nn.	this is the largest n. in the body; it begins at the greater sciatic foramen and courses over the deep gluteal muscle and down the caudal aspect of the thigh, giving twigs to muscles on the way
short ciliary nn.	nn. ciliares breves (NAV)	the ciliary ganglion		about a dozen delicate filaments convey mainly parasympathetic fibers from the ciliary ganglion to the sphincter pupillae and ciliary muscle
sixth cranial n.	*see* abducent n.			
spinal nn.	nn. spinales (NAV)	a series of dorsal and ventral rootlets from the spinal cord	after escaping from the vertebral canal through an intervertebral foramen, each n. divides into dorsal and ventral primary branches (or divisions)	paired nn. arranged serially and segmentally and named (in mammals) according to the vertebra cranial to them (except for the cervical spinal nn. in which the first emerges cranial to and the second caudal to the atlas, the third caudal to the axis, etc.); in birds all spinal nn. are best numbered sequentially from behind the cranium because of difficulties in distinguishing spinal regions
spinal accessory n.	*see* accessory n.			
splanchnic nn.	*see* greater, lesser, least, lumbar and sacral splanchnic nn.			these nn. are all sympathetic nn.; the so-called pelvic splanchnic nn. contain mostly parasympathetic fibers and are now known as the pelvic nn.
stapedial n.	n. stapedius (NAV)	the facial n.		a tiny motor n. to the minute stapedius muscle within the middle ear
subclavian n.	n. subclavius (NAV)	the cervical nn. C5 and C6 via the brachial plexus		the motor n. to the subclavius muscle
subcostal n.	*see* costoabdominal n.			
sublingual n.	n. sublingualis (NAV)	the lingual n.		a sensory n. that supplies the ventral surface of the tongue and the floor of the mouth; it also conveys parasympathetic fibers to the sublingual glands

VetBooks.ir

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
suboccipital n.	n. suboccipitalis (NAV)	the dorsal division of the first cervical n.	to the muscles over the nape	the motor n. supplies some ear muscles, the major and minor straight muscles of the head, and a few other muscles
subscapular n.	n. subscapularis (NAV)	the cervical nn. C6 and C7 via the brachial plexus	to the subscapular muscle	despite its short course the n. is long to allow movement of the forelimb
superficial branch of the radial n.	n. radialis, ramus superficialis (NAV)	the parent radial n. within the brachial groove	the lateral cutaneous antebrachial n.; the common dorsal digital nn.; lateral and medial branches	this sensory n. divides in some species into lateral and medial branches that run down the cranial aspect of the forearm on either side of the cephalic vein
superficial fibular n.	n. fibularis superficialis (NAV), n. peroneus superficialis (NAV alternative)	the common fibular n.	it gives off muscular and cutaneous rami before branching into the dorsal common digital nn.	the n. supplies branches to the lateral digital extensor and the peroneus brevis muscle and terminates as sensory nn. to the dorsum of the paw
superficial perineal n.	n. perinealis superficialis (NAV)	the pudendal n.		the n. is sensory to the skin of the perineal region, including the anus and vulva
superficial peroneal n.	*see* superficial fibular n.			
supraclavicular nn.	nn. supraclaviculares (NAV)	the ventral branch of the fifth or sixth cervical n.	dorsal, middle and ventral branches	these are bundles of cutaneous nn. of variable origin between species that supply the ventral aspect of the caudal neck, the shoulder and pectoral regions
supraorbital n.	n. supraorbitalis (NAV)	the frontal n.		the continuation of the frontal n. that, in the horse, passes through the supraorbital foramen to deliver sensory fibers to the forehead and upper eyelid; not present in ruminants or dogs
suprascapular n.	n. suprascapularis (NAV)	the cervical n. C6 (and C7) via the brachial plexus	to the supra- and infraspinatus muscles	this cranial member of the nn. from the brachial plexus is vulnerable to trauma as it passes over the neck of the scapula—its bruising here causes the condition of 'sweeny'
supratrochlear n.	n. supratrochlearis (NAV)	the frontal n.		a terminal branch of the frontal n. of the pig that carries sensory fibers to the medial corner of the upper eyelid
sural nn.	*see* lateral and caudal cutaneous sural nn.			
sympathetic trunk	truncus sympathicus (NAV), sympathetic chain	preganglionic sympathetic fibers by way of the (white) rami communicantes	postganglionic sympathetic fibers via the (gray) rami communicantes; many named nn.	this is the most conspicuous part of the sympathetic nervous system; paired ganglionated trunks run outside the vertebral canal; the principal nn. that issue from the ganglia are the greater, lesser, least, lumbar and sacral splanchnic nn., the cardiac nn., the vertebral n. and the jugular n.
tail nn.	*see* caudal nn.			
temporal nn.	*see* deep temporal n.			

(Continued)

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
tensor of soft palate, n. of	n. tensoris veli palatini (NAV)	the mandibular n. via the medial pterygoid n.		a motor n. to this muscle
tensor tympani, n. of	n. tensoris tympani (NAV), n. musculi tensoris tympani (NA)	the mandibular n. via the medial pterygoid n.		a motor n. to this muscle
tenth cranial n.	*see* vagus n.			
terminal n.	n. terminalis (NAV)	an olfactory n.? The lamina terminalis, or the hypothalamus, depending on species		the n. is listed under the olfactory nn. yet is regarded by some as a separate entity that supplies the nasal mucosa; it may be an osmoreceptor or a rostral extension of the sympathetic nervous system
third cranial n.	*see* oculomotor n.			
thoracic nn.	nn. thoracici (NAV)	from the thoracic segments of the spinal cord	each n. typically divides into dorsal and ventral (= intercostal) branches; the first two nn. contribute to the brachial plexus	these are paired spinal nn. that are named according to the vertebra that is immediately cranial to them; there are typically 13 pairs in the dog and cat, and 18 pairs in the horse; the primary dorsal branch further divides into lateral and medial branches; *see* intercostal nn.
thoracic splanchnic n.	*see* greater splanchnic n.			
thoracodorsal n.	n. thoracodorsalis (NAV), dorsal thoracic n.	usually the middle root(s) of the brachial plexus (C8)		the n. is motor to the latissimus dorsi muscle; it runs on the medial surface of the muscle
tibial n.	n. tibialis (NAV)	the sciatic n. about half way down the thigh	muscular and cutaneous rami, the caudal cutaneous sural n. and the plantar nn.	this direct continuation of the sciatic n. supplies the caudal muscles of the calf: popliteus, gastrocnemius, soleus and the superficial and deep digital flexors; it terminates as the plantar nn.
transverse cervical n.	n. transversus colli (NAV), transverse colli n., cutaneous n. of the neck	the ventral division of the second cervical n.	cranial and caudal branches	a cutaneous n. that supplies the ventral aspect of the neck and part of the intermandibular space
transverse colli n.	*see* transverse cervical n.			
trigeminal n.	n. trigeminus (NAV), fifth cranial n.	the lateral surface of the pons	the ophthalmic n.; the maxillary n.; the mandibular n.	the largest of the cranial nn.; it is the main sensory n. to the head and has a motor root to the muscles of mastication (those of the mandibular branchial arch of the embryo)
trochlear n.	n. trochlearis (NAV), fourth cranial n., pathetic n.	the n. emerges from the brainstem just behind the caudal colliculus		the most slender of the cranial nn.; it provides the motor fibers to the dorsal oblique muscle of the eye and has the longest intracranial course of all the cranial nn.
twelfth cranial n.	*see* hypoglossal n.			
tympanic n.	n. tympanicus (NAV), Jacobson's n.	the distal (= petrosal) ganglion of the glossopharyngeal n.	the tympanic plexus; the lesser petrosal n.; the caroticotympanic nn.	thought to be a general sensory and parasympathetic n.; it courses in a canal between the petrous and tympanic parts of the temporal bone to reach the tympanic plexus; the plexus, in turn, supplies the middle ear and the parotid gland via the lesser petrosal n.

VetBooks.ir

VetBooks.ir

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
ulnar n.	n. ulnaris (NAV)	the most caudal member of the brachial plexus, receiving most fibers from T1	the caudal cutaneous antebrachial n.; the common digital nn.; a deep branch	a major n. in the brachial plexus that innervates the flexor carpi ulnaris, the ulnar head of the deep flexor and the muscles of the paw; it is sensory to the caudal aspect of the forearm and to the lateral aspect of the manus
utricular n.	n. utricularis (NAV), n. utriculoampullaris (NAV)	the vestibular n.		the n. to the macula of the utricle
vagosympathetic trunk	truncus vagosympathicus (NAV)	the vagus n. and cervical sympathetic trunk		the combined vagus and cervical sympathetic nn. in the neck located within the carotid sheath; in cats the sympathetic trunk remains separate from the vagus
vagus n.	n. vagus (NAV), tenth cranial n., pneumogastric n.	the lateral aspect of the medulla	the cranial and recurrent laryngeal nn.; the dorsal and ventral vagal trunks	a mixed n. that provides sensory fibers to the ear, pharynx and larynx, motor fibers to the pharynx, larynx and esophagus, and parasympathetic and sensory fibers to most of the thoracic and abdominal viscera; the longest of the cranial nn.
ventral thoracic nn.	*see* pectoral nn.			
ventral vagal trunk	truncus vagalis ventralis (NAV), ventral esophageal trunk	the right and left vagus nn.	branches to the stomach and intestines	this n. with its dorsal partner enters the abdomen at the esophageal hiatus and provides the major parasympathetic supply to the alimentary tract
vertebral n.	n. vertebralis (NAV)	the cervicothoracic ganglion		this sympathetic n. follows the vertebral artery of the neck, supplying delicate branches to the spinal nn. and meninges
vestibular n.	n. vestibularis (NAV)	the vestibulocochlear n.	the utricular and ampullary nn.	the vestibular part of the eighth cranial n. that carries sensory information from the semicircular canals, utricle and saccule of the inner ear
vestibulocochlear n.	n. vestibulocochlearis (NAV); eighth cranial n.; acoustic n.	the trapezoid body just caudal to the facial n. and pons	the vestibular n.; the cochlear n.	the short n. that conveys impulses concerned with hearing and balance from the inner ear
vomeronasal n.	n. vomeronasalis (NAV)	the olfactory nn.		delicate nn. to the vomeronasal organ that are thought to mediate a unique gustatory or olfactory sense
white rami communicantes	white communicating branches	the ventral branches of most thoracic and lumbar spinal nn.	to the sympathetic trunk	in some animals it is possible to distinguish these rami (containing preganglionic myelinated sympathetic fibers) from gray rami (containing postganglionic nonmyelinated sympathetic fibers), but in many animals both types of fiber are found within the same ramus

(Continued)

Table 14 Nerves—cont'd

Nerve	Other names	Origin	Branches	Type, distribution and comments
Willis's n.	*see* accessory n.			
Wrisberg's n.	*see* intermediate n.			
zygomatic n.	n. zygomaticus (NAV)	the maxillary n.	zygomaticotemporal and zygomaticofacial branches	the first branch of the maxillary n. in the pterygopalatine fossa; it conveys sensory information from around the lateral corner of the eye and the zygomatic arch
zygomaticotemporal n.	ramus zygomaticotemporalis (NAV)	the zygomatic n.	the cornual n. in luminants	a communicating n. between the zygomatic and the lacrimal nn. that contains secretomotor fibers which ramify in the lacrimal gland

Table prepared by John Grandage. NA, Nomina Anatomica; NAV, Nomina Anatomica Veterinaria.

Table 15 Veins*

Vein	Other names	Destination	Comments
accessory cephalic v.	v. cephalica accessoria (NAV)	it drains into the cephalic v.	this is the superficial v. of the dorsum of the foot that ascends over the carpus to join the cephalic v. in the distal part of the forearm
allantoic v.	*see* umbilical v.		
angular v. of the eye	v. angularis oculi (NAV)	it drains both into the facial v. and the external ophthalmic v.	the v. is of significance for intravenous injection, especially of radiographic contrast agents; the vein's deep communication with the dural venous sinuses enables them to be made radiopaque for diagnostic x-ray purposes; the v. lies subcutaneously rostral to the medial corner of the eye
auricular vv.	*see* ear veins		
axillobrachial v.	v. axillobrachialis (NAV)	it drains into the axillary v.	this v. is a dorsal continuation of the cephalic v. as it reaches the shoulder; it passes caudal to the humerus, receiving tributaries from the triceps before it reaches the axillary v.
azygos vv.	*see* right and left azygos vv., and right and left hemiazygos vv.	the coronary sinus (for the left v.) or the roof of the right atrium (for the right v.)	the azygos system of vv. drains the dorsal thoracic wall; azygos literally means unpaired even though the vv. develop from the paired embryonic cardinal vv.; usually most of one side disappears leaving a single right or left azygos; caudal segments of the other side may persist as a right or a left hemiazygos v.; both right and left azygos vv. are present in ruminants, only the right in carnivores and horses, and usually only the left in pigs
basilar sinus	sinus basilaris (NAV)	this sinus opens into the vertebral venous plexus	the sinus passes through the foramen magnum into the vertebral venous plexuses communicating variously with the more rostral sinuses; in carnivores interbasilar sinuses unite the two
bijugular trunk	truncus bijugularis (NAV)	it drains into the cranial vena cava	this is the short vessel found near the thoracic inlet where the right and left external jugular vv. unite; it is commonly found in horses and pigs; note that the name does not apply, strictly, to the union of internal and external jugulars on one side to form a common trunk, or to the union of the two internal jugulars as occurs in cattle.
bronchial vv.	vv. bronchiales (NAV)	these drain into the azygos v., in some cases via a broncho-esophageal v.	the peripheral part of the bronchial venous drainage empties directly into the pulmonary vv. (diluting its oxygen content infinitessimally); the true bronchial vv. only drain the larger parts of the bronchial tree and empty into the systemic venous system
buccal v.	v. buccalis (NAV)	it drains into the maxillary v., usually via the pterygoid plexus	this vessel is best developed in horses in which it undergoes a remarkable dilatation (sinus v. buccalis—NAV) as it passes beneath the masseter muscle
buccinator v.	*see* deep facial v.		
canal of Schlemm	*see* scleral venous sinus/plexus		

VetBooks.ir

Table 15 Veins*—cont'd

Vein	Other names	Destination	Comments
cardiac vv.	vv. cordis (NAV)	mostly these drain into the right atrium via the coronary sinus; a few open elsewhere	most cardiac vv. run much of their course beneath the epicardium, often as paired companion vv. that flank a radicle of the coronary arteries; *see* great, middle, right, and smallest cardiac vv., and the coronary sinus
caudal vv.	*see* tail vv.		
caudal mesenteric v.	v. mesenterica caudalis (NAV)	it opens into the portal v.	this is the smallest of the principal tributaries of the portal v., carrying venous blood from the descending colon; its tributaries include the middle and left colic vv. and the cranial rectal v.
caudal vena cava	v. cava caudalis (NAV), postcava, inferior vena cava	it leads into the sinus venarum of the right atrium	the most capacious of all the great vv.; it arises from the union of the paired common iliac vv., and runs forwards to the right of the aorta; it makes brief but intimate contact with the liver (receiving the hepatic vv.), pierces the diaphragm at the foramen venae cavae (receiving the cranial phrenic vv.) and finally runs through the caudal thorax in its own fold of pleura (plica venae cavae) to the right atrium; it is often duplicated in diving mammals; it carries the venous return from most of the hind half of the animal
cavernous sinus	sinus cavernosus (NAV)	into the ventral petrosal or basilar sinuses and out of the cranium via several emissary vv.	these are large paired sinuses that flank the pituitary and lie beneath the hypothalamus; they receive venous blood from the orbit that seems to serve as a cooling device for the internal carotid artery (or especially the rete mirabile) that runs through it; the two sinuses are converted into a ring by the intercavernous sinuses
cephalic v.	v. cephalica (NAV)	into the external jugular v. and the omobrachial v. (dogs) or the superficial cervical v. (cats)	this is the large superficial v. of the forelimb, that runs on the cranial aspect of the forearm and arm and that is used routinely for venipuncture in many species; it begins on the medial and palmar side of the paw and is augmented by the accessory cephalic v.; dorsally it passes under the brachiocephalic to reach the jugular (this part was formerly called the distal communicating branch)
cerebellar vv.	vv. cerebelli dorsales/ ventrales (NAV)	these vv. drain into the transverse sigmoid or basilar sinuses	these are fine vessels that, dorsally, run on the surface of the cerebellum and flank the vermis, and, ventrally, run between the cerebellar hemispheres and the medulla
cerebral vv.	vv. cerebri (NAV), veins of the brain	these vv. drain into the dural sinuses	these vv. are unusual in their absence of valves, their lack of accompanying arteries, and their thin walls; *see* dorsal, ventral and great cerebral vv., and cerebellar vv.
coccygeal vv.	*see* tail vv.		
common cardinal v.	v. cardinalis communis (NE), duct of Cuvier	this embryonic v. drains into the sinus venosus of the heart	this v. is the terminal vessel that receives blood from the fetal head and trunk via the precardinal and postcardinal vv.
common iliac v.	v. iliaca communis (NAV)	the confluence of the two vv. forms the origin of the caudal vena cava	the vessel is formed from the union of the internal and external iliac vv. (they normally remain separate in the arterial system)
cornual v.	v. cornualis (NAV)	this v. empties into the maxillary v.	the v. receives blood from the horn via dorsal and ventral branches; these unite near the base of the horn and pass along the border of the temporal line
coronary sinus	sinus coronarius (NAV)	this opens into the right atrium just ventral to the entrance of the caudal vena cava	the sinus serves as the terminal vessel for most of the venous drainage of the heart; it runs in the caudal part of the coronary groove and receives the great and middle cardiac vv.; its origin is indicated by the receipt of the left azygos v. (pigs and ruminants) or the left oblique atrial v. (horses and carnivores); its atrial opening is guarded by a valvular flap, most obvious in horses
cranial mesenteric v.	v. mesenterica cranialis (NAV)	this opens into the portal v.	the largest of the tributaries of the portal v.; it typically receives drainage from the caudal pancreaticoduodenal, jejunal, ileal, ileocolic, cecal and sometimes the right and middle colic vv.
cranial phrenic vv.	vv. phrenicae craniales (NAV)	these vv. drain straight into the caudal vena cava	these vv. are conspicuous within the tendinous center of the diaphragm where they are odd because they are obliged to adopt a highly flattened form

(Continued)

Table 15 Veins*—cont'd

Vein	Other names	Destination	Comments
cranial rectal v.	v. rectalis cranialis (NAV)	this drains mainly into the caudal mesenteric v.	this v. is of interest because it forms a link between the systemic vv. represented by the middle and caudal rectal vv. and the portal vv. with which it makes most connection; obstruction to portal blood flow may thus dilate the rectal vv.; moreover it indicates that drugs administered per rectum may be absorbed into the systemic circulation and can bypass the liver
cranial vena cava	v. cava cranialis (NAV), precava, superior vena cava	this v. drains directly into the sinus venarum of the right atrium	this becomes the widest vein of the body as it drains into the heart; it is valveless and is formed from the union of the two external jugular vv. (horses), from all four jugulars (cattle) or from the two brachiocephalic vv. (dogs and pigs); it may also receive costocervical, vertebral, internal thoracic and right azygos vv.
deep facial v.	v. profunda faciei (NAV), reflex v., buccinator v.	the v. drains into the facial v. rostrally and various other vessels on its course to the pterygopalatine fossa	this v. unites the superficial and deep set of facial vv.; in the horse it dilates to form a sinus (sinus v. profundae faciei—NAV), which is the middle of the three large venous sinuses of the horse's cheek; their position beneath the masseter muscle suggests they serve as a reservoir for blood that can be emptied by muscular contraction
diploic vv.	vv. diploicae (NAV)	usually these vv. drain into the sagittal sinus but there are variations	these are vv. that drain the diploe or marrow of the bones of the skull roof; three are named: the frontal, parietal and occipital diploic vv.
dorsal cerebral vv.	vv. cerebri dorsales (NAV)	they open into the dorsal group of dural sinuses, especially the dorsal sagittal sinus	these form a series of paired vessels on the dorsal surface of the cerebral cortex; they are not necessarily symmetrical
dorsal petrosal sinus	sinus petrosus dorsalis (NAV)	it opens into the transverse sinus	this paired sinus runs caudodorsally from the region of the piriform lobe into the transverse sinus, coursing in the root of the tentorium cerebelli
duct of Cuvier	*see* common cardinal v.		
ductus venosus (NE)		it opens into the caudal vena cava with the hepatic vv.	this is a fetal vessel within the substance of the liver that unites the umbilical v. with the caudal vena cava, thus allowing oxygenated placental blood to bypass the liver; it is present in all young embryos but becomes vestigial in the horse and pig; even in other species it tends to become reduced towards the end of gestation; it is obliterated shortly after birth
dural sinuses	sinus durae matris (NAV), dural venous sinuses, sinuses of the dura mater	all the sinuses ultimately open into emissary vv. that convey the blood through cranial foramina to the internal jugular, vertebral and maxillary vv. and to the vertebral venous plexuses	dural sinuses mostly occupy spaces between adjacent leaves of dura mater, especially between the periosteal and meningeal sheets; they are typically divided into dorsal and ventral sets that have limited communication with each other; they serve as vessels into which cerebral vv. empty and into which some extracranial veins from the orbit also drain; being valveless, flow can be in either direction; some are invaginated by arachnoid granulations for the drainage of cerebrospinal fluid; for individual sinuses *see the dorsal set*: sagittal, transverse, temporal, sigmoid, dorsal petrosal and straight sinuses; *the ventral set*: basilar, ventral petrosal, cavernous and intercavernous sinuses
ear vv.	auricular vv.	these typically drain into the maxillary v.	several auricular vv. run mostly over the caudal surface of the earflap; depending on the species there are lateral, intermediate, medial and rostral vv.; these and the deep auricular v. empty into the maxillary v. either via the caudal auricular or the superficial temporal vv.; in some species (e.g. rabbits, elephants) these vv. serve for cooling; the lateral and medial vv. run near the margin of the helix and are useful for venipuncture in rabbits and pigs; the lateral auricular is the v. of choice in pigs
emissary vv.	vv. emissariae (NAV)	these vv. unite the dural venous sinuses with several extracranial vv. such as the ophthalmic plexus, internal jugular v., vertebral v. and various tributaries of the maxillary v.	the emissary vv. allow venous blood within the cranium to escape through about twenty cranial foramina to enter the extracranial vv.; they include the mastoid and occipital emissary vv., the emissary vv. of the carotid and hypoglossal canals and of the jugular, oval, orbital, retroarticular, round and orbitorotund foramina, and the emissary v. of the foramen lacerum; emissary vv. are without valves and can convey blood either centrally or peripherally

VetBooks.ir

VetBooks.ir

Table 15 Veins*—cont'd

Vein	Other names	Destination	Comments
esophageal vv.	vv. esophageae (NAV)	most drain into the azygos v., in some cases via a broncho-esophageal v., and into a tributary of the portal v.	the esophageal vv. serve as a watershed between drainage via the systemic and portal systems; any obstruction of the portal blood flow may cause enlargement or varicosities of the thoracic esophageal vv.
external jugular v.	v. jugularis externa (NAV)	it drains into either a brachiocephalic v. (dogs, some pigs) or a bijugular trunk (cattle, horses) before becoming the cranial vena cava	this is the principal venous pathway from the head in domestic mammals; the v. mostly runs subcutaneously in the jugular groove of the neck (which usually lies between the sternocephalic muscle ventrally and the brachiocephalic dorsally); it is the vessel of choice for venipuncture in large animals; it arises from the confluence of the linguofacial and maxillary vv.
external vertebral plexus	plexus vertebralis externus dorsalis/ ventralis (NAV)	the plexus unites with the internal vertebral plexus and a variety of local extravertebral vv.	this plexus is located just outside the intervertebral foramina, and is not well developed in domestic mammals except in the cervical region; its function complements that of the more important internal vertebral plexus
great cardiac v.	v. cordis magna (NAV)	it drains into the coronary sinus	this v. takes most of the coronary venous return; it arises at the apex of the heart, ascends the paraconal ventricular groove and runs in the caudal part of the coronary groove to open into the coronary sinus and right atrium
great cerebral v.	v. cerebri magna (NAV)	it drains into the straight sinus	the unpaired v. is the channel for venous return from the deep structures of the cerebrum; its tributaries include the v. of the corpus callosum (v. corporis callosi—NAV) and various internal cerebral vv. (vv. cerebrae internae—NAV) that receive blood from the thalamus, choroid plexuses, etc.
great saphenous v.	*see* medial saphenous v.		
hepatic vv.	vv. hepaticae (NAV)	drain directly into the caudal vena cava	these vessels lie totally within the liver parenchyma and open directly into the vena cava as it passes adjacent to or through the liver; it is possible to identify right, left and middle vv. from the individual lobes
hepatic portal v.	*see* portal v.		
hepatic sinus		it lies within the caudal vena cava	this is a large dilation of the caudal vena cava and the hepatic veins where they become confluent just caudal to the diaphragm in diving mammals; the sinus works as a temporary reservoir during dives when venous return is restricted by the caval sphincter located just cranial to it
hyoid arch	arcus hyoideus (NAV)	it unites right and left lingual or linguofacial vv.	this is a superficial vessel that runs transversely across the throat; it is not present in the horse
intercavernous sinuses	sinus intercavernosi (NAV)	these sinuses open laterally into the two cavernous sinuses	the intercavernous sinuses cross in front of and behind the pituitary gland, forming a vascular ring
internal jugular v.	v. jugularis interna (NAV)	it usually drains into the external jugular v. (carnivores, pigs) or into the bijugular trunk (cattle)	this is a small v. in domestic mammals, although the largest vein of the neck in humans; it is absent from sheep and horses; after emerging from the hypoglossal canal it runs most of its course down the neck in company with the common carotid artery in the carotid sheath
internal vertebral plexus	plexus vertebralis internus ventralis (NAV), vertebral venous sinuses, longitudinal vertebral sinuses	this plexus is united with the extravertebral vv. at every intervertebral foramen	these paired, thin-walled, valveless sinuses run the length of the vertebral canal on its floor in the epidural fat; they drain the vertebrae and spinal cord but more importantly serve as an alternative venous pathway for blood returning to the heart, especially when local pressure changes (e.g. a twisted neck or compressed abdomen) compromise the orthodox route; *see* intervertebral vv.
intervertebral vv.	vv. intervertebrales (NAV)	these vv. unite the internal and external vertebral plexuses	these paired vv. pass through the intervertebral foramina along the whole spine; they unite vv. such as the vertebral and azygos vv. and caudal vena cava with the internal vertebral plexus, thus allowing an alternative route for venous return when the extravertebral vv. are compressed
jugular vv.	*see* internal and external jugular vv.		the term jugular by itself (without the adjective internal or external) usually refers to the larger vessel, i.e. the external jugular in domestic mammals or the internal jugular in humans

(Continued)

Table 15 Veins*—cont'd

Vein	Other names	Destination	Comments
lateral saphenous v.	v. saphena lateralis/ parva (NAV), small saphenous v.	it empties into the distal caudal femoral v. (carnivores) or the medial circumflex femoral (pigs and ruminants)	this v. is conspicuous in dogs as it runs proximally in the subcutaneous tissue above the hock; though it is a prominent vein, its flexuous course and its loose tethering to the skin make it less than ideal for venipuncture; it anastomoses with the medial saphenous v. and usually has cranial and caudal tributaries; the v. is small in horses
left azygos v.	v. azygos sinistra (NAV)	it opens into the coronary sinus	this v. receives drainage from the intercostal vv. above and caudal to the heart and from the esophageal and bronchial vv; its extent varies and it often arises caudal to the diaphragm, which it pierces through the aortic hiatus; it is found only in ruminants and pigs
left hemiazygos v.	v. hemiazygos sinistra (NAV)	it drains into the right azygos v.	a caudal remnant of the left cardinal vv.; found only in horses and carnivores
maxillary v.	v. maxillaris (NAV)	it drains into the external jugular v.	this is one of the two principal tributaries of the jugular v.; it receives much of the drainage from the face and begins in most species as a plexus of vv., the pterygoid plexus
medial saphenous v.	v. saphena medialis/ magna (NAV), great saphenous v.	it opens into the femoral v.	this is a large v. that runs on the medial side of the shank and thigh; it receives venous drainage from its cranial and caudal branches which pass over the flexor and extensor aspects of the hock respectively; the branches are fed in turn by the dorsal common digital vv. and medial and lateral plantar vv., there is communion between the great saphenous and the lateral saphenous vv. as well as with the deep vv.
median cubital v.	v. mediana cubiti (NAV)	it drains into the cephalic v.	this v. is located over the flexor surface of the elbow; it unites the median v. with the cephalic v.
middle cardiac v.	v. cordis media (NAV)	it drains into the terminal part of the coronary sinus	this v. arises near the apex of the heart and ascends the subsinuosal interventricular groove
milk v.	v. mammaria cranialis (NAV), v. epigastrica caudalis superficialis (NAV), subcutaneous abdominal v.	it drains into both the external pudendal v. and, via the milk well, into the internal thoracic v.	the name of this v. is applied particularly to that of the lactating cow in which it is grossly distended, varicose and conspicuous as it runs its tortuous subcutaneous course on the floor of the abdomen from the udder forwards; it develops from the cranial and caudal superficial epigastric vv. whose delicate anastomoses during youth become grossly distended with the first calving; valves become incompetent and venous flow is directed cranially (even along the caudal part which formerly only conducted caudally); the v. is important for venipuncture in cows
omobrachial v.	v. omobrachialis (NAV), communicating branch of the cephalic v.	it drains into the external jugular v.	this v. unites the cephalic v. of the forelimb with the external jugular v.; it runs superficially over the deltoid and brachiocephalic muscles to reach the jugular v. in its furrow; only in carnivores
omphalomesenteric v.	*see* vitelline v.		
ophthalmic plexus	plexus ophthalmicus (NAV)	this plexus drains into both the cavernous sinus and tributaries of the facial v.	this plexus is found within the periorbita, and is made up of the dorsal and ventral external ophthalmic vv. that communicate both centrally with the dural sinuses and peripherally with the facial vessels; its drainage area corresponds to that supplied by the external ophthalmic artery
ovarian v.	v. ovarica (NAV)	into the renal v., caudal vena cava, or common iliac v.	the v. tends to terminate more cranially in carnivores, especially on the left, and more caudally in ruminants; the v. is plexiform as it passes over the ovarian a., and somewhat resembles the pampiniform plexus in the male; it may serve for transvascular hormonal exchange
pampiniform plexus	plexus pampiniformis (NAV)	the plexus unites into a single testicular v.	the plexus consists of a large number of delicate venules that intimately embrace the tortuous testicular a.; the arrangement serves for heat exchange and the maintenance of a cool testicular blood supply
petrosal sinuses	*see* dorsal and ventral petrosal sinuses		

VetBooks.ir

Table 15 Veins*—cont'd

Vein	Other names	Destination	Comments
portal v.	v. portae (NAV), v. portae hepatis (NA), hepatic portal v.	into the liver at its porta, where it divides into interlobar and interlobular vv.	this v. conveys blood from the capillary bed of the abdominal digestive organs to a secondary capillary (sinusoidal) bed within the liver; it provides the so-called functional circulation (80% of the volume) to the liver; its tributaries typically include the splenic v. (corresponding to the supply from the celiac a.), and the cranial and caudal mesenteric vv.; its terminal course is within the lesser omentum ventral to the epiploic foramen
pterygoid plexus	plexus pterygoideus (NAV)	this plexus drains into the maxillary v.	this is a complex set of vessels lying lateral to the medial pterygoid muscle; it frequently unites with the ophthalmic plexus and receives drainage from many vv. including the masseteric, palatine, buccal, pharyngeal and deep temporal vv.
pulmonary vv.	v. pulmonales (NAV)	these vv. drain into the left atrium	these vessels lie mostly within the substance of the lung and convey oxygenated blood from the pulmonary alveolar capillaries to the heart; they run either with the bronchi (cattle) or, for part of the course, intersegmentally (sheep, dogs, pigs and horses); they typically run on the medial sides of the bronchi, are valveless and also carry some of the bronchial venous drainage; they open via five to eight ostia into the left atrium
reflex v.	*see* deep facial v.		
renal v.	v. renalis (NAV)	it opens directly into the caudal vena cava	the left renal v. is longer than the right because it has to cross the aorta to reach the caudal vena cava; in carnivores it often receives the ovarian or testicular v. as well as the adrenal vv.
renal portal v.	v. portalis renalis caudalis/cranialis (NAA)	this v. opens into the common iliac v., the caudal mesenteric v. and the kidney tissue itself	a renal portal system is found in vertebrates other than mammals and is derived from the embryonic postcardinal vv.; venous blood from the hind part of the body is transported to the kidneys by the renal portal v. to complement the supply from the renal arteries; in birds, cranial and caudal renal portal vv. receive blood from the external iliac v. and channel it into the kidneys by afferent renal branches; a direct connection between the portal v. and the common iliac v. is retained and guarded by a portal valve that regulates blood flow to the kidneys; some renal portal flow can also bypass the kidneys via connections with the caudal mesenteric v. and the vertebral venous sinuses
right azygos v.	v. azygos dextra (NAV)	it opens into the roof of the right atrium near the junction with the cranial vena cava	this v. drains the intercostal vv. and is formed from the embryonic postcardinal v.; it arises within the abdomen, passes through the aortic hiatus and may receive a left hemiazygos v. (horses and dogs); in ruminants it drains a more limited area; it is usually absent from pigs
right cardiac vv.	vv. cordis dextrae (NAV), vv. cordis anteriores (NA), small cardiac vv.	these vv. drain by a common vessel into the right atrium	these form a series of small vessels that drain the myocardium of the right ventricle and open through orifices into the right atrium between the pectinate muscles
right hemiazygos v.	v. hemiazygos dextra (NAV)	it drains into the left azygos v.	the caudal remnant of the right cardinal vv., it is found only in ruminants and pigs and drains the caudal part of the dorsal thoracic wall
sagittal sinuses	sinus sagittalis dorsalis/ventralis (NAV)	the sinus terminates at the transverse sinus	this unpaired dural sinus runs in the midline within the falx cerebri; in animals with large brains there are usually dorsal and ventral sinuses; the wall is pocked by lateral lacunae for the invagination of arachnoid granulations
Schlemm's canal	*see* scleral venous sinus/plexus		
scleral venous sinus/plexus	sinus venosus sclerae (NAV), plexus venosus sclerae (NAV), Schlemm's canal	the sinus drains into the anterior ciliary vv.	this annular sinus is found within the sclera near the corneoscleral limbus; when it is predominantly a single vessel it is known as a sinus (as in some primates), and when composed of multiple vessels, as a plexus (domestic mammals); it drains the effluent aqueous humor which reaches it from the anterior chamber through the spaces of the corneoiridial angle

(Continued)

Table 15 Veins*—cont'd

Vein	Other names	Destination	Comments
sigmoid sinus	sinus sigmoideus (NAV)	this sinus empties into the emissary v. of the jugular foramen	this dural sinus is one of the two main effluent passages for the transverse sinus; it runs an S-shaped course around the petrous temporal bone before entering the emissary v. of the jugular foramen
small cardiac vv.	*see* right and smallest cardiac vv.		
smallest cardiac vv.	vv. cordis minimi (NAV), thebesian vv.	these vv. drain by numerous openings into all four heart chambers	these tiny vv. open directly into the heart chambers from the myocardium; in the left ventricle the venous blood they discharge dilutes (by a small amount) the oxygenated blood from the lungs
small saphenous v.	*see* lateral saphenous v.		
splenic v.	v. lienalis (NAV)	this drains into the portal v.	this vessel is typically one of the three or four main tributaries of the portal v.; it receives pancreatic, left gastric, left gastroepiploic, short gastric and caudal esophaeal tributaries
spur v.	*see* superficial thoracic v.		
straight sinus	sinus rectus (NAV)	this sinus usually empties into the sagittal sinus near its junction with the transverse sinus	this dural sinus is the direct continuation within the dura of the great cerebral v.; it thus collects blood from the deeper cerebral structures
superficial thoracic v.	v. thoracica superficialis (NAV), spur v. (horses)	it drains into the axillary v. (cattle) or the thoracodorsal v. (horses)	this v. has no arterial companion; in horses its conspicuous course in the subcutaneous tissue of the ventral thorax has prompted its common name 'spur vein'
tail vv.	v. caudalis mediana/ lateralis/etc. (NAV), caudal vv., coccygeal vv.	these vv. drain mostly into the median sacral and caudal gluteal vv.	there are several veins draining the tail; the main ones in carnivores are the lateral tail vv.; in cattle the large, unpaired, median tail v. is used for tail bleeding—it runs in the ventral midline adjacent to the artery (to the left or right) as far as the fourth caudal vertebra and thereafter it lies deep (dorsal to) the artery
temporal sinus	sinus temporalis (NAV)	this sinus empties into the emissary v. of the retroarticular foramen	this dural sinus is one of the two main effluent passages for the transverse sinus; it runs most of its course within the temporal canal (if present) or temporal meatus, before entering the emissary v. of the retroarticular foramen
testicular v.	v. testicularis (NAV), internal spermatic v.	it drains into the renal v. in most dogs and some others, or into the caudal vena cava or common iliac v.	the v. terminates more caudally in ruminants and more cranially in carnivores; its tributaries run over the surface of the testis before forming a dense, intricate pampiniform plexus over the testicular a. in the distal part of the spermatic cord
thebesian vv.	*see* smallest cardiac vv.		
transverse cubital v.	v. transversa cubiti (NAV), distal collateral radial v.	it drains into neighboring vv. such as the cephalic v.	a small vessel that crosses the flexor aspect of the elbow, proximal to the medial cubita v.
transverse facial v.	v. transversa faciei (NAV)	it drains into the superficial temporal v.	this v. is unusually dilated in the horse to form a sinus (sinus v. transversae faciei—NAV) just ventral to the facial crest beneath the origin of the masseter muscle
transverse sinus	sinus transversus (NAV)	this sinus opens into two others, the temporal and sigmoid sinuses	this large dural sinus runs transversely between the cerebral and cerebellar hemispheres; it is housed within the transverse canal (or groove) in the roof of the cranium; it begins in the midline at the confluence of the sinuses (where straight and sagittal sinuses meet) and more laterally is joined by the dorsal petrosal sinus
umbilical v.	v. umbilicalis (NE), allantoic v.	it opens into the ductus venosus, the left lobe of the liver, and into the right lobe of the liver with the portal v.	this fetal vessel conducts oxygenated blood from the placenta to the fetus; its placental tributaries unite into paired vessels that wind round the umbilical cord parallel to the umbilical arteries (ruminants and carnivores) or surrounded by them (pigs and horses) to join into a single vessel at the navel (the right v. degenerating in the early embryo); the left v. runs in the free margin of the falciform ligament to the umbilical fissure of the liver where, after detaching branches to the left lobe, it unites with the ductus venosus and portal v.; the v. has a thick wall resembling an artery; after birth its lumen obliterates and it gradually atrophies to become the round ligament of the liver or disappear altogether

VetBooks.ir

Table 15 Veins*—cont'd

Vein	Other names	Destination	Comments
ventral cerebral vv.	vv. cerebri ventrales (NAV)	these usually drain into the dorsal petrosal sinus	there is often only one of these; it drains the cortex of the temporal lobe
ventral petrosal sinus	sinus petrosus ventralis (NAV)	it unites the cavernous sinus with the sigmoid or basilar sinuses and communicates with several emissary vv.	this paired sinus runs caudally on the floor of the cranium from the cavernous sinus to adjacent sinuses; in the dog it contains the carotid artery
vertebral plexuses	*see* internal and external vertebral plexus		
vitelline v.	v. vitellina (NE), omphalomesenteric v.	this v. drains initially into the sinus venosus of the heart and later into the portal vein	this is an embryonic v. that carries nutrients from the yolk sac to the liver and heart; in the early embryo the paired vv. run to the sinus venosus of the heart; they course through the septum transversum and the liver anlage and, as the yolk sac declines in importance, lose parts of the left and right vessel and become modified to form part of the portal v.; they are of more sustained importance in birds and reptiles which have large heavy yolks
vorticose vv.	vv. vorticosae (NAV)	these vv. drain into the ophthalmic plexus	there are usually about four of these vv. that are the principal drainage from the choroid, leaving the eyeball near its equator

Table prepared by John Grandage. NA, Nomina Anatomica; NAA, Nomina Anatomica Avium; NAV, Nomina Anatomica Veterinaria, NE, Nomina Embryologica.

*For brevity, this table lists only selected veins; in general it only includes those which have either clinical or functional significance or which do not have a similar course and distribution to the arteries of the same name (see Table 9).

Table 16 Collective nouns, gender groups

Species (adj.)	Neonate	Young male	Young female	Adult male	Adult female	Group noun
Alligator (eusuchian)	hatchling			cow	bull	congregation
Alpaca[a] (camelid)	cria	tui	tui	machos	hembra	punta
Baboon						troop
Bear (ursine)	cub			boar	sow	sloth, sleuth
Bee (apian)				drone	queen bee	swarm or hive
Camel (camelid)	calf			bull	cow	herd
Cat (feline)	kitten			tom	queen	cluster
Cattle (bovine)	calf	bull calf, bullock	heifer calf	bull	cow	herd
Deer Large (cervine)[b]	calf	pricket		buck or stag	doe	bunch (hinds), herd
Deer Small (cervine)[c]	fawn, kid	pricket		buck	doe	herd
Dog (canine)	pup or puppy	dog pup	bitch pup	dog	bitch	pack
Donkey or ass (asinine)	foal	colt	filly	jack	jenny	herd
Eagle (aquiline)	eaglet					aerie or convocation
Echidna	puggle					
Elephant (elephantine)	calf			bull	cow	herd
Elk[d]	calf			bull	cow	herd
Emu	chick	blackhead	blackhead	cock	hen	flock or group
Ferret (musteline)	kit			buck, jack or hob	bitch or jill	cast
Fish (piscine)	fingerling or Fry					shoal
Fox (vulpine)	cub, pup or kit			dog or reynard	vixen	leash, lead or skulk
Geese, domestic (anserine)	gosling			gander	goose	skein (in skein) or gaggle (on ground)
Goat (caprine)	kid	buck kid	doe kid	buck or billy	doe or nanny	flock, herd, tribe, trip
Guinea pig	pup			boar	sow	herd
Hamster (cricetine)	pup			buck	doe	horde
Hare (leprine)	leveret			buck	doe	drove
Hippopotamus (hippopotamine)	calf			bull	cow	bloat, herd

Table 16 Collective nouns, gender groups—cont'd

Species (adj.)	Neonate	Young male	Young female	Adult male	Adult female	Group noun
Horse (equine)	foal	colt	filly	stallion or stud	mare	band or herd
Kangaroo (macropine)	joey or pouch young			buck or boomer	doe	herd, mob or troop
Leopard (pardine)	cub			leopard	leopardess	leap
Lion (leonine)	cub			lion	lioness	pride
Llama (camelid)	cria	tui	tui	machos	hembra	punta
Mink (musteline)	cub, kit			boar	sow	
Mule	foal			jack	jennet, jenny	pack, barren or span
Ostrich	chick			male	hen	troupe
Pheasant	poult			cock	hen	bouquet, nye, brood or covey
Pig (porcine)	piglet	barrow (castrate)	gilt	boar	sow	herd
Poultry (avian)	chick or poult			rooster or cock	hen	flock
Rabbit (leporine)	kit, leveret, or nestling			buck or jack	doe or jill	nest, warren or colony
Rat (murine)	pup or nestling			buck	doe	colony
Rhinoceros (ceratorhine)	calf			bull	cow	crash
Sheep (ovine)	lamb	ram lamb	ewe lamb	ram	ewe	flock
Snake (ophidian)	hatchling					bed, knot, den, or pit
Swan (cygnine)	cygnet			cob	pen	flock, bevy, herd, bank, wedge, flight
Tiger (tigrine)	cub			tiger	tigress	streak
Turkey	poult			gobbler or tom	hen	flock or rafter
Whale	calf			bull	cow	pod
Wombat	joey			jack	jill	wisdom, mob, warren, or army

[a]Same nomenclature for all South American camelids, i.e. vicuna, alpaca, guanaco and llama.

[b]Large deer—Red, Japanese, Sika.

[c]Small deer—roe, fallow, muntjac, Chinese water deer.

[d]Elk and moose, wapiti and reindeer.

Table 17 Estrus cycles in animals

Species	Estral cycle (inter-estrous interval in days)	Duration of estrus	Time of ovulation	Comments
Cow	21	18 hours	12 hours after estrus ends	
Ewe	17	36 hours	30 hours after estrus begins	Some breeds seasonal only
Goat doe	20	40 hours	30 hours after estrus begins	Seasonal only
Sow	21	45 hours	36 hours after estrus begins	Tend to anestrus in winter
Mare	21	120–50 hours	last day of estrus	Seasonal only
Camelids	n/a	n/a	induced 30–36 hours after coitus	Follicular waves, interfollicular wave interval varies from 12–25 days. Receptive until bred.
Bitch	210–240	7–9 days	1st or 2nd day after estrus begins	
Queen	16	5-6 days	induced 20–74 hours after coitus	Seasonal only

23.0	0.81	49.0	1.34
24.0	0.83	50.0	1.36
25.0	0.85		

*Although the above chart was compiled for dogs, it can also be used for cats. A formula for more precise values follows:

$$\text{BSA in } m^2 = \frac{K \times W^{\frac{2}{3}}}{10^4}$$ *Given that* BSA = body surface area

m^2 = sq meters

W = weight in g

K = 10.1 (dogs), 10.0 (cats)

Table 22 Diseases notifiable to the World Organisation for Animal Health (OIE)

Multiple species diseases

Anthrax
Aujeszky's disease
Bluetongue
Brucellosis *(Brucella abortus)*
Brucellosis *(Brucella melitensis)*
Brucellosis *(Brucella suis)*
Crimean Congo haemorrhagic fever
Echinococcosis/hydatidosis
Epizootic haemorrhagic disease
Equine encephalomyelitis (Eastern)
Foot and mouth disease
Heartwater
Japanese encephalitis
Leptospirosis
New world screw-worm *(Cochliomyia hominivorax)*
Old world screw-worm *(Chrysomya bezziana)*
Paratuberculosis
Q fever
Rabies
Rift Valley fever
Rinderpest
Surra (*Trypanosoma evansi*)
Trichinellosis
Tularemia
Vesicular stomatitis
West Nile fever

Equine diseases

African horse sickness
Contagious equine metritis
Dourine
Equine encephalomyelitis (Western)
Equine infectious anemia
Equine influenza
Equine piroplasmosis
Equine rhinopneumonitis
Equine viral arteritis
Glanders
Venezuelan equine encephalomyelitis

Avian diseases

Avian chlamydiosis
Avian infectious bronchitis
Avian infectious laryngotracheitis
Avian mycoplasmosis *(M. gallisepticum)*
Avian mycoplasmosis *(M. synoviae)*
Duck virus hepatitis
Fowl cholera
Fowl typhoid
Highly pathogenic avian influenza and certain low pathogenic strains
Infectious bursal disease (Gumboro disease)
Marek's disease
Newcastle disease
Pullorum disease
Turkey rhinotracheitis

Fish diseases

Epizootic haematopoietic necrosis
Epizootic ulcerative syndrome
Gyrodactylosis (*Gyrodactylus salaris)*
Infectious haematopoietic necrosis
Infectious salmon anaemia
Koi herpesvirus disease
Red sea bream iridoviral disease
Spring viraemia of carp
Viral haemorrhagic septicaemia

Crustacean diseases

Crayfish plague (*Aphanomyces astaci*)
Infectious myonecrosis
Infectious hypodermal and haematopoietic necrosis
Necrotising hepatopancreatitis
Taura syndrome
Tetrahedral baculovirosis (*Baculovirus penaei*)
White spot disease
White tail disease
Yellowhead disease

Cattle diseases

Bovine anaplasmosis
Bovine babesiosis
Bovine genital campylobacteriosis
Bovine spongiform encephalopathy
Bovine tuberculosis
Bovine viral diarrhea
Contagious bovine pleuropneumonia
Enzootic bovine leucosis
Hemorrhagic septicemia
Infectious bovine rhinotracheitis/infectious pustular vulvovaginitis
Lumpy skin disease
Theileriosis
Trichomonosis
Trypanosomosis (tsetse-transmitted)

Sheep and goat diseases

Caprine arthritis/encephalitis
Contagious agalactia
Contagious caprine pleuropneumonia
Enzootic abortion of ewes (ovine chlamydiosis)
Maedi-visna
Nairobi sheep disease
Ovine epididymitis *(Brucella ovis)*
Peste des petits ruminants
Salmonellosis *(S. abortusovis)*
Scrapie
Sheep pox and goat pox

Swine diseases

African swine fever
Classical swine fever
Nipah virus encephalitis
Porcine cysticercosis
Porcine reproductive and respiratory syndrome
Swine vesicular disease
Transmissible gastroenteritis

Lagomorph diseases

Myxomatosis
Rabbit hemorrhagic disease

Bee diseases

Acarapisosis of honey bees
American foulbrood of honey bees
European foulbrood of honey bees
Small hive beetle infestation *(Aethina tumida)*
Tropilaelaps infestation of honey bees
Varroosis of honey bees

Mollusc diseases

Infection with abalone herpes-like virus
Infection with *Bonamia ostreae*
Infection with *Bonamia exitiosa*
Infection with *Marteilia refringens*
Infectiion with *Perkinsus marinus*
Infectiion with *Perkinsus olseni*
Infection with *Xenohaliotis californiensis*

Amphibian diseases

Infection with *Batrachochytrium dendrobatidis*
Infection with ranavirus

Other diseases

Camelpox
Leishmaniosis
